THE BEST OF THE NEW NOVELS

THESE ARE REALLY GOOD NOVELS—WELL WORTH READING

Winston Churchill's New Novel

"Many people read 'The Inside of the Cup,' but 'A Far Country' should reach a wider audience."—N. Y. Times.

A FAR COUNTRY

By the Author of "The Inside of the Cup," etc.

Opinions of Early Reviewers:

"No one can afford to miss reading 'A Far Country,' or reading it, can fail to be interested. The themes Mr. Churchill handles are the big themes confronting all America, and in the fortunes and misfortunes of his characters he indicates energies and developments that are nation-wide. It touches on what is vital, . . . and it will help in no small degree to broaden our thought and clarify our vision."—*N. Y. Times.*

"A powerfully written story, displaying wonderful scope and clarity of vision. Presents a wonderful study of American emotions and character analysis."—*Boston Globe.*

"A story worthily complete, . . . vastly encouraging. The kind of a book that points to a hope and a right road."—*N. Y. World.*

"A great piece of art, comprising admirable humanization, plot, and sympathy, diverse as intrinsic, . . . and many interesting side issues. Any author might well be proud of such achievement."—*Chicago Herald.*

"'A Far Country' is an American novel in all that that term implies."—*Chicago Tribune.*

Illustrated, $1.50

Ernest Poole's New Novel

THE HARBOR

By Ernest Poole

"By all odds the best American novel that has appeared in many a long day."—*N. Y. Times.*

"One of the ablest novels added to American fiction in many a year. . . . The first really notable novel produced by the new democracy."—*N. Y. Tribune.* ***$1.40***

St. John Ervine's New Novel

ALICE AND A FAMILY

By St. John G. Ervine

"There is not a single character in the book that is not well portrayed. . . . They are all presented with clearness, simplicity, and truth."—*N. Y. Times.*

"As enjoyable a blend of fun and hard sense as we have met in a long while."—*N. Y. Sun.* ***$1.25***

Eden Phillpotts' New Novel

BRUNEL'S TOWER

By Eden Phillpotts

"Magnificently written . . . the daily bread of life is in this book. . . . Absorbingly interesting, and holds that element of surprise which is never lacking in the work of the true story-teller. . . . A book for which to be frankly grateful."—*N. Y. Times.* ***$1.50***

H. G. Wells' New Novel

BEALBY

By H. G. Wells

"Mr. Wells has written a book as unpolitical as 'Alice in Wonderland' and as innocent of economics as of astrology. A deliciously amusing comedy of action, swift, violent, and fantastic."—*N. Y. Times.*

"It is Wells on a vacation—a vacation that will be enjoyed by every one who takes it with him."—*N. Y. Globe.* ***$1.35***

A NOVEL IN VERSE

SPOON RIVER ANTHOLOGY

By Edgar Lee Masters

"It is the first successful novel in verse we have had in American literature. . . . An American 'Comedie Humaine.' . . . Brings more characters into its pages than have ever been brought into an American novel before. . . . It at once takes its place among those masterpieces which are not of a time or of a locality."—*Boston Transcript.* ***$1.25***

NEW YORK, THURSDAY, JULY 1, 1915

Summary of the News

Forecasts of the German reply to the American note of June 9 agree in the impression that it will be moderate in tone, and will suggest definite concessions to the American point of view in regard to the conduct of Germany's submarine warfare. It seems to be generally agreed that the note has already been drafted and has been submitted for consideration to the German Admiralty. It is not expected, however, that it will be ready for transmission until some time next week. Confidential dispatches from Ambassador Gerard were received at the State Department on Monday which are said to confirm the general tone of the forecasts of the note cabled by correspondents from Berlin. It is understood, however, that the Ambassador's dispatch contained a statement that the German Government would submit counter-proposals to the suggestions made by the American Government, and it is generally surmised that these proposals will be based on the German contention that passengers should not be permitted to travel on ships carrying arms and ammunition to the Allies.

The suppression, to which we referred last week, of the *Tageszeitung* of June 21, on account of an article by the fire-eating Count von Reventlow, has also been regarded as a favorable sign of the attitude of the German Government. The importance of the bearing of this incident on the negotiations with the United States may, however, be easily overrated, since it appears that if Count von Reventlow's counsels in regard to the American note were the reverse of moderate, the article which caused the suppression of the paper also contained a scarcely veiled attack on Chancellor von Bethmann-Hollweg. Nevertheless, the attitude of Count von Reventlow has called forth severe criticism in the more moderate section of the German press, notably in the *Norddeutsche Allgemeine Zeitung*. The *Tageszeitung* resumed publication on June 24, signalling its reappearance with an extraordinary article by Count von Reventlow, in which President Wilson was accused of having "closed the Panama Canal to shipping trade in order that transportation of ammunition and other war materials from eastern harbors of the United States to Vladivostok, for increasing the Russian fighting strength, shall not suffer interruption." We comment in our editorial columns on the possible significance of the suspension on June 26 of the Socialist *Vorwärts* for having published an appeal for peace.

Two other diplomatic communications of the past week are the subject of comment in our editorial columns. The text of the memorandum from the British Government, dated June 22, explaining the treatment accorded to American commerce in pursuance of the provisions of the Order in Council to restrict trade with Germany and Austria, was published in the morning papers of June 25. On Tuesday was published the text of the note, dated June 24, addressed by Secretary of State Lansing to Ambassador Gerard for presentation to the German Government, and replying to the German note of June 7 in regard to the sinking of the William P. Frye. The latest American note disputes the German view that the Frye case may properly be dealt with in the Hamburg Prize Court, and contends that the demand of the United States is for an indemnity, on account of the violation of a treaty, not for an indemnity in accordance with a treaty.

Official announcement of the appointment of Robert Lansing as Secretary of State was made by the President on June 23.

On June 24 New York celebrated the 250th anniversary of the establishment of Manhattan as a municipality, with a Mayor and a Board of Aldermen.

Dispatches from Peking on Monday revealed the fact that in the middle of May, during the crisis between China and Japan, an identical warning had been conveyed to both countries that the United States would not recognize any agreement which impaired American rights in China or endangered the policy of the "open door."

There has been no appreciable change in the situation in Mexico, but anxiety was expressed in Washington on Tuesday on account of the fact that no word had been received from Mexico City for a week. Gen. Victoriano Huerta stepped once more into the fierce light of publicity when it became known on Saturday that he had left his home on Long Island and was on his way to El Paso. The confidential agency of the Villa Government in Washington notified the State Department of the reported movement of Huerta and of former military chiefs and officials of his Government towards the Mexican frontier, with the result that on his arrival at a wayside station a little way out from El Paso Huerta was arrested by a United States Deputy Marshal on a charge of violating section 10 of the Penal Code. Gen. Huerta is at liberty under bond, and protests that his intentions have been entirely misunderstood.

The activities of the ex-Secretary of State continue. On the night of June 24 he addressed a plea for peace to a meeting, principally composed of people of German origin, at Madison Square Garden, at which he was welcomed by the presiding officer to "this German atmosphere." To a similar atmosphere in Chicago, apparently, Mr. Bryan was not so welcome, since a meeting of the "Sons of the Teutons" which he was to have addressed on Monday night was postponed, the reason being, according to dispatches from Chicago on Tuesday, that, whereas Mr. Bryan desired to speak on peace, his audience wished to hear about the export of ammunition. Elsewhere we take note of Mr. Bryan's statement, published in Monday's papers, in regard to the wrong impression which he has been alleged to have given Ambassador Dumba of the attitude of the Administration towards the sinking of the Lusitania. The general reception accorded to Mr. Bryan's statement by the press suggests that he has explained either too much or too little.

An important announcement, outlining the policy to be pursued by the British Government to insure an adequate supply of munitions was made by Mr. Lloyd George in the House of Commons on June 23.

The French Chamber of Deputies on June 25, by a vote of 492 to 1, and after a debate in which the Socialists pledged their unqualified support in carrying on the war, passed the bill appropriating 5,600,000,000 francs to cover national expense for the three months beginning July 1.

It was announced on June 28 that Herbert C. Hoover, chairman of the American Commission for Relief in Belgium, had concluded an agreement with Gen. von Bissing, Military Governor of Belgium, providing that the wheat and rye crops in the occupied territory should be reserved for civilian consumption.

Dispatches from South Africa of June 26 told of the conviction for treason of Gen. Barend Wessels, ex-member of the Union Defence Council. Gen. Wessels was sentenced to five years' imprisonment and to pay a fine of $5,000. At the same time two members of the Legislature were each sentenced to imprisonment for four years.

Considerable excitement has been caused by the alleged interview of a French journalist, Louis Latapie, with Pope Benedict, which was published in *La Liberté* on June 21 and cabled to American papers of the following day. That the interview could hardly be taken as correctly representing the utterances of the Pope appeared obvious, and for that reason we refrained from commenting on it last week. What may presumably be regarded as the official explanation of the Vatican has now been published, in the form of an interview with Cardinal Pietro Gasparri, Papal Secretary of State, in the *Corriere d'Italia* of June 28, summarized in the American papers of Tuesday. According to Cardinal Gasparri, M. Latapie was guilty of many inaccuracies and misrepresentations, and broke a promise which he had given not to publish anything without previous authorization.

Whether the relaxation of activity by German submarines during the past two weeks represents the normal period of "respite, respite from Nepenthe," which succeeds strenuous days, or whether, as may be hoped, it indicates an intention on the part of Germany to moderate her submarine warfare, the relaxation has, at any rate, been notable. Since we wrote last week, only twelve vessels have been reported sunk, of which seven were British fishing boats, one a Norwegian steamer, and the other four British ships. It is noteworthy that in one case, that of the Norwegian mail steamer Venus, recorded on June 23, the vessel was stopped at the order of the commander of the submarine, and was allowed to proceed after the greater part of the cargo had been thrown overboard.

The Week

Secretary Lansing's reply to the German note in relation to our demand for damages for the sinking of the William P. Frye by the Prinz Eitel Friedrich is a model of lucidity and directness. The issue does not turn on any broad or indefinite considerations of humanity, or any complex definitions of international law. The most vital point involved is as to whether the German cruiser had a right, in any circumstances, to destroy the American merchant ship. The Treaty of 1799 between Prussia and the United States, says the German note, "reserves to the party at war the right to stop the carrying of contraband and to detain the contraband; it follows, then, that if it cannot be accomplished in any other way, the stopping of the supply may be in the extreme case effected by the destruction of the contraband and of the ship carrying it." But this "follows" only under a view of military necessity which, though extremely familiar in Germany, is not elsewhere regarded as self-evident; and it happens, fortunately for Secretary Lansing's case, that the treaty expressly provides that the neutral vessel stopped for contraband shall not even "be carried into port, nor further detained" if she will "deliver out the goods supposed to be contraband."

It should be remembered that what actually happened in the case of the Frye was that her wheat was not being thrown overboard (even with the assistance of the crew of the German cruiser) fast enough to suit the commander of the Eitel Friedrich; and it is to the undesirability, and possible danger, to that cruiser of any avoidable delay that the German Foreign Minister had reference in speaking of its being impossible to "detain the contraband . . . in any other way" than by the destruction of the vessel carrying it. In the first German note on the Frye case, that of April 4, there is a somewhat more specific reference to the point. "It was not possible," said that note, "for the auxiliary cruiser to take the prize into a German port without involving danger to its own security or the success of its operations." Into the logic of this plea, Secretary Lansing does not enter. How far one might be carried if one were to admit that any means of attaining an object is permissible to the commander of a warship which may be necessary in order to avoid danger "to the success of its operations," it requires no great amount of imagination to realize. But Secretary Lansing's point is that what is here involved is the interpretation of a treaty, and that this is a subject for diplomatic settlement and not for the decision of a German prize court. As for "other claims of neutral and enemy interested parties," our Government, says Mr. Lansing, "does not perceive the necessity for postponing the settlement of the present claim pending the consideration of those other claims by the prize court."

Mr. Bryan's denial that he gave the Austrian Ambassador, and through him Berlin, the impression that the President's demands on Germany were not seriously meant, is one of those denials which unwittingly admit the basis of the charge. No one supposes that the Secretary of State committed himself, much less this Government, in the imprudent way alleged. But he did have an informal conversation with Dr. Dumba. And it is clear that from it the Austrian Ambassador got the idea that the Washington Government would not be averse to applying Mr. Bryan's notions to the Lusitania case. In fact, it was stated at the time of the German reply that Berlin thought it had done a clever thing in proposing a long investigation of the affair. It would be very awkward, it was said, for Mr. Bryan to decline the suggestion. Of course, this may have been only what is called, though not in diplomacy, "taking a chance." And it is reasonable to infer that it was based upon Mr. Bryan's free talk with the Austrian Ambassador. What probably occurred was nothing like an official undertaking by the Secretary, but a little peace oration by him which Dr. Dumba misunderstood, or to which he assigned more importance than it really had. No matter exactly what passed in the interview, we have another cause of relief at the change in the Department of State. That is no place for an impulsive and effusive man who mistakes an Ambassador for a public meeting.

Mr. Bryan gave every sign last Thursday night at Madison Square Garden of being extremely happy at having laid down the cares of office. He had a vast and applauding audience to address, and that alone was enough to warm the cockles of his heart. But more than this, in order to make his happiness complete, he has again got a selfish, subsidized, and wicked "interest" arrayed against him. It is the press of New York, to which he paid his respects as he used to pay them to gold-bug capitalism. Well, the New York newspapers are all miserable sinners, but in this matter they are sinning along with a great company of fellow-culprits. Why single out the press of New York? The newspapers of the whole country have held exactly the same tone regarding the President's note to Germany and Mr. Bryan's resignation. A veteran observer of the American press declares that he never knew a case where the sentiment expressed was so unanimous. Then why did not Mr. Bryan give the newspapers of Oshkosh and Omaha fits as well as those of New York? It can't be that he shrinks from having it appear that his opponents swarm everywhere. His new-found German-American supporters could give him the right motto: "Viel Feind, viel Ehre."

With the main object of this meeting—the laying of an embargo on the export of arms—Mr. Bryan cannot be at all in sympathy. We say this on the basis of the letter which he wrote to Senator Stone on the 20th of last January. This was not one of those diplomatic notes to a foreign country which Mr. Bryan signed, perhaps with many misgivings; it was a direct statement made to a friend in the Senate, representing a State and city containing a large population of German descent. And in it Mr. Bryan took a position flatly opposed to the resolutions adopted by the meeting at which he was the chief figure. Whatever he thinks or says now, this is what W. J. Bryan deliberately wrote on January 20:

> If any American citizens, partisans of Germany and Austria-Hungary, feel that this Administration is acting in a way injurious to the cause of those countries, this feeling results from the fact that on the high seas the German and Austro-Hungarian naval power is thus far inferior to the British. It is the business of a belligerent operating on the high seas, not the duty of a neutral, to prevent contraband from reaching an enemy.
>
> Those in this country who sympathize with Germany and Austria-Hungary appear to assume that some obligation rests upon this Government, in the performance of its neutral duty, to prevent all trade in contraband, and thus to equalize the difference due to the relative naval strength of the belligerents. *No such obligation exists; it would be an unneutral act,* an act of partiality on the part of this Government, to adopt such a policy, if the Executive had the power to do so. If Germany and Austria-Hungary cannot import contraband from this country, it is not, because of that fact, the duty of the United States to close its markets to the Allies. The markets of this country are open upon equal terms to all the world, to every nation, belligerent or neutral.

The *Frankfurter Zeitung* lists with a note of triumph the sinking of 111 English merchantmen, displacing 234,239 tons, in the three months following the declaration of

the war zone. There is a naïve contradiction, however, between the statements that the figures may "not seem especially large in comparison with the gigantic number of merchant ships flying the flag of the enemy," and that "the rise of prices, and the paralyzing of great branches of trade that could not occur in an England that really ruled the sea, may be attributed in chief part to this war of the submarines." The total of British shipping in 1914 was about 22,000,000 tons, so that the loss from submarines amounts to little more than 1 per cent. of the whole. That this would paralyze "great branches of trade" is preposterous. Another fruitful comparison is of the loss with the annual additions to the British merchant marine. In 1913 these approached within a few tons of two millions, and in 1914 within a few tons of 1,750,000. If the submarines maintain their activity, and no effective means is found of combating them, they may in one year cause Great Britain to lose half as great a tonnage as she has built within that time. This is hardly likely to cause in English economic life, in the words of the *Frankfurter Zeitung*, "phenomena similar to those which the English plan for the isolation of Germany aims at."

On the basis of current prices of food, as recorded in official German publications, a writer in the *Westminster Gazette* has calculated that twenty principal articles of consumption in March of the present year show an increase of 49.4 per cent. over a year before. Bread and meat showed an increase ranging from 74 per cent. for rye bread, 72 per cent. for lard, 71 per cent. for eggs, through 58 per cent. for bacon, 44 per cent. for pork, about 10 per cent. for mutton and beef, to an actual decrease of 2 per cent. for veal. But the rise in potatoes was 180 per cent., peas 200 per cent., lentils 174 per cent., and beans 182 per cent. In other words, the food of the poorer classes, which on the Continent comprises a small ratio of meat, had risen anywhere from nearly double to three times the cost of a year ago. Since February, according to the writer in the *Westminster*, there has been another rise of 5 per cent. in the general level, so that food in Berlin to-day would be 55 per cent. dearer than it was in the spring of 1914. In Vienna the increase has been still more marked, though certain commodities, like potatoes, show a smaller increase than in Berlin. That the Teutonic nations are not the only sufferers by the war, however, is well known. In England, according to the *Manchester Guardian*, there has been a rise of about 40 per cent. in the price of meat and 25 per cent. for fish.

Secretary McAdoo's attempt to throw dust about the emphatic vote of the Chamber of Commerce of the United States against any plan of Federal ship-ownership will mislead no one. "The referendum," he states, "was so prepared that no vote was taken upon the plan proposed in the last Congress to have the Government subscribe stock in a corporation which was to operate ships." He goes on to say that there is a wide difference between the Government's holding and operating ships and the Government's becoming such a stockholder in a private corporation. What a mild measure this retrospective view makes of the Ship Purchase bill! Its much-altered provisions were always wrapped in a haze of mystery, but no one before ever thought that its plan for the creation of a holding corporation, in which the Government was to subscribe for a majority of the stock, was tantamount to much less than governmental operation. One part of the referendum, moreover, related to a plan which has clear elements of relationship even to that stated by Secretary McAdoo. Asked if they favored Government ownership of vessels to be leased to private parties or companies, 711 commercial bodies answered in the negative, and 54 in the affirmative—a more decisive vote than that against full purchase and operation by Government. It is clear that these bodies must have felt towards the actual Shipping bill as did the New York and other associations of merchants which sent in protests at the time it was pending. Their heavy vote for a Federal Shipping Board to report to Congress on the navigation laws demonstrates the sentiment for repeal of the present onerous shipping legislation.

It was felt all along that the La Follette Seamen's act would operate against American shipping with greater severity on the Pacific than on the Atlantic Ocean; but the announced intention of the Robert Dollar Company to transfer its boats to the British flag, with Vancouver as a terminus, may seem ominous for others. Are we to expect shifting of transatlantic trade from New York and Boston to Montreal, Quebec, and Halifax? On the Pacific Coast the alternative seems outright sale or British-Canadian registry; and here, too, the effect of the new provisions of the law may be found advantageous to the Dominion. The Department of Commerce, always tacitly hostile to the new measure, is reported now to have an expert commission at work ascertaining its effects, and to have an understanding with the Administration that the findings of this body will receive Congressional attention. No one in shipping circles believes that the action of the Dollar and Pacific Mail lines is insincere or the result of anything but absolute necessity. Their refusal to attempt competition with foreign lines after November 2 next, even under war conditions that mean high freight rates, should convince the Department that nothing less than repeal of at least the clauses as to language and percentage of able seamen will save our merchant marine.

In the obscure and usually uninspiriting pages of the Record of the Constitutional Convention, that has been sitting at Albany, there lies buried a gem of patriotic eloquence which ought to be shedding its rays upon all the people of this commonwealth. How the president and members of the Convention could reconcile themselves to the cold formality of referring to a committee the question of its being put into general circulation, we cannot understand. Yet that is the proceeding that was adopted when Mr. Thomas F. Smith, having presented the memorial of the Society of Tammany or Columbian Order, asked that it be printed as a document. There was one member, indeed, with soul so dead as to move that a copy of the memorial be sent to the Committee on the Relations of the State to the Indians; and the president of the Convention, instead of rebuking this shocking levity, stated that those copies of the Record which are distributed to the Indian tribes would suffice to convey the memorial. These gentlemen may think it very amusing to poke fun at the Tammany sachems; but is such ridicule of the loftiest sentiments to pass without remonstrance? Not if we can help it. See, for example, what the patriots and sages of Tammany have to say on the proposal of an appointive judiciary:

> In the undisguised effort being made to deprive our citizens of the right to be judged by judges of their own selection, we perceive an inevitable return to the days of Jeffreys—those black and despairing times when a favored sycophant passed upon the life and liberty of the masses, at the behest of the power which had selected him to wreak its private vengeance. Substitute for a Jeffreys an unscrupulous attorney selected by an insidious and powerful combination of money and monopoly, the greatest menace of modern society, and you have a possibility of injustice and tyranny which will all too soon ripen into a probability.

Such burning words ought to set the people into a flame of indignation; but instead of that we find—in "this otherwise Excelsior State," to quote a happy phrase of the Tammany memorial—an unaccountable disposition to trêat the whole thing as a joke.

Existence of an almost State-wide machinery for the corruption of municipal elections in Indiana is indicated by the indictment of Committeeman Taggart, Mayor Bell of Indianapolis, and 126 others for ballot offences in Marion County. Two months ago the Mayor of Terre Haute and certain associates were sent to prison for frauds in the same election of November 3, 1914; in Goshen and Elkhart city officials have just been indicted for various offences; in Rockville a court has been sitting upon election frauds in Vigo County; and it is predicted that the present investigation, centring in Indianapolis, will reveal trails leading to Evansville and Gary. It has already been established that repeaters and other "workers" were exchanged last autumn between the capital and Terre Haute. In all this it is hard to hold any one party responsible, for the indictments have included Democrats, Republicans, and Progressives. Inter-partisan combinations, however, have doubtless been made easy by the existence of corrupt party organizations, and it is pleasing to see the investigation reach leaders in the ranks of Taggart and Fairbanks. If it is pushed to completion it may show the ramifications of an intricate web of political intrigue, and deliver the State from iniquities that have been admitted but unpunished for decades. The Terre Haute prosccution was vigorously pushed by Federal authorities; in conducting that at Indianapolis, the State officers have an opportunity to exhibit equal zeal.

The arraignment of Judge Lindsey in the Colorado criminal courts is so certain to set far-reaching precedents affecting juvenile courts that his defence will be followed with wide interest. The matter has arisen from the trial of a Denver woman for the murder of her husband—a murder to which she at first confessed. Within a few days after her arrest, her son of twelve came forward with the story that it was he who had shot the drunken husband, and that his mother had assumed the blame because she was a consumptive with but a short time to live. Judge Lindsey—with what end in view is not clear—examined the boy confidentially in the Children's Court. When the District Attorney attempted to make him repeat the boy's statement before the jury, Judge Lindsey protested that the communication was privileged, that the principle of the Juvenile Court was to lead delinquents to confess their own misdeeds, but to discourage them from turning State's evidence, and that in a case involving the life of the child's mother the introduction of testimony by the child under such circumstances would be outrageous. He was forced to tell the story, but the mother was acquitted, and he is now indicted as a conniver at perjury. The *Outlook*, which reviews the case, hints that politics is again back of the attack. The legal side may be perplexing; but the moral issue seems clearly defined.

Whether Carlyle's remark about the true university being a collection of books be accepted or not, the heart of any educational institution is its library. The dedication of the Widener Memorial Library at Harvard on Thursday of last week will have attracted small attention beside the boat-races which closed the week on the Thames, but for generations it will be regarded as one of the important dates in the history of the University. Architecturally, the building will take its place with the Low Memorial Library at Columbia and the Harper Memorial Library at Chicago University. In its elaborate arrangement, its equipment with every device that science and ingenuity can invent for the convenience of teacher and student, there is, as Senator Lodge stated, "no university and scarcely any State or nation" which can show its equal. Its nucleus of rarely valuable volumes will at once invest its newness with tradition and atmosphcre. Harvard's collection of two million books and pamphlets has been one of the greatest in America—nearly three times as large, for example, as Columbia's; and scattered among a number of buildings, imperative reasons of economy and efficiency demanded that it have an adequate housing. Aside from this, however, there should be an immense sentimental satisfaction to all friends of a university founded by a gift of books in seeing its library cherished beyond other branches of the institution.

The Italian campaign since the occupation of Monfalcone, on the way to Triest, has made little progress, and the recent official dispatches from Rome speak of the assumption of the offensive by the Austrians. It would certainly seem odd that thus early in the campaign, without any serious reverse to Italian arms reported from any capital, and after long months of preparation by Italy, the initiative should be surrendered to Austria at a time when her main armies are so busily employed in Galicia. Consequently, there may be more truth in the Italian statement that the purpose of the campaign is to let the Austrians wear themselves out in attack than usually attaches to such statements. Caution is the keynote to Italy's movements. In the Tyrol her armies must refrain from shattering themselves against the mountain fortifications. On the Isonzo the battles must be those of artillery. In the meanwhile the full fighting strength of Italy is in the course of development. Nor is it at all improbable that, as has been reported during the past few days, behind a forcible demonstration on her northern frontier, Italy may be gathering an army for service in the Dardanelles, where the Allies still stand to win a greater prize than they can obtain anywhere else by a similar effort.

The new Austro-German objective after Lemberg is apparently Warsaw once more. This would amount to a renewal of the Austrian campaign at the beginning of the war. It will be recalled that the first Austrian movement was an invasion of southern Poland east of the Vistula. It began with an Austrian success at Krasnik, in the province of Lublin, in the last week of August, but was shattered by the Russian victory further to the south at Rawa Ruska, which compelled a precipitate Austrian retrcat from Poland. To-day the Teuton armies are in a position to renew the attack in more formidable strength. The ultimate purpose would be to strike north into Poland east of the Vistula and so threaten the fortresses of Ivangorod and Warsaw from tho rear. And it is not unlikely, as is now stated from Petrograd, that the failure of the Russians to hold up the Teuton drive in Galicia may have been due in part to a recognition by the Russian General Staff that such reinforcements as were available might be better employed to guard the positions on the Vistula than to attempt the desperate task of facing the Austro-Germans in Galicia. What the near future may see, therefore, is the pressing forward of a huge Teuton encircling movement against Warsaw from the line of the Narew on the north, from the Bzura, the Rawka, and the hills of Lysa Gora to the west, and from the Galician border to the southeast.

THE ENGLISH BLOCKADE.

In transmitting the latest note of the British Government to that of the United States, Ambassador Page justly remarks that "it is not an answer to the principles set forth" in our Government's protest of March 30. What we have is, rather, a routine account of the steps taken to meet the complaints of American shippers, and to reduce to a minimum the hardships caused to neutral commerce by the English blockade of German ports. As such, the British statement is both friendly and reasonably satisfactory. No one can read it without seeing that the English authorities have been anxious to do as little injury to our trade as was consistent with their main and lawful military object. They have modified their original orders, to our advantage. They have made concessions, on one point and another, and have sought to expedite the settlement of disputed cases in the prize courts, or by private agreement. They have paid more than $2,250,000 to American claimants, and are ready to pay more as soon as the details can be arranged. The net showing is that, at present, only three American ships are detained in British ports, pending inquiry as to "suspicious consignments." The others have been allowed to go forward, or to discharge their cargoes for which the English Government has made full payment.

If this were the whole case, the British Government would be entitled to argue that its conduct had been such as to give no "substantial grievance" to American citizens. But we have an interest which runs beyond the mere procedure of English prize courts, or the buying of our cotton cargoes, or the arrangements to let German goods, purchased by our importers before the blockade was established, come through. All this is well enough and gratifying enough, in its way, but there remains the question of those "principles" to which Ambassador Page referred. This was clearly raised by our Government, both before and after the English blockade was declared. On December 26, the Department of State instructed Mr. Page to communicate to Sir Edward Grey the fact that "this Government is reluctantly forced to the conclusion that the present policy of His Majesty's Government towards neutral ships and cargoes exceeds the manifest necessity of a belligerent and constitutes restrictions upon the rights of American citizens on the high seas which are not justified by the rules of international law." This, of course, was before the establishment of the blockade, when it was merely a matter of visiting and searching neutral vessels. It was doubtless the protests of our Government, along with other neutral nations, which in part led to the final decision of England to announce and maintain an effective blockade. But even after that was done, our Government made earnest representations to the British authorities. We did not question the right to declare a blockade. That it might be established in an unusual form, on account of the changes in modern warfare, we freely conceded, so long as it remained effective. But our Department of State strongly objected to a blockade which might become, in reality, a blockade of "many neutral ports and coasts," and insisted that, blockade or no blockade, nothing should be allowed to interfere with the "general practice," under which "innocent shipments may be freely transported to and from the United States through neutral countries to belligerent territory without being subject to the penalties of contraband traffic or breach of blockade."

That was, and still is, the chief point at issue. It is not so simple as some pretend. There can, of course, be no blockade of neutral ports. But when it comes to the question of stopping ships bound for neutral countries whose "destination" is really, or is suspected to be, a belligerent country, we get into a maze of difficulties. The precedents, the chief of which have been set by American courts, are not all on one side. In the letter of our Department of State, last March, the attention of the British Government was called to the case of the Peterhof. In the instance of that ship, the Supreme Court held that a vessel bound for a Mexican port could not be made a prize merely because there was every reason to suppose its cargo to be destined for Texas. But very likely the English Government will remind us of the Springbok case, in which the Supreme Court appeared to lay down an opposite doctrine of "destination." In fact, during our Civil War, ships bound for Nassau were repeatedly captured by the United States men-of-war on the ground that they were virtual blockade-runners. It is a vexed question on which there may be an honest difference of opinion.

When the time comes for the British Government to declare itself on the main principle, there can be no doubt that it will acquiesce in our main theoretical contentions. The high seas must remain free to neutrals. It is only enemy ports that can be blockaded. But the sticking-point will lie in the stopping of shipments ostensibly to neutral countries. In this there is obviously much parlous matter, over which international lawyers may long dispute. For the present, it need only be said that the issue is less definite and far less vital than the one involved in our controversy with Germany; and that, even if the difference becomes irreconcilable, our Government will have no occasion to go further than to reiterate its demand of "reparation" for any demonstrable damage unlawfully done to American commerce.

ORGANIZING FOR MUNITIONS.

The problems with which Mr. Lloyd George, as Minister of Munitions, is preparing to deal, under the plenary powers conferred upon him by Parliament, fall under three general heads. There is what may be called the psychological factor, the factor of organization, and the factor of England's actual resources. The first two have been to the forefront. The national temperament has manifested itself in a characteristic failure of the imagination. Englishmen do not foresee; they must be taught by the bitter lessons of experience, and they are slow in learning. The nation at large for a long time unquestionably underestimated the tremendous severity of the test that it faces. The men at the head of affairs have been slow in learning the specific lessons of the war. If the industrial workers have not given their full efforts towards the production of munitions, it is also true that the War Office was a long time in deciding just what kind of munitions the situation demanded. English individualism has reinforced the lack of imagination. On the one hand, the workers' unions have been fearful of the loss of their rights. On the other hand, the employers have had to be taught that they must consent to a limitation of profits for the common welfare. Thus, when Mr. Lloyd George was under the necessity of offering to the labor unions a pledge that the employers would take no advantage of the relaxation of union rules, he was contending both with British individualism and with the lack of British imagination. The labor unions have remembered the repression that followed the Napoleonic wars and have demanded guarantees for the future. It is true that if the nation were in a desperate state there would be no such insistence on individual rights. It is to bring home the needs of the situation to the workers that Mr. Lloyd George is now exerting himself.

The mistakes in organization began with the overconcentration of duties in Lord

Kitchener. That error has now been rectified. Presumably because Kitchener was overworked, red tape came into play. There have been complaints that in the distribution of contracts errors of delay and judgment have occurred. Manufacturers in a position to supply war munitions have failed to get a hearing from the War Office. Contracts, on the other hand, have been awarded to establishments with inadequate facilities. These errors, too, are in the way of being remedied. England will probably be divided into munition areas under the central control of prominent manufacturers to whom will be delegated the duty of portioning out the subcontracts and who will be responsible for the total output. Such dissatisfaction as has arisen over the progress of contracts for munitions in this country is to be dealt with by a special representative of the British Government. Minor but important problems like the shifting of labor from point to point are taken up in the Munition bill. The recall from the front of skilled workers for the factories has been practiced for some time. For just as important as an adequate supply of labor is the utilization of labor economically. The situation is one which calls for men in the field, in the ship yards, in the factories, in the clothing shops, in the food warehouses, and on the farms. In Germany this nice adjustment of forces was undoubtedly worked out with care years in advance.

Once organized, the English industries, according to Mr. Lloyd George, are in a position to equal, and surpass, the output of munitions in Germany and Austria. That output he estimates at 250,000 shells a day. But England must do more than organize for such an output. She has to outstrip the great stocks of ammunition which German foresight had piled up in advance. To overcome this handicap, what are England's resources? We need take only one standard of comparison. In 1911 there were in the United Kingdom about eleven and a half million industrial workers. In 1907 there were in Germany about eleven and a quarter million industrial workers. We may assume that at the outbreak of the war the industrial armies in the two countries were about equal. From their ranks must obviously come the labor for the munition factories. On the basis of mere numbers, therefore, England and Germany should be turning out the same amount of supplies. In favor of Germany are two factors, the accumulated stores of ammunition already mentioned, and the unquestionably superior organization which obtains better results from the same amount of labor. In favor of England, however, is one fully counterbalancing factor. Germany at the maximum of her efforts will be maintaining in the field nearly twice as large an army as England. That must mean a much greater drain on the industrial population. Even German superiority in organization cannot overcome this handicap. The more men the Kaiser places in the field, the more men he withdraws from industry. On the whole, therefore, we may assume that when England settles down to work, she can equal Germany's output of munitions. If we thus check off England against Germany, we have France, Italy, Russia, and the supplies from this country to balance against Austria's contribution; a showing which totals up decidedly in favor of the Allies.

Nevertheless, a task of extraordinary difficulty confronts the new Minister of Munitions. In all discussions of the matter the question is treated as one of shells simply. Lloyd George spoke chiefly of shells. But, however pressing is the need for high explosives, the war will not be decided by shells alone. We know that the Teuton armies have depended chiefly on heavy guns in their victories over Russia, and that the Allies must have heavy guns if they are to break through in the west. But to the careful reader of the war chronicles the importance of other arms has also been apparent. The machine gun has been used by the Germans with extraordinary effect on the defensive. At Neuve Chapelle and elsewhere the Allies lost heavily in the face of small rear guards armed with the automatic gun. Some reports have gone so far as to state that the machine gun is replacing the rifle for infantry action with the German armies. And after shells and machine guns come other factors—traction machinery, chemical supplies, and, by no means least, aeroplanes. H. G. Wells may not be altogether visionary in calling for huge squadrons of aeroplanes for the invasion of Germany. Certainly the effectiveness of the English aviation service has been such as to call for a large increase.

One caution with regard to the state of mind in England it may be well to remember. The anxiety over munitions is not altogether a reflection of the way the fighting has been going against the Allies. It is an indication also that one problem which confronted England has been solved. That is the question of men. The present agitation over shells is a repetition of the earlier anxiety over recruiting. It is certain that Kitchener has obtained nearly all, if not all, of the three and a quarter million men that Parliament has authorized. If England is now muddling with the problem of ammunition, it is a sign that she has muddled through the problem of men.

THE GERMAN SOCIALISTS AND PEACE.

To what extent can the remarkable peace manifesto in the Berlin *Vorwärts* be taken as an index of popular opinion with regard to the chances of a German victory? That obviously is the first meaning for which people will search. Abroad the natural tendency will be to argue that a cry for peace from any important German source is a sign of weakness. The German Government, by forbidding the publication of the *Vorwärts*, apparently recognizes this danger. And yet the fears of the Government may not be so real as its action would indicate. At bottom, no interpretation of the Socialist peace manifesto can leave out of account the circumstances of the Socialist party, not only since the beginning of the war, but before the war; or the consideration that the Socialists of Germany are looking beyond the war to the interests of their own movement.

With the first day of mobilization last summer there came what has been usually described as a collapse of the international Socialist movement. Events must show whether this is so, but on the face of things the spectacle of Socialists rallying without murmur to the colors, voting war credits, and entering into coalition War Ministries, was unquestionably a denial of Socialist pretensions. Because the Social-Democracy of Germany was the oldest and most powerful party in the international movement, its fall from grace was all the more impressive. Yet the German Socialists after a time began to find their bearings. They admitted failure, but not a failure of their fundamental principles. They had over-estimated the strength of international solidarity in the resurgence of national passions, and they had overestimated their own strength when it came to a protest against war. For their justification they described the crisis as one which called first to them as Germans and only secondarily as Socialists. But once they had done their duty to the Fatherland by joining the colors and voting war budgets, they set themselves to the task of keeping intact, in the midst of the storm, the foundations of their Socialist creed. Thus in the act of voting war supplies the Socialists in the Reichstag maintained some connection with their past

by registering a protest against a war of annexation, by demanding that in the midst of war the interests of the laboring classes must not be forgotten in the way of caring for soldiers' families and survivors, food prices, wages, and so on, and by serving notice, repeatedly, that after the war the workers of Germany would expect full recognition of their services to the Fatherland in the way of democratic reform, among other things by the reform of the iniquitous Prussian franchise.

Let us suppose now that a moment came when German prospects of victory were bright, and when Germany might broach the possibility of peace without loss of prestige. From whom would the first intimations of peace come? Obviously, from the Socialists. Self-interest would dictate that. The Socialists have confessed to their insufficient strength when it came to the prevention of war, but they have reasserted their fidelity to their basic principles and have labored to keep the record as consistent as might be under adverse circumstances. As we have said, they have been looking beyond the war to a process of Socialist reconstruction, when past weaknesses and inconsistencies will be forgotten or forgiven. It would obviously be a calamity for the future of the German Socialists if an authoritative voice for peace arose in Germany and it was not a Socialist voice. They had failed to prevent war. For their future existence they must be the pioneers of peace. It was a tactical opportunity which the party must seize; and this it has done in the *Vorwärts* manifesto which is virtually an *apologia* for the party. It restates what Socialists did to prevent war, their fidelity to such Socialist principles as could be maintained under the *force majeure* of the war fever, and their readiness once more to enter on the ways of friendship with their enemies. In other words, if we suppose Germany confident of victory, the *Vorwärts* manifesto would be easily explained. It would simply mean that, with peace in the air, the Socialists were eager to be the first to adopt the issue for their own.

But, as a matter of fact, the spirit of victory does not breathe in the manifesto. Had the Socialists said, "We are victorious, let us now be generous," the heavy hand of the censor would not have fallen on the *Vorwärts*. The Government could tolerate a debate on the question to annex or not to annex, once it is conceded that it was for Germany to decide whether to annex or not. The Socialists may wish to be generous, the Conservatives may clamor for the last ounce of flesh; that is merely academic discussion; the point is, we have won. Had the manifesto been edited in one or two places, the Government might have even welcomed it as a *ballon d'essai*, and waited for the Allies to speak. What the Government could not tolerate was a question like this:

> Must this terrible drama, which has no precedent in the history of the world, go on indefinitely?

Or statements like these:

> If the war is not to go on indefinitely until all the nations are completely exhausted . . .
>
> Upon Germany, which has successfully defended itself against superior forces, and which has frustrated the plan to bring it to starvation, rests the duty of taking the first steps towards peace.

This plainly is no pæan of victory, from the standpoint of Tirpitz, at least. It looks forward to an indefinite war, and to exhaustion. It evidently assumes that a successful defence against starvation and dismemberment is all Germany can hope for. It makes havoc of the standard argument that the unity and confidence of the German people must bring victory; for now it is shown that there is no such unanimity of confidence. Balancing those features of the manifesto which might indicate a belief in Germany's triumph against the very explicit phrases in which doubt and weariness are expressed, the result shows a state of mind in Germany quite different from what the Government would have it after the victories of the last two months. The *Vorwärts* manifesto is not an endeavor on the part of the Socialists to be first in announcing Germany's success. It is rather a confession of deadlock.

A NON-POLITICAL SECRETARY OF STATE.

President Wilson's decision to appoint Robert Lansing Secretary of State seems as natural as it is praiseworthy. Mr. Lansing's competence is unquestioned; he has the advantage of having all the threads of pending diplomatic negotiation already in his hand, so that there will be no break or pause in the policy of the Department; and the feeling is general that the new Secretary has earned his position fairly and will adorn it. His designation as acting Secretary was a convenient mode of bridging over the resignation of Mr. Bryan, at the same time that it gave the President opportunity to decide at leisure what was the best way of filling the vacancy permanently. Every President has to be, in the big matters, his own Secretary of State, and Mr. Wilson will undoubtedly continue to determine for himself the main features of our foreign policy; but he is to be congratulated upon having so able and so acceptable a coadjutor as Robert Lansing.

The appointment is plainly non-political. It is made even in the face of certain political objections that might be urged—that are, indeed, said to have been urged. With two Secretaries from New York already in the Cabinet, it might be thought politically inexpedient to name a third. The States are proverbially jealous for their "quota." Besides, Mr. Lansing will bring no purely political strength to the Administration. He has never been known as even a local party leader. It was doubtless with this fact in mind that some of the President's advisers besought him to look about and select some Democrat with large political influence, who was at the same time skilled in diplomacy, to take charge of the State Department. Perhaps Mr. Wilson found such a combination difficult to discover. Democrats of that description are not as thick as blackberries. At all events, the President fell back upon an appointment which has nothing to do with politics, in the party sense. In the higher sense, the selection of Mr. Lansing may prove to be the best kind of politics.

Thus in the third year of his Administration President Wilson is enabled to do what has been permitted to almost no President at the beginning of his term. The usual rule is well understood. Presidents-elect feel compelled to offer the State Department to some man powerful in the party, often to one who had himself been a formidable candidate for the Presidency. The Secretary of State is sometimes called the "Premier" of the Cabinet. His office comes to him as a sort of grand consolation prize. Yet even in recent years the practice has not been invariable. Hamilton Fish was, to be sure, a well-known Republican, but had not been a moulder of the destinies of his party even in his own State when Grant called him to the State Department, where he served so long and, on the whole, so satisfactorily. When President Hayes made Evarts Secretary of State it was personal ability, not political weight that was the deciding thing. Cleveland's choice of Gresham was, indeed, political, but it was a case of politics reversed, since Gresham had been a Republican.

The most striking instances, during the last generation, of non-political appointments to the Department of State have occurred under circumstances very like those of Mr.

Lansing's. They were, that is to say, *ad-interim* or mid-term appointments. In such cases, the President may feel at liberty to disregard politics and look chiefly to personal and professional attainments. This was partially true of President Arthur's selection of Frelinghuysen as Secretary of State, to succeed Blaine. Frelinghuysen had, indeed, been prominent in New Jersey politics, but at the time of his entering the Cabinet was at such an age, and so situated politically, as not to be able to do much to help Arthur to reëlection. In fact, he died almost immediately after the expiration of Arthur's term. Much more notable was President Harrison's summoning of John W. Foster to the Department in 1892—again to succeed Blaine. This was as nearly a strictly diplomatic appointment as ever had been made before the similar honor which has now come to Mr. Foster's son-in-law, Robert Lansing. John Hay's first appointment was made by McKinley, after the break-down of his political nominee, John Sherman, and the resignation of the makeshift, Day. In Hay's case it was certainly the diplomat who towered above the politician. His retention by Roosevelt even into his second term, and until Hay died, was a clear recognition of the value of special training and peculiar aptitudes in the conduct of the Department of State. John Hay, like Robert Lansing, did not carry many "votes" in his pocket, but he did a great deal to add to the prestige of the Presidents under whom he served.

GROWTH OF PROPERTY AND OF TAXES.

The United States Census report, issued a few days ago, on "Assessed Valuation of Property and Amounts and Rates of Levy," presents some very striking figures. What first catches the eye in the leading table is the tremendous increase, in the ten years from 1902 to 1912, in the total assessed valuation of all property subject to *ad-valorem* taxation; an increase throwing completely into the shade anything that was shown in earlier periods. The total assessed valuation in 1912 was (we use the nearest billion throughout) 69 billion dollars, as against 35 billion in 1902, an increase of very nearly 100 per cent. The same thing is true of the assessed valuation of real property and improvements subject to taxation, which advanced from 26 billion dollars to 52 billion. In both cases, to get a total which should be to that of 1912 as that of 1912 was to that of 1902, we have to go back to 1880, when the assessed valuation of all property and of real property and improvements, respectively, was 17 billion and 13 billion dollars. That is, it took twenty-two years to do the doubling, starting from 1880, whereas ten years sufficed, starting from 1902.

It is very much to be wished that the Census Bureau should devote more effort—and a corresponding space in its publications—to the analysis and discussion of phenomena of this kind. Considering the striking character of the figures we have been referring to, the comment made upon them in the introductory remarks is far from satisfying:

> There are many considerations which may be advanced in explanation of the sudden and unprecedented increase in the amount of the assessed valuation [from 1902 to 1912], the principal one being, undoubtedly, the actual increase in the value of real property throughout the country, the value of farm land alone having increased 118.1 per cent. from 1900 to 1910, while the value of all farm property, including buildings, implements and machinery, and domestic animals, but not including the value of crops, increased 100.5 per cent. during the same period. It is a safe assumption that the value of other property has increased at approximately the same or even a greater rate during this period, the smaller increase in the assessed valuation being accounted for by the fact that in only a part of the States is property assessed at the full value. In some States, notably Ohio, the increase is due in a large measure to a change in the basis of assessment from about one-third the actual value to the actual cash or sale value of such property.

This is on its face very inadequate—which is not saying that it is incorrect—as related to the increase from 1902 to 1912, taken by itself; and it fails altogether to look into the question of the "unprecedented" character of that increase. Even if it be granted that the 100 per cent. growth is to be looked upon almost entirely as a growth of actual value, and not as due in any great measure to changes in the basis of assessment, the question remains as to what happened in this respect in previous decades. Thus the decade 1880 to 1890 shows an increase of only 46 per cent. (from 13 to 19 billion dollars) in assessment of realty, or less than half the rate from 1902 to 1912; is that a fair reflection of the relative growth of actual money values in the two periods? Turning to a former census bulletin, dealing with estimated valuation of actual wealth, we find the value of realty in 1890 set down as 20 billion dollars, and in 1900 as nearly 36 billion, an increase not of 46 but of 78 per cent. And between 78 per cent. and 100 per cent. there is no startling difference. Moreover, if we were to allow for the fall in the purchasing power of money (a factor common to both periods, but far greater in 1902-1912 than in 1880-90) it is possible that the difference between the two periods in the rate of growth of the value of real property would be completely wiped out, or perhaps even put into the opposite scale.

Great as is the increase of assessed valuation for the country as a whole, the increase for some of the large geographical divisions is decidedly greater—the West South Central division and the Pacific division showing nearly 200 per cent. increase—while in some individual States the increase is, on the face of the figures, startling. This last is especially true of Kansas, whose assessed valuation, both for all property and for realty, increased by about 650 per cent. between 1902 and 1912—namely, from 363 million dollars to 2,747 million for the total, and from 242 to 1,798 million for realty. That this cannot be accounted for without a great change in the method of assessment, every one would take to be a matter of course; and in point of fact, in the statements relating to methods of assessments, etc., in the several States, we find that in 1908 "the basis of assessment was changed from about one-fifth to about four-fifths of the true value."

The per capita figures for assessed valuation show similar divergences; but in the tables of the per capita *levy* there is a much nearer approach to uniformity. The levy is the real thing—how much per head have the people been paying in the shape of *ad-valorem* property taxes? For the country as a whole, the per capita levy has been as follows (the 1870 figure being on a gold basis):

1860	1870	1880	1890	1902	1912
$3.00	$5.87	$6.26	$7.53	$9.22	$13.91

and the upward trend in the great geographical divisions, and in the separate States, parallels fairly well that shown by the whole country, except where reasons such as the effect of the war upon the Southern States, or the peculiar conditions of California in its earlier history, account for a marked difference. Thus the per capita property tax in Kansas in 1880, 1890, 1902, and 1912, was $5.00, $8.94, $10.14, and $16.55, respectively; a course which, it will be seen, presents no remarkable divergence in character from that of the figures for the whole country. As for these latter, the salient fact is that the average American in 1912 was turning over to his State and local governments, in the shape of property taxes, 50 per cent. more money than he was in 1902; and it seems pretty certain that something like that rate of increase has been maintained since 1912.

Foreign Correspondence

MR. BRYAN'S RESIGNATION—THE NEW ALLY—ZEPPELIN RAIDS.

By JAMES F. MUIRHEAD.

LONDON, June 11.

Under European conditions the resignation of an important Cabinet Minister at the very moment when a decision of the highest significance was pending, on the relations between his own country and another, would be ominous indeed; hence the perturbation with which the news of Mr. Bryan's letter to President Wilson was at first received here was natural enough. It was soon realized, however, that American conditions are by no means on all fours with those of Europe in such an emergency, and that Mr. Bryan's disappearance from official life does not really mean any serious division of forces in the face of the enemy. Mr. Bryan, by resigning, it is now believed here, has really strengthened the hands of President Wilson. The news will undoubtedly greatly flutter the dove-cotes of Berlin, where, it is understood, the belief in Mr. Bryan's ascendency over Mr. Wilson was accepted as a dogma. The stock of President Wilson is still steadily mounting in the British market, and this not because we expect to receive material assistance from him, but because we hold him to be more and more in the attitude of vindicating the best traditions of the great nation to which we feel ourselves most closely akin. We seem to see good evidence that the people of the United States are firmly and overwhelmingly behind their President.

Those of us who have resigned themselves to the belief that this great struggle *must* be carried on to the bitter end, realize that war is hell, just as much as do the most extreme of the academic pacifists; but we also realize that there are many circles in the inferno, and that the gap of relative evil between the highest and the lowest of these is certainly greater than that between a just war and a disgraceful peace. Those who see little moral difference between the sinking of the Lusitania and a fair fight between bodies of armed men, inasmuch as both are parts of the unspeakable horror of war, are in this matter less, rather than more, moral than those who clearly appreciate the difference. Their trouble is that a long-continued obsession by a contemplation of the blessings of peace has atrophied the tract of their moral consciousness not immediately concerned, and has rendered it unable to react to the stimulus of the rare but (alas!) still possible moment when the sagest and most righteous of men have to own that there is something still more precious than peace. They do not recognize the logic of fact. As M. Ostrogorski puts it: "Mieux vaut mourir en combattant que vivre en mourant."

The entrance of Italy into the war has been a great satisfaction to the British anti-military (or unmilitary) supporters of this war, because, after all necessary deductions, it is believed that her action was to a very large extent moral and idealistic. A striking symbol of the present unity of the Italian nation is the report from Rome that, during the National Fête celebrated there last Sunday, the Italian tri-color was hoisted over the Jesuit University, for the first time since the downfall of the Temporal Power forty-five years ago. The sympathetic coöperation of the Pope and Church (though not yet, perhaps, of the Cardinals) with the state, is of good augury for future developments in Italy.

The Zeppelins do not allow us to forget them. So far as I can make out, the general attitude is one of a kind of resigned annoyance. If Germany is to win in this war (which we hope is practically impossible), it does not seem to matter much whether her acts of wanton destruction are committed now or a little later. If we are victorious (which we hope is highly probable), the repeated Zeppelin raids will only swell the account against Germany. The item, xy, in our claim for damages (x Zeppelin raids at £y per visit $=£xy$) will simply be so much the larger. Up to the present moment the Zeppelins have slain about fifteen people in England, all non-combatants, and most of them women and children, while Flight-Lieutenant Warneford alone, by his feat of June 7, has permanently deprived the armies of H. I. M. the Kaiser of the services of twenty-eight fighting men. While we cannot confidently hope that the balance will continue to be so decidedly in our favor, we do not despair even of that; and if worse things befall us, we shall accept them as the fortunes of war.

It would be easy to go on writing indefinitely about the myriad organizations for woman's work in war time, but I must regard that part of my task as closed for the moment, and finish my references to feminine activity with a simple enumeration of a few of the cases where the ordinary citizen now personally encounters women or girls where he formerly saw men or boys.

The demand for women teachers has been very great, and many boys' schools (preparatory, grammar, etc.) are now almost wholly staffed by women. Proficiency in outdoor games is considered a strong recommendation. At least one head mistress of a private school has, to my knowledge, offered her services as an ordinary board school-teacher, in order to let a young man enlist. No one can pass through Victoria Station without marvelling at the beehive activity of the women's free buffet for soldiers on their way to or from the front. The special constable who turns out for night patrol duty may now quit his home side by side with his wife on her way to an all-night shift at the tea and coffee canteens in the arms factories of Woolwich and Enfield. Women "drummers" are making a distinct success by their tact, industry, keenness, and economy. We are now quite accustomed to buy our suburban railway tickets from, and have them clipped by, smart looking young women. The first station, however, to be entirely staffed by women is the Tube Station at Maida Vale—a choice made in all probability by a wholly unconscious humorist. The male traveller with luggage is here, and at the Grand Central terminus, exposed to serious clashes between his gallantry and his convenience. A few women tramway conductors have also made their appearance. The Athenæum was the first club to introduce waitresses into its sacred halls, but its example has been freely followed in less venerable institutions. Many hotels and restaurants have also replaced waiters by waitresses. The London authorities have not yet allowed any women to qualify as taxi-drivers, but women are now not infrequently seen in control of the business vans and automobiles of Whiteley's and other stores. My butcher now calls for orders in the form of a smart girl on a bicycle. Riding mistresses are busy preparing young officers for the mounted services. Hairdressing seems a natural enough field for feminine skill, and the hardy may even (I understand) expose themselves to the risks of a feminine razor. The number of women employed in filling cartridges, in making fuses, and in other departments of ammunition works is steadily growing. The papers contain many advertisements for girls to act as messengers, book-stall attendants, "office boys," and elevator attendants, and for women as gardeners and even as coachmen.

Since the above was written, President Wilson's second Lusitania note has been published. The general impression here is that never was the steel hand so well velveted; never was so long and so silky a rope uncoiled before the eyes of a potential suicide. If Germany lets herself be entangled in this noose, America's conscience will be clear. We find it rather hard to understand why the Mr. Bryan who swallowed the last note finds it impossible to digest this one. The brew seems as stiff, but no stiffer. Mr. Bryan must be an invincible doctrinaire.

GLEANINGS, FRENCH AND BELGIAN.

PARIS, June 12.

"Lean over, shut up, and follow!"

For the first time, you are going into the trenches. It is black night, and your feet catch in roots and on sticks and stones. Suddenly a fusee bursts in the sky, falling in red and white or green or blue lights, bringing out bushes and trees and distant hills. You do your best to lean over to the very ground, while machine guns begin crackling and balls whistle too near your head. You shut up and follow quick—very quick!

You get into a trench and keep leaning over and shutting up. And you listen. Night intensifies the least noise. You can distinguish the rolling of the provision trucks over beyond the enemy's lines; the rumbling of the ambulances picking up the wounded, railway metals dropped where the enemy is laying a track—and balls that pass too near overhead. And you perceive that there is a firing at regular intervals, and that there are balls fired irregularly. Every minute, from nightfall to morning, there is a German rifle fired in among the bursting of bombs and the hiss of shells in air. It is like the tick-tack of a clock going on for weeks and weeks.

In this endless siege war, in which the enemies work in trenches often not a hundred yards apart, the action of artillery, light and heavy, to prepare and accompany infantry attacks, is of prime importance. An advance of half a mile along a front of three miles is nowadays a famous victory. The battle of Arras, long in space and time, inaugurated at the beginning of May new tactics of the French army after eight months of this siege war. The intention is to blow down the enemy's trench defences by artillery fire, and then to attack by an infantry bound forward—and to keep the ground which is thus sure to be won at the start.

The whole front of this battle of Arras was nine miles, along which the French had more

than one thousand "firing mouths." On May 9, for the attack on Carency, a village in which the Germans had intrenched themselves formidably, the French artillery began at seven o'clock and kept up a showering fire of more than 20,000 shells for three hours. At ten, when it was thought the parapets of the enemy's trenches had crumbled sufficiently, the infantry leaped across the slope into the first line of German trenches, almost without loss. It was the winning of the second and third lines which was murderous. All the next day they were occupied in storming a ravine to the west of the village.

Carency itself still had its strong works, prepared through months of toil by the German invaders. The French commander began finally investing the village at one o'clock of the 11th, and at five the defenders, seeing their retreat cut off, surrendered. The next day the Germans abandoned Ablain, a neighboring hamlet, after setting fire to it. On May 13 the prisoners of war began their movement through the French lines towards their captivity. The morning was gray, with a fine drizzling rain; but French hearts were beating high. Along the Arras road a French general witnessed the filing off, at parade step, heads left, of Baden guards, Bavarian chasseurs, Saxon foot, with their colonel at the head.

On the same May 9 and the days after, the English line attacked to the north of Arras. They had not enough shells to do as the French did and prepare their infantry attack. "Our men went courageously forward to attack the trenches—and found the barbed wire defences untouched, while mitrailleuses well hidden swept our ranks." And that is why Lloyd George is preaching to British workmen that, without shot and shell, there is no salvation now.

These mitrailleuses have grown greatly in power and less in compass since the American Gatling invented something of the kind in 1862, during our fighting among ourselves. Two other Americans, Maxim and Hotchkiss, are chiefly responsible for the present form. The Belgian army still uses Hotchkiss guns; but the French for the most part have an improved and simplified model of their own. Whole and entire, with exchange piece, telemetre, carriage, and all, its weight is less than 265 pounds, the normal charge of a beast of burden. These guns sweep a distance from 500 to 1,600 yards. A French infantry regiment has three mitrailleuse companies or sections, with two guns for each; and each cavalry regiment has one section. A section has a lieutenant with his under-officer at its head, three brigadiers, and twenty soldiers, each with his own technical work to do. And for every infantry section there are nine horses or mules of burden and four draught horses. A cavalry section has for its service fourteen draught-horses and twenty-one saddle-horses.

The German service of such pieces is heavier and not nearly so manageable, as this new phase of the war may show. They use a heavy gun-carriage, which passes with difficulty where the draught horses rush forward. With their prodigality of men, they have for every section of six pieces four officers, thirteen under-officers, and sixty-four men, of whom eighteen are conductors; and these have twenty-six horses, with officers riding on four. Russians and English have similar detachments, and Belgians are particularly strong in this branch. So is Austria-Hungary—only the Servians have captured their mitrailleuses by dozens and turned them against their owners!

Whosoever shall write a true history of this world-encircling war must inform himself in this use of mitrailleuses and aeroplanes and automobile transports.

A Belgian officer explains what is going on at their end of the long battle line, now that this new phase of the war has begun: "For us the evil hour passed with the retreat from Antwerp, the first battles of the Yser, and the endless winter in rain and freezing mud. Since we have held out in such wretched conditions, we shall still hold out and without too much trouble. We are inured to war, and our army has been reconstituted, stronger and more confident than ever. Our troops are much superior to what they were at the beginning. We never lacked courage, but now we know all the tricks of the trade. Yes, we are old troopers, *vieux de la vieille.*

"Not only are the Germans excellent soldiers, but they are also incomparable teachers—and we hope and even we are sure we shall soon show them that their lessons have not been lost. They may be proud of their pupils when we start the campaign in Germany. For to Germany we must go—that is the dream, the aim, of all of us. We feel the need of a field of application for the knowledge we have acquired so dearly!"

Georges Batault, the Swiss neutral who was listening, observed that all these Belgians have now a very decided feeling of superiority over their adversary. They say the German troops of the spring of 1915 cannot be compared to those of August, 1914. The enemy gives signs of wear, however tenacious he may be and though he is still to be feared; but now that his most desperate efforts are always in vain, he is practically conquered.

"All the German attacks since the month of October have cost us dear, but they have been his ruin. Some of the fighting, in which the Germans were engaged in unfavorable positions, was a veritable butchery. It seems to me"—a Belgian sergeant was speaking—"that we should have revolted against our commanders if they had dared to send us so cruelly to our death. We should not have had confidence in chiefs who counted our lives so cheaply.

"Thank God that is not the way with us! That which gives the Belgian army its unity to-day is the feeling that, throughout this frightful war, we have always been considered from the first to the last as men—and not as cannon fodder. With us, it is not a blind people fighting for its Emperor; it is a king fighting with his people and for his people. We are all free men who fight for freedom. It is the nobility of our King that, by courage and greatness of soul, he is truly—the first of all the Belgians!"

As the under-officer spoke all the soldiers standing near bowed their heads gravely in approval.

Meanwhile some one is paying for a peace propaganda in Paris and through France. In an entrance to the subway where countless people pass, some one has thrown handbills addressed to French working women and demanding instant peace. Other such are left at porters' lodges or sent like shop prospectuses by mail. And it is not the French who are paying for it. "One can make war, but it takes two to make peace," says Senator Clemenceau in the name of France. S. D.

A French Poet of Yesterday

By STODDARD DEWEY.

It is scarcely necessary to explain Henri de Regnier to America, where he long ago gave university lectures and where, long ago, too, his principal poems were analyzed. For his poetic production lasted little longer than twenty years from his first fluttering attempts as a college boy in 1885; and his prose, which has since been published in considerable quantity, is not particularly likely to attract American readers. He was easily first of the poets of his time—and Rostand, who came after and sang to the people at large, is not, like Henri de Regnier, a poets' poet. His was the poetry of yesterday—of the time of dilettante lassitude and art for art's sake and life for the sake of living which went before the present rude awakening, just as Louis Quinze art went before the great Revolution.

No French poet is more decorative, more vocal of a life that Tanagra figurines and Florentine pages might have led in mythology quite modern around some Greek vase. His "free verses," in reality, are only lawless Alexandrines. No one can distinguish if echoes of English poets sound through his verses, but he fell early under the influence of Mallarmé, who was most comprehensible when speaking of the English he taught. Something he certainly owes to the writer of a single book of sonnets highly wrought—José Maria de Heredia, whose daughter Henri de Regnier was to marry. The poet himself is fond of his heredity from forefathers who were "brigadiers" or Chevaliers of the King when Watteau and Boucher and Fragonard painted.

In any case, his poetry is his own, no matter how many or what centuries end in him. Luckily, as is common in later days, he is conscious and articulate of his art—and he is worth hearing now that France and the nations have slipped a cog in the revolving wheel of time. We still have timely interest in such Poets of Yesterday.

Perhaps the most characteristic work of Henri de Regnier—highest in imaginative composition, kindliest in its far-away touch of emotion, most like the winding procession of a Greek vase, yet so unlike that of Keats—is a Twilight Scene in the "Poèmes anciens et romanesques," dating shortly before and after 1890. A literal and line-to-line translation, even of a considerable fragment, can hope for little more than to keep some of the quick rhythm of thought. Those who can appreciate the French text will not soon forget the haunting pulses of the original verse. It takes its motto from a line of Heredia: "Too soon the Night comes on; thy hope is vain":

Going toward the City where they sing upon the terraces
Under trees in flower-like brides' bouquets,
Going toward the City where the pave of public places
Is thrilling to the blue rose eve of dances tired and still,

There we met the maidens of the plain
Coming to the fountain,
Coming on out of breath,
And we passed by.

Living in their sad eyes was the sweetness of clear skies,
Birds of morning sang in their voices sweet,
Oh, so sweet with their eyes of the way that is good
And so tender with voices of doves that show the way!
Down they sat to see us, sadly and sage,
Their joined hands seemed keeping their hearts in a cage.

Dancing girls then crossed our paths
And we followed their paint and their laugh and tambourines—
To lose them in the evening dusk at the turning of the way.
. . . . . .

A few years later (1897), in a book of "Rustic and Divine Sports," the poet sang of his own peculiar art in an *odelette:*

A little reed's enough for me
To set a-tremble the high grass,
All the meadow,
Gentle willows,
And the brook a-singing, too;
A little reed's enough for me
To make the forest sing.

Passers-by have heard it
When the eve was deep in their thoughts,
Through silence or wind,
Clear-toned or lost,
Near or far away . . .
Passers-by, in their thoughts,
Shall listen in the deep of themselves,
Shall hear it again and shall hear
That still it sings on.

'Twas enough for me—
This little reed I cut
At the spring where Love came
On a day to look
At his face so grave
And a-weeping—
Enough to make passers-by weep
And grasses tremble and waters thrill;
And. with my breathing in a reed,
I made all the forest sing.

In the same volume was "The Vase," which also tells of art—and is chosen by the poet's admirers as his masterpiece. "The Strayed Reveller" of Matthew Arnold—whom Henri de Regnier must not know—stands in Circe's palace to get a somewhat like view with gods and bards who "see, below them, the earth and men":

My heavy hammer sounded in the light air,
I looked to river and orchard
And meadow and on to the wood
'Neath a sky bluer hour by hour,
And then rose and then purple in twilight;
Then I stood upright,
Stretching happy from the task of the hours,
Stiff from stooping from dawn to the twilight
Over the marble block, cutting its sides
To the vase still in the rough, which my heavy hammer,
In rhythm with morning clear and good daytime,
Struck rejoicing to sound in the light air.

The vase took birth in the fashioned stone.
Slender and pure it grew,
Unformed still in its slenderness,
While I waited,
Hands idle, disquiet,
Days together, turning my head
Left, right, to the lightest noise,
The curved side unpolished, not lifting my hammer.
The water
Ran in the fountain as if panting.
In the silence
I heard, one by one, 'mid the trees of the orchard,
Fruits falling from branch to branch;
I breathed the messenger fragrance
From far-away flowers on the wind;
Often
I believed some one spoke low
And, one day, as I dreamed—unsleeping—
I heard beyond meadows and river
Flutes singing. . . .
One day again,
'Twixt the leaves, ochre, and gold,
Of the wood I saw, with his legs yellow-haired,
A Faun dancing;
And I saw him, too, another time,
Come from the wood
Along the way, and sit on the bound
To catch a butterfly on one of his horns.

Once yet again
A Centaur crossed the river swimming.
Water dripped from his man's skin down on his furred hide:
He came a few steps among the reeds,
Scented the wind, neighed, and recrossed the water;
The morrow I saw the print of his hoofs
Marked in the grass. . . .
. . . . . .
—The orchard vast and the wood and the plain
Trembled to a noise that was strange, and the fountain
Ran quicker with a laugh in its waters;
—Three Nymphs upstanding by three reeds
Took hands and danced; from the wood
Red Fauns came in troops, and voices
Sang beyond the orchard trees
With flutes awake in the light air.
The ground reëchoed to the gallop of Centaurs;
They came from the depth of the sounding horizon,
And I saw seated at bounding croups,
Thyrsi atwist and bottle-bellied,
The halt bee-stung Satyrs,
Hairy-mouthed, crimson-lipped,
Kissing in measureless, frantic round,
Heavy hoof and light foot, hairy croups and tunics
Turning mazily around me who, gravely,
As they passed carved on the vase's swelling sides
The whirl of the forces of Life.
. . . . . .
My delirium died with the task that was done;
And at last, on its pedestal, from foot to handles,
The great Vase rose bare in the silence;
And, spirally carved on the living marble,
The scattered round to a feeble air
Bringing an echo of noise that was over
Turned with the goats and the Gods and nude women,
With Centaurs leaping and Fauns alert,
Silently rounding its surface—
While, alone evermore, in the sombre night
I cursed at the dawn and wept toward the shadow.

Surely, it is this which Matthew Arnold saw of his own art in the dreams of the youth who drank in the cool night-wind from the bowl of Circe:

These things, Ulysses,
The wise bards also
Behold and sing.
But oh, what labor,
O prince, what pain!
. . . . . .
But I, Ulysses,
Sitting on the warm steps,
Looking over the valley,
All day long have seen,
Without pain, without labor,
Sometimes a wild Mænad;
Sometimes a Faun with torches;
And sometimes, for a moment,
Passing through the dark stems
Flowing-robed—the beloved,
The desired, the divine,
Beloved Iacchus.

So the immortal Paganisms are prolonged; and very likely, when the present fever of Action and War sinks into convalescence, Dionysus and his art will reappear in English parks and French gardens. In one of his most profiting volumes, "The City of Waters," Henri de Regnier shows himself conscious of this eternal musical moan through the ages:

The wave sings no more in thy thousand fountains,
O Versailles, City of Waters, Garden of Kings!
—Enough that thy waters, unbroken, unfestive,
Rest in their order and tranquillity
Though nothing remains in their noble defeat
Of all that was show and enchantment of yore;—
Provided that weak, low, uncertain in shadow,
From the depths of the green grove she takes for her tomb,
I hear long and slowly the last of thy fountains
Weep o'er thee, City of Waters, Versailles!

"The Winged Sandal," which, in 1905, seems to have signed the close of the poet's inspiration, has a few parting verses of grave philosophy as well as art. It is his "welcome" to two young admirers who have climbed the hill to the poet's little house:

Both looked at me, surprised to see
One who was other in their thought's belief
Rise up to welcome them
In gray gown and bare head—
And not as in their thinking,
Purple-draped and crowned with gold.
. . . . . .
If some day,
Coming back whence now you go,
You should meet on this same way,
Between the barley and the wheat,
A troop of men
Climbing hither, palms in hand,
Tell them well
That, if you follow, you'll not see me
As to-day in my gown of wool,
Hole at shoulder, rent at arm,
But draped in haughty purple
Mayhap—and dead
And crowned with gold!

Book Notes and Byways

DOCTOR FAUSTUS AND FRIAR BACON.

EXAMPLES OF THE SUPERMAN THEN AND NOW.

By FELIX E. SCHELLING.

When London was new to the young Shakespeare, two plays of devil-lore and magic, "Doctor Faustus" and "Friar Bacon and Friar Bungay," were holding the public stage; one the work of the great Christopher Marlowe, the other that of the popular writer of stories, Robert Greene. Both were based on old-world stories, even then as familiar almost as the folk-lore of the countryside; and one, the story of Faustus, was destined to inspire the best poetic and musical genius of at least three modern nations. The German "Faustbuch," whatever the intermediate channel, was the source and inspiration of Marlowe's "Tragical History of Doctor Faustus," precisely as an old English chapbook, "The History of Friar Bacon and Friar Bungay," was the original of Robert Greene's comedy of that title. One play was written in rivalry with the other, the "white magic" of Friar Bacon answering the "black magic" of Faustus; and both have this in common, that each concerns the life, the art, and the fate of one whose ambition it was to transcend and dominate his fellowmen in the brief world in which he lived, and that this ambition led him to pawn his soul to the Prince of Evil thereby to attain that unhallowed end.

There is no need to repeat the familiar story of Doctor Faustus, "his damnable life and deserved death," as the title of the old English "Faust Book" has it, his conjuring of the devil, his deadly compact sealed with blood, his throes and agonies, as the spirits of good and evil wrestle in his heart for the possession of his soul. This is not the masterwork of cosmopolitan Goethe, who raised the old legend of mediæval deviltry to the fourth dimensions of modern speculative philosophy and, after bringing the gins and snares of the cleverest of devils to an overthrow of the virtue of one poor little maiden, transcends time, fate, and eternity in his stupendous second part to the outfacing of God as well as to the outwitting of the devil. More real, more pathetic—dare we say more dramatically effective?—is Marlowe's broken torso of a complete statue, with its cheap mediæval *diablerie* and its simple, poignant scenes of the agony of an average human soul in straits to pay the penalty of his own folly.

Faustus has pledged his soul, and to what end? That he may box the ears of the Pope in "his Holiness' privy chamber" and outwit a jockey in the sale of a horse! To such ashes turn the fruits of Sodom on the lips of the sinner whether of to-day or of yesterday. Verily the old tragedy belonged to an age of greater faith than ours, an age—dare we call it of deeper superstition? There is a curious old anecdote extant of a contemporary performance of Marlowe's "Faustus," in the provinces somewhere apparently, and with the limited scratch company of actors that trapesed out of London in time of plague and "carried their fardels a pick-a-back," as the old phrase goes. They had reached the scene in which the Seven Deadly Sins file by in order before Faustus and Mephistopheles, each discoursing on the quality of his peculiar wickedness, and the stage direction—not designated in the old quartos—called for a dance of these deadly visitors. As they were whirling about without the magic circle which Faustus had drawn about him with his sword for his protection, he and his fellow actor of Mephistopheles looked, and behold there were, not seven devils, but eight. Now the company was all accounted for, for the actors were few in number and the parts were doubled and doled out even threefold. So the actors of Faustus and Mephistopheles as well—sadly forgetting their parts—fell on their knees and cried upon God to forgive them their sins, for there was a real devil among them. And players and auditors stampeded from the stricken place. The thing is ludicrous, but it represents an honest faith in the presence of evil among men, the deterrent, we may well believe, of many a robust sinner, possibly a deterrent sadly to seek in this our day.

"The History of Friar Bacon and Friar Bungay" is less universally known. It has been a moot question, even among scholars, as to whether there was ever a Johann Faust; or, if there were, whether he was in any wise the travelling scholar and tamperer with forbidden studies that the figure of Faustus represents. No such doubt hangs about Friar Bacon, who is referable to no less a person than Roger Bacon, the famous scholar of thirteenth-century Oxford. Bacon, it will be remembered, was a man of some substance and station in his time, however his family had become impoverished in the feudal wars of King Henry III. Bacon gave such wealth as he had, his health, his life, to scientific study and investigation, and this in an age when the theology of scholasticism had engulfed nearly all learning in its thirsty and barren quicksands. Seeking peace in the Franciscan brotherhood in despair of his long struggle to acquire learning, Bacon was forbidden to write on pain of forfeiture and penance; and only the intervention of the Pope made possible the publication of the admirable "Opus Majus" and its successors, wherein we find Roger Bacon anticipating his namesake Francis by four hundred years in a daring attempt to reform the crude philosophizing processes of his time, to open up new sources of knowledge, and to point forward the way to the enfranchisement of learning. In the comprehensive review which Roger Bacon gave the sciences of his day, grammar, philology, textual criticism, music, mathematics, nothing is forgotten, and he passes on to treat of geography, chronology, hydropathy, astrology, and optics (this last his special study), with a suggestion of improvement for each and a recognition for all in his comprehensive scheme. It is not to be wondered that, in an ignorant age, a haze of popular myth should soon have gathered about so remarkable a genius. Later times assigned to Bacon the discovery of gunpowder, the invention of the telescope and the *camera obscura;* and other inventions were his. As to his own age, tradition made him a conjurer whose dealings were with the powers of evil whereby he made many "wonderful inventions of art." Among them were "instruments of navigation without man to row in them, and they sayle," says the narrative of these wonders, "far more swiftly than if they were full of men." Also chariots that shall move with an unspeakable force without any living creature to steer them; flying engines, and an instrument of three fingers high "by which a man may rid himself and others of imprisonment, and whereby a man may virtually draw unto him a thousand men, will they nill they." But the greatest of Bacon's mechanical ingenuities, according to popular tradition, was the creation of a brazen head which, the incantations complete, was to have had the power of speech. To the consummation of this great work Bacon and his assistant adept in magic, Friar Bungay, labored long, and at last, by the conjuration of the devil and their compelling power upon him, their task was finished save for the crowning achievement, the utterance of human speech. It was then that their familiar spirit reluctantly warned them that "with the continual fume of the six hotest simples (the brazen head) should have motion and in one month's space speak; the time of the month or day he knew not; also he told them that if they heard it not before it had done speaking all their labor should be lost."

Now Faustus, "glutted with conceit" (that is, in the old tongue, busied with the imaginative construction of air castles), and in the ecstasy of his dreams of power, demanded of his familiar, supernatural attendants many selfish things: "gold fetched from the Indies," "orient pearl," "pleasant fruits and princely delicates"; for his was the ambition (of the overman) for world power, a world-wide commerce to bring him the products of strange lands to the end that he might have dominion and the means of luxurious living. There was, however, among his behests to his familiar, one, which, if not less selfish, was at least less apparently personal, and that was his desire:

> I'll have them wall all Germany with brass.

So, too, Friar Bacon's avowed purpose in the contriving of the brazen head was

> . . . by the help of devils and ghastly fiends,
> . . e'er many years or days be past,
> To compass England with a wall of brass.

The assumption of superiority to one's fellowman involves inevitably a barrier against his resentment of that assumption. And in conceiving of that barrier as compacted of metal and of that metal as brass our ancient storytellers may be said verily to have builded better than they knew. Of the project of Faustus we hear no more in the old story. It fell through before more immediate and trivial things; having been once foretold, it was left, if I may so put it, in the forward and abysm of time, for the future to bring forth. Unhappily, too, for the English project of Friar Bacon and Friar Bungay, the two friars at last, worn out with constant watching for the promised moment when the miraculous brazen head was at length to speak, entrusted their weighty charge to a foolish servant named Miles. Miles was to watch while they slept and wake them at the supreme moment. Let the old book tell the story:

> [Now] after some noyse the head spake these two words, TIME IS. Miles, hearing it to speake no more, thought his master would be angry if hee waked him for that, and therefore he let them both sleepe, and began to mocke the head in this manner: "Thou brazen-faced head, hath my master tooke all these paines about thee, and now dost thou requite him with two words, TIME IS? If thou canst speake no wiser, thou shal sleepe till doomes day for me: TIME IS!" . . . After halfe an houre had passed, the head did speake againe, two words, which were these, TIME WAS. Miles respected these words as little as he did the former, and would not wake them, but still scoffed at the brazen head, that it had learned no better words, and have such a tutor as his master. . . . Thus Miles talked and sung till an-

other halfe-houre was gone: then the brazen head spake again these words, TIME IS PAST; and therewith fell downe, and presentiy followed a terrible noyse, with strange flashes of fire, so that Miles was halfe dead with feare. At this noyse the two Fryers awaked, and wondred to see the whole roome so full of smoake; but that being vanished, they might perceive the brazen head broken and lying on the ground. . . . "Out on thee, villaine!" said Fryer Bacon; "thou hast undone us both; hadst thou but called us when it dld speake, all England had been walled round about with brasse, to its glory and our eternal fames."

In these two old tales, as the dramatists, Marlowe and Greene, treated them, there are several passages remarkably pertinent, if not prophetic, of the straits in which the world lies struggling to-day. What a superlative overman is Faustus and how admirably he voices the Hohenzollern ambition—if we are to believe that the Hohenzollerns have ever been ambitious—for world empire:

O, what a world of profit and delight
Of power of honor, of omnipotence
Is promised to the studious artizan!
All things that move between the quiet poles
Shall be at my command: emperors and kings
Are but obeyed in their several provinces
Nor can they raise the wind, nor rend the clouds;
But his dominion that exceeds in this,
Stretcheth as far as doth the mind of man.

Again:

Shall I make spirits fetch me what I please
Resolve me of all ambiguities
Perform what desperate enterprize I will?
. . . . . .
I'll have them read me strange philosophy
[Could the Nietzschean philosophy be better designated with its novel ethical code?]
And tell the secrets of all foreign kings
[The admirable German system of espionage in foreign countries has been unequalled in the history of the world];
I'll have them wall all Germany with brass
[It may be doubted if a nation has ever been better prepared for war than the Germany of to-day],
I'll levy soldiers with the coin they bring
And men in armor shall appear.
[Germany's military system is based on wide commerce and subtle finance]
And reign sole king in all our provinces.
[Prussian political preëminence.]

Yea stranger engines for the brunt of war,
Than was the fiery keel of Antwerp's bridge,
I'll make my servile spirits to invent.
[The supremacy of the Krupp gun is foretold.]
I'll be great emperor of the world
And make a bridge thorough the moving air
To pass the ocean with a band of men
[Even the promised Zeppelin invasion of England is here foretold and in what follows the ever-present help of the Almighty];
Having thee [the God of the overman] ever to attend on me
To give me whatsoever I should ask
To tell me whatsoever I demand
To slay my enemies and aid my friends
And always be obedient to my will.

Friar Bacon was less the overman. In the play, it is true, he is victorious in a match at magic with one Vandermast, a rival in his art. Vandermast conjures Hercules to appear in person before the assembled court; but Friar Bacon constrains Hercules by his superior power to carry Vandermast home on his back to Vandermast's native Germany. My powers of vaticination do not enable me to figure forth the meaning of this. Perhaps it has to do with commercial jealousy, or English objection to German patent medicines in England. It is notable that Bacon is a humane magician practicing white magic for the welfare of mankind (a clear allusion to the white man's burden) and, when at last his meddling with forbidden things causes evil and his "glass prospective worketh many woes," he abjures his art and "pyromantic spells," and so cheats the devil. None the less in the days when he too was "possessed" Bacon leaves us in no doubt of the precise nature of his political ambition.

I have contrived and framed a head of brass
. . . . . .
And I will strengthen England by my skill
That if ten Cæsars lived and reigned in Rome [here read Berlin]
With all the legions Europe doth contain
They should not touch a grass of English ground.

And now let us leave these old wives' tales and curious parallels of a forgotten lore. I should not have called them forth were it not that, try as we may to turn our backs on this burning world of ours, we cannot take our fascinated and wearied eyes off its intolerable glare. As Americans it is not for us to take sides, for the blood of most of the combatants is flowing in our veins and we are like children distraught in the discord of their own parents. The attitude of the unthinking patriot who cries "My country, right or wrong," is an attitude comprehensible and even commendable in its crude way. The project of conquest to the end that all men shall be of one type, is a thought abhorrent to any liberal mind. He is a strong idealist who can find in broken treaties, desecrated colleges and churches, and the sufferings of thousands of innocent women and children any trace of the glory or the glamour of war. And he is an unhappy reactionary who does not deplore the mediævalism that makes the ambition of one man, or of any group of men, the absolute arbiter of the lives and deaths of thousands of his fellows. One of the saddest things in connection with this war is the failure, in this material age, of the old generosity of a magnanimous foe. Worse than the paralysis of the ordinary activities of life, the destruction of property, worse than the carnage itself, is the envy, hatred, and all uncharitableness in which this war was begotten, and the malice and barbarity with which it has been waged. *Væ victis;* but no less is there everlasting woe to the victor, be he who he may, whose iron heel has trod out the light of civilization, when all is said, only too feebly aglimmer in this world.

The modern overman is a disappointment as we compare him with Faustus, with Prometheus, with Machiavelli in his theories, and with the practices of the Cæsars, Napoleons, and some of the Popes. These devotees of might as the god over right were honestly consistent, treading with ruthless heel on guilt and innocence alike. Never did one of them look backward or downward at the bleeding forms which their victorious tread had marred from the likeness of men; their pitiless eyes were ever forward for new foes or upward in adoration of the terrible god of carnage that led them, whether his name was Moloch, Ares, Mars, or Thor. Our modern overlords are weak in the knees, unstable in faith of their own gods, explanatory in printed books and documented excuses, concerned about the opinion of the brute multitude that happens as yet to be out of the reach of their guns. Marlowe's Faustus, having had his will, took his medicine of damnation like a man; Goethe's Faust contrived by the sinuosities of metaphysics and the admirable quality of his Welt Kultur to have both his will in this world and his salvation in the next. Can it be that our modern evangelists of a higher civilization at the cannon's mouth are not really overmen at all, but only of our own paltry stature, masquerading in the regalia and the pomp of the old heroes of Walhalla?

Correspondence.

THOSE TERRIBLE ENGLISH.

To the Editor of The Nation:

Sir: The people of the United States having perhaps by this time become conscious that their country is not a British colony, I venture to ask whether it has not occurred to some of them that the sinking of the Lusitania was regarded with complaisance if not actual joy by the English naval authorities. It would have been so easy to protect her—a torpedo boat or two, or even an armed cruiser. And then splendid chance of drawing America into the conflict!

Lest you think this suggestion a monstrous one, I beg you to reflect upon these remarks of Professor Cramb:

"Do we imagine that the other Powers of the Continent see England exactly as England sees itself? England! the successful burglar, who, an immense fortune amassed, has retired from business, and *having broken every law, human and divine,* violated every instinct of honor and fidelity on every sea and on every continent, desires now the protection of the police! . . . So long as England, the great robber state, retains her booty, the spoils of a world, what right has she to expect peace from the nations?"

And Professor Cramb was an Englishman: The italics are my own. Jacques Mayer.

Munich, May 30.

"MAIS ICI . . ."

To the Editor of The Nation:

Sir: In the Boston *Transcript* of May 15 there appeared some fragmentary verses in French "found scribbled on a blood-stained scrap of paper in a dead soldier's hand" in a trench, and left unfinished. These few lines seemed to me so genuine, so good, that I attempted to render them into English. Here they are:

BUT HERE . . .

A shrapnel struck me with a mortal blow
And in the mud I lie, awaiting death.
Oh, I had dreamed to breathe my dying breath
In a more beauteous way, but fate not so.
In a mad charge beneath the sun's glad rays
And filled with glory I'd have liked to fall,
My blood tinging with red my soldier's pall,
My heart with wind of victory ablaze.
My casque and cuirass would have been my shroud.
The rush of horses my funereal dirge,
But here . . .

"Mais ici . . ." then hand and heart failed and the unnamed poet-soldier died.

Though much is naturally lost in the translation, let me point out that the spirit of these lines is exactly that of the most popular literary hero of modern France, Rostand's Cyrano de Bergerac, who, in Act 5, Scene 6, says:

"D'un coup d'épée,
Frappé par un héros, tomber la pointe au cœur!" . . .
—Oui, je disais cela! . . . Le destin est railleur!
. . .

Is it that Rostand embodied in his Cyrano so much of the real Frenchman's heroic idealism, or that the obscure French soldier dying in the muddy trench had some vague reminiscences of his "Cyrano"? And is it not a thousand pities that one who could, with such touching simplicity, voice what must be the feeling of thousands, should, like

his English brother Brooke, perish as cannon-fodder?

RUDOLPH ALTROCCHI.

Cambridge, Mass., June 3.

THE FALSE DAWN IN EUROPE.

TO THE EDITOR OF THE NATION:

SIR: A naïve optimism concerning world politics obsesses us. Since last August we have heard many high promises for the future from the belligerents: this was to be the war that would end war, give a check to militarism, and lift from the peoples the burden of armaments. A new international order was to arise out of civilization's wreck. Many sanguine Americans have accepted these handsome promises at full face value, apparently, and have looked forward to a purged and pacific Europe. There are not lacking prophets in this country who talk largely of a Universal League of Peace, and a Concert of the Powers, and an International Police Force.

Of such stuff are dreams! It is time we turned aside from beguiling mirages and faced the facts with a candid and, if need be, a cynical eye. It is time we contrasted fair words with deeds. Has either side during these nine months respected any international convention or law when it conflicted with one of its own military projects? Has a single neutral or belligerent right been safe unless defended by force or threat of force? Have terms of peace been hinted at in any Chancellery which promise the healing of old sores or abstinence from the inflicting of new? Is there anything in the temper of either statesmen or public opinions in Europe which foreshadows a settlement wrought in a spirit of forbearance and conciliation rather than in a spirit of self-aggrandizement and revenge? Without qualification, no. The drift of affairs is plain; only an unreasoning partisanship or a fatuous optimism can obscure it.

The actual issue of the conflict does not matter. Neither antagonist can be annihilated, although a decisive defeat is within bounds of possibility. Imagine a battered and exhausted Germany forced to accept the Allies' terms. The text of these terms will be the history of the next half-century. If dictated in good-will and generosity they would form a constitution for world organization. Germany would be placed back within her borders. She would be made to indemnify Belgium, and compelled to sign a new and more definite guarantee of Belgian neutrality. Then she would be invited into a Concert of Europe. But she would not be humiliated or despoiled. The Allies would treat her as a wise father treats a headstrong child who needs to be shown the folly of depredations and fisticuffs. Such a peace might endure.

Precisely such a peace, unless every sign fails, will not be made. The terms, by whichever side imposed, will be as harsh as can be secured. A beaten Germany will be stripped of her colonies. Alsace-Lorraine will be used once more as an international football and snatched from one hand to another without regard to the wishes—now unknown—of the inhabitants. Austria will be left to smart from the loss of a number of provinces. Germany will be compelled to pay a "crushing" indemnity—as futile an instrument for crushing as the indemnity imposed on France after 1870. And all this to what ultimate end? That Germany arm afresh. That Russia continue to marshal and drill her millions. That England seek to perpetuate her world-dominant navy. That Europe remain an armed camp.

Many Americans shrink from so pessimistic a forecast. The greater will be their disappointment in the event! But if, wrapped in a mist of illusory hopes, we cannot bear to contemplate an evil outcome, we should at least understand that just this evil outcome is anticipated by some of the better minds in the Old World. In the March issue of *War and Peace*, an outspoken and able English periodical, this statement is found:

> We started upon the war fully persuaded that its object was to put an end to militarism in Europe, to build up a system of European governments based upon the coöperation of the governed, to establish a society of nations rooted in real law. Any one who cares to watch the development of opinion during six months will see that day by day this ideal has been steadily undermined; writers and public men who first advocated it we now find expressing the purest Prussianism. . . .
>
> Such matters as the claims of Russia at the end of the war, her presence in Constantinople, her control of the Dardanelles, her annexation of Austrian provinces, her failure to give any evidence of the reality of the Liberalization that we had all hoped (it is since the war that the Russification of Finland has been proceeded with, trade union leaders arrested, Bourtseff sent to Siberia, and so forth), the growing likelihood that France will adopt a policy of vengeance in Alsace, the steps that Japan has already taken to establish almost a suzerainty over China, the demands America will undoubtedly make for a greater internationalization of the working of sea power—these and a score of like questions we know nothing about, our public opinion is absolutely incapable of dealing with them. We actually boast that "the nation is of one mind" on all this. But to say of fifty million people on such questions as these that they are of one mind is to say that they are mindless. And in the end our destinies in these and other matters will be settled by a dozen diplomats acting in secret; the future of millions, the issues of civilization for a generation or two, will either be settled over the heads of those concerned as much as though they were cattle upon a farm, or by a wave of popular feeling, provoked fortuitously by some momentarily dramatic incident.

A permanent peace in Europe cannot be wrought by the sword. So long as the Allies seek, as at present, to extort as much from their enemies and cajole as much from each other as possible, all talk of a Concert or a League is merest moonshine. National self-interest is not a strong enough cement to bind together Russia, England, and France for long. And a Concert of Europe which left an armed Germany and Austria outside its pale would be a farce. There can be no happy family if two big brothers are outlawed.

It is difficult, moreover, to see how Germany could be brought into an entente with her opponents. We know clearly enough on what conditions she would insist. Even though in the dust she would demand two assurances: an effective guarantee that she would not be attacked by Russia, and an effective guarantee from England that the seas be neutralized and capture of private property at sea forever be abolished. Public opinion in Germany sounds no ambiguous note. To the accomplishment of these two objects the Teutons have consecrated themselves almost to the last unit. However much more they may desire, they never will be satisfied with less.

This determination will dictate the diplomacy of Germany's statesmen at the settlement. With England she will be implacable. We have heard within a few weeks assurances from high German authorities that she would gladly withdraw from Belgium were England already dealt with—but not otherwise. Belgium as a German province would be a political and economic liability. But Antwerp is a trump in any future game with England. And should the fortunes of war make Germany a partial master of the situation, Antwerp will be retained.

In a word, it will be a *military* settlement. Ethical considerations will be subordinated and even economic interests sacrificed to strategy. Naval bases, coaling stations, fortresses, railway centres—these will be the stakes asked and bargained for. Each nation will play for position in the armed truce which is to follow. It has been well said that this is a "war of mutual fears." Fear, which precipitated the collapse, will write the terms of peace.

All historical prediction is contingent. But unless we love delusion we must face frankly the possibility of a worse Europe rather than a better. This conflict has ruptured a thousand ties of friendship and good-will, and aroused strong and savage passions. Why should any one expect good out of evil—international figs from national thistles? We have been misled by outbursts of energy in single countries into generalizing about Europe as a whole. Any one nation, or indeed each of them, may experience a literary renaissance or a political liberalization after the war. But it does not follow that each national culture will not be embittered or that Europe will not be riven by new hatreds.

World politics distinctly has retrograded. "War," said Disraeli, "is never a solution, it is an aggravation." Only strife is bred from strife. Peace can be prepared for only in times of peace.

ENGLISH IN COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 22, p. 431, you refer, in a brief editorial paragraph, to the measure recently adopted by the Harvard faculty for the, or a, solution of the English problem. Your words are:

> "A standing faculty committee is to be appointed, and 'instructors in all courses will be urged to send to the committee any examination book, thesis, or other piece of work which has demonstrated the writer's inability to express his thought.' The committee will thereupon prescribe additional work in English for the delinquent students."

So far as I can judge the new Harvard plan from the above meagre outline, I venture to say that it is at once unjust and unwise. Perhaps the philosopher will say that the unjust is always unwise and the unwise always unjust. Still, even according to that view, we may distinguish injustice and unwisdom as separate manifestations of one and the same radical evil.

First, for the injustice. The Harvard faculty of English, like its compeers throughout the country, is already worked to death. Now, after it has done its best in the line of personal conferences, blue pencillings, rewriting of themes, etc., it is to be required to do the work all over in a quasi-supplementary course. The department, having already failed, not through its own fault, but through the thick-headedness of the student, is to be required to "try it again," perhaps to keep

on trying. In all this there is fine irony, which doubtless the reader will detect.

Worse, much worse, however, is the unwisdom of the proposed method. For that method—in fact, every method at present employed for the teaching of English composition in school and in college—is based upon a fatal misconception, namely, that by selecting a few teachers you may throw upon them the whole responsibility for correct normal English expression. The misconception is harmful in two directions: it restricts the work instead of making it universal; in the next place it begets and encourages in the student mind the belief that good English is of use only in the English room, but does not count outside.

Until this misconception is eradicated and a true working principle adopted and enforced, there will be the same tiresome waste of time and effort, the same pitiful sloppy sentences and uncouth diction, whether the writer be in Public School X or Harvard X.

The only true and rational principle is this: Good writing is the business of *every* teacher, instructor, professor. It is his duty to require his students to write adequately in the subject which he teaches, to make them feel that the correct use of words, the writing of clear sentences, is of the very essence of that subject.

For example, a professor of chemistry once said to me: "I'm deadly tired of reading papers that misspell *gass*." To this I answered briefly: "Why pass the papers? Put negatively, why not *condition* them? Why not post a list of the more usual chemical terms and announce that those terms at least must be spelled and used correctly under peril of failure?" My advice seemed to him preposterous; he was professor of chemistry, not of English; his sole concern was with H_2 O_2, NO_5, and the like. And the professor of physical geography complained that his students, after they had, through much toil and tribulation, learned to speak and write of a *crater*, proceeded to discourse of a *strater!*

Every department employs terms peculiar to itself, yet every department is equally concerned in the unity and clearness of sentences. Is the English department the only one qualified to teach unity and clearness? Apparently it is, if I understand the Harvard plan and bear in mind many ludicrous and many painful experiences at Cornell. Let me cite only one. Ten or twelve years ago I had, in my most advanced class, a young woman who was an uncommonly clever writer and thinker. Her expression was, in truth, faultless. After getting the first degree, she became a graduate student, and in three years was Ph.D. Her graduate study was technical. The professor in charge, knowing my strong personal interest in her, let me read her doctoral thesis. I was overwhelmed. The substance was doubtless scientific enough, but in place of lucidity, ease, direct force, all was what I venture to call "technical mush." Yet the professor is a man of rare literary gifts, clear, witty, even brilliant, a man whose company is a pleasurable tonic.

My readers may draw their own inferences; I merely throw out a suggestion in the form of a question: Why this cumbersome plan of a faculty committee to which a department, or an instructor, say in history, shall appeal for a decree prescribing *additional work* in English? Rather, so it seems to me, the instructor should reject the paper on his own responsibility and require rewriting. Thus each department would sweep its own doorstep.

LIGHT UPON THE WIND.

To the Editor of The Nation:

Sir: In your issue of February 25 P. E. M. has this to say of Tennyson's poetry: "Once upon a time there occurred to me the pretty thought, which I no doubt printed somewhere, that Tennyson's world was peculiarly characterized by his use of the word 'wind.'" This is supported, he thinks, by the references to the word in the new Tennyson *Concordance*, in which he finds "some three columns of quotations listed there from the Poems, with about half a column from the Dramas." But is this new doctrine of wind justified of itself?

It will be evident, I think, that only by comparison of one poet with another can we arrive at a true evaluation in such a matter. Comparison, too, is easily possible with some of the more important poets. Tennyson uses the word *wind* 237 times in poems and dramas. We naturally do not expect to find a considerable number of references in the older poets, since theirs was not so largely poetry of the external world. Yet even Shakespeare uses the word 217 times. The natural comparison, however, is with Wordsworth and Shelley, both mentioned in a general way by P. E. M. In Wordsworth there are 180 uses of the word *wind*, or 76 per cent. as many as in Tennyson. If we count compounds, as west-wind, of which none are so written in Tennyson, the number is 185, or 78 per cent. But Wordsworth wrote a smaller body of verse than Tennyson, and any exact comparison should take this into account. This may be done in a fairly accurate way, since both poets are printed in the same type in the Macmillan edition, the old "Globe." The volume of Tennyson contains 878 pages of verse, that of Wordsworth 796. From the former we must subtract some ten pages of notes or title-pages, and from the latter some twenty pages of prose introductions. This leaves 868 pages for Tennyson, and 776 pages for Wordsworth, or 89 per cent. of the former. If, therefore, Wordsworth had written as much verse as Tennyson, and had used the word *wind* as often in proportion as in his present lines, he would have used it 207 times, or within 12 per cent. as many times as Tennyson. It is a question whether 12 per cent. more uses of a single word, as *wind*, can constitute a poetic "world."

But a more striking comparison may be made with Shelley. The Shelley *Concordance* shows 201 examples of lines with the word *wind*, or 89 per cent. as many as in Tennyson. If we add compounds like *wind-built*, as we should, the number is 216, or 91 per cent. But Shelley wrote a much smaller body of poetry than Tennyson. In the "Globe" Shelley there are 684 pages from the first poem to the Notes, with full sixty pages of introductions and notes by Shelley himself or Mrs. Shelley. This leaves 624 pages of verse, or 72 per cent. of Tennyson's. If, therefore, Shelley had written as much verse as Tennyson, and had used *wind* as frequently in proportion as in the verse which he wrote, he would have used the word 300 times, or 26 per cent. oftener than Tennyson. In other words, granting that he did not confine his use of *wind* to certain periods of his poetic life, Shelley did use the word 26 per cent. oftener than Tennyson in the same body of poetry. In proportion to his verse Shelley is, far more than Tennyson, a poet of the "wind" world. It might be contended, perhaps, that Tennyson used the word *wind* in different senses or in different relations from those of other poets, but not more frequently than Shelley, or much more frequently than Shakespeare or Wordsworth.

More important than this however, is the interpretation of Tennyson's expression "O light upon the wind" ("Passing of Arthur," line 46), in which P. E. M. is almost certainly in error, as is the Baker *Concordance*, in placing the quotation under *light*, the noun. The careful punctuation of Rolfe in the Cambridge edition (1898), "O, light upon the wind," must be correct, at least, in showing that the address is not to *light*, but to *Gawain*. "Light upon the wind" modifies Gawain, and refers to his coming as a ghost "blown upon a wandering wind," or possibly relates to voice, a reference which would not materially alter the meaning. The former seems to have been understood by Sir Bedivere, who says a little further on:

> Light was Gawain in life, and light in death
> Was Gawain, for the ghost is as the man.

In either case the word *light* is not the noun, and so far as this passage is concerned Tennyson's world cannot be "the land of the 'light upon the wind.'"

Notes from the Capital

AN EX-SECRETARY OF THE TREASURY.

Every crisis in a country's history brings its own problems. The threat of a breach with Germany raised in every one's mind the question of the sufficiency of our defensive armament on land and sea. The approach of the war with Spain in 1898, however, even with the enemy in possession of an important base within a stone's throw of our coast, aroused not nearly so much apprehension about our forts or munitions or available men, as about our ability to finance a serious struggle without temporarily dropping to a paper or at least a silver basis. At the psychological moment, Secretary Gage advertised a bond issue of $200,000,000, insisting, against the judgment of some of his Cabinet colleagues, that the loan should be floated by popular subscription; and, though the interest rate offered was the lowest then known, more than half the amount of the loan was subscribed in sums of $500 and less, while the total subscriptions amounted to nearly a billion and a half of dollars, or seven times as much as the Secretary had called for. Of course, the currency bogeys melted at once into thin air, and the moral effect produced all over the world by this bit of strategy would be hard to describe. The author of it now lives in retirement in southern California, but comes from time to time to Washington, where the recent tension of relations with Germany has revived the memory of his master-stroke.

It was quite in keeping with his general attitude towards himself and his work that Mr. Gage should have declined a gratulatory dinner tendered him by his Chicago friends on the announcement of his having been ap-

pointed Secretary of the Treasury—not because he was unappreciative of their courtesy, but because he felt that their testimony to his qualifications would have more value after his pubic service had ended than before it had begun. Life had taught him this. He had earned his own living ever since his schoolboy days; and when, at nineteen, he quitted his old home in central New York to seek his fortune in the West, he invaded Chicago with only a few dollars in his pocket and not a single friend who could help him to a start. Having once worked for a while in a small country bank and liked it, he sought employment in the banks of Chicago; but, as it became plain that nobody wanted him, he took a iob in a lumber-yard, and was highly delighted when his apprenticeship at loading logs and feeding saws won him promotion to a night-watchman's place, and his success there led to a bookkeeper's desk. It was on the strength of his proved capacity in handling the accounts of the lumber-yard that he was presently offered a similar position in a bank at five hundred a year. The rest is history, all pointing to his conclusion that the best kind of advertising is a record of actual achievement.

There was a great contrast between Mr. Gage and his immediate predecessor at the head of the Treasury. Mr. Carlisle wore the absorbed air of an unworldly student who had been pitchforked into a post of authority in which he found no satisfaction except on its philosophic side; Mr. Gage was the man of large affairs who moved deliberately only because he could accomplish more in that way, and with whom philosophy was more of a pastime than a tool of his trade. Both men were approachable: Carlisle, because it seemed to him a matter of course that he should be, and because, with his natural gentleness, he would not have known how to go about driving any one away; Gage, because publicity acted on him as a tonic. Carlisle was so unsuspicious by temperament that he trusted nearly every one to do what was right, and was often deceived. Gage had the self-confidence that comes from long acquaintance with a world in which the chief end of one man is to get the better of another; and, though he would trust a borrower further on his own judgment of human nature than on the best rating of a commercial agency, he was rarely imposed upon.

As a phrase-maker, Mr. Gage was among the notable men of his day in Washington. Once, it is recalled, when the New York banks threatened to rebel against some official ruling he had made, he took the matter good-naturedly, chuckling softy as he reassured a timorous inquirer with: "Oh, they may wander about a little, just to show their independence; but don't be alarmed—they won't stray so far as to get out of hearing of the Government's dinner-horn!" He was never at a loss for a funny story or a homely simile with which to enforce a point in an argument, and his gestures were quite as characteristic as his remarks, always following rather than accompanying the phrases to which they were to be attached. Describing, for instance, the difficulty of procuring exactly the right man to fill a particular office, he might put it like this: "You can easily find a man who can saw wood"—a brief pause, and then, with the two hands, the motions of a wood-sawyer—"or play the piano"—another pause, and then the imitation of striking chords and running scales on a keyboard—"or copy figures into a book"—a third pause, followed by the up-and-down motions of an accountant's hand wielding a pen—"but it is quite another thing to find one who can" perform such-and-such duties satisfactorily.

To this day, Mr. Gage retains the half-shy manner which has always distinguished him from the "climbers" in public life who are aggressively sociable for the purpose of courting popularity. Many persons, meeting him for the first time, mistake this manner for coldness, and show more or less resentment at it. No man was ever less cold by nature than he. On the contrary, he has the kind of affectionateness which binds to him with hooks of steel all those who prove worthy of his confidence and are ready to exchange friendship for friendship. But there never was any shyness about his anger with any one, big or little, famous or obscure, who dared to abuse his good faith.

VIEILLARD.

Literature

THE VATICINATIONS OF PROFESSOR USHER.

Pan-Americanism: A Forecast of the Inevitable Clash between the United States and Europe's Victor. By Roland G. Usher. New York: The Century Co. $2 net.

It is in the prophetic vein that Mr. Usher most abounds; his "Pan-Germanism" has given him a wide popular reputation as a seer in the domain of *Weltpolitik*—a reputation only imperfectly justified by recent events—and he has lost no time in again ascending the tripod. The present volume is expressly announced as a prediction of "what is most likely to happen to America after the war." Neither the author on his title-page, nor the publishers in their advertisements, have left anything undone to produce the impression that the prophecy is both definite and sensational: there is to be an "inevitable clash" between the United States and the Power which emerges triumphant from the present war. It is the Monroe Doctrine, one is given to understand, which is to involve us in this conflict. The reader, therefore, naturally begins the book expecting to find it offering evidence for the conclusion that some European country has designs of territorial expansion in South America. And this is quite unequivocally the conclusion which Mr. Usher at the outset indicates that he proposes to establish. It is with the "doctrine" by which "the United States obligates itself to preserve intact the Western Hemisphere from European aggression," that "the victor will inevitably clash" (p. 6).

Yet the principal argument of the volume follows a wholly different course, though nominally to the same conclusion. The occasion of our future war with "Europe's victor" is to be quite other than has been predicted by imaginations less ingenious than Mr. Usher's. No European Power, he repeatedly contends, has any adequate motive for seeking territorial gains or political dominance in Latin America:

> The political independence of South America seems as well assured as that of the United States, and as little in danger from Europe. The South Americans do not dread any such eventuality (p. 399).

Even in his chapter on "Probabilities of German Aggression" Mr. Usher takes pains to explain that "no conquest by arms would be desired" by Germany, "no military rule of any sort would be expedient"; her only aspiration would be for some kind of preferential tariff "which would be as profitable to South Americans as to Germans." How, then, the reader asks, can the maintenance of the Monroe Doctrine require us to fight a nation so innocent of aggressive purposes?

The answer is to be found in Mr. Usher's singular conception of the "true meaning of the Monroe Doctrine." He assures us that—though he scarcely tells us why—that doctrine is synonymous with expansion, militarism, and imperialism (pp. 402-3):

> Its prerequisites include the establishment of our independence of the sea power, both in the Atlantic and the Pacific, by the development of a great navy and a great merchant marine, the one large enough to terrorize England, Germany, and Japan, the other sufficient to transport the whole volume of our foreign trade. . . . A further indispensable military measure would be the occupation of Mexico and Central America, in order to assure ourselves of the land approaches to the Panama Canal (p. 403).

In other words, to uphold the Monroe Doctrine will compel us to "quarrel with our best friends in Europe," in order to render to the Latin-Americans a pretended assistance which they neither need nor desire. In short, "it means only one thing: war with Europe's victor in the first place, and with South America in the second place." And this last will involve us in "a series of campaigns requiring years for completion," for the purpose of "subduing each of the Latin states separately." Thus, war will come, not because we are compelled "to defend the Western Hemisphere against European aggression," but because Europe will feel compelled to defend the rest of the Western Hemisphere against *our* aggression! "Far from its being true that Pan-Americanism is in danger from Europe, the probabilities seem to indicate that it is the United States which is about to be assailed by Europe in the interests of Latin America" (p. 316).

Such are the singular premises through which Mr. Usher reaches his most alarming prediction. But it is sufficiently manifest that these premises can justify such a prediction only with the aid of a further but tacit premise: that our people and Government may be expected to embark upon a career of military adventure and reckless expansion which would in the maximum degree combine folly with unscrupulousness. The conflict which Mr. Usher proclaims as inevitable, he at the same time seeks to show to be not even probable, unless, indeed, we all go mad together. For his language

frequently indicates that he himself regards the strange programme which he labels "the Monroe Doctrine" as both impracticable and morally repugnant.

It is true that the author also declares that the Monroe Doctrine must be maintained; "its fundamental principles we cannot abandon without sacrificing all that is vital to our national integrity and our national honor" (p. 395). But this is merely a manifestation of a distinguishing characteristic of Mr. Usher's method, whether as prophet, historian, or publicist. He is wont to affirm equally categorically both alternatives upon most of the questions which he discusses. Few writers have attained so remarkable a complacency in self-contradiction. There is room for only a few additional examples. On page 136 the reader learns that "the military and naval probabilities indicate" as the outcome of the war "a naval victory over England," and "a qualified victory on land and sea by Germany and Austria, sufficient to compel their enemies to conclude peace on terms favorable to Germany." But thirty pages later, when Mr. Usher is engaged in dressing up the hobgoblin of a possible war with England, it is apparently Great Britain which figures as "the power most likely to be the victor in this war." On the former page, again, we are told that the qualified German triumph which is to be expected will "be the very situation which the United States has most to fear"; on page 410, however, we are more consolingly assured that the partial victory which will probably end the present conflict will produce no "situation dangerous to the United States." On page 7 Mr. Usher dilates upon the Quaker-like rôle of America among the nations: "the foundation of our wealth and greatness lies in no sense in aggression, conquest, or spoliation." But in a subsequent chapter he recognizes that the war through which we obtained an empire exceeding in extent and value the territory of Germany, England, France, and Austria-Hungary combined, was an "aggression" inspired by "the insatiable demand for new land."

Mr. Usher seems not unaware that his reasonings usually come to no unambiguous issue; but he pleads in extenuation that he holds no brief for any conclusion with respect to the questions raised, and he begs his readers not to tax him with inconsistency until they are sure that the conflicting statements represent his own views. But the fact is that he gives the reader, as a rule, no means of judging what his views are. He apparently makes one side of a contradiction as much his own as the other side. What for the most part he offers is, not a critical comparison of considerations *pro* and considerations *contra*, but a series of dogmatic and seemingly equally conclusive affirmations which are in blank opposition to one another. With historians, and with writers who desire to influence public policy, this method is unusual; but with prophets it does not wholly lack precedent. For it is a way of insuring a sort of prophetic infallibility. Whatever the future may bring forth, it is unlikely to bring forth anything which Mr. Usher has not somewhere "forecast."

Clearly, it is scarcely a fair game which Mr. Usher plays with his public. He permits his book to be advertised in the most sensational manner as containing explicit and startling predictions; he himself incorporates such predictions in his title and chapter-headings; yet, in fact, he for the most part avoids choosing between alternative possibilities, and for nearly every event that he prognosticates, prognosticates also its opposite. He has apparently been desirous of performing simultaneously the rôles of Cassandra and Gamaliel.

The sort of elaborate irrelevancy which has been seen illustrated in Mr. Usher's discussion of the Monroe Doctrine—which in his hands becomes a policy that no sane person now supports or is ever likely to support—is also exemplified in the disquisition on "Pan-Americanism" which forms a large part of the volume. The Pan-Americanism in question is purely and avowedly a figment of the author's imagination; it consists in a scheme for a single Federal Republic of North and South America, which (pp. 212-217) it is admitted that nobody proposes or desires to realize—"the possible creation of something which never existed and which does not now exist," and which, it must be added, almost certainly never will exist. Yet Mr. Usher gravely proceeds to point out at length the "fallacies" of this non-existent project. Upon this matter, however, he at least takes a single and definite position; and in the course of his argument he says some pointed things concerning the assumption of a unity of interests between the Americas, as against Europe.

Contemporary history Mr. Usher continues to write with a bold, free hand, untrammelled by any feeling of obligation to support his statements with evidence; but there is nothing in the present book equal to the mare's nest of an Anglo-American alliance, his discovery of which was reported in "Pan-Germanism." We are, however, told with considerable detail of a definite agreement or bargain by which England "handed over to the United States the actual control of American waters, and, in particular, of the Gulf of Mexico," in exchange for "an understanding as to the ways in which the United States should use its control of American waters and for an amicable agreement which would probably lead to close economic relations with the United States." Is this merely a "heightened and telling way" of summarizing the terms of the Hay-Pauncefote Treaty, or is it the disclosure of another of those diplomatic secrets which are known to Mr. Usher alone?

Yet—be it said in spite of all this—the book is one which most Americans may read not without profit. For it does, after all, convey with effectiveness something that the average American lacks, but will hereafter greatly need—a lively sense of the interdependence of the fortunes of various nations, of the interlacing of their political and economic problems, and of the impossibility of understanding either the past or the present history of America without some acquaintance with the larger workings of international forces.

CURRENT FICTION.

The Scarlet Plague. By Jack London. New York: The Macmillan Co.

Mr. London has several times, in "The Iron Heel" and elsewhere, dealt in that sort of novelized prophecy (for even prophecy is novelized in these days, on its way to "the pictures") of which "Looking Backward" is the great original. Mr. Wells has taken his brilliant turn at it; indeed, it has been so thoroughly "exploited" in various quarters that we ought to be able by now to demand special cause for further use of it. There are really only two things which the prophetic romancer can do with the future. He can show humanity advanced to Utopia or lapsed to barbarism. Mr. Wells chooses, for the most part, the former vision. Mr. London chooses the latter. In "The Iron Heel" he pictures an America ruled by a brutal and pitiless oligarchy, shaken from time to time by bloody insurrections of the enslaved people, but avenging itself by slaughter on a vast scale, and keeping the whip-hand by power of wealth. In the present tale he has one new idea—that of a method by which even the power of brute wealth may be brought to naught. This would be by the development of some totally new germ, deadly beyond precedent, and so quick in its action as to defeat science. The germ is isolated and a serum found, but not in time to save the world. The tale is told by one of the few who, for cause unexplained, have been immune to the disease. In the space of sixty years they have lapsed into savagery, so that the story-teller's skin-clad grandchildren are incredulous of his account of a civilized world. The narrative has, as it were, a sort of off-hand vividness; the writer himself is not particularly interested in it, and, indeed, it lacks even such human quality as belonged to "The Iron Heel." It is bad enough to be called upon to follow a long series of events in which society is the loathed villain; it is next to impossible to warm to the dastardly work of a microbe, though the idea, as an idea, is amusing enough.

The Miracle of Love. By Cosmo Hamilton. New York: George H. Doran Co.

"You've neither of you run straight for nothing," cries horsey Aunt Emily, in triumph, at the end of this tale. "'You've brought about the altogether unexpected, and your reward is in having each other. I've had a present of money from the man whose wife I'm going to be that I've put into the family. There's no longer any need for you to sell yourself. You're your own master.' . . . Clive turned, gave a hungry cry, caught Helena into his arms, and in the midst of the unseeing crowd . . . held her against his heart and kissed her soul."

The Clive who performs this uncommon

feat is a duke. Helena is a duchess. They have been wedded before God since the beginning of time, or somewhat earlier, but unluckily, when they meet in the flesh, Helena has been sold by a mercenary father to the wrong duke, one of those debauchees so frequently to be encountered in ducal circles. The noble pair of lovers struggle against their passion, but are on the eve of flight together when the death of Clive's older brother, which is arranged by motor, makes Clive a duke, and endows him with a Duty. This Duty, which nobody challenges, is to marry for money and restore the fortunes of his impoverished house. He tries for an American heiress, whose father is a fine fellow in Mr. Hamilton's eyes, and who is quite willing to sell his daughter to a duke. But Clive has a fishy eye for all but Helena, and the heiress does not care for fish. Nevertheless, when she has broken off the affair, though Helena's original duke is now handily dead, Clive is in no better case. Helena has been disinherited, and is therefore not eligible for a duke with a Duty. He is about to have another look in the matrimonial market, when the arrangement outlined by Aunt Emily in the passage quoted above clears the atmosphere for love, duty, and the voice that still breathes o'er Eden. Than this plot, it will be perceived, there is nothing more British in Trollope. A modern note is introduced in various episodes presenting passion as she is made in post-Victorian England.

Mary Moreland. By Marie Van Vorst. Boston: Little, Brown & Co.

The American business woman grows in favor as romantic heroine. In bald terms, this is the familiar story of the business man who falls in love with his stenographer. Mary Moreland, to be sure, is beautiful and virtuous beyond the stenographic average. The employer, Maughm, is unhappily married to one of those little tin Hedda Gabiers who throng the pages of recent fiction, and whom one sometimes almost meets in real life. Maughm longs for children, but she cares only for bridge, cigarettes, and the proper thing. So at least it appears; though she is understood by the author to be desperately in love with the husband she flouts and opposes at every turn. So, after Mary Moreland has been in his employ five years, Maughm, in his loneliness, turns to her for consolation. She, for her part, has long loved him, without knowing it. His declaration opens her eyes, and for a moment she is tempted to meet his desires. But she is not that kind of a girl, and is then and several times later saved by some inner resistant force from herself and her lover. Finally the wife is converted from her selfishness by Mary's magnanimity, and atones by the death of a martyr; which leaves Maughm and his Mary free to become all they should be to each other. Whatever tinge of power the story may have lies in the portrait of Mary—a species of twentieth-century Clarissa, rewarded for her virtue in due season as all Clarissas be.

The Lady Aft. By Richard Matthews Hallet. Boston: Small, Maynard & Co.

Whatever of story and incident may be lacking, there is certainly salt of the sea in this volume. A young lawyer's clerk, carrying marine affidavits down Dover Street, smells it, and the whiff thereof so goes to his head that incontinently he ships as able-bodied seaman aboard an ocean-going hooker. Whither the hooker is bound neither he nor the crew knows, and at the end of the book the reader is left in equal innocence. That, however, does not particularly matter, nor does the fact that the "stiff" (so in the parlance of the sea are described young men who may be able-bodied but are not seamen) and the "Lady Aft" are left on the last page embracing rapturously in an unknown latitude and longitude. Nor yet are we more than faintly moved by the mysterious "man in the forepeak," who was in love with the "Lady Aft" and chose to demonstrate his affection by leading a precarious existence as a stowaway. What holds the interest is the realistic chronicle of life in the forecastle of a hooker—the conversation of the crew, their quarrels, their grumblings, their fatalism, their proneness to obsessions of one kind and another. There is little of the romance of the sea here presented, and the picture is for the most part an unlovely one, though the narration is extraordinarily vivid and interesting; and while the "stiff" was apparently rewarded for his aberration of intellect by the love of a beautiful lady, his experiences are not such as to encourage other lawyer's clerks who happen to grow tired of marine affidavits to emulate his example. Besides, a "Lady Aft" is not part of the complement of every hooker.

THE DRIFT TOWARDS THE NEW REALISM.

American Thought: From Puritanism to Pragmatism. By Woodbridge Riley. New York: Henry Holt & Co. $1.50 net.

Mr. Riley writes as a professor in an American college, much concerned with the guerrilla warfare that is going on among the various sects in our philosophical faculties, to their own great satisfaction, and as a wholly or half-convinced partisan of the youngest and most obstreperous of these sects. From that position much of the good and much of the inadequacy of his present work may be explained. One would expect from such a writer fully adequate insistence on those elements in American thought in the past which lead directly to the particular battle in which he is engaged; one would expect comparative neglect of all movements which, in appearance at least, do not contribute to the immediate questions at issue in the American Philosophical Association; one would expect to find some great men of the past treated cavalierly and some small men of the present treated very generously; one would expect to meet with a keen destructive analysis applied to all but one of the modern sects, with, at the same time, full recognition of their importance in the actual field of interest; finally, one would expect to see this critical faculty suddenly sinking into complete abeyance when the favored sect is approached. And all these things are patent in Mr. Riley's book. The scientific activity of this country in so far as it leads up to the present position of pragmatism and realism is followed lucidly and learnedly. The great religious questions, which have engaged so many of the strongest minds of America, are treated scantily and, one is tempted to say, with scant knowledge. More space is indeed given to Jonathan Edwards dead than to Professor Pitkin living, but in the realm of significant thought the former, if one judged from the drift of this history, is less important than the latter. The romantic idealism of Royce, and the various pragmatism of Peirce, Dewey, and James, are discussed at length and searchingly, the strength and final inadequacy of each system being exposed with something like masterly skill. The record ends with this panegyric of the programme of the favored sect:

> We leave the new realism in this its hopeful state. Its motto might be this: New worlds for old. In place of a disheartening idealism, which makes things in themselves undiscoverable, unless by the aid of an Absolute, it puts a world of actuality. In place of those speculative mountain peaks covered with the fogs of the phenomenal, it points to valleys of decision, whose soil is deep and whose crops are rich.

So. Not a word as to the palpable absurdities and easily detected evasions in the programme of the six rebels and their new realism. Considerable space, for instance, is given to Professor Marvin's attempt to emancipate metaphysics from epistemology, yet nothing is said to indicate that this boasted emancipation rests on so bald a sophistry as the substitution of increase of knowledge for explanation of the nature of knowledge. These qualities of Mr. Riley's work are typical, we are bound to add, of much of the philosophical instruction in American colleges. It is (largely, not entirely) a kind of game of words kept up among a certain group of scholars for their own amusement.

The hungry sheep look up, and are not fed.

Meanwhile, one quality of Mr. Riley's book might not be expected from these conditions. He has read widely in old American journals, and gone carefully through the works of such ancient worthies of science as Dr. Benjamin Rush, with the consequence that he is often able to give life to a question or discussion which for most of the world is dead and forgotten. Notable in this respect is his treatment of the Scottish philosophy so long regnant at Princeton, and his discrimination of the currents of thought that flowed to the North and to the South in the revolutionary era.

In dealing with Emerson he is sympathetic, but his generalizations are here not always perfectly clear and convincing. "Transcendentalism," he says, "summed up in itself the marks of all three centuries—the faith of the seventeenth, the reason of the eighteenth, the feeling of the nineteenth." That is a pretty generalization, but fanciful at bottom, and the space given to expounding and justifying it might well have been spared for a more careful exposition of the relation of the movement with New England theology. If, however, Mr. Riley leaves something to be desired here in his treatment of sources, he is admirable in his discussion of the relation of New England transcendentalism with its German kin. We think he is right in seeking the origin of the movement mainly in old and new springs of thought in England, though possibly, in his zeal for the actual document, he a little underestimates those elusive forms of influence which passed from German romanticism to England and even to this country before the recipients were themselves aware of the fact. For the strong and direct infiltration of Kant's and Hegel's ideas into American thinking Professor Riley looks to the St. Louis school of Brockmeyer, Harris, and Snider, to whom he gives certainly all the credit due to their somewhat amorphous labors.

Probably to most readers the really valuable portion of the book will be the chapters on Royce, Peirce, Dewey, and James. In particular, we do not remember to have read anything better on the pragmatists, to whom the author stands close enough to be appreciative and from whom he is distant enough to be critical. But his treatment of this theme is already condensed and would suffer greatly from further condensation in a review. It is a pity the volume did not close on this critical note.

COLOSSAL BIOGRAPHY.

Memoir of Thomas Addis and Robert Emmet. With Their Ancestors and Immediate Family. By Thomas Addis Emmet, M.D., LL.D. Two Vols. New York: The Emmet Press. $10 net.

The movement for freeing Ireland from political control at Whitehall and Westminster was continuous from the American Revolution to the outbreak of the present war. It began in 1781, with the successful agitation led by Grattan for the repeal of Poynings's law, and went on with an occasional short interval until the act for restoring the Irish Parliament, on a new model, received the royal assent on September 18, 1914. Until Parnell came on the scene in 1875—in fact, until Parnell reached his greatest power in 1886-1890—no names in Irish history, not excepting either Grattan or O'Connell, stood out more distinctly or were more venerated by Irishmen in Ireland and the world over than those of Robert and Thomas Addis Emmet. The position of both these men, of whom Dr. Emmet has written the most elaborate and detailed biography ever issued from an American or an English press, was due not so much to what they directly achieved, as in the case of Grattan and O'Connell, as to what they were in character, what they attempted, and what they sacrificed for the Irish nationalism to which they were committed. It was the inspiration the Emmets gave—and this is especially true of Robert Emmet—to three generations of Irishmen of the Nationalist movement that explains much of their abiding fame; for both the Emmets were active in Irish revolutionary politics for singularly short periods. With the exception of Allen, Larkin, and Gould, whose fame rests solely on the Fenian outbreak at Manchester in 1867, the Emmets were actively prominent in Nationalist politics for a shorter time than any other men of the movement whose names are enshrined in Irish tradition and Irish history.

The elder Emmet, who was born in 1764, was not admitted to the Irish bar until 1790. His public political life can scarcely be said to have begun until October, 1792, when he associated himself with the committee in Dublin that was agitating for Catholic enfranchisement. He was of the rebellion of 1798, and was arrested for his part in it in March, 1798. A year later—March 30, 1799—he, with other state prisoners, was transferred from Kilmainham jail to Fort George, Scotland. He went as an exile to Brussels, and thence to Paris in the summer of 1802, and reached New York, where he lived for the rest of his life, in November, 1804. His active political career in Ireland consequently extended only over a little less than six years.

The younger brother, Robert Emmet, had a public political career in Ireland that was even shorter than that of Thomas Addis Emmet. He was only twenty when imprisonment ended the Irish career of his brother; and Dr. Emmet, in his fifty years of painstaking research, has found no evidence that Robert Emmet was connected with the rebellion of 1798. He was in attendance at the last sitting of the Irish House of Commons; but in 1801-1802 he was in Switzerland and France. It was October, 1802, before he left Paris for Ireland; and it was March, 1803, before he was engaged in active preparations for the abortive rising out of which his world-wide fame developed. The rising, remembered to-day chiefly for Robert Emmet's prominent and responsible part in it, for the quite unprovoked and brutal murder of Kilwarden, and for the part played by government spies, came on July 23. From that day until August 25 Emmet was in hiding and deep in the romance with Sarah Curran which was to do so much to keep Emmet's memory green with Irishmen and with all lovers of the romantic. He was examined at Dublin Castle on August 20, tried at Green Street Court House on September 19, and executed at the scene of the assassination of Lord Kilwarden, in Thomas Street, on September 20, 1803. Less than a year had elapsed between Robert Emmet's departure from Paris and his execution.

The services of the Emmet brothers in Ireland to the Nationalist cause did not extend altogether over more than seven years. Two quarto volumes, one of 589 pages and the other of 644 pages, seem more than ample as biographies of men whose actual political services, however stirring, were comprised within such a short period of time. Morley's Life of Gladstone is only about half the length of these biographies of the Emmets; and the Monypenny-Buckle Life of Disraeli, when complete, is not to be much longer than Morley's Gladstone. But neither of these English biographies was written by a man who was in any way related to the subjects of them, and it is obvious all through these minutely detailed biographies of Thomas Addis and Robert Emmet that family history and tradition, and pride in family achievements and fame, have greatly influenced the length and detail of Dr. Emmet's colossal work.

The standpoint from which Dr. Emmet approached what to him must have been a congenial and absorbing task is made clear at several places in the historical preface, as well as by the aphorisms, printed in heavy-faced type, which are scattered through the two volumes with a profusion that is almost distracting. A quotation from the preface will serve to indicate Dr. Emmet's point of view, and will also show where, in the long struggle between Ireland and England, the sympathies of the biographer of the Emmets lie. "The author," he writes, on the opening page of the preface, "as an American of Irish descent, offers no apology for the views he expresses in this work; his convictions are as of the warp in the construction of cloth; the fabric would be worthless were it omitted. He claims little originality and no responsibility for the views held by him, bred as they are in the bone. His utterance of them is but a reflection of what would be said by his father, grandfather, great-uncle, and great-grandfather were they living."

Elsewhere in the preface Dr. Emmet shows plainly his hostility towards England, an attitude that is frequently manifested as he tells the stories of Thomas Addis and Robert Emmet. Many students of Irish history, even those who are drawn towards the Emmets, and who sympathize with the movement with which their names will always be associated, will object to Dr. Emmet's point of view, and to his conception of England's attitude towards Ireland and the rest of the world during the last half-century. To some students also there are conclusions arrived at by Dr. Emmet which will be as difficult of acceptance as his conception of British policy. But students for whom Irish revolutionary history has a fascination will not object too strenuously either to the personal and topographical detail, or to the enormous volume of documentary data which characterize the biographies of the Emmets. Much of the detail is undoubtedly interesting, when one becomes accus-

tomed to the framework; and the completeness with which Dr. Emmet has done his work is in keeping with his zeal for the Irish cause, and with his pride in the achievements of the first two members of the family who made the name of Emmet famous outside Ireland.

A PRUSSIANIZED AMERICAN.

The European War of 1914: Its Causes, Purposes, and Probable Results. By John William Burgess. Chicago: A. C. McClurg & Co. $1 net.

For Professor Burgess the causes of the war are perfectly clear. "They are . . . the determination of Russia to dominate the Balkan lands and to extend her empire to the Bosphorus, the Ægean, and the Adriatic; the determination of France to make conquest of Elsass-Lothiringen, and the determination of Great Britain to repress the political, industrial, and commercial growth of Germany." There is a promise that these statements will be demonstrated. The demonstration consists merely in manifold reiteration of the accusation. Or perhaps Professor Burgess asks us to take the Kaiser's word for it. The Kaiser has entered upon the war "under the firm conviction that Great Britain, France, and Russia have conspired to destroy Germany as a world power. . . . For seven years I myself have witnessed the growth of this conviction in his mind and in that of the whole German nation."

Throughout the book one is asked to accept the state of mind of the German nation, its estimate of the intentions of other Powers as incontrovertible fact. This attitude is pardonable in an eager partisan. What is not pardonable in a scholar is the suppression and perversion of available evidence. Not infrequently Professor Burgess's special pleading takes this ugly form. He actually leaves the impression that the Anglo-Prussian *ad interim* agreement of 1870 annulled the treaty of 1839 concerning the neutralization of Belgium, whereas, on the contrary, the temporary agreement expressly reaffirmed the old treaty. He holds that the military conversations between England and Belgium concerning a possible aggression by Germany prove that Belgium was false to her neutrality. The evidence of Belgium's entire correctness in this negotiation has been published, but Professor Burgess has not seen fit to retract a suspicion prematurely asserted, on incomplete evidence, as a fact.

Professor Burgess is as tortuous as he is dogmatic. By a marvel of mystification he represents the British Parliamentary rule as something like an absolutism, while in comparison the German Imperialism is relatively restricted and liberal. Naturally the reader gets no hint of the impotence of the Reichstag, nor yet of the expedients by which the Kaiser controls the all-powerful Bundesrath, nor yet of the electoral system in virtue of which Prussia, ruled by a small percentage of her wealthier citizens, virtually rules the Empire. Such serious and discreditable suppression of essential evidence is characteristic of the entire work. There is nothing of disinterested scholarship in it, just a shrewd and lawyer-like plea. Since the author is after all a distinguished scholar, his derogation must be painful and humiliating to his colleagues.

The reason for such a phenomenon may be divined from a mere stylistic analysis of the passage we have quoted. For Professor Burgess Alsace-Lorraine is Elsass-Lothiringen, and the French aspiration thither is "to make a conquest." His vocabulary is as Prussian as his thinking. His mind has palpably been remade in Germany, to what advantage or disadvantage the reader may judge.

THE QUEEN OF THE ANTILLES.

The French Revolution in San Domingo. By T. Lothrop Stoddard. Boston: Houghton Mifflin Co. $2 net.

In the year 1789 the western third of the island of San Domingo formed the most prosperous and precious of the overseas possessions of France. The greater part of its rich soil was covered with huge plantations, which were worked by slave gangs and supplied half of Europe with sugar, coffee, and cotton. Its wealth was rapidly increasing with the inflow of French capital and under intelligent French administration. It furnished three-fourths of the 218,000,000 livres of imports into France from her American colonies. It had the predominant share in maintaining the fleet of a thousand ships and fifteen thousand French sailors trading with the colonies. It had a busy population numbering nearly forty thousand whites, ten times that number of slaves, and some twenty-seven thousand "free people of color," mostly mulattoes. Well might the French of that day praise it as "La Reine des Antilles." By 1804 all this was changed. The white population had been wiped off completely in a series of massacres of indescribable ferocity. The barren Black Republic of Hayti had succeeded the fruitful French colony of San Domingo. The old prosperity was gone never to return. Half-civilized Africans (more than half the negroes in San Domingo in 1789 had been born in the wilds of Guinea or the Congo), under a burning sun, and without any of the needs and desires of Europeans, could not be expected to be as industrious as were those in the old régime.

The story of the fifteen years which witnessed this transformation is excellently told by Mr. Stoddard. His book shows something of the feeling for the picturesque and the dramatic which made his father's lectures so famous. He has fingered some of the manuscripts in the French archives which deal with this period, but he is able to rely mainly on good French and German monographs which have appeared in recent years. The value of his book is that it is the only constructive account in English which describes the complex structure of the old colonial society, bound by custom and caste, and then shows how blind and hopeless was the attempt of the Jacobin theorists at Paris to introduce liberty and equality. It is a clear but sad narrative of one of the first great conflicts between the ideals of white supremacy and race equality. It is an episode in the problem which the twentieth century still has before it in some parts of the world. In the case of San Domingo, be it said, the planters were partly to blame in bringing misfortunes on themselves. When the Revolution broke over the mother-country the planters clamored for representation in the National Constituent Assembly, and so brought colonial questions to an issue in Paris and roused a bitter and disruptive clash of opinions in San Domingo itself. Mr. Stoddard believes that if the great planter aristocracy had held together and consistently backed the Government, it could certainly have kept the island peaceful. With no news from San Domingo to excite discussion, in the tumult of great events at Paris, colonial questions would probably have been overlooked or hushed up by a little clever manipulation. As a matter of fact, a policy very like this was actually carried out by the colonists of Ile-de-France and Bourbon, with the result that these colonies escaped the woes of the West Indian islands.

Of Toussaint Louverture, says the author, "extremely little first-class material exists, and practically everything written about him is of such doubtful value that his figure seems destined to remain forever shrouded in the haze of legend and tradition." Certain it is, however, that he was a full-blooded negro with no trace of white or mulatto blood. He learned to read and to write Créole French, though so imperfectly as to be scarcely intelligible to Frenchmen. Soon after the outbreak of the great slave uprising in August, 1791, Toussaint, being then nearly fifty years old, entered Spanish service, became the leader of several hundred well-armed and fanatically devoted negroes, and fought against the soldiers of the French Republic. Then, in April, 1794, with the extraordinary duplicity which was the most striking trait of his character, he suddenly massacred all the Spanish soldiers under his orders, and, with fervent professions of Republican faith, led his four thousand blacks over to the side of the French. Mr. Stoddard then shows how he bound the other black chiefs to his cause, duped the French civil commissioners who tried to dupe him, and gradually succeeded in eliminating all French power from the island. He was just beginning to restore some semblance of order and authority when Leclerc descended with twenty thousand French troops to execute Napoleon's will. Leclerc has been much blamed for failing to reëstablish French control; but when one sees Mr. Stoddard's picture of the yellow fever, of the anger caused by Napoleon's decision to re-impose slavery, and of the difficulties described in Leclerc's own luminous dispatches, one wonders that he did as well as he did.

Notes

E. P. Dutton & Co. announce the forthcoming publication of "The Complete Jujitsuan," by W. H. Garrud; "The Tollhouse," by Mrs. St. Ledger, and "From the Shelf," by Paxton Holgar.

"Michael O'Halloran," by Gene Stratton-Porter, will be published on August 17 by Doubleday, Page & Co.

The following volumes are announced for publication by G. P. Putnam's Sons: "An Art Philosopher's Cabinet," by George Lansing Raymond; "The War of 1914," by Emil Waxweiler; "Zoölogy," by A. E. Shipley (third edition, revised and enlarged).

In "The Monroe Doctrine: National or International?" (Putnam; 75 cents net) Prof. William I. Hull, of Swarthmore, collects three addresses delivered within the past two years. They involve a certain overlapping and repetition, but their theme is one. It is that the Monroe Doctrine has become a perilous development for the United States; and that, as there is no likelihood of its being cut down or abandoned, the true American policy is to seek to give it an international status. That there are great difficulties in the way of this, Professor Hull is fully aware; but to his mind it is the only sure solution of a problem which he is confident will become increasingly acute. In his preface he links the matter with the present war and its possible outcome, affirming that in the coming world-state it will make for "the promotion of peace and justice" if the United States will "convey to the representatives of the family of nations the rights and duties pertaining to the Monroe Doctrine." This is confessedly a long look ahead, but Professor Hull treats the subject in a way that is not the less suggestive for his brevity.

Mr. Alexander Mackintosh's "Joseph Chamberlain" was first published in 1906. He now publishes a new edition (G. H. Doran Co.; $3 net), with added chapters covering Mr. Chamberlain's last years and death. He rather aggressively calls his book "An Honest Biography," but by this he means only that he presents fairly the various stages of a public career that had at least the charm of being a puzzle in its contradictions. As these were manifested in Mr. Chamberlain's speeches, Mr. Mackintosh exhibits them to the reader in a topical series of opposite utterances. But their author never cared a snap of his finger for consistency. He gloried in wreaking himself upon the thing in hand with slight regard to what he had said or done in the past. His immense energy and wonderful organizing skill he put at the service of different causes and parties, caring little how one could be made to dovetail with another. He was a great elemental force in English public life, and it is open to his friends to maintain that the end would have crowned the work had not a long and disabling illness thrown his final hopes and plans into the shadow. For his full biography—if not for a satisfactory clearing up of his motives and purposes in all that he did—we must wait. His relations with Gladstone, which John Morley in the Life of that statesman touched with discreet hand; his real connection with Parnell and Irish Home Rule, as to which only fragmentary glimpses have been given by Barry O'Brien and Mr. Labouchere; the whole truth about his negotiations with Kruger, and the inner history of his surprising campaign against English free trade—for light on all these things we must look to the future ransacking of official archives and the publication of Mr. Chamberlain's political correspondence.

"The Modern Army in Action" (McBride, Nast; $1.50 net), by Major-Gen. J. F. O'Ryan and Capt. W. D. A. Anderson, is frankly what the French call an *ouvrage de vulgarisation*. The authors tell us in their introduction that it has been written at the request of the publishers to meet "an intelligent and widespread public demand for a work of this character." If this be true, the sign should be welcomed, for certainly if there is one subject of which the American public is to-day crassly ignorant, that subject is the modern army. Of necessity untechnical, this book undertakes to give the every-day reader a plain and simple explanation of the expression that forms its title. This is no easy task. The modern army is a complex organism; hence, the need in the present case of avoiding technicalities on the one hand, without falling into spineless generalities on the other, imposes conditions all the more severe because we may not take for granted in our land that general knowledge of armies which is common property in Germany or France. Capt. Anderson is responsible for four of the sixteen chapters, those describing the German and the British systems of training and the fundamental subjects of mobilization and transportation. The main part of this book is therefore due to Gen. O'Ryan, who opens with a chapter, not on strategy, but on the genesis of strategy. We take it that in doing this he has a moral purpose in view: to suggest that the ultimate cause of war lies in the primal instinct of self-interest. The reader must draw his own conclusions. An international court of arbitration is repudiated as a "dependable agency"; for, even if created, an international force could not be trusted to execute its decrees. Ground less debatable, perhaps, is occupied in the exposition of war and preparations therefor; the possibility of war once admitted, the most sincere pacifist must agree with the really significant passages of this portion of the book: for example, that "an aggregation of individuals hastily organized into military units, and later grouped into large commands," cannot be seriously regarded as an army. The average citizen will find in Capt. Anderson's four chapters an elementary, but nevertheless adequate, summary of two "systems" regarded as typical.

The text carries us on to strategy and to the subjects of Infantry, Cavalry, and Artillery, and the auxiliary services, among which very properly the author places aerial reconnaissance. If we have any fault to find with these chapters, it is that they are, if anything, too untechnical; for example, under infantry, some description of the magazine rifle might well have been given, and so of the shrapnel under artillery; pictures of Germans under cover, of Highlanders in a skirmish line, could have given way, if necessary, to diagrams of the essentials just mentioned. Illustrations of technical equipment are not lacking, but they are chiefly of novelties, such as, for example, the Loiseau mount for an aeroplane gun. In general, however, a good selection of illustrations has been made, but we must remark on the omission of cavalry and field artillery from the list. A chapter on Security and Information leads the way to the "combined arms in action," in which the substance of the preceding pages is, as it were, quickened into life, and we follow the operations of a division from the moment it leaves camp until success crowns its efforts. The choice of so small a unit to illustrate principles is wise: a larger unit might have obscured the end sought. Against this little book, no charge of militarism can lie; in spirit it is almost as free from any such coloring as though it were describing the march of the Ten Thousand. And yet it deals with a subject of which no considerable nation can afford to be ignorant; a national realization of the meaning of its title implies some realization of the effort demanded by modern war.

Some errors ought to be corrected: Von Moltke never was Minister of War (pp. 44-75); on page 49, the entire field artillery of the German army has been omitted from the list of men furloughed after two and three years' service, respectively; the 150 (p. 82) railway trains needed to move a corps become 160 on page 92; the 10 for a regiment of infantry (p. 83) grow to 12 on page 94. The incorrect total given as the peace strength of the British army (p. 62) has been inadvertently taken from page 69, where the numbers are correct. The assertion (p. 233) that "the signal corps of an army . . . is charged with the maintenance of communication between the various units" is true enough if by "signal corps" is meant technical troops, usually engineers. Otherwise the statement is true only of our own army.

It is desirable to distinguish between some things in Horace J. Bridges's "Criticisms of Life" (Houghton Mifflin; $1.50 net) which we like very much, and some things which seem rather muddled in thought and futile in purpose. To begin with the latter, it does not appear that Mr. Bridges, as a leader in the Ethical Society, has quite cleared up his position in relation to orthodox Christianity, or quite sees the difficulties of his own doctrine. His first essay, nominally on Thompson's "Hound of Heaven," is in reality a sermon on William James's "Varieties of Religious Experience," with the intention of showing that definite creeds are secondary, and that "the spiritual experience testified to in 'The Hound of Heaven' is possible to all men, whether they be Catholic, Jew, Buddhist, or Agnostic." There is a certain latitude in such a statement; it is likely that Huxley, for example, as the creator and type of agnosticism, would deny any such inclusion of his own sect with the Catholic. But let that pass. The similarity (we would not say identity) of religious experience is no doubt a psychological fact, and the aim of Mr. Bridges and his Society is to present this naked experience to the world, freed of extraneous myth and formula. It is a hope, noble in itself, that has often haunted the speculative mind. But we find a certain inconsistency in Mr. Bridges's attitude towards those who cling to what he would call the mythology of the church. On one page he makes Christianity the cause of the "all-prevailing illiteracy"

which gives scope and power to pseudo-philosophers like Haeckel; and again he associates Haeckel with Augustine and Calvin (in itself a logical absurdity), and declares baldly that the Christianity of the Western world has always been "materialistic." So far we understand him, whether we approve or not. But how does he reconcile this position with the sentiment of his essay on Winston Churchill's "Inside of the Cup"? Here the early church is the patron of art, "the prophetic soul of the world dreaming on things to come," whose collapse is "the direct cause of the spiritual chaos which prevails in the world to-day." He is ready to justify Mr. Churchill's skeptical priest for abiding in the church, and regards the Ethical Society as only "the advanced party" in the movement which is working for religious unity.

It is not easy to see how Mr. Bridges would explain this discrepancy away, nor do we think he has really discerned the difficulty of giving wide and permanent efficiency to a worship which shakes itself free of the mythopoetic power of the imagination. But when he touches on questions of ethics or literature, he generally moves in a surer atmosphere. His respectful but crushing refutation of Ellen Key's theories of free love, his ridicule of Haeckel's absurd monism (which, indeed, scarcely needs to be ridiculed outside of the Rationalist Press Association to which Mr. Bridges belongs), his pricking of Sir Oliver Lodge's bubble-logic on immortality, his exposition of H. G. Wells's self-complacent shallowness, his meditations on the great deeds and words of Capt. Scott, his characterization of Maeterlinck's thought, at its best, as "but Emerson-and-water"—these and other things of his volume are soundly argued and handsomely written. And the spirit of the book is always good.

Whoever Mr. Edward Edgeworth, the author of "The Human German" (Dutton; $3 net), may be in the flesh, he is intellectually and spiritually the descendant of Heinrich Heine—that is to say, the Heine of the "Reisebilder," not of the "Buch der Lieder." There is some direct evidence in the book of his interest in Heine, but more important is the indirect testimony of his whole manner. The reader will discover the same wit and irreverence, the same worldly wisdom and cosmopolitan tolerance, the same fondness for epigram and paradox, and the same skilful skating around the skatological. Persiflage is the author's persistent note, and, being a fellow of infinite jest, he runs the gamut of fun from pungent irony to rollicking and very juvenile puns. If the *amari aliquid* of Heine is lacking, there is frequently a sub-acid flavor which the experienced palate will at once detect. Though Mr. Edgeworth is genial and indulgent by nature, a certain *malice* (in the French sense of the word) appears at times, as, for instance, when he insists upon coupling "the mentality of Helmholtz and the æsthetic sensibility of Kaiser William II." Like the good journalist that he is (note again the kinship with Heine, the super-journalist), he is acute rather than profound. His information about Germany is both wide and accurate; yet his book can hardly be called informational. The countless amusing side-lights never blend into a full picture; indeed, are not meant to do so. Therefore, he who expects a delineation of modern Germany or even of Berlin, the writer's focal point, will miss his account sadly.

Mr. Edgeworth merely endeavors in eighteen chapters to illumine the modern German from the point of view of the Nietzschean *Menschliches, Allzumenschliches.* Each chapter is devoted to a human somebody or something—maid-servant, bureaucrat, warrior, professor, Kaiser, world-city, state, etc. While all of these are abundantly entertaining in their several ways, the shrewdest judgments are perhaps to be found in the chapters on women and on the Emperor. The author tilts at the old and rather unwinsome German ideal of the Hausfrau, and avers that "domesticity is the cancer of love." At the same time, he notes the emergence of a new and, to him, more congenial type of woman. Of William II, whom he calls the "Kino-Kaiser," he has this to say:

> He is a foil to Germanism. Germany's plague is dull, full men. William II is neither dull nor full; he is bright and shallowly all-knowing. Germany is plagued with experts and specialists, who have studied it all their lives; but Wilhelm II has not studied it at all and his fulness of inspired error spurs dull men to motion. Germans are deeply ignorant in their knowledge, but Wilhem II is catholically, comprehensively, œcumenically learned in his ignorance.

All of this has to do with ante-bellum Germany, and, though there is one slight indication that the book was written, at least in part, after the outbreak of the war, the author, who proclaims himself British, has neither bias nor rancor. The book may be cheerfully recommended as summer reading of a diverting and not too exacting kind to all those who, weary as they may be of Germany's diplomacy and militarism, still retain an interest in the very human raw material out of which the mighty mechanism of that state is built. Some misprints have been noted: "haste" for "hate" (p. 225) completely spoils the sense of the passage; German words are irresponsibly spelled, which is a pity, for the author really knows the language; on the other hand, surely no mere printer is responsible for "pie" where "pi" is obviously meant (p. 275).

That economic cycles are caused by the cyclical movement of the rainfall is the thesis of Prof. H. L. Moore's book on "Economic Cycles" (Macmillan; $2). The steps in his argument are briefly as follows: The rainfall in the great cereal-producing States runs in two cycles—one of thirty-three years and one of eight years. The yield per acre of the more important crops is closely correlated with the rainfall. The increase in the yield causes an increasing demand for producers' goods, *e. g.*, pig iron, with a consequent increase in the prices of such goods. Conversely a decreasing yield causes a decreasing demand for such goods and a decrease in their prices. Professor Moore's thesis is by no means new. Jevons, in 1875, at the meeting of the British Association, presented a paper in which he showed that the price of wheat in England from 1259 to 1400 followed a cycle of eleven years. He suggested that this cycle was connected with the sun-spot cycle, and that economic cycles were in turn connected with variations in the price of wheat. This paper was not published in the transactions of the Association, because after further investigation Jevons was unable to find a periodicity in the price of wheat in modern times. In a second paper, published in 1878, he fell back on his well-known theory that the English economic cycle is caused by cyclical variations in the Indian crops. Several writers since Jevons have investigated the periodicity of yield of various crops, and others have studied the relation of the crop yield to general business activity. The novelty in Professor Moore's treatment of the subject is the use which he makes of statistical methods which have been developed within very recent years. These methods are peculiarly appropriate to the problem, and it seems clear that it is only by their use that any advance can be made in its solution. The available data are, however, by no means as extensive as is desirable for a final conclusion, but it can be safely said that Professor Moore has established a strong presumption that the rainfall cycle is at least an important cause of economic cycles.

Miss Freda Du Faur, the author of "The Conquest of Mount Cook and Other Climbs" (Scribner; $4.50 net), is a product of the Australian bush country, and her brief story of her childhood in the wilds starts the imagination off in the direction of Camilla, the wildwood Volscian maid of the Æneid. Fortunately, however, the spirit of Diana has drawn her into no more dangerous contests with men than those of muscle, nerve, and brain as applied to the challenging slopes and peaks of the New Zealand Mountains. According to her own belief, the mental temperament that conditions the successful mountaineer is a matter of birth, not of subsequent manufacture. Physical fitness she sought by the path of intelligent preparation, and certainly obtained. Her ascent of Mount Cook, 12,349 feet, broke the best of the few previous records by two hours' time, and her whole experience in New Zealand indicates that her vague ambition some day to try the higher and more difficult ascents of other lands is not unreasonable, so far as her own ability is concerned. She climbs with her eyes open, and, while she has no especially distinctive gift of style, her narrative is lucid and interesting. She does not deny a certain pride in showing that a woman can achieve feats of mountain-climbing worthy of admiration wholly apart from the fact of her sex, and yet the reader feels that her dominant motive is always a genuine love for the mountains in themselves. The volume should by all means have been provided with a good map or two. The reader cannot gather from the text the geographical relation of the mountains ascended to one another, and the maps ordinarily accessible give little aid. Miss Du Faur confesses herself not a photographer, and in photographic illustration the book comes far short of such a work, for instance, as Howard Palmer's volume on the Canadian Selkirks, reviewed in these pages some months ago.

A score of colleges and universities figure in "Representative Phi Beta Kappa Orations," a collection made for the United Chapters by Clark S. Northup, William C. Lane, and John C. Schwab (Houghton Mifflin; $3 net). The addresses included begin with The True Wealth or Weal of Nations, given by Horace Bushnell at Yale in 1837, and Emerson's The American Scholar, delivered at Harvard the same year, and end with Paul Shorey's The Unity of the Human Spirit, Oberlin, 1910. The special interests of scholarship are evident in most of the titles, but not in all, as Elisha Benjamin Andrews's The Social Plaint, New

York Alumni, 1892, and Andrew Dickson White's Evolution vs. Revolution in Politics, which has the distinction of having been delivered thrice as a Phi Beta Kappa oration, not to speak of other occasions. In this latter respect, however, it does not approach George William Curtis's The American Doctrine of Liberty, which, spoken first as a Phi Beta Kappa oration at Harvard in 1862, was repeated forty times during the following year in New England, New York, and Pennsylvania. It is no depreciation of the value of the collection to say that its historic interest is perhaps as great as any other. Unlike most organizations, the Phi Beta Kappa can afford to take the risk of publishing twenty-six out of the hundreds of addresses made under its auspices in less than three-quarters of a century. There is a frontispiece from a crayon portrait of Emerson.

The discarding of formal rhetoric in college writing receives one more shove in Prof. Maurice Garland Fulton's "College Life: Its Conditions and Problems" (The Macmillan Company; $1.25). His volume, like Steeves and Ristine's "Representative Essays in Modern Thought" and Foerster, Manchester, and Young's "Essays for College Men," aims to present a selection of essays that will stimulate the college boy to think, after which it will be easy enough for him to present his thoughts in elegant form. But Professor Fulton has gone about the matter from a different conviction. He does not, however, specialize in literature as Professor Cady does in "A Freshman Course in English" or Professor Aydelotte in his system of correlation. An investigator of origins would at once point to the modest compilation of Professor Lockwood, "The Freshman and his College." That book was not, in conception, a basis for composition. With a wistful earnestness the editor endeavored to help the youth pass through his first year without ignorantly and idly wasting time and opportunity. But its usefulness in English classes was so obvious that it was soon found extremely practical. With the practical use directly in view, Professor Fulton holds that the boy is ignorant of the purposes of the college life and education upon which he has entered, and that he will find the most juicy mental pabulum in that circle of ideas. He has consequently, with a wider fling of the net than Professor Lockwood, drafted into his boat a large number of college presidents, from President Wilson down. They discourse on every phase of the youth's new environment, from "What is College For?" to "The Political Duties of the Citizen." At the close of each selection topics for discussion are suggested, and a large number of subjects for essays are grouped at the close of the book. No kind of opportunity is omitted to stimulate the freshman into some kind of reaction. But this latest product of the ferment that is leavening the teaching of English will interest not merely the undergraduate. Even those alumni long out of college and many persons who take a purely professional interest in education will pronounce dull few of the exceedingly various pages in this substantial volume.

"A Woman in the Sahara" (Stokes; $1.50 net), by Helen C. Gordon, has been unfortunately named, for its title inevitably suggests either the literature of feminism or the words of the Psalmist in affliction: "I am a pelican in the wilderness; I am an owl in the desert." Yet it is in reality an unassuming and spirited account of the author's experiences in some of the little-travelled districts of Northern Africa. With an artist friend, Miss Gordon passed a winter at the 'Place of Happiness" (presumably Bou-Saâda, a favorite resort of artists), about one hundred and fifty miles southeast of Algiers. In the spring she went alone with her guide towards the south as far as Ghardaïa, visiting en route, or from there, the other confederated towns of the M'Zab, notably Lagouat and the Sacred City, Beni-Isguen. In the summer she took her way to the north, to the Zaccar Mountains, where she stayed for some time at Miliana, southwest of Algiers, and afterwards went to Michelet, in the Great Kabylia. In the autumn she went from Michelet by way of Maillot and Sétif to Constantine, and from there she took the difficult and fatiguing journey to El-Oued, the capital of the northern offshoot of the eastern Sahara, known as the Souf. Here we leave her, riding among the sand dunes on her way back to El-Oued, after a visit to the neighboring oasis of Guémar. This itinerary, which involves journeys of wearisome length and transportation by varied means of conveyance, ranging in swiftness from automobiles to mules, the author pursues with the zest of an intrepid traveller, but she never tinges her narrative with startling sensationalism, and, considering that she was performing a highly unusual adventure in travelling as a lone woman in the regions where she elected to go, she is delightfully free from the self-consciousness that too often mars similar books of travel. This, however, should hardly be classed as an ordinary book of travel. It does not pretend to be a systematic or instructive account of the author's wanderings; it is merely a series of informal and pleasantly written sketches of the places, the scenery, the people, the customs, the superstitions of a land still primitive and comparatively little worn by the feet of tourists. The book contains many errors, which should doubtless be laid at the door of the proofreader. Such, for example, are *première danseuse* (p. 226), bye your leave (p. 83), and 1913, an evident error for 1912, on page 17. Let us hope, too, that the proofreader is responsible for the new version of Gray that we meet in the first paragraph of the book, "far from the *maddening* crowd," and for the transformation of our old friend, *facilis descensus Averni* into *facili decensus Avernus,* which comes upon us with a shock on page 128. Throughout there is great inconsistency in the italicizing of foreign words. There is a glossary of the many Arab words in the text, and the meaning of each word is usually (but not always) given in a footnote to the page on which it occurs for the first time. This arrangement, which at first sight makes the glossary appear a needless duplication of labor, in reality adds somewhat to the convenience of the reader, though, unfortunately, it is not complete (see *eûcha,* p. 80; *basours,* p. 91). We should like, also, translations for the formulas of good-bye given on p. 41. There are a few instances where the definitions are not beyond criticism; for instance, "the national dish" is no more sufficient as a definition of *couscous* than it would be of *porridge* in a book about Scotland, or of *bouillabaisse* in a book on Provence. The volume has a frontispiece in color and sixteen rather attractive monotone illustrations from photographs.

We are watching the throes of the latest convulsions in eastern Europe; in "The Life of Saint Severinus by Eugippius," translated into English for the first time, with notes, by George W. Robinson (Cambridge: Harvard University Press), we have the simple story of a witness to the Germanic cataclysm which closed the Roman epoch in Austria 1,400 years ago. Some time between Attila's invasion and the fateful date of 476, a missionary named Severinus came to the Roman outposts near the Vienna of to-day, and so identified himself with Austrian Christianity that he became a patron saint of the Dual Monarchy. An ascetic who went barefoot the whole year through, he was nevertheless so liberal and practical that he kept on good terms with the heretic invaders, won many who were heathen or Arian over to orthodoxy, and either cheered up his fellow-Romans in their hopeless resistance, or gave them the sensible advice to retire while there was yet time. One of his enthusiastic pupils, Eugippius, felt that the record of such a life should be preserved; and as his account, however credulous, is our only ray of light in a dark but important period, we feel indebted to Mr. Robinson for this scholarly and trustworthy translation. Mommsen gave us an excellent Latin text, in the valuable collection (not so well known in our universities as it should be) of the "Scriptores Rerum Germanicarum in Usum Scholarum"; the reviewer has found this and other volumes of the series, notably Einhard's Life of Charlemagne, relished by college students. Mr. Robinson bases his translation on this text, incorporates in his excellent notes the discoveries of numerous German scholars, and adds some acute observations of his own; in fact, he has on several occasions to correct the Cambridge Mediæval History, Bury, or Pflugk-Harttung. The translation is no easy task; but though it is occasionally awkward, it is faithful. He includes the letters to and from Paschasius, and the hymn on Severinus (text and translation), which is probably not much later than the saint's time. There is a full bibliography and an excellent index; the book is admirably printed. In an era when modern pedagogy is filling our colleges with teachers of history who can neither read Latin nor write English, it is a relief to pick up Mr. Robinson's solid achievement.

Of English translations of "Beowulf" there must now be little short of a score. The most recent is in verse, by John R. Clark Hall (Cambridge University Press; 65 cents net), whose prose version, particularly by virtue of its illustrative matter, has for a dozen years been indispensable. The present rendering adheres closely to no single text, but finds its account where it can over the whole range of modern interpretation. In style it is faithful and, except in a very few cases, eschews archaisms. The line generally shows four beats, but no attempt is made to reproduce the alliteration. The rhythm that seems to prevail is "Then the powerful sprite who abode in the gloom," which, in spite of trochaic substitutions and feminine endings, grows a little monotonous; to vary it short paragraphs like the following are from time to time introduced:

soon was ready,
fierce and raging;
henchmen thirty;
home, rejoicing

The wight of ruin
grim and greedy
took while resting
then departed
in his booty. . . .

A sound but not a distinguished performance.

Science

HYDRAULIC ENGINEERING.

The Control of Water as Applied to Irrigation, Power, and Town Water Supply Purposes. By Philip A. Morley Parker. New York: D. Van Nostrand Co. $5 net.

The title of this book is somewhat out of the ordinary as indicating to a large extent at least a treatise on hydraulics. It is not, however, a misnomer, for hydraulic engineering is nothing if not the science and art of controlling water for definite engineering purposes. The author does not establish the fundamental formulæ of hydraulics. Indeed, he states frankly in his preface that "this book is essentially the product of actual engineering experience. . . . It must, therefore, be regarded not as a textbook, but rather as a manual for engineers in active work." Nevertheless, it is a work of wide scope, covering in a reasonable manner a number of the most important fields occupied by the civil engineer engaged in hydraulic practice.

There lies at the very foundation of hydraulic investigation the necessity for reasonably accurate means of gauging the flow of water in streams or other channels. This may be accomplished by accurately formed weirs or notches or, in the case of natural streams, such as the largest rivers, by the employment of a great variety of means. The last vary from the simple surface float, giving only the surface velocity, and the immersed rod, giving a sort of average velocity in a limited vertical line, to such a mechanism, on the one hand, as the sensitive current meter which measures the velocity of water at a single point, and, on the other, the Venturi meter, which gauges the entire discharge of a pipe, large or small. There have been, as might be expected, many differences of opinion in regard to the degree of accuracy attainable by these various means, and the author does not hesitate to add his expression to those of others. He states in his preface and indicates elsewhere his disbelief in the supposed law on which such standard and long-used weir formulæ as those of Francis and Bazin are based. At the same time he uses these formulæ, as do all hydraulic engineers, for the simple reason that there are no others available.

There is also included the method of chemical gauging, the latest procedure employed for measuring the flow of water in a channel. This interesting process consists of injecting continuously in the stream a chemical at a uniform known rate. This chemical, such as salt, will produce a solution of intensity or strength depending upon the volume of water which receives it. A calculation, therefore, of the amount of the chemical in a given volume of the solution will at once determine the relation between the volume or weight of the chemical itself and the volume of the water throughout which it is distributed, the latter being the volume of flow of the stream or channel for the time during which the chemical was injected.

One of the most important subjects with which an engineer has to deal in the general control of water for a great variety of objects is the rainfall on and run-off from a given territory. The proper treatment of all engineering questions of this kind requires the accumulation of rainfall and related data for the district in question covering the longest practical period of years. All this requires an extended series of observations with rain gauges, and proper gauges suitably placed to determine the convenient flow of streams from one season to another, covering years of both low and high rainfall. The discharge or run-off of a stream is affected not only by the amount of rainfall or precipitation on the area which feeds it, but also by the character of the sub-surface material which affects the ground storage. Where the sub-surface material is relatively open, like sand or gravel, large quantities may be stored during and after a rainfall, which prevents large and rapid flood discharges of streams; whereas in a district of close, clayey material or with big areas of exposed rock the streams will be subjected to large and rapid flood discharges. Furthermore, the volume of water available for a given drainage area will depend materially upon the evaporation, which is generally far greater than is commonly supposed.

All these elements of the general conservation and use of water naturally vary somewhat in different countries and climates, and the author's discussion covers data both from British countries and from the United States. It includes also the loss due to absorption in the growth of vegetation, which in some localities should not be ignored.

After devoting one chapter of the book to the important question of floods and their control, the author turns to an extended consideration of the construction of dams, especially of masonry dams. The design and construction of these has been brought to a state of excellence attested by such structures as the new Croton Dam and the Ashokan Dam in the water supply system of New York city, which are among the largest structures of their kind ever built. The author's treatment of this class of structures includes the most modern theories. Indeed, he sets forth the rather startling views of the English engineers, Pearson and Atcherley, especially the latter, who about ten years ago reopened some questions regarding the stresses of dams which engineers in general had accepted as closed and who asserted that masonry in some parts of dams as at present designed is subjected to tension. These views have been discussed and apparently credited by a considerable number of engineers. Although the author does not accept them in their entirety, he gives them a well-considered and comprehensive discussion based upon existing successful structures, but calls attention to the relation of these theories to the failure of other structures.

The section of this book devoted to irrigation of arid and semi-arid districts is necessarily large. Although the considerations set forth are devoted more specifically to Egyptian and Indian experiences than to American, the data recorded are based to a considerable extent on American practice. It is interesting to note that irrigation channels, including both the main and branch ditches, exhibit a system of streams along the side hills and ridges of the irrigated district which is precisely opposite to that of the drainage streams of the same area, the latter naturally running along the lowest lines of the valleys. In other portions of this comprehensive work questions connected with town water supply, movable dams for canalized rivers and other purposes, hydraulic machinery, including turbines and centrifugal pumps, as well as concrete, hydraulic, and other constructions, are treated with equal thoroughness and fulness of detail.

The fundamental laws of hydraulics and the abundant mathematical analysis required in the application of those laws to engineering problems have long been given by mechanicians and engineers. Any really new developments of an analytical character, therefore, are likely to be realized but slowly. There is, however, a large field of engineering practice in which the general laws and principles so long established find new applications and take their place among the essential features of quantitative results of engineering practice. This book is a well-considered and carefully written volume of the latter character, and will undoubtedly take its place among the more important recent works in hydraulic engineering.

It is a question whether many of the recent textbooks on economic or commercial geography should not be called geographical economics. One of the latest is "Economic Geography," by John McFarlane, of the University of Manchester (Macmillan; $2.25 net), where economics naturally has more attention than geography. True, it gives greater attention to "natural regions" than many books of its class, but like most of its predecessors it gives little space to their description; so little, indeed, that students who have not already learned their natural regions can get only an elementary knowledge of them here; that is, however, no great drawback to the use of the book, because in the economic pages that follow only an inconsiderable knowledge of geography is demanded. The introduction of these brief geographical descriptions is geographically a disadvantage, because it will suggest that such a book may be used by students who have no other knowledge of geography than the little which they may here add to the little they bring from early schooldays. Much more space is given, properly enough, in a book of this kind, to products than to the lands that produce them, and for that reason the volume might fittingly bear the title, "Geographical Economics." The book is a good one of its kind; but if its kind is really to be geographical, a stronger geographical foundation should be provided for it. It has eighteen outline maps, a three-page list of "works consulted," and a thirty-page index.

Drama and Music

THE REPERTORY THEATRES — TWO PREPOSTEROUS WAR PLAYS.

By WILLIAM ARCHER.

London, June 10.

When the theatrical history of our time comes to be written, it will probably be recognized that the great movement of the past fifteen years has been the decentralization of the drama. The repertory theatres of the provinces have been but struggling efforts financially, but wherever they have been established they have set free the dramatic impulse of the locality in a remarkable fashion. Twenty years ago, even after the dramatic revival had unmistakably set in, we were all complaining that the British drama was a London drawing-room drama and nothing else. One would have supposed that, for theatrical purposes, the whole of England was summed up in its peerage and baronetage, and that the middle and lower classes had no more drama in their lives than the beasts that perish. The dramatist, in Gilbertian phrase, took no notice of any one beneath the rank of a stock broker. The life of workingmen, of provincial cities, and of the rural districts was left contemptuously to the cheap melodramatist. Now what a change of scene! We have Irish drama, Scotch drama, Welsh drama, Manchester and Liverpool drama; and if Ireland alone has produced anything great and original, all the other localities have at least brought to the study of their own conditions and character an intelligence and technical skill which, a quarter of a century ago, it would have been hard to find among the three or four leading dramatists of the London stage. It should be noted that this is something quite different from a mere reversion to the old "stock company" system. The stock companies which flourished down to 1870 or thereabouts were valuable schools of acting, but they did scarcely anything in the way of developing local authorship. They were as dependent upon London for their material as are the "touring combinations" of our own day.

These reflections are suggested by the visit to London of the Irish Players, of the Liverpool Commonwealth Company, and of Mr. Milton Rosmer's company, an offshoot (more or less) of Miss Horniman's Manchester Repertory Company. The most interesting of these, for the moment, is the second in order. When the war broke out, the Liverpool Repertory Theatre, always rather a struggling institution, was on the point of throwing up the sponge, when two actresses, Miss Madge McIntosh and Miss Estelle Winwood, conceived the idea of reorganizing the company on the old theatrical system of the "commonwealth"—the system of Shakespeare's theatre and of the Comédie Française. The actors and staff of the theatre all came in on half salaries, and were entitled to share proportionately in the profits after all expenses had been paid. It happened that Miss McIntosh was a capital organizer and producer, and the company has, in fact, been more successful under this system, during the past winter, than it ever had been before. They played Wilde, Shaw, Ibsen, Galsworthy, Hankin, Besier, Hubert Henry Davies, etc., as well as pieces by a couple of local playwrights. Among other things, they produced a delightfully witty "Revue of Revues" by a Liverpool author, Mr. Ronald Jeans. It was called "Hullo Repertory!" and was at once a burlesque of the great medleys known as "Revues" at the variety theatres, and a travesty of the chief plays of the company's own season. I saw it on its native heath, at Liverpool, and was delighted not only with its genuine wit, but with the excellent idea of proving, by means of a little gay banter, that the company did not take itself too seriously, but could do intelligent work without being pompously "high-browed."

The Commonwealth Company's visit to London was signalized by the production last week of a new play by Mr. Galsworthy, entitled "A Bit o' Love." It is a poignant little work, full of Mr. Galsworthy's intensely humanitarian spirit. It sins against the Aristotelian canon that the misfortunes of an entirely good man are no fit subject for tragedy; but then it does not profess to be tragedy; it is only a painful episode of Devonshire village life, which compensates for its pain by its underlying beauty and by its demonstration of the evils wrought by callous stupidity. Certainly it is impossible to find any *tragische Schuld* in the Rev. Michael Strangway, unless it be supersensitiveness and too hot an indignation against cruelty. He is a man with something of the St. Francis about him, which is entirely unappreciated by his Devonshire parishioners. With some he is unpopular because he protests against their treatment of animals—overworking horses, for instance, and caging larks. Others despise him as an ineffectual nincompoop; scarcely any one has real sympathy for him. The crisis comes when his adored wife, after living abroad all winter, returns only to tell him that she loves another man, to whom her heart had really been given before she made the mistake of marrying Strangway, and to implore him not to ruin the career of her lover by dragging him into a divorce suit. Unfortunately, this painful explanation between them is overheard by a malicious village girl, and presently the whole countryside rings with the scandal. The curate, in consenting not to punish his runaway wife, is held to be condoning sin and failing to play the part of a man. His parishioners gather in the churchyard and hoot and hiss him after evening service, and he is almost driven to suicide, when his hand is stayed by a charmingly conceived little incident, and he determines to go on living in and loving a world which has only resentment for his love and pity for it. Though certainly gloomy in the main, the play is lightened by many delectable touches of rustic character, and there is a scene of a village meeting, paralyzed by its notions of parliamentary procedure, which is a bit of pure humor.

Mr. Milton Rosmer's company, above mentioned, has given us a new comedy, "The Hillarys," left unfinished by the late Stanley Houghton (author of "Hindle Wakes") and finished by another Manchester playwright, Mr. Harold Brighouse. It is a pure comedy of a quite unpretending kind, but saved from triviality by its clever character-drawing and the vivacity, without artificiality, of its dialogue. Its theme is a little like that which "Robert Browning, writer of plays," considered "a subject made to his hand"; but it is treated in an entirely un-Browningesque spirit. The boy heir to an ancient baronetcy falls in love with his sister's governess; his uncle, an amiably cynical man-about-town, is called in to free him from the toils of the supposed adventuress by proving her worthless; but the Don Juan is himself enslaved, the uncle and nephew become bitter rivals, and in the end the governess, who happens to be a young woman of great good sense and dignity, declines to marry either of them. I cannot but foresee a fourth act, a year or two later, in which she marries the uncle; but the ending Mr. Brighouse has chosen is doubtless the right ending for the moment, though I think he makes the lady misrepresent her motives. She declares, before going off, that she really loves the nephew; but I cannot believe that this was what Mr. Stanley Houghton intended to convey to us.

The Irish Players have given us (I think) only one novelty, "Shanwalla," by Lady Gregory. Shanwalla is a racehorse; two rustic villains succeed in hocussing it and throwing the guilt upon the trainer, and their plot is in the end baffled only by the intervention of the ghost of the trainer's young wife, who wanders around, unable to make her presence felt by any one but a blind beggar. There are touches in the play which remind one of "Peter Grim," but the whole thing is simple, primitive, unelaborated to an almost incredible degree. The helplessness, the disdain of anything like structure, which is a note of the Irish manner, is here carried altogether too far. There is no reason why a story, however simple, should not be told with some approach to art and with a reasonable eye to effect. Even the writing, though often imaginative and characteristic, seemed to me too obviously inspired by Synge.

Mr. Martin Harvey has produced, under the ominous title of "Armageddon," a "modern epic drama" by Mr. Stephen Phillips, which admirers of that poet—I can speak for one of them—will make all possible haste to forget. It is inspired, not by any high sense of the historic crisis, but simply by the common catchwords of the war. It

does not stimulate thought or purify emotion, but merely gives violent utterance to the sentiments of the man in the street—just sentiments in many cases, but made no juster by being bellowed through a megaphone. The episodes are bracketed between a prologue and an epilogue in Hell. The prologue shows us Satan in council, on the Miltonic model, dispatching the spirit of Attila to earth to attempt a new conquest of the planet. Here and there Mr. Phillips hits upon a fine line in something like his old manner; but there is too much mere rant after this fashion (the speaker is Moloch):

Rise, Madness! Mother that didst bring me forth
In pangs before the making of the world,
While Famine, like a midwife, eased thy throes.
Arise now, Massacre! Thou favorite daughter,
Got in adultery 'neath a moody moon;
Awaken to the smell of infant-blood!
What matter now the cause so ye be loosed?
Here have I space at last and boundless field!

What good purpose can be served by this sort of thing it is impossible to divine. Equally unfathomable is the reason why Famine should ease the throes of Madness; while the idea of Moloch braving the danger of the divorce court and begetting Massacre, in defiance of the prayer-book, is surely as nice a piece of bathos as was ever perpetrated. Since when has the sacrament of marriage been acknowledged in Hell?

The first of the episodes shows us (of course) the bombardment of Rheims Cathedral, in spite of the pleadings of a saintly abbé, with many other horrors of war. It ends with the instant and painless annihilation of a roomful of German officers by a French asphyxiating shell—an incident which, if it were not melodramatic nonsense, would justify the German contention that the French led the way in the use of poisonous gases. Then we have a scene in which the death of an officer at the front is announced to his lady mother and his betrothed—a scene as unreal in form as it is painfully, intolerably real in every-day fact. It seems inconceivable that any one should want to make cheap theatrical sentiment of the bleeding wounds of ten thousand hearts and the agonized apprehensions of ten thousand more. Then we have a farcical scene in Wolff's Bureau—though the memory of our own "Russian" myth might have tempered Mr. Phillips's scorn for people who feed themselves with lies. And, finally, there is a scene at Cologne, which is saved from the fury of the Allied armies by the intervention of a vision of Joan of Arc. This is, in itself, the most sensible and dramatic scene in the piece. One might even take some pleasure in it if the Allied armies were a little nearer Cologne.

Another preposterous war play is Mr. C. B. Fernald's "The Day Before the Day" at the St. James's. It deals with the doings of a gang of Prussian spies whose business it is to deceive the British fleet as to the intended locality of a raid upon the British coast. Like all plays of its class, it attributes to the German spy a weird mixture of miraculous cleverness and childish imbecility. I fear that the popular imagination even of wartime is not credulous enough to make the play a success.

A piano teacher who does not think he knows better how things should be played than the great pianists do is somewhat of a curiosity. Charles W. Wilkinson is such a teacher. He has heard the principal pianists, from Rubinstein to the present day, and what he has learned from them he has embodied with his own ideas on interpretation in a book which must be highly commended to all students of the piano: "Well-Known Piano Solos: How to Play Them with Understanding, Expression, and Effect" (Charles Scribner's Sons). In a compass of 288 pages the author considers 110 pieces, among them such favorites as Paderewski's Minuet, Rubinstein's Melody in F, Grieg's "Wedding Day at Troldhaugen," Rachmaninoff's popular Prelude, Mendelssohn's "Spinning Song," Liszt's "Waldesrauschen," MacDowell's "To the Sea," pieces by Chopin, some of Beethoven's sonatas, and so on, all the music chosen being good as well as popular. One wonders that no one had thought of writing such a book before, and one feels glad that the task fell into the hands of a teacher whose good taste and catholicity equal his knowledge and his skill in imparting it in a telling way.

Art

A book of ready reference, designed "to tell the reader what he wishes to know and *all* that he needs to know in order to identify and classify any piece of period furniture, whether original or a reproduction," is "The Practical Book of Period Furniture" (Lippincott; $5 net). The authors, Harold D. Eberlein and Abbot McClure, are frequent contributors to journals of architecture and home decoration. Without adding much to the total of knowledge concerning English, French, and early American furniture (for they freely acknowledge their evident indebtedness to Lockwood, Cescinsky, Macquoid, and Foley), they have written a comprehensive, accurate, and readable volume. An illustrated chronological key, to aid "in identifying the period of any particular piece of furniture," should be valuable to amateur collectors. Tolerant of all the styles extant before the great decadence of the middle nineteenth century, the writers say a good word even for "American Empire." "Under one phase or another," they indicate, regarding the vogue of a manner derived from the French, "the fashion lasted until about the middle of the century, but its last decadent stages, dating from a time when all artistic appreciation was sinking to its lowest ebb, were clumsy and graceless in the extreme, with large vulgar and meaningless scrolls highly suggestive of the convolutions of fat, squirming earthworms. The bulk of the Empire furniture that came between these two extremes had much to commend it. Though there was no longer the airy lightness of the painted satinwood creations of an earlier style and the brilliancy of finely grained, light-colored veneer, there was a good deal by way of compensation. The rich coloring of the mahogany that was almost invariably used, relieved by the brass mounts and occasional brass banding or gilded carving, made a most impressive and agreeable contrast. Not a little of the carving was vigorous in conception and excellent in execution."

The book loses its catholicity as it comes down to recent fashions. The rôle of the furniture designer, henceforth, it would appear, is to reproduce, not to invent. We learn that "the decorative bent of our day demands good reproductions. This is true because there are no worthy new styles that can at all fill their place." Here are particulars: "Some depressing new styles have, indeed, been concocted from time to time, as the result of conscious effort, but they are stilted and affected and are evidently the product of a tenuous invention painfully striving for something it could not attain. There was, for instance, the Eastlake mode of Victorian days, there were the various manifestations of the *art nouveau*, with its grotesque and tortured forms; nearer our own day there is the Mission style, and several others might be added—all of them so awkward, self-conscious, and so evidently betokening origin from a diseased and wofully jejune imagination that we naturally feel disposed to mistrust the latest phase of style creation evidenced in the tendencies of the Vienna school." It may be questioned if this repressive attitude cannot be held too tenaciously and if the newer needs of business and domestic life do not justify serious and well tempered efforts to invent suitable new modes in furniture as well as in architecture.

The title of "Pottery, for Artists, Craftsmen, and Teachers," by George J. Cox (Macmillan Company; $1.25), accurately indicates the field of usefulness of an explicit little manual. It is not a book for the general reader, though the introductory Historical Summary contains information that is universally interesting. The author, who is instructor in pottery and modelling at Teachers College, Columbia University, imparts much technical lore in a small compass: on the working of clays and pastes; building shapes by hand and on the wheel; moulding, casting, and pressing; jigger and jolley work; tile-making; glazes and lustres; modelling and glazing of figurines; construction and management of kilns, and other similar topics. The various operations are illustrated with Mr. Cox's pen drawings, made and hand-lettered in the rather black manner of the English "arts and crafts" school—a mode which the printer has more or less successfully followed in the style of his type printed on a coarse buff stock. The influence of William Morris and Fabian socialism is observed whenever the author generalizes concerning the present situation in the pottery trade. He is hopeful. Since the "eighties" the craft, he believes, has shown "signs of a renaissance in æsthetics." A further awakening may be predicted. "Tradition, except the traditions of flawless glazes, certain soulless results, and commercial cheese-paring, seems dead, perhaps, but it will surely come to life again. To see the potter 'thumping his wet clay,' and seated at the wheel of ancient lineage, conjuring forth a wealth of gracious shapes, is to renew one's faith in the ultimate survival of simple, honest handicraft even in this machine-ridden age. Masterpieces were never conceived in factories, and

when we make pots primarily for love of them, not to sell them, we shall begin to beat back the manufacturer of debauched 'art' pots into that domestic and hygienic realm wherein his efforts are particularly admirable and effective. A craft that teems with such an endless variety of beautiful objects for such countless uses can never remain for all time a hand-maiden of commerce."

Finance

MARKETS AND THE BRITISH WAR LOAN.

The first comment of the financial markets, after Great Britain had announced its new $1,250,000,000 war loan with an interest rate of 4½ per cent., was that this meant formal recognition of a rise in the price of capital, and that therefore all other new securities issued anywhere must pay a higher rate of interest than before, and that prices of all outstanding bonds ought logically to decline. The next comment was, that the economic strain on Europe must be approaching unbearable severity.

Undoubtedly, the terms of the loan denote a rise in the price of capital. Those terms are more unfavorable to the British Government than any which that Government has accepted in a hundred years. In November, when the first British loan of the present war was made, a price of 95 was fixed for 3½ per cents; making the net yield, allowing for redemption at par in 1928, about 4 per cent. The last previous occasion of extensive "war borrowing" by England was during the Boer War. In March, 1900, a special issue of £30,000,000 "war stock," bearing 2¾ per cent. interest and maturing in 1910, was sold at 98½. In April, 1901, £60,000,000 of 2¾ per cent. consols were sold at 94½; again, a year later, $32,000,000 of the 2¾ per cents were sold at 93½. During the Crimean War, England's debt was increased by £30,000,000, but borrowing was then effected when the open market was offering a price averaging 90 for 3 per cent. consols. To encounter a rate equivalent to the present 4½ per cent., one would have to go back to 1815.

It might be inferred, then, that the rate of interest on all other new securities must be raised, and (what is really the same thing) that the price of all other outstanding bonds must fall. But this does not follow. The Exchequer has made no new discovery. France has been selling Government bonds on a 5½ per cent. basis, Germany at nearly as high a rate. New York city this week issued 4½ per cent. bonds, but whereas the British Government has offered the same security at par, an appreciably higher price was received at the public offering of the New York loan on Tuesday. Except for the fact that England is engaged in an immensely expensive war, the higher price for bonds of an American city would be absurd. The truth is, that the market for Europe's war loans is governed by conditions peculiar to itself.

This consideration leads to the second question—how long can such borrowing as this of England's continue? The British funded debt, when the new $1,250,000,000 loan is floated, will be double what it was last July. Germany has nearly trebled her Imperial funded debt by the two billion-dollar war loans; the $1,400,000,000 war borrowings of France have increased her already huge public debt by 50 per cent. Can this sort of thing go on indefinitely?

The only answer possible to make is, that the same question has been asked on previous similar occasions, when the result proved that such borrowings could go on. In the earlier part of the war with France, between 1793 and 1801, England borrowed $1,672,000,000—a prodigious sum in those days—and had eventually to sell its bonds at such a discount that the cash proceeds of the above total issue were barely $1,000,000,000. Yet $1,500,000,000 more were sold in the next dozen years, and not, as a rule, at any worse prices.

Other governments have had the same experience. In 1862, after a year of war loans in unheard-of sums, Secretary Chase believed himself to have discovered that United States bonds "could not be disposed of to capitalists in amounts sufficient for prompt payment of the army and navy"—the language is from an official Treasury report. He employed Jay Cooke as the Treasury's "general agent," allowed him a commission, and set him at work with an army of 2,500 canvassers. The Secretary declared to Congress:

> Under this plan, bonds to the amount of nearly $400,000,000, in denominations of $50, $100, $500, and $1,000, were distributed throughout the whole country not controlled by the rebellion, and among all classes of our countrymen.

Later in the war, the same energetic agent sold $830,000,000 more United States bonds in a similar way, and within four months. Before Cooke tried his experiment, nobody imagined that any such sum of available money existed in such quarters.

This is the kind of achievement which England apparently means to try, in the new plan for offering the 4½ per cents at every post office, in denominations as low as a $25 bond, and with the further privilege to the little investor of buying five-shilling interest-bearing "vouchers," and turning them into a 4½ per cent. bond when $25 worth have been purchased. It is impossible to say what the result of such an experiment, in so thrifty a community as Great Britain, may not accomplish.

No doubt, as the war goes on, we shall get many new impressions and learn many new lessons. But even regarding the strain on Europe, people who draw conclusions should make sure they understand what are the real resources of the world's capital in an emergency. Macaulay has a striking passage on the unfulfilled predictions of economic ruin to England, on each successive expansion of her public debt in war-time. It was easy to prove, at the end of the eighteenth century, that England could not possibly raise and spend on the war with France what she did raise and spend in the subsequent fifteen years. Any one who had predicted in 1861 our own Civil War loans of the next four years would have been laughed out of Wall Street. "Thinking in hundred millions" came into very practical fashion in America in 1901, exactly five years after the financial world had pronounced the country's financial capacities nearly exhausted. We are now beginning to learn how to think in thousands of millions.

Common Sense Applied to Woman's Suffrage

By Dr. Mary Putnam Jacobi

New Edition with an Introduction by Frances Maule Björkman

12°. $1.00 net

The expansion of an Address delivered by its author before the New York State Constitutional Convention of 1894. The Address was described at the time by friends and opponents of Equal Suffrage as the most weighty, dignified, and forcible statement that had as yet been presented in behalf of the removal of sex restriction on suffrage. The author's statements and reasonings are as pertinent to-day as they were twenty years ago.

VOLUME I. JUST ISSUED

Bound Book of 1,238 Pages

The New York Times
CURRENT HISTORY

THE EUROPEAN WAR

A work of reference and a treasury of human documents of vital importance to this generation. A gift to posterity that will increase in value with the passage of time.

AN IMPARTIAL RECORD of the great European Conflict from the beginning to date of issue, including the official documents relating to the outbreak of the war; the speeches of statesmen; the utterances of the chief literary champions of all the nations involved; diplomatic correspondence; together with accounts of military operations as embodied in official dispatches, stories from soldiers in the trenches and descriptions of the chief phases of the fighting on all the fronts by war correspondents.

GEORGE BERNARD SHAW'S "Common Sense About the War"; Rudyard Kipling's "As They Tested Our Fathers"; Gerhart Hauptmann's "Are We Barbarians?" James M. Beck's "In the Supreme Court of Civilization"; Baron Hengelmuller's "In Defense of Austria"; Sir John French's Own Story; Cyril Brown's "At the Kaiser's Headquarters"; Cardinal Mercier's Pastoral Letter; The Crown Prince's Message to America and the discussion between Sir Edward Grey and von Bethmann-Hollweg over the latter's "Scrap of Paper" utterance are a few examples taken at random as showing the character of the contents of this great work.

JUST think what a priceless treasure a similar first-hand contemporaneous record of the civil war would be to you if you had the good fortune to possess such a volume! Do not neglect this opportunity to obtain this splendid record of the most stupendous series of events in history. It will be invaluable to you as a work of reference while the war is in progress and a precious relic to be handed on to your children.

This book comprises the first six numbers of the monthly magazine. Contains 1,238 pages, 6½x9½ inches, 96 full-page rotogravure portraits, 48 full-page views of the war, 28 full-page cartoons from foreign periodicals, a 9-page Analytical Index and a complete Chronological Record. Bound in durable seal brown embossed cloth, with gold lettering. Price $2.00, delivery charges extra.

The Life of Henry Laurens

By Prof. D. D. Wallace

8°. *$3.50 net.*

Henry Laurens's presidency of the Continental Congress was in some respects the most notable among the services of the Revolutionary statesmen who presided over that famous body. He belonged to the small group of men of exceptional ability who held the Congress to its arduous duties in the critical period of 1777-9, and impressed his personality deeply upon the political history of the Revolution. Further, he has been called the "finest, proudest, wittiest, most efficient, and most chivalrous American of his time." This is the first biography ever published of the famous South Carolina merchant, planter, and statesman.

The Story of the Week

IN FINANCE COMMERCE AND ECONOMICS

Business in the large sense affects vitally every reader of this advertisement. The fluctuating conditions of the markets, financial and commercial movements, new developments in the whole field of industry and business, demand attention from everyone with a desire to be well informed.

THE ANNALIST

a weekly journal of national scope, furnishes the most satisfactory survey of the world's commercial and financial news. The following are typical of the topics treated in its pages:

The effect of the War on trade conditions; workmen's compensation laws; the work of state banking departments in safeguarding the citizen's savings; the upbuilding of new industries in War time; War finance and the markets of the world; the cost of living; news of public utilities, with forecast and comment, earnings, issues of stock, relation to legislation, etc.; railroad and industrial news; new laws affecting business, trust regulation; the barometrics of business (sales of stocks, with average prices, the metal barometer, production of pig iron, building permits, alien migration, bank clearings); prices of business commodities; the state of credit; condition of national banks; foreign and domestic exchange rates; cost of money; gold movement at New York, summary of commercial failures; bank clearings; stock market averages; record of transactions of the New York Stock Exchange, weekly statements and news of the Federal Reserve banks.

THE ANNALIST OPEN SECURITY MARKET

is a record of authoritative bid and asking prices on unlisted and inactive stocks and bonds. It has proved a valuable help to investors.

By Geraldine Bonner.
The quick wit of a telephone girl and her keen understanding of human nature help her to solve a baffling murder mystery and develop a romance all her own.
Illustrated by A. W. Brown. $1.30 *net.*

Reduced facsimile of the Appleton advertisement appearing in the first issue of The Nation. The American Year Book has succeeded the Annual Cyclopedia as the Standard Reference Work of American Affairs

VOLUME FOR 1864

THE ANNUAL CYCLOPÆDIA

AND

Register of Important Events for the Year:

In presenting to the public a new volume of the Annual Cyclopædia, containing the record of another eventful year, no efforts have been spared to secure its completeness and accuracy, and to preserve it free from every mark of partisanship.

The work was commenced in the year 1861, and is published, one volume annually, in the same style as the "New American Cyclopædia." Each volume is intended to be a Cyclopædia of the material and intellectual development of the year, and embraces the civil, military and social affairs of all countries; important Public Documents; Biography; Statistics; Commerce; Finance; Literature; Science; Agriculture; Mechanical Industry, etc. In a word, it covers the same field as the "New American Cyclopædia," but each volume is confined to the results of its year.

The portions of each volume devoted to the United States embrace the operations of the armies, step by step and day by day, and the causes and consequences of their movements; also their organization, numbers and condition. The debates of Congress on all important questions; the Messages of the President, and public documents of the Government; finances; commercial and diplomatic intercourse; emancipation, peace, etc.; the internal affairs of all the States; their military enterprise, industry, and prosperity.

Under Foreign Affairs, all those countries are noticed which have attracted attention during each year. Commercial interests, in all their branches, including petroleum, are discussed.

The developments of mechanical industry are shown by details of important results and inventions patented.

Those branches of natural science in which progress has been made are noticed each year, and the developments fully brought up.

The condition of the principal religious denominations, with their branches, membership, numbers, views on civil affairs, and the spread of their opinions among the nations, is presented.

The geographical explorations and discoveries are stated. The record of literature and literary progress is carefully explained. Nor is the large mortality among distinguished men overlooked.

The contents are accompanied by a most extensive and complete Index.

Price and Style of Binding of each Annual Volume, 1861, 1862, 1863, 1864:

In Cloth,	$5.00
In Sheep,	6.00
In Half Mor.,	6.50
In Half Rus.,	7.50
In Full Mor.,	9.00
In Full Rus.,	9.00

And to insure a uniform price and regularity in the delivery of the volume to subscribers in all parts of the country, local agents are appointed in all the cities and principal towns in the States and Territories,

D. APPLETON & CO., Publishers,
443 & 445 Broadway, N. Y.

Satellite Cities
By Graham R. Taylor. $1.50 *net.*

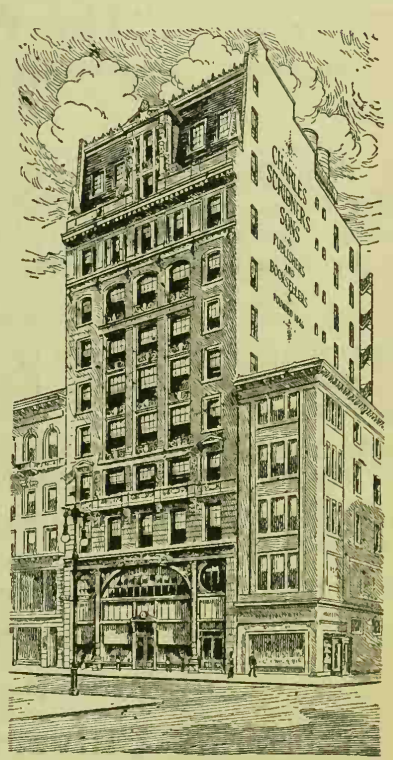
D. APPLETON AND COMPANY, PUBLISHERS, NEW YORK

CHARLES SCRIBNER'S SONS

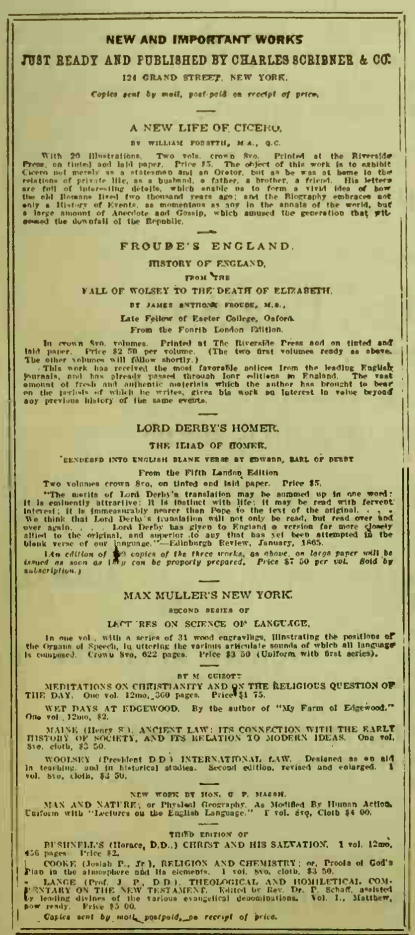
PUBLISHERS AND BOOKSELLERS

Founded in 1846

This cut, to the right, represents the present quarters of the editorial and business offices of the Scribner Publishing House and of the Scribner Bookstore—their printing offices are in the Scribner Press Building in West 43rd Street.



The cut in the lower left-hand corner is a facsimile of an advertisement inserted by the house in the first issue of the Nation, published just half a century ago—nineteen years after the original offices of the house had been opened in the chapel of the Old Brick Meeting House on the corner of Nassau Street and Park Row.



NEW AND IMPORTANT WORKS

JUST READY AND PUBLISHED BY CHARLES SCRIBNER & CO.

124 GRAND STREET, NEW YORK.

Copies sent by mail, post-paid on receipt of price.

A NEW LIFE OF CICERO.

BY WILLIAM FORSYTH, M.A., Q.C.

With 20 Illustrations. Two vols. crown 8vo. Printed at the Riverside Press, on tinted and laid paper. Price $5. The object of this work is to exhibit Cicero not merely as a statesman and an Orator, but as he was at home in the relations of private life, as a husband, a father, a brother, a friend. His letters are full of interesting details, which enable us to form a vivid idea of how the old Romans lived two thousand years ago; and the Biography embraces not only a History of Events, as momentous as any in the annals of the world, but a large amount of Anecdote and Gossip, which amused the generation that witnessed the downfall of the Republic.

FROUDE'S ENGLAND.

HISTORY OF ENGLAND,

FROM THE

FALL OF WOLSEY TO THE DEATH OF ELIZABETH.

BY JAMES ANTHONY FROUDE, M.A.,

Late Fellow of Exeter College, Oxford.

From the Fourth London Edition.

In crown 8vo. volumes. Printed at The Riverside Press and on tinted and laid paper. Price $2 50 per volume. (The two first volumes ready as above. The other volumes will follow shortly.)

This work has received the most favorable notices from the leading English journals, and has already passed through four editions in England. The vast amount of fresh and authentic materials which the author has brought to bear on the periods of which he writes, gives his work an interest in value beyond any previous history of the same events.

LORD DERBY'S HOMER.

THE ILIAD OF HOMER,

RENDERED INTO ENGLISH BLANK VERSE BY EDWARD, EARL OF DERBY

From the Fifth London Edition

Two volumes crown 8vo, on tinted and laid paper. Price $5.

"The merits of Lord Derby's translation may be summed up in one word: it is eminently attractive: it is instinct with life: it may be read with fervent interest: it is immeasurably nearer than Pope to the text of the original. . . . We think that Lord Derby's translation will not only be read, but read over and over again. . . . Lord Derby has given to England a version far more closely allied to the original, and superior to any that has yet been attempted in the blank verse of our language."—Edinburgh Review, January, 1865.

An edition of 250 copies of the three works, as above, on large paper will be issued as soon as they can be properly prepared. Price $7 50 per vol. Sold by subscription.

MAX MULLER'S NEW YORK.

SECOND SERIES OF

LECTURES ON SCIENCE OF LANGUAGE.

In one vol., with a series of 21 wood engravings, illustrating the positions of the Organs of Speech, in uttering the various articulate sounds of which all language is composed. Crown 8vo, 622 pages. Price $3 50 (Uniform with first series).

BY M. GUIZOT.

MEDITATIONS ON CHRISTIANITY AND ON THE RELIGIOUS QUESTION OF THE DAY. One vol. 12mo, 360 pages. Price $1 75.

WET DAYS AT EDGEWOOD. By the author of "My Farm of Edgewood." One vol. 12mo, $2.

MAINE (Henry S.). ANCIENT LAW: ITS CONNECTION WITH THE EARLY HISTORY OF SOCIETY, AND ITS RELATION TO MODERN IDEAS. One vol. 8vo, cloth, $3 50.

WOOLSEY (President D.D.). INTERNATIONAL LAW. Designed as an aid in teaching, and in historical studies. Second edition, revised and enlarged. 1 vol. 8vo, cloth, $3 50.

NEW WORK BY HON. G. P. MARSH.

MAN AND NATURE, or Physical Geography, As Modified By Human Action. Uniform with "Lectures on the English Language." 1 vol. 8vo, Cloth $4 00.

THIRD EDITION OF

BUSHNELL'S (Horace, D.D.) CHRIST AND HIS SALVATION. 1 vol. 12mo, 456 pages. Price $2.

COOKE (Josiah P., Jr.). RELIGION AND CHEMISTRY: or, Proofs of God's Plan in the atmosphere and its elements. 1 vol. 8vo, cloth, $3 50.

LANGE (Prof. J. P., D.D.). THEOLOGICAL AND HOMILETICAL COMMENTARY ON THE NEW TESTAMENT. Edited by Rev. Dr. P. Schaff, assisted by leading divines of the various evangelical denominations. Vol. I., Matthew, now ready. Price $5 00.

1784 —— 1837 —— 1915

Boston's Oldest Publishing House

Fifty years ago the Boston publishing house of Little, Brown & Company (as the accompanying facsimile advertisement from the initial number of the *Nation* indicates) was bringing out the Richard Grant White edition of Shakespeare, the historical works of Francis Parkman, the lives of Andrew Johnson and Samuel Adams, Grimm's Life of Michael Angelo, the works of Edmund Burke, and a translation of Epictetus—and most of these books are in active demand to-day. A new edition of the Richard Grant White Shakespeare has recently been published by this house, Parkman's historical works have become standard authorities, and this American edition of Burke's works is actually supplied to England.

When the first issue of the *Nation* appeared a half century ago, Little, Brown & Company had been in existence twenty-eight years, for it was in 1837 that Charles C. Little and James Brown acquired the bookselling and publishing business of Hilliard, Gray & Company. In fact, this Boston house traces its history back to 1784 when Ebenezer Battelle kept a bookstore on Marlborough Street, then that part of Washington Street south of School and north of Eliot.

The house has long ranked with the world's foremost publishers of the works of standard authors, and books of history, biography, travel, description, belles lettres, poetry, domestic science as well as popular fiction, both adult and juvenile. Perhaps no house has issued more of the works of famous American statesmen. Their lists of publications have long been noted for their solid, substantial character. In the earlier days they brought out the "Life and Works of Washington," by Jared Sparks, in twelve volumes; Sparks' American biography, in twenty-five volumes; and the works of John Adams, Edward Everett, and Daniel Webster. The publication of the works of Parkman alone would have made this firm famous, but other successful ventures include the issuing of the late Admiral A. T. Mahan's epoch-making books on "The Influence of Sea Power," Bartlett's "Familiar Quotations," recently revised and enlarged, and the translations of the Polish novels of Henryk Sienkiewicz. Their editions of Dumas, Daudet, and Hugo have been accepted in England as well as America as the standard editions of these great French authors.

This advertisement was in The Nation's first number

Vol. I. now ready

The publishers will send the volumes as issued, free of expense to Subscribers, upon the receipt of $2 25.

The house has been from its beginning the leading law book publishers in America, its imprint appearing on the legal works of such early authorities as Chancellor Kent, Emory Washburn, Theophilus Parsons, Judge Story, and Simon Greenleaf. During the past fifty years the law book list has grown in length and importance with the list of publications in general literature, and to-day contains the revised works of such notable legal writers as Judge Thomas M. Cooley, James Bradley Thayer, John N. Woerner, Judge John F. Dillon, Victor Morawetz, Oliver Wendell Holmes, Jr., Hon. Simeon E. Baldwin, Judge Emlin McClain, William W. Cook, and the several epoch-making treatises of John H. Wigmore. More recent publishing ventures in this department include the three-volume collection of Essays in Anglo-American Legal History, the Modern Criminal Science Series in nine volumes, the Continental Legal History Series in eleven volumes, and the Evolution of Law Series in three volumes.

By acquiring the publishing business of Roberts Brothers in 1898, Little, Brown & Company came into possession of many authors and books of widely recognized literary worth. Included in the list taken over were Miss Wormeley's wonderful translation of Balzac's Works, and the writings of such authors as Louisa M. Alcott, Dr. Edward Everett Hale, Helen Hunt Jackson, Laura E. Richards, Emily Dickinson, Susan Coolidge, Louise Chandler Moulton, Lilian Whiting, Annie Payson Call, Mary W. Tileston, Mary J. Lincoln, Mary P. Wells Smith, and many others. Nearly 3,000,000 copies of "Little Women" and Miss Alcott's other stories have been sold.

This house has brought out in recent years the books of some of the most popular novelists of the present day, including Jeffery Farnol, author of "The Broad Highway," etc., E. Phillips Oppenheim, whose stories of international intrigue were never more popular, A. S. M. Hutchinson, author of "The Happy Warrior," Sidney McCall, who wrote "Truth Dexter," Mary E. Waller, author of "The Wood-Carver of 'Lympus," Anne Warner, the creator of "Susan Clegg," Louis Joseph Vance, Eliza Calvert Hall, author of "Aunt Jane of Kentucky," Payne Erskine, who wrote "The Mountain Girl," and W. L. George. Among the most recent additions to its list of juvenile writers is Thornton W. Burgess, whose animal stories for bedtime reading have earned for him the title of the "Twentieth Century Uncle Remus." The varied character of the publications of the company is illustrated by the fact that its perennial best sellers include Miss Farmer's "Boston Cooking School Cook Book."

The Educational Department, of more recent growth, has confined its activities principally to supplying the needs of the lower grades, and its constantly increasing business and lengthened list of authors testify to its success in this large field.

Little, Brown & Company is now an incorporated company with its principal offices at 34 Beacon Street.

THE NEW INTERNATIONAL ENCYCLOPAEDIA

SECOND EDITION

EDITORS

FRANK MOORE COLBY, M.A. TALCOTT WILLIAMS, LL.D., Litt.D.

In 1885 Dodd, Mead & Company published the International Cyclopædia. This work embodied a thorough revision and expansion of Alden's famous Library of Universal Knowledge, which was purchased by Dodd, Mead & Company one year before.

In 1890 an extensive revision of the work was made, and in 1902 the plates were discarded and an entirely new work prepared, which was entitled "The New International Encyclopædia."

The first volumes of the Second Edition of The New International Encyclopædia were placed on the market in the spring of 1914. When completed this will be the most satisfactory, practical reference book published in this country. Of the different editions of the International, the first edition of the New International and also the second edition of the New International, there have been sold upward of 100,000 sets. It is to-day regarded by librarians and institutions of learning as the most satisfactory reference book published. Full information regarding this work can be had for the asking.

DODD, MEAD & COMPANY

will be glad to send to any address New Illustrated Catalogue of Publications and complete information about The New International Encyclopaedia, Second Edition

EIGHTEENTH CENTURY NINETEENTH CENTURY TWENTIETH CENTURY

THE RECORD OF A GREAT PHILADELPHIA HOUSE

EARLY BEGINNINGS

It was during the second term of George Washington's administration, or in 1792, to be exact, that on High Street, Philadelphia, Jacob Johnston opened a small book store. The development from this little shop to the J. B. Lippincott Company of to-day has been a development intimately linked with the intellectual, scientific, and industrial history of America.

The early Philadelphians were evidently students and readers of books, as Johnston's establishment soon became crowded with eager customers. Expansion was necessary. Added capital and thoroughgoing energy were applied, and the business became one of greater and greater importance. As it was in the eighteenth century so is it in the twentieth, for, as with the small book store of long ago, so with the publishing house of to-day, expansion upon solid foundations has been the keynote of the policy.

ACTIVITIES IN THE FIFTIES

It was in 1851 that the House came to be regarded by publishers across the water as one of world-wide importance. Up to this time the conservative Englishmen had not regarded their American competitors with any special favor, but in 1851 J. B. Lippincott, the prime mover in the firm, made his first business trip to London and Edinburgh. This visit was comprehensive in its consequences: making extensive purchases, he gave ample security, thus establishing a credit for large dealings which laid the foundation of the subsequent importing business and did much to cement trade relations between all members of the profession in England and America.

From this date may be reckoned the intimate relations of the Philadelphia house with the eminent firm of William & Robert Chambers. This connection has remained a close one to this day, and those famous reference books found in almost every private library, however small, are the result of it.

In 1855 appeared the first edition of "Lippincott's Pronouncing Gazetteer of the World," a volume of two thousand pages, which through successive editions has since been virtually without a rival. An opportunity was presented in 1857 of securing from the original publishers the copyright of Prescott's Histories. It was accepted, and the books have been in constant demand to this day. In 1870, as a worthy companion of the Gazetteer, "Lippincott's Pronouncing Dictionary of Biography and Mythology" appeared, and from time to time other valuable standard works were added to the list, among them the famous "Dictionary of Authors," by Doctor Allibone.

Another great monument is the Variorum Edition of Shakespeare, edited by the late Dr. Horace Howard Furness, assisted and now ably seconded by his son, Horace Howard Furness, Jr. This magnificent work, honored wherever English literature is honored, was commenced in the sixties, when Dr. Furness was but thirty years old. There have now been seventeen plays published, and the world of scholars looks to Mr. Furness, Jr., to complete the tremendous task. It is a unique triumph for American letters.

TO READERS OF FICTION

It was through the J. B. Lippincott Company presses that those representative novels from the pens of Ouida, "Duchess," and Mrs. Wister, those popular ladies of the past century, made their bow to an admiring public. John Reed Scott's "The Colonel of the Red Huzzars," Grace Livingstone Hill Lutz's "Marcia Schuyler," Robert Hichens's "Bella Donna," Frank Danby's "Pigs in Clover," and Hall Caine's "The Woman Thou Gavest Me" are some of the novels that have won renown within recent years.

THE VARIED BOOKS OF TO-DAY

And what of to-day in every department? This Company, as does the *Nation*, looks back upon a long and honored history, but that very history prompts to greater endeavors for the future. As usual upon the alert to provide the public with the best that it demands, a standard series of Farm Manuals have been published under the editorship of Kary C. Davis, a leading agricultural expert. These books are used in the leading agricultural colleges throughout the United States as the required texts. In medicine the House stands preëminent, and no one at all acquainted with medical literature will wonder at it when they see upon the lists such works as Piersol's "Anatomy," Wilson's "Medical Diagnosis," Remington's "Practice of Pharmacy," and the "United States Dispensatory." The complete line of scientific works imported from Charles Griffin & Company of London bring the Lippincott name to all students of scientific industries, and also American scientific works, such as Blair's standard book upon Iron Analysis, carry great weight in technical circles. History is well represented by the True Series of Biography and History, books that are spreading far and wide among all classes of readers, a living interest in American history. The Lippincott Readers (from which how many American citizens have had their first reading lessons!) remain as a standby of the Educational Department, but many another series has been added to them. The Art Department is proud of the handsome works of Joseph Pennell, and of many other books upon American architecture, period furniture, and the other branches of arts and crafts. In considering stories of travel, Sir Ernest Shackleton's "The Heart of the Antarctic" and Sir Douglas Mawson's "The Home of the Blizzard" stand preëminent.

The J. B. Lippincott Company, now established in a five-story building on Washington Square, has a broad foundation, and it is with confidence that it agrees to greet the *Nation* fifty years hence upon the Centennial Anniversary.

OXFORD UNIVERSITY PRESS AMERICAN BRANCH

The Oxford English Texts

Library editions, 8vo, uniformly bound in cloth, with facsimile title-pages. The texts carefully collated with the original editions.

THE COMPLETE WORKS OF HENRY VAUGHAN

Edited by L. C. MARTIN

Two volumes, pp. 402+340. *With facsimiles....net* **$5.75**

"Henry Vaughan is one of the curiosities of literary values.... These volumes will be the authoritative edition."—*Nation.*

(Uniform with The Oxford Book of English Verse)

"It must surely give legal readers an added pride in the literature of our American republic."—*N. Y. Evening Post.*

THE CONSORT OF MUSIC

A Study in Interpretation and Ensemble.

By J. A. FULLER-MAITLAND.

8vo, cloth, pp. 250.....*net* **$2.00**

"A discourse so readable and so well founded in experience forms an important addition to English musical literature."—*Scotsman.*

Sacred Books of the East

Translated by various Scholars, and edited by the late Right Hon. F. MAX MULLER.

THE LAWS OF MANU

Translated by GEORG BÜHLER. Volume XXV.

New impression. *8vo, cloth, pp.* 758.....*net* **$6.75**

THE VEDÂNTA-SÛTRAS

Part I. With Saṅkara's commentary.

By G. THIBAUT. Volume XXXIV.

New impression. *8vo, cloth, pp.* 576.....*net* **$3.15**

THE WORKS OF ARISTOTLE.

Translated into English under the editorship of J. A. SMITH and W. D. ROSS, M.A., Fellow of Oriel College.

TWO NEW PARTS JUST PUBLISHED.

(1) *Magna Moralia,* by ST. GEORGE STOCK; *Ethica Eudemia* and *De Virtutibus et Vitiis,* by J. SOLOMON.

8vo, pp. 274..... **$1.75**

(2) *De Mundo,* by E. S. FORSTER; *De Spiritu,* by J. F. DOBSON.

8vo, pp. 64.....**70c**

(Send for list of parts previously published.)

THE LETTERS of SIDONIUS

Translated with Introduction and Notes by O. M. DALTON

Crown 8vo, cloth. Vol. I. pp. clxxxiii+86. *Vol. II. pp.* 268.

Per volume **$1.00**

(Oxford Library of Translations.)

EDUCATIONAL VALUES AND METHODS

Based on the principles of the training process, by W. G. SLEIGHT, M.A., D.Litt., Lecturer on education under the London County Council, with preface by C. Spearman, Ph.D., University of London.

From The Preface: "Out of the ashes of the old pedagogic systems, he is conjuring up a new and more hopeful one. In place of the existing school curriculum, based largely on illusion and mere historical accident, he proposes to us an education in which every detail rests on rational grounds.

"The prospect depicted by him is fair, indeed. He portrays happy, healthy, graceful children, living out their own lives, and yet preparing well for their duties as adult citizens of the state; the utmost skill is being developed for the coming hours of labour, the fullest culture for those of leisure, and high ideals for all times."

Crown 8vo, cloth, pp. 364.....*net* **$1.50**

SOME LOVE SONGS OF PETRARCH

Translated and annotated, and with a Biographical Introduction. By WILLIAM DUDLEY FOULKE.

Fcap 8vo, cloth, pp. 244.....*net* **$1.15**

THE VITAL FORCES OF CHRISTIANITY AND ISLAM

Six studies by Missionaries to Moslems, with an Introduction by the Rev. S. M. ZWEMER, and a Concluding Study by Professor DUNCAN BLACK MACDONALD.

Crown 8vo, cloth, pp. 250.....*net* **$1.15**

THE LIFE OF BARNAVE

By E. D. BRADBY. Two volumes.

8vo, cloth, pp. 396+414.....*net* **$5.75**

"Barnave was the embodiment of the first phase of the Revolution. In the study of this phase Miss Bradby's book will be henceforth indispensable."—*London Times.*

THE LIFE OF PHILIP SKELTON

By SAMUEL BURDY, A.B. Reprinted from the Edition of 1792. With an Introduction by NORMAN MOORE.

Crown 8vo, cloth, pp. xxviii+256.....*net* **$1.75**

"A delightful book, and one giving the best account of Ireland of any work of its time."—*Macaulay on 1792 Edition.*

"A book, in short, full of character and abounding in humour."—*London Times.*

The DEVELOPMENT of ARABIC NUMERALS in EUROPE

Exhibited in sixty-four Tables. By G. F. HILL.

8vo, cloth, pp. 126.....*net* **$2.50**

MADAME DE STAËL AND THE SPREAD OF GERMAN LITERATURE

By EMMA GERTRUDE JAECK, PH.D.

(Germanic Literature and Culture Series)

Crown 8vo, cloth, pp. vi+358.....*net* **75c**

The WAR SPEECHES of WILLIAM PITT THE YOUNGER

Selected, and with Introduction, by R. COUPLAND.

Crown 8vo, cloth, pp. 408.....*net* **$1.00**

"There is not a speech which, if we substitute the German Emperor for Napoleon, and Germany for France, does not contain something precisely applicable to the situation of ourselves and of the British Empire in the present crisis."—*Pall Mall Gazette.*

STUDIES IN THE HISTORY OF NATURAL THEOLOGY

By C. C. J. WEBB.

8vo, cloth, pp. 370..*net* **$3.40**

Contents—Introduction to the History of Natural Theology—The Natural Theology of Plato—Natural Theology in the Middle Ages.

THE NOTE-BOOK OF AN ATTACHÉ

Seven Months in the War Zone

By ERIC FISHER WOOD

A most amazing fund of accurate information gathered with the care and caution of a Government official, organized with the skill of an artist, and presented with the dramatic intensity of an eye-witnessing young American.

The author was studying architecture at the Beaux Arts in Paris when the war broke out. Entering the service of the American Embassy, he spent seven months carrying dispatches all over Europe, visiting battlefields, taking care of interned Teutons, helping organize ambulance corps, and everywhere and all the time gathering information.

Returning to America, Mr. Wood spent five days at Washington answering questions of three officers from the War College as to the fighting and the fighters; among other things, telling of the operations of the infantry, cavalry, aeroplanes, and medical corps of most of the armies. The gist of his report is in an appendix to the book.

"The Note-Book of an Attaché" is compiled from notes and letters written on the ground, and the narrative has inevitably taken on the rushing swiftness, the thrilling intensity of the storm raging round the writer.

Illustrated. Price $1.60 net, postage 10 cents.

THE WORLD STORM—AND BEYOND

By EDWIN DAVIES SCHOONMAKER

An interpretation of the present war in its historical perspective and in its bearing on the main relations of society and the great social movements of the present time.

Although each chapter can be read as a separate essay, the book is bound together by a compelling train of thought. The author's contention that the desire for empire tends constantly northward leads him to examine the enigmatical Russian race as perhaps the dominant influence of the future, an influence by no means to be feared. He points out that landlordism is the main cause of militarism. He discusses a possible federation of Europe. He points out that the efficiency of socialism, far from collapsing, has for the first time been demonstrated in the unity of emotion and the practical results it has achieved for the war.

Perhaps the most striking of all his chapters is "The Moral Failure of 'Efficiency,'" in which he shows how, for a generation, and especially in Germany, the world has been conceived of primarily as a factory and man as a workman, and that this has made it impossible for man to rise above a mechanical and partial view of life.

Price $2.00 net, postage 10 cents.

PAN-AMERICANISM

By ROLAND G. USHER

Author of "The Rise of the American People," etc.

A forecast of the inevitable clash between the United States and Europe's victor.

"The most candid and revolutionary study of our destinies for many a day. No American who has at heart the interests of his country can afford to neglect it."—*Boston Transcript.*

Price $2.00 net, postage 10 cents.

SOUTH OF PANAMA

By EDWARD ALSWORTH ROSS

Author of "The Old World in the New," etc.

An unhackneyed consideration of our neighbors, the Latin-American republics; their business, their manners and customs, their cities and scenery, their social conditions and outstanding men. The author's purpose is not the promulgation of Pan-Americanism, or of trade, or of anything except the truth. He found South America more astonishing than China.

80 illustrations. Price $2.40 net, postage 10 cents.

ARMS AND THE RACE

By R. M. JOHNSTON

Author of "The French Revolution," etc.

A résumé of modern military development, a brief sketch of our own military history, a definite military plan, and a powerful warning to the United States. The author analyzes in a very clear way living questions like the Swiss military system (urged by many as a model for us) and the military aspect of Mexican intervention.

Price $1.00 net, postage 5 cents.

THE NEW MAP OF EUROPE

By HERBERT ADAMS GIBBONS

Author of "The Foundations of the Ottoman Empire," etc.

An impartial, dramatic account of the history of the ten years leading up to the European war, showing the exact bearing of each crisis and incident from the Kaiser's famous visit to Morocco in 1905 up to the outbreak of hostilities in August, 1914. Admittedly the best background book of the war. Adopted as required reading at Princeton, Harvard, Yale, Dartmouth and other universities and colleges.

Price $2.00 net, postage 10 cents.

THE CENTURY CO.

353 Fourth Avenue (at 26th Street) New York City

The Nation

NEW YORK, THURSDAY, JULY 8, 1915.

Summary of the News

The German note on the submarine question, the receipt of which had been expected this week, has been again delayed. Dispatches from Berlin of Monday's date declare, though on what authority it is not stated, that the substance of the proposed note has been made the subject of preliminary diplomatic exchanges between Berlin and Washington. In both capitals a general impression seems to persist that the contents of the forthcoming note will open a way to an understanding on the questions at issue.

J. P. Morgan was shot in two places, but not, happily, seriously injured, at his country place at Glen Cove, on Saturday morning by a man who gave his name as Frank Holt. The man is a former instructor in German at Cornell University, and is apparently a pro-German in conviction. It seems probable, however, that he is simply an individual fanatic who acted entirely on his own responsibility, and was inspired to his deed by the propaganda for prohibiting the export of munitions from this country to the European belligerents. His purpose, the man declares, was to induce Mr. Morgan to use his influence for the stopping of this traffic. Physicians on Monday pronounced Mr. Morgan to be out of danger.

The night before the attack on Mr. Morgan an explosion caused by a bomb wrecked the east reception room on the main floor of the Senate wing of the Capitol building. The damage was not particularly serious, and no one was injured. Since Holt's arrest he has admitted that he was responsible for this outrage also, giving the same reason as for his other crime, that he did it as a protest against the export of munitions. The identity of the criminal was first suspected on account of the similarity of his statement before the justice of the peace after the shooting of Mr. Morgan and of four letters which were sent to the Washington papers by the perpetrator of the outrage at the Capitol. Subsequent investigation has led to the suspicion that Holt may also be identified as Erich Muenter, the Harvard professor of German, who disappeared from Cambridge in 1906, after the death of his wife from poisoning, and for whose arrest a warrant has been out ever since. Still another bomb explosion, the source of which has not, as we write, been traced, occurred at Police Headquarters in New York on Monday evening. No one was hurt, but a considerable amount of damage was done, although the structure of the building remained uninjured.

News received on June 30 that the Leyland liner Armenian, carrying a cargo of mules from this country to England, had been torpedoed off the coast of Cornwall, with the loss of a number of American citizens, occasioned the fear that the incident might still further aggravate relations between the United States and Germany. That fear, however, was dispelled by later reports, which made it clear that the Armenian had been challenged by the submarine and ordered to stop. Only when the order was disobeyed and the vessel attempted to escape did the submarine open fire with shrapnel. It was under this bombardment that most of the lives were lost. The chase lasted an hour, the submarine all the time gaining on the Armenian. After the captain had surrendered his vessel, he and his crew were allowed time by the commander of the submarine to leave the ship, whereupon she was sunk by torpedoes. Clearly, then, the submarine in this instance acted in strict accordance with international law, and the principal significance of the incident is that it disproves the German contention that submarines, in the nature of the case, are unable to obey the ordinarily accepted rules of warfare. The fate of the Armenian demonstrates that the new large type of German submarine, mounting guns, can fulfil the function of a commerce destroyer almost as effectively as a cruiser.

The Armenian case and the practice recently adopted in other cases by German submarines of giving warning to those whom they have intended to destroy were hailed in many quarters as significant of Germany's purpose to change the whole manner of her submarine warfare so as to bring it within the recognized limits of international law. That impression, however, was dispelled by an inspired notice which appeared in the German press on July 4 explicitly denying that any change was contemplated. Nevertheless, it is gratifying to note that the majority of ships reported sunk since we wrote last week received warning, and that the crews were permitted to escape. Refreshed by their visit to their bases, the submarines have, during the past few days, returned to the attack with renewed vigor. In addition to the Armenian, twenty-five vessels have been reported sunk. Of these seventeen were British, six Norwegian, two French, and one Belgian. One British vessel, the Anglo-Californian, by fine seamanship on the part of her captain, and, after he had been killed by a shell, of his son, the mate, managed to elude the attacking submarine after a stern chase. The incident was reported in Tuesday's papers. On the same day appeared a statement by the French Ministry of Marine recording the probable sinking of a submarine by a French light squadron in the English Channel.

In the British Parliament the final reading of the Munitions bill was passed in the House of Commons on July 1. The bill went to the House of Lords and was passed in all its stages on the following day. Introducing the bill, Lord Curzon announced that the response to Mr. Lloyd George's appeal for volunteer munition workers had resulted during the first week in the enrolment of 46,000 names. The bill authorizing the compilation of a national register of all persons in the United Kingdom between the ages of fifteen and sixty-five has aroused a good deal of opposition in the House of Commons as savoring too unpleasantly of conscription. The bill, however, will apparently be pressed. The Cabinet, it was stated in debate, was absolutely unanimous on it, and Premier Asquith informed the House that the Government did not contemplate any change under the terms of the bill involving forced labor or conscription.

In view of the international situation, President Wilson, it was announced last week, has definitely abandoned his intention to visit the Panama-Pacific Exposition.

According to dispatches from Washington on Monday, analysis of returns, not absolutely complete, indicated that total receipts from corporations and individuals under the income tax for the fiscal year ended June 30 amounted to $79,828,675, as against $71,000,000 for the previous year. Of this amount the individual income tax was $41,011,402, and the corporation tax $38,817,273.

Statistics of the Department of Commerce, published in Washington on July 2, showed the extent to which the United States is feeding the world during the present war. Exports of foodstuffs from this country for the eleven months ended May 31 amounted to $724,000,000, while the total exports of food for the same eleven months of the previous year amounted only to $443,000,000.

Gen. Porfirio Diaz, former President of Mexico, died in Paris on July 2. So far as the situation in his native country goes, there is little change to record. Gen. Pascual Orozco, who was arrested and detained in El Paso with General Huerta, on Saturday succeeded in escaping across the Mexican border, and it is reported that he is to head a new revolt. In consequence of the escape of his lieutenant, General Huerta is now guarded in jail.

Announcement was made on July 4 that Admiral Lord Fisher, who recently resigned the position of First Sea Lord of the Admiralty, had been appointed chairman of the "Inventions Board," which is being formed to assist the British Admiralty in regard to naval requirements.

The Russian Government, it was announced on Tuesday, has apologized to Sweden for its violation of the latter's territorial waters during the sea-fight in the Baltic Sea on July 2, on which occasion the German mine-layer Albatross, badly damaged by Russian fire, was run aground near Henviker. The inadvertent violation of Swedish neutrality, the Russian statement explains, was due to the fog that prevailed at the time.

The French Government last week issued an appeal to the public to turn in its private hoards of gold so as to strengthen the national reserve. According to dispatches from Paris on Tuesday, the appeal has met with a ready response.

Official contradiction was made by the French Ministry of War on July 1 to the monotonously reiterated German plaint that brave German soldiers are being slaughtered in their thousands by American shells. According to this statement, no shells manufactured in the United States have been used by the French army at any time since the beginning of the war.

The Week

In regard to the sinking of the Armenian, with a reported loss of Americans among the crew, we now see how well advised was President Wilson in waiting to ascertain the exact facts. Only after they were known could it be possible to reach a sound judgment, or decide on the action that should be taken. The precise status of the ship was in doubt. Whether she had due warning, and whether, after it, she sought to escape, the early dispatches did not make definite. But later we got a great deal of new light on what really occurred. The mere fact that the Armenian had contraband on board furnished no warrant whatever for her being sunk by a German submarine on sight. President Wilson made that clear in his first Lusitania note. In it he laid down the general principle, which he repeated almost in the same words in the second Lusitania note, that "the lives of non-combatants, whether they be of neutral citizenship or citizens of one of the nations at war, cannot lawfully or rightfully be put in jeopardy by the capture or destruction of an unarmed merchantman." In the second note the phrase was made "unresisting merchantman." It now seems evident that the Armenian was not unresisting. There remains the sharp issue between the United States and Germany, and to it the German Government is expected to address itself in its forthcoming reply to the American protest. The sinking of the Armenian, even if it had been wholly unwarranted, would only have been a fresh illustration of a policy in naval warfare against which the United States had lodged solemn objection. The new offence is not of a nature to heighten the old, though it serves to call vividly to mind the great crime which was committed when the Lusitania's passengers were murdered.

One of the most interesting outgivings that have come from any high German quarter since the sinking of the Lusitania is the article by Admiral von Truppel, at one time Governor of Kiao-chau, which appeared in the *Tag* on Monday. That it represents the sober thought of a large section of opinion in Government circles at Berlin there can be little question. Very quietly, but none the less impressively, Admiral von Truppel points out the two vital elements in the situation concerning the American protest, as viewed from the standpoint of German policy. In the first place, he tells those who imagine that a rupture with the United States would do Germany no serious harm that they are grossly underestimating the injury which such a rupture would inflict upon the German cause. And secondly, he asks this simple and pregnant question:

> Can we hope, so far as we are able to foresee, to force England to its knees through submarine warfare against her commerce?

To leave this question unanswered is, so far as its practical effect is concerned, much the same thing as to answer it in the negative. Indeed, it may be more effective through the suggestion of the negative than it would through the direct assertion of it; for assertion provokes contradiction, while the unanswered question suggests thought, and it takes nothing more than cool thought to see what the true answer is. And, apparently as an encouragement to the thinker, the Admiral points out various effective uses to which the submarines might be put in real warfare if they were withdrawn from their attempts to scare British commerce off the seas.

Germany's Military Governor of Belgium does no more than he should in guaranteeing the entire grain crop in the occupied zone to the civilian population; but the action is none the less another evidence of the diligence and tact of the American Commission for Relief. The Imperial forces had no more right to levy upon the production of the year than to take toll of the supplies shipped in by foreign charity, and while they may have accepted this principle as a matter of course, it was no doubt rendered plainer to them by the thoroughness of the Commission's organization for making national use of every source of supply. The relief authorities have themselves provided the seed and supervised the sowing, and they are to take possession of the crop and distribute it in monthly fractions, supplying the deficiencies it leaves. In their pleasant relations with both conquered and conquerors, their entirely trusted position, and their control of perhaps the larger part of the civil activities of the population, they are constantly reporting achievements of which their countrymen may well be proud. The announcement of the Commission apropos of Gen. von Bissing's order reveals how rapidly it is perfecting all food arrangements for the future. What fighting Belgian territory will see throughout the summer, no one can tell, but we may be sure that Chairman Hoover and his associates will attempt to minimize its effects on the non-combatants.

It did not require the official statement, issued by the French Embassy at Washington last week, to dispose of the extraordinary assertion in regard to American shells made by Prince Rupprecht of Bavaria in his recent interview. The absurdity had already been pointed out of his allegation that 50 per cent. of the shells used by the French against the Germans under Prince Rupprecht's command were of American make. From the plain facts known on this side in regard to the shipment of shells, it was clear that either none at all, or so few as not to be worth noting, had been used in any of the European operations up to the present time. The French official statement is absolute that "France has bought no shells of any sort in the United States since the beginning of the war." American shells will undoubtedly in the future play an important part in the great war; but in the eleven months that have thus far passed, they have played almost no part at all.

The point has a two-fold interest and importance. It is important first as bearing on the preposterous claim that the war would have been over long ago—over, of course, through a decisive victory for Germany—had it not been for American munitions of war. Munitions of certain kinds have, of course, been going to the Allies from this country; but neither in quantity nor in kind such as to have been of vital consequence. Moreover, the battle of the Marne, which turned the tide of German conquest, was fought when the war was only a month old and when, consequently, American supplies had not begun to arrive even in small quantities. But even more interesting than its bearing on the facts of the war is the reminder that this incident furnishes of the appalling unscrupulousness of German assertions relating to the vital facts of the situation, in all directions. Any guess, any shred of "evidence" however untrustworthy, any rumor, seems to be regarded by the highest of the German authorities as adequate ground for unqualified assertions of fact, and this without any regard to their inherent improbability or even absurdity. The Belgian conspiracy against Germany, the "armed" Lusitania, the American shells mowing down the Bavarian troops—these are all of a piece; and it is a piece which stands quite by itself, a piece that can no more be matched in any of the other warring nations than can the superlative efficiency and completeness of Germany's military preparation.

For a truly patriotic view of the Fourth of July, commend us to the New York *Staats-*

Zeitung. If a nation is degenerate and contemptible, the best service that can be done to it is to tell it so, and that is what is done to the American nation in an article prominently printed in the issue of Sunday. "For the Fourth of July. A sermon for the times, by Dr. G. C. Berkemeier"—such is the heading. And its chief point is that the American people are held in subjection to their "hereditary enemy," their "arch-enemy," England, through the influence of a servile and venal press. "The greater part of our press is subsidized, inspired, edited, from London," exclaims this German-American patriot. It requires a little thought to appreciate fully the courage required to make this assertion. Most Americans will be inclined simply to smile at it as an absurdity; but it is something more than that. For it is an assertion the like of which could not conceivably be made concerning the press of any other great nation by its bitterest enemy or its most shameless calumniator. If "the greater part of the American press"—and the man might well have gone farther, while he was about it, for substantially the whole American press is anti-German—if practically the whole American press is "subsidized, inspired, edited, from London," this country is not merely in a condition of degradation, but in a condition of unparalleled degradation. The man Holt was doubtless crazy; but what is the word to apply to the condition of mind of this writer, or of the editor who sees fit to publish his rubbish as one of the conspicuous contributions to the celebration of the Fourth of July?

One war myth has been pretty thoroughly disposed of. The great numbers of "war babies," actual or expected, in England do not exist. In addition to other refutations of the wild stories on this subject which were current a few weeks ago, the Society for the Prevention of Cruelty to Children has made an elaborate investigation into the facts, throughout the United Kingdom, and has reported that there was no foundation for the original charges. No perceptible rise in illegitimacy is to be discovered. Inspectors ran down tale after tale, and rumor after rumor, as affecting various localities, and found them all to be false. In no place were the stories verified. Thus passes this aspersion on the character of the soldiers and the women. No one will regret this, except perhaps that New York editor who wrote in dithyrambic praise of the splendid patriotism and the superhuman virtue of those who were responsible for the leaping up of bastardy in England.

The Supreme Court's decision annulling the "grandfather clause" has been received by the Southern press very much as a matter of course. The *Virginian-Pilot* remarks: "We do not see how the Court could have arrived at any other conclusion unless prepared to set aside the Fifteenth Amendment as invalid and inoperative." But this does not mean that the Southern white man now welcomes his black brother to the polls. North Carolina newspapers point out that the "grandfather clause" in that State expired by limitation six years ago, and remark that there are plenty of ways left of politically restricting the negro which are not open to legal objections. Even if literacy requirements were impartially enforced against both races, the lack of negro schools would give the white man an advantage. The imposition of poll taxes also has the effect of keeping many negroes away from the polls. The Columbia *State* shows its usual frankness by saying:

> The negroes were ready to quit voting whenever the white people showed them plainly enough that they were not desired as electors. The negroes are not such fools as most people give them credit for being. They . . . see which side their bread is buttered on. They know that, at this juncture, it is not buttered on the political side.

The Charlotte *Observer* declares that the grandfather clause has been a stimulus to education "because colored youths became ambitious to learn and illiterate white people were spurred by this rivalry to greater efforts." This is a tribute to negro ambition which would seem to deserve a better fate than to be warned not to utilize the hard-won education.

The close of the fiscal year finds the Treasury belying the prediction of empty vaults, although to date the Government has paid out approximately $90,000,000 more than it has collected. On June 22 the Department announced a balance in the general fund of $27,375,000. Eight days later it was known to be not less than $38,000,000, and it was predicted that when returns had been received from internal revenue collectors regarding the day's payments of income tax, it would be found to have stood at about $50,000,000. That such a cash balance is possible when disbursements have exceeded collections is, of course, due to surplus accumulations from previous years. At the same time, it is to be pointed out that $90,000,000 is not actually a just estimate of the year's discrepancy between receipts and expenditures. Income taxes will continue to be paid into the Treasury until July 10, at the rate of several millions a day, and the total, including the forty-three millions already collected, should reach a figure above eighty millions. Counting this entire sum as of the last fiscal year, and subtracting the similar late payments for the year 1913-1914, the deficiency would be reduced by perhaps half. This sum is no more than was to be expected from the falling off in customs revenues and from the loss in internal revenue from tobacco and liquors, resulting from prohibition and the social tendency to economy.

William Allen White's reply to Mr. McHarg's appeal for a union of the Progressives with the Republicans makes what Horace Greeley was accustomed to call "mighty interestin' reading." And what makes it so interesting is not so much the snap that Mr. White puts into his writing, but the practical conclusion that it naturally suggests. "Our real issue is to beat the Democrats," says Mr. McHarg; and substantially that is all he says, though he backs up his appeal with a quotation from Lincoln, whose only relevance is that the words "the real issue" occur in it. Mr. White, however, has no use for this issue; he absolutely refuses to acknowledge that "the chief end of man is to lick the Democrats and enjoy their offices forever." He does admit that two million or more of the Progressives have gone back to the Republican fold; but these were the men who didn't really know why they were Progressives. The other two million, who stood by the colors last autumn, did know. They will stay away, says Mr. White; there is nothing whatever in the Republican party as at present constituted that appeals to them, and they "don't care whether the Republicans whip the Democrats or the Democrats whip the Republicans in 1916."

Now, there is no doubt that this statement by one of the most notable of Western Progressives represents pretty accurately the state of mind of a large fraction of the Progressives of 1912, though it may not be as much as half. And how will those men who followed the Roosevelt banner in 1912, in a flame of enthusiasm for a programme of Progressiveness, and who now "don't care whether the Republicans whip the Democrats or the Democrats whip the Republicans in 1916"—how will they act in the coming Presidential campaign? They are not going to stay away from the polls; they will vote against the side they dislike the most or in favor of the side they like the most. And the consequence of this upon the arithmetic

of the campaign will be important. Those who have been imagining that in case there is no Progressive ticket in the field the Republicans will have a walkover had better be doing a little revision of judgment. Supposing, for example, that Wilson was the Democratic candidate and that the Republican party presented a decidedly Bourbon aspect, it is quite plain that the true-blue Progressives of Mr. White's classification would vote pretty solidly on the Democratic side. And, since each of these votes would count twice as heavily against the Republican candidate as would a vote cast for a Progressive, it is plain that the failure of the Progressives to run a ticket of their own would be a very doubtful blessing for the Republicans.

If the exaggeration of social abuses may possibly be condoned, this is because it sometimes obtains a hearing which the sober facts would not get. Though Chief Bills of the Porto Rican Bureau of Labor condemned in a letter to the New York *Times* the inaccurate testimony of insular labor leaders before the Commission on Industrial Relations, he suggested that this extenuation exists. "The fact is," he remarks, "as Mr. Traneso stated to the Commission, that Porto Rico has a big and difficult problem in bettering the conditions of its laboring masses." While he denies peonage, he admits the existence of thousands of landless people as a direct heritage from times when peonage did obtain, and the housing of the majority of sugar-field laborers in buildings owned by their employers. He states that the prevailing rate of interest asked for money is from 8 to 10 per cent., which is distinctly higher than that in our Southwest. Sanitary conditions are still to be bettered, education improved, and also agrarian measures devised. The great objects in calling these facts to American attention are to enlist a stronger public sentiment behind the act granting citizenship to Porto Ricans, and to stimulate the investment of capital in a land of rich but undeveloped resources. The passage of the new organic act, at least, should not long be delayed. It has been waiting two years, and in giving Porto Ricans at once a greater degree of self-government and a closer connection with the United States, it will facilitate the reforms so evidently needed.

A short time ago, an atrocious murder was discovered in London. On Thursday of last week, a jury, after twenty-two minutes' deliberation, brought in a verdict of guilty against the perpetrator. The judge promptly sentenced him to be hanged on July 27. Thus the whole interval between the discovery of the crime and the final disposal of the wretch who committed it will be only a few weeks; for the probability of any interference with the sentence by way of appeal is almost *nil*. The contrast between such expeditious and decent dispatch of criminal business and what we are familiar with in this country is painful. We say "decent," because the meaningless and frivolous delays which so frequently drag out the processes of justice in America are really as much of an offence against decent standards of fitness as against efficiency. If the cumbrousness and dilatoriness of our ways were calculated to effect more exact justice, the case would be altogether different; but nobody pretends that we can lay claim to any such superiority. Our shiftless toleration of all sorts of triflings with what ought to be the stern and vigorous operation of the machinery of justice means a gross waste of time, money, and energy, with no other result than that of reducing to a deplorable minimum the impressiveness and the deterrent efficacy of the working of the criminal law.

Chicago's epidemic of labor troubles is continued by the lockout which began last Thursday in the building trades, throwing 200,000 men in the city out of work, and affecting 300,000 more in the neighborhood. The lockout is the direct sequel of a long-continued strike by 6,000 carpenters, who have recently all but won their demand for an increase from 65 to 70 cents per hour. Over 1,800 independent contractors have agreed to the advance, and the associated employers who are fighting it and who have demanded arbitration have induced the lumber, brick, and cement companies to declare a sympathetic lockout of all their men to bring the carpenters to terms. Upon the merits of the quarrel it is hard to pronounce, but one fact is clear—the injury done to Chicago by these recurrent industrial disputes. "Affairs are in such a state," remarked the head of the builders' and contractors' organization, "that something must be done to insure security of investment. Capital has become afraid of investments here." The thing to be done is apparently to make the present useless State Board of Arbitration one of conciliation and arbitration, and greatly to broaden its powers.

The death of the aged Porfirio Diaz has, of course, no direct bearing on the posture of affairs in Mexico, yet lovers of coincidence will endeavor to make one out. It may be said, at any rate, that the passing of the famous "strong man" of Mexico comes to reinforce the belief that Mexican salvation is not to be worked out on any Carlylean theory. The strong man was in power for a generation, but left only chaos behind him. Some contend that this was only because he overstayed his time. Had he quietly retired before his last seizure of the Presidency, it has been argued, a successor could have been found to carry on his work in his own spirit. But there is no proof of this. All the evidence is that it was Diaz's plan that had overstayed its time. And those who now see no solution of Mexico's troubles except in the appearance of a powerful and unscrupulous ruler should be asked to fix their minds upon exactly what happened in 1910. Absolute rule broke down absolutely. Arbitrary government lapsed into anarchy. Nobody that we know of has a guaranteed scheme of salving Mexico. Seemingly, the work must be done, if done at all from the inside, by groups and parties rather than by a single, dominant individual. At all events, the plan which Diaz instituted died along with Diaz.

German arms have certainly been triumphant during the fighting of the past few weeks. While the Galician campaign has not broken up the Russian armies, or inflicted disproportionate losses upon them—the German losses have not been made public, but must have been very great—the success attained has been conspicuous and dramatic. Russia is now pushed back virtually to her own soil; and a powerful movement against Warsaw is plainly under way. That at the same time the German General Staff should be assuming a strong offensive against the French, is at once a testimony to the military resources upon which it can depend, and to the audacity of the high command. There is no likelihood of any considerable transfer of forces from the eastern theatre of war to the western. But Gen. Joffre is reported to be making preparations to beat off an assault in great strength. To take the offensive on both fronts at the same time was not the German plan of campaign of last year. It would be to violate the Napoleonic maxim which warned a commander not to seek to be strong at all points at once. But the German strategists have considered Napoleon obsolete. They prefer to follow Clausewitz, whose theory of war was to bring great masses of troops together, like two heaps of gunpowder, and see which side would have something left over after the conflagration.

THE "NATION'S" JUBILEE.

Those to-day responsible for the conduct of the *Nation* look back to its fifty years of life with a kind of proud humility. The secure past is not theirs, yet they, as inheritors of a high tradition, must not discredit it. As they think of the men who conceived the *Nation* and nourished its early years—both editors and contributors during the time when its fame was solidly built up—the sensation is like that of one walking through a gallery of the portraits of his famous ancestors. They are his, yet not his—his, if he lives worthy of the name they bequeathed to him; not his, if he fastens disgrace where they stamped only honor.

Of *Nation* personalities in the earlier day, we must leave others to speak. They have done it in this issue richly and with grace and justice. Over the still recent and still mourned loss of Mr. Hammond Lamont, we could not pass in complete silence. His was a very tragedy of premature death.

Early didst thou leave the world, with powers
Fresh, undiverted to the world without,
Firm to their mark, not spent on other things,
Free from the sick fatigue, the languid doubt.

Tributes to Mr. Godkin and Mr. Garrison finer than those paid elsewhere, no friend and admirer of theirs could desire. There is perhaps room for a word on the felicitous way in which the two supplemented each other in their joint work. Mr. Godkin's was the greater elemental force. He had an impetuous rush. But sometimes the mighty flood of his argument, surcharged with humor, was in danger of overflowing its banks. He occasionally needed a dike-builder. It was a piece of rare good fortune for him that he had at his elbow a man of the coolest judgment, of accurate scholarship, willing and pleased to wreak himself upon the perfecting of the smallest detail. In Mr. Garrison's hands, verification was as a religion. Even punctuation became to his pen a fine art. His patient labor behind the curtain was not of a kind that the high gods of literature delight in, yet it was indispensable to the rounding out of the *Nation*. No one was quicker to perceive this than Mr. Godkin. He once wrote to Mr. Garrison, after years of associated endeavor: "If anything happens to you, I shall retire into a monastery."

No one has ever written comprehensively of the place of the *Nation* in the intellectual life of the United States, or, more particularly, of its true position in the history of American journalism. The hints, the echoes, the scattered individual testimonies, the treasured memories, abound. We have the letters of Lowell and Norton. We have the men of sixty whose hearts still burn within them as they recall what the *Nation* was to them in the years when their minds were expanding to the light. In the colleges it was a power with the choicer natures; on more than one farm it was a college to awakening intelligences denied a college education. Not long ago, a man who had spent forty-five years in the service of a railway, rising from train-hand to conductor of a trunk-line express, spoke simply of the *Nation*, which he had read for all that time, as "the only university I have been able to attend." No doubt, the new weekly of 1865 fell happily upon the period. America was still very provincial-minded, more than a trifle crude, afflicted with Chauvinism. Yet there were stirrings of a new life, gropings after more severe standards, an increasing perception that American achievement must submit to the test of the best that had been done or written. Then along came the *Nation* to express trained and cosmopolitan judgment of books and men and movements. To many a youth—and his elders, too—it was like the opening of a new world.

The *Nation's* influence in shaping the American press was out of all proportion to the mere number of its readers. It did not strive nor cry. The effects it wrought were subtle and insinuated, never clamorous. A virtue went out from it which was unconsciously absorbed by many newspaper writers. They could scarcely have said where they got their new impulse to exercise a judgment independent of party. All can raise the flowers now, for all have got the seed. To-day the most powerful newspapers in the United States are those which have the reputation of being always ready, on a question of real principle, to snap the green withes with which politicians would bind them. But until twenty years after the *Nation* was founded, how few they were, how sneered at, how disliked! The steady light which Mr. Godkin burned in the *Nation*, and later in the *Evening Post*, had its slow but cumulative radiations. Not merely did it become impossible to employ, with a grave face, the partisan shibboleths which he was continually holding up to ridicule, but it was made easier for editors to refuse to give up to party what was meant for country. In this way, the *Nation* was as leaven in the lump of American journalism. Its primary appeal was to "the remnant." Yet those whom it taught and inspired were all the time going out to teach and inspire others. Thus the result was like a geometrical progression. The *Nation* reaped where apparently it had never sowed. And in the whole matter of unbiassed and informed comment upon great affairs, it gradually became a sort of external conscience to other publications. They waited to see what it would say before finally committing themselves. Coming down to a later period, that of Mr. Godkin's larger identification with the *Evening Post*, we have the remark of a veteran Western journalist, in reply to some one who was lamenting the fact that such a paper had not a larger circulation. "You idiot," he exclaimed, with profane emphasis, "don't you know that there isn't a decent editor in the United States who does not want to find out what it has to say on any subject worth writing about, before getting himself on record in cold type?"

We would not end on a purely commemorative note. The past of the *Nation* ought to be a pledge for the present and a guarantee of its future. Walter Bagehot chose a newspaper as a good illustration of the doctrine of persistence of type; and no one connected with the *Nation* could escape, if he would, what the years have wrought into it. If it has seen many of the causes advocated by it come to triumph, there are others still to be struggled for. If it drew to itself rare spirits in a day that is dead, it will continue to invite the best thought and to seek to secure and express the soundest verdicts on literature, science, politics, life. This number of the *Nation* is largely given up to memory, but hope is interfused. Coming days are to be fronted bravely. An institution like the *Nation* is self-renewing. The spirit of youth is forever interpenetrating it. So that there is the more reason for confidence as it grows old, since, with Rabbi Ben Ezra, it may hope that the best is yet to be.

Twenty-five years ago, Mr. Godkin, on the occasion of the *Nation's* quarter century, reviewed the tendencies and developments, good and bad, of the period. His conclusion from the whole was one of reasoned optimism. He believed that not even the most pessimistic observers could discover real ground for despairing of the republic. In words which we may make our own to-day, he said: "After they have collected together all the most depressing facts in existence, they are sure to find mixed up in them a bushel of reminders that, in the

Western world at least, after all action comes reaction, after the flood comes the ebb, and that in politics, as in private life, people often make a ladder of their vices to rise to higher things."

THE "NATION" OF THE PRESENT.

The war has been productive of few benefits, but one of these has been acutely felt by the *Nation*. The war has partially restored a valuable condition of the *Nation's* early years. Always having drawn largely upon the universities for contributions, it once had the advantage of scholars who could write upon pressing fundamental issues. The back files show that neither Norton nor Lowell, to mention no more, was content to be confined to his special field, broad as it was compared with the limits prescribed for most scholars to-day. Both men were deeply concerned about the politics and culture of the country at large, and conceived it their duty to speak out. In recent years the *Nation*, though still enlisting the services of foremost scholars, has found it increasingly difficult to draw from them any broad expression of their views. Partly, the trend of scholarship towards specialization was responsible for this; partly, it was because they preferred to leave general statements to representatives of certain newer departments of the university to which generalizing is the breath of life; but mainly it was because they had been confronted by no public issue of supreme importance.

Fortunately for the *Nation*, the war has changed all this; it has made the secluded study no sufficient abode, and nas moved some of this country's most distinguished scholars to assail the ready arguments which have threatened us all with confusion. That, though trained in the German system, they have found their quarry to be chiefly eminent German professors, has added zest as well as irony to the onslaught. To those who have followed the *Nation's* correspondence columns and its special articles on the war during the past year, it must be evident that the American professor has aided materially in the cause of clear thinking, and that much may be expected from him on other issues, provided he can be induced to speak. Now it is the intention of the *Nation*, in so far as it may, to prevent the study from becoming an ivory tower. For we are convinced that our staff of contributors, selected, in the main, from the academic world throughout the country, have a peculiar opportunity just at this moment. The scholar's discipline, directed by well-tried principles, may yet make the sway of the great god Change less easy. In accordance with its traditional policy, the *Nation* will continue to point out the danger of innovations which do not stand the test of rational criticism.

We are glad to announce that in the autumn we shall print a series of articles, written by some half-dozen distinguished scholars, on as vital an issue as exists to-day. To say that it is at the root of the war would be no exaggeration in the judgment of some; it is, at the least, a question whose ramifications reach to all spheres of life. We mean the New Realism. There could be no better time to examine the pretensions of this growing attitude, for by its very immensity and revolutionary character the war has set the whole world to questioning what this reality is which is worth such a cataclysm as we are witnessing to-day.

So long as realism, so called, meant that photographic attention to details which for a time infected the drama it did little harm. Even though its votaries pictured by preference the life of the slums, including the brothel, there was the conviction that the public would tire of an art which stifled imagination. What it actually did was to increase the run on the "movies," which were seen to be more exact illustrations of things as they are. But the new realism has been turned into something much more subtle, and has pervaded all the arts, as well as philosophy, education, business, and politics, passing in the case of the last three under the name of efficiency—that prince of corrupters! Yet it is in the spheres of painting, poetry, and philosophy that it has flourished most spectacularly. To explain its peculiarities in one sphere is to come near explaining them in all; and though we cannot undertake to give here an analysis of the new movement, some of the lines may be indicated which the symposium in the autumn will follow.

The new realism, as the *Nation* apprehends it, is in brief a variety of naturalism disguised by a veneer of science. In its desire to break through the monotony of the conventional it has been constrained to do away, in large measure, with the rational as well. The movement is also prompted, let us admit, by the higher motive of arriving at truth, which it is felt has been befogged by a silly adherence to the traditional; habits of thinking have come down to us from ages past which do not keep pace with the vast changes of modern life. Yet to throw over the intellect would be to put reliance entirely upon the emotions and to bring in a new brood of romanticists. In such a pass the alternative is to turn to science, the guiding spirit of the times. This is, in fact, what has been done, whether we look at the preponderance of mathematical formulæ in the new philosophy, at the pretentious accuracy in details of the new poetry, or at the elaborate, smooth-running machinery of modern business. The desire is to make automatons of us all. The intellect, if we examine the movement on the philosophical side, is to be exercised in applying the exact truths of mathematics, and the higher truths, those usually arrived at by a rational synthesis, are to be reached by means of the "instinct." It will be noted that this element of instinct is in reality the determining factor, even though so much is made of the safeguards of science, and that it thus relates the new school with the old one of romanticism. The one is but the inverse of the other. Whereas the romanticists created the universe out of their souls, the new realists admit a universe existing independently of them, but bring it into their ken, when science will not suffice to do so, by means of their emotions.

When William James, by his alluring definition of pragmatism, put a modicum of philosophy into the hands of the people, he could not have realized how eagerly they would embrace it, nor that to them pragmatism would soon be identified with efficiency —the thing which brings results, "delivers the goods." Neither could he have foreseen that the methods of modern business would tend to direct the minds of some of his philosophical disciples. Yet this seems to be what has happened. The new realists will have their philosophy as practicable as James's. They must organize and create a machinery as scientific as a Steel Trust's. They must be efficient by forestalling the waste occasioned by old-fashioned mental concepts; knowledge is to be conveyed much more directly. For their symbolic logic, which they have adapted from Mr. Bertrand Russell, read business organization, and for their "instinct" read "hunch"—that frequent court of appeal with the man of affairs—and you see how closely adjusted is their philosophy to everyday conditions of modern life.

It should be tolerably plain, we think, after a systematic examination, that the body of doctrine which is the basis of efficiency is also to a large extent the basis of the new realism. If so, this will mean that the

arts and philosophy are coming into close touch with actual life; it will also mean that the limitations of efficiency are likewise those of the new realism.

GERMAN-AMERICAN "MISUNDERSTANDINGS."

Dr. Meyer-Gerhard, who was sent to Germany by Ambassador Bernstorff to set the Government and people right about American sentiment, has already begun his work. The long article which he wrote for the *Tag* has been summarized in cable dispatches. Its burden is that the stress of war has led to misapprehensions on both sides. Americans have not understood the German position, and Germans have not been able to comprehend the American attitude. It is Dr. Meyer-Gerhard's mission, as he evidently conceives it, to act as a skilful intermediary and conciliator between the two. He begins with the German public; and it may be taken for granted that what he writes guardedly in a newspaper he will state more explicitly and emphatically in his confidential interviews with the officials of the Foreign Office.

It must be conceded that he sets about his difficult task in friendly temper and with a fair measure of adroitness. One must bear in mind the inflamed state of opinion in Germany which he is addressing and endeavoring to soothe. It would not do for him to tell bluntly the whole truth—supposing that he knows it—about American feeling regarding the raping of Belgium and the sinking of the Lusitania. He has, as it were, to break it gently to German readers. And he does it, with some degree of cleverness, by explaining that Americans did not "understand" the "German idea of the real conditions" which compelled the violation of Belgium and the destruction of women and children at sea. From this it is easy to pass to a warning to the German public not to make the mistake of supposing that there is not real and wide indignation in the United States at these acts in Germany's conduct of the war. The implication is rather subtle, and had to be deftly conveyed. But that the desired impression was made is indicated by the comment of the *Lokal Anzeiger*—the newspaper, it will be remembered, which has lately been preaching that Germany must do everything within reason to keep on friendly terms with this country. It remarks of Dr. Meyer-Gerhard's article that it ought to give a new point of view to "those circles which heretofore have been inclined to make light of our differences with America as being utterly unimportant." Whether Mr. Bryan did or did not give Berlin to understand that the diplomatic notes of our Government meant nothing in particular, it is plain that Dr. Meyer-Gerhard is reporting that they were wholly serious.

If he gives but a pale reflection of the antagonism which Germany has aroused in this country, it is also true that he seeks to understate the bitterness with which Germans have expressed themselves against the United States. This is consistent with the rôle which he has assumed of amiable go-between. His aim is to get each of the two nations to believe that the other is really a good fellow and a true friend, and that the differences which have arisen are due wholly to failure on either side to understand what the other was driving at. This is tactful and may be helpful up to a certain point; but obviously it cannot go very far. Despite all the bland words that can be used, there remains a clear and sharp issue, a question between the two countries to the merits of which Dr. Meyer-Gerhard's conciliatory methods do not and cannot go. And it is Germany's official position on that question which we are now waiting for her to make known, and which will be decisive of her relations with the United States.

On one point, Dr. Meyer-Gerhard touches rather gingerly. This is the American sale of arms and munitions of war to the Allies. He considers this "regrettable," and to that opinion he is entitled. But when he adds that a "large part" of the American people disapproves of it, and that "a popular vote" would show "a considerable majority" against it, one feels like asking him for his evidence. On the question of the legality of the practice, the record is perfectly clear. The German Government has itself officially admitted that it has no ground in international law for complaining of the purchase in this country of shells and other war material. The position of our own Government was laid down plainly in the note to Ambassador Bernstorff. And Mr. Bryan committed himself up to the hilt, in his personal letter to Senator Stone, to the view that our sales to the Allies were both legal and proper. His words on that subject, it is worth noting, he has thus far refused to retract. Recently, he was to have addressed a meeting of German-Americans in Chicago. But they demanded that he come out squarely for an embargo on the export of arms. As the *Fatherland* maintains, this is the "pivot" of German-American sentiment at present. But Mr. Bryan declined to turn on that pivot, and so his Chicago speech was cancelled. The thing passed without causing a ripple of excitement. That could hardly have been the case if a "considerable majority" of the American people were of the mind that war supplies to the Allies, to be used against Germany, ought to be stopped.

Most Americans will respond heartily to the statement of Dr. Meyer-Gerhard that friendship between two nations such as Germany and the United States ought not to be lightly thrown away. But a good test of friendship is to be able to endure the truth from a friend. And the truth which Germans have now to bear from their American friends is that the course of the German Government in this war has deeply alienated American opinion. There is not so much "misunderstanding" as Dr. Meyer-Gerhard chooses to allege. We in this country understand only too well what happened in Belgium, and what was done to the Lusitania. And if Germany really wishes to retain and to deserve our friendship, she now knows what just demands of this nation she must first grant.

THE ENGLISH WILL TO CONQUER.

Taken in connection with the well-defined reports of a considerable growth of peace sentiment among the German Socialists, on which we commented last week, the short shrift given at a recent meeting of British trade unionists to the proposal that a vote of sympathy be passed for their fellows in Germany is not without significance. "Drop such sentimental bosh," was the contemptuous exclamation of that stalwart labor leader, Ben Tillett; and we are told that "loud cries of 'Next business!' buried the proposal." The temper of the British trade unionists thus revealed is significant principally because it is on a revival of the international sentiment among the workers of the various countries at war that recent expressions of hope for an early peace have been largely based. Despite the far more efficient control of the press exercised in Germany than in England, and despite the greater difficulties of communication with the former country, we have seen that in Germany there are signs of such a revival. That similar influences are at work in England to any considerable extent there appears to be so far but the most meagre evidence. On the contrary, the response to Mr. Lloyd George's appeal for volunteers to carry out the provisions of the Munitions Bill would seem to

indicate that whatever indifference to the war there may have been among the workers of England is in a fair way to being dissipated, and that in its place is crystallizing a determination to prosecute to a finish the business in hand.

Among the phenomena that distinguish this war from any in which England has engaged during the last hundred years not the least remarkable is the almost total absence of a "peace party." By this we do not mean any lack of those who, amid the horrors of war, continue to work faithfully for an ultimate solution of international problems which shall in the future eliminate the waste and futility of armed strife. Of these there are, happily, plenty. We mean that in England to-day the small but powerful minority which openly disapproves a particular war on the ground that it is unjust and unnecessary is all but non-existent. This was not the case even during the Napoleonic wars, in the early stages of which the Government was regularly called to task by an Opposition in which figured such men as Fox and Grey and Sheridan, and when there were not wanting British subjects, like Sir Roger Casement in the present war, to give comfort to the enemy in his own stronghold. The oppposition of the "Little Englanders" to the South African War is fresh in the memory of all but the youngest, and it is significant of the changed temper of the land that to-day the man to whom England looks to make provision of the munitions necessary to a successful prosecution of the war is the same man who, fifteen years ago, as a rising young statesman, jeopardized his future career by fearlessly denouncing the Boer War as unjust and unnecessary.

To-day those Englishmen of any prominence who have expressed open opposition to the war may be counted on the fingers of one hand. Lord Morley and John Burns resigned from the Cabinet at the outbreak of the war, but they have kept guard over their tongues, although Mr. Burns's famous statement, long ago proved apocryphal, is still quoted with satisfaction in Germany. Ramsay MacDonald, the labor leader and member of Parliament, is the one man of prominence in public life who has not hesitated to voice his opposition to the war, his conviction that England's participation in it was utterly unnecessary. That his views are not popular in his constituency of Leicester is evident from an editorial in the Leicester *Daily Post*, a Radical organ, in which the writer comments unfavorably on Mr. MacDonald's recent article discountenancing the tales of German atrocities, in the Swiss review, *Les Documents du Progrès*. Of Mr. Bernard Shaw, the author of "Commonsense About the War," it is hardly necessary to speak. His natural disapprobation of the war and his inherent mistrust of his fellow-countrymen seem to be mingled with a curiously romantic satisfaction in the spectacle of the "Lion's last fight." Besides, Mr. Shaw is one of those who never follow anything that other men begin.

Perhaps the most interesting of the small group of English dissenters is Prof. F. C. Conybeare, of Oxford, whose mental process since the war began has been kaleidoscopic in its variety. Beginning as a well-known pacifist convinced of the justice of England's cause—on which subject he contributed a number of letters to the *Nation*—he gradually veered round to the opposite position, which he stated in a private letter to a friend in America that was published in the *Vital Issue*. This document, on which we published a letter with brief editorial comment in our issue of May 13, was remarkable for its vitriolic attack on Sir Edward Grey, whom the writer described as a "sinister liar" and whose ultimate fate, it was prophesied, would be to be sent to the gallows by the House of Commons which he had "utterly hoodwinked." Mr. Asquith, it was hinted, might be expected to share the fate of his Foreign Minister. Naturally, Professor Conybeare's diatribe has been widely circulated by German sympathizers. Now comes the professor's recantation, in the form of a letter to Sir Walter Raleigh, cabled to this country last week. A further study of the official documents has convinced Professor Conybeare that he was "quite wrong" in attributing to Sir Edward Grey the motives that he did and that "I ought to have set down to the awful contingencies with which he [Sir Edward] was faced, many passages which I was guilty of grossly misinterpreting. . . . I deeply regret that I misunderstood his aims, and in my endeavor to be fair to the enemy was grossly unjust to him." Professor Conybeare concludes: "I am only anxious to undo, if it be still possible, some of the harm which my hasty judgments and intemperate language have caused."

In the fulness of his repentance we suspect that Professor Conybeare overestimates the harm that he has done, which is chiefly in the sorry exhibition—not unlike that made by his academic brethren in Germany—of the disastrous effects exercised by the present cataclysm on a mind that should be trained to clear thinking. The point, however, which is emphasized by Professor Conybeare's recantation is that by his defection the very small group of Englishmen who have regarded the war as unnecessary and found fault with Sir Edward Grey's part in it, is deprived of one of its principal spokesmen. Clearly the sentiment in England in favor of an early peace on the basis of the *status quo ante* seems to diminish rather than to increase. It might even not be putting it too strongly to say that the "will to conquer" appears to-day to be more widespread in England than in Germany.

KEEPING OUR HEADS WITH ASSASSINS ABOUT.

When Vaillant threw his bomb in the French Chamber, twenty-two years ago, the presiding officer quickly recovered his poise and called upon the Deputies to proceed quietly with the public business. It was a fine way of testifying to dynamitards that they cannot frighten civilized people out of their senses. Yet of this truth it seems necessary to remind some civilized people as often as the assassins. We have just had a succession of shocks. The wrecked room in the Capitol at Washington, the attempt to kill Mr. Morgan, and the explosion of a bomb at Police Headquarters in New York are events which, treading so closely upon one another's heels, cannot but try our nerves. They are also a test of what we carry about in our heads. However greatly we may be startled and horrified by such mad acts, we must make it our business to look calmly at their causes, and to make a note of what can be done—and what cannot be done—to prevent their recurrence, as also to protect individuals and society from miscreants of this kind.

After every sensational occurrence of the sort there is invariably an outburst, greater or less, of hysteria. It was so when Guiteau shot President Garfield. It was so when Czolgosz killed President McKinley. We were told that these crimes proved not only the weakness of our laws and the need of making them vastly more comprehensive and more severe, but the folly of allowing so much free discussion in this country, with its effect of putting wild ideas into unbalanced brains. Not much talk like this, we are glad to say, was set loose by the effort to murder Mr. Morgan. Some newspapers went to the hasty extreme of making the pro-Germans in the United States directly responsible for the crime, but they were so far out-

done in this regard by the English press that they soon gave up the competition. The London *Standard*, for example, declared that the attempt on Mr. Morgan's life was presumptive evidence of "a German blackhand conspiracy in the United States." Trying to improve on itself, it went on to say that "it is becoming clear that the German Embassy at Washington is the headquarters of a criminal organization." This is going it far too strong for American editors to hope to keep up. They have had to content themselves with pointing out the danger of inflaming minds like Holt's, or whatever his name is, and with suggesting various precautions and punishments that might be adopted.

It is a problem with which civilized nations have been wrestling for at least thirty years. No complete solution has been found. None is to be looked for in the near future. We shall have to get on with whatever safeguards or palliatives can be devised. The risk, especially for public officials and for men prominent by reason of great wealth, will remain. As our pioneer ancestors were subject to the peril of venomous reptiles and wild animals, so we of to-day seem to be compelled to reckon with the possibility of dynamite explosions or lurking attempts at assassination. We must do our best to guard the classes particularly exposed; we must make penalties exemplary; we ought to seek to remove every removable cause of such outrages—so far as this can be done consistently with what is more precious than life; but when all is done, the hazard will long continue to exist, for all that we can now see. It is, as King Humbert put it, one of the hazards of the "trade" of monarchs. And we see how it inevitably attends others. They may be carefully guarded. Presidents and Governors and Mayors should have the best protection that the detective service can furnish. But, as Mr. Wilson observed, at the time when Col. Roosevelt was shot by a crazy man in Milwaukee, it is not possible absolutely to prevent homicidal maniacs from getting access to American public men. The danger can be kept small; it cannot be wholly eliminated. The risk is there, and the only question is how we are to face it.

The concrete case just now is that of Mr. Morgan's assailant. He appears to be of unsound mind. He may fall within the legal definition of sanity; that is for the courts to decide; but he betrays unmistakable symptoms of brain disturbance. Now, it must be granted that the particular obsession under which he labored was intensified, if it was not immediately provoked, by things the assassin had read in the newspapers, or had heard people say, on the question of the sale of American munitions of war to the Allies. So far as any motive can be made out in the murderer's mind, this was the substance of it. If he is really insane on this subject, his malady was doubtless heightened by publications and speeches. But are we now to rush off and say that all such agitation must be suppressed? Most of it is, in our opinion, very foolish, and a good deal of it is malicious; we can also readily imagine that some forms of the outcry, reaching brains already on the verge of losing self-control, might set them to brooding over criminal thoughts. But shall we, on this account, forbid German-Americans, or German sympathizers, or mistaken sentimentalists, to say the thing they really believe, so long as it is legitimate agitation, and not a direct incitement to violence? We all know that this is impossible. If a law were passed this year to effect it, it would be repealed next year. You cannot repress pro-German discussion without also ruling out anti-German. The principle was pretty thoroughly threshed out at the time of McKinley's assassination. Only then it was "anarchy," not protests against the shipment of ammunition, which nobody was to be allowed to whisper about. Suppression was found to be impossible then, and it will be now. We have to take the drawbacks along with our free institutions. And we must keep our heads even when assassins are about.

ABOLISHING THE STYMIE.

Mr. John G. Anderson, well known as both a skilful player and an intelligent writer on golf, has been boldly advocating what many will think nothing less than a revolution in the game. He would have the United States Golf Association courageously take the stymie by the horns and legislate it out of existence. In the very phrasing of the proposal there is a consciousness of challenging the long British tradition of golf. America got the game, with its rules, from England, yet we have shown a certain degree of independence in setting up American variations. We have legalized the Schenectady putter, still anathema across the water. We have slightly modified the rules for a lost ball and a ball out of bounds. Why not, asks Mr. Anderson, issue another Declaration of American Independence, and abolish the stymie in this fair land?

It is admitted that Britons will never, never cease to be slaves to the stymie. They would no more consent to its abolition than they would to the taking down of the images of Gog and Magog in the Guildhall. Any American who ever played golf with an Englishman, and who politely offered to lift his own ball so that his opponent might have an unobstructed putt for the hole, knows what is the astonished stare with which the proffer is refused, and the conclusive reason given: "It isn't done, you know." The question often heard as two American players start from the first tee, "Shall we play stymies?" would be profanation on a British links. As well ask whether strokes were to be honestly counted! So that it is a case for an American secession, if the thing is to be done at all.

Yet if we are to set up for ourselves in this high matter, a decent regard for the opinion of mankind requires us to give our reasons. They are stated in the usual form by Mr. Anderson. Match play at golf should be purely a test of skill. The man who gets into the hole in the fewest number of strokes wins. Yet he may be robbed of his deserved victory by an unforeseeable stymie. He gets on the green, four feet from the hole, in three, while his opponent requires four, yet the latter's ball is directly in line of the former's. Thus two strokes are necessary where only one would have been needed but for the stymie. What could be more unfair? Is it not obvious that the rules should be changed so as to do away with this unjust penalty?

Those who argue on the other side have something to say for themselves. They would distinguish between the stymie that is an accident and the one that is deliberately "laid." The latter is not met with so often as some suppose. A player who in cold blood tries to stymie his opponent is apt to meet with a good many cold glances, not to say cold shoulders. Besides, the thing is not so easily done. If a player can hit his ball with such delicate accuracy that it comes to rest on the precise spot, to a hair's breadth, where it blocks the line to the hole, why not expend that preternatural skill on holing out, and be done with it? It is doubtless true that a player sometimes has the thought in the back of his head, when essaying a long and difficult putt, that, in case he misses, it wouldn't be a bad thing if his ball stopped so as to stymie his opponent. But both this idea and the execution of it are rare. Nine stymies out of ten are pure luck.

All the more reason for abolishing them, maintains Mr. Anderson. Get the game

down to terms of pure skill. But that is easier said than done. Lucky chances often happen on the links; but no player is expected to refuse what the kind fates throw into his lap. If Hilton's ball bounded back from a rock upon the green and won him the American championship, he was under no obligation to refuse to profit by the fluke. And accidents are all the time occurring to get the better, temporarily, of skill on the links. These "rubs of the green" are exasperating, but we have to take them as they come.

Not all is plain sailing for the reasoning in behalf of the stymie. What about the six-inches rule? If your opponent's ball is within six inches of yours, you may ask him to lift. What becomes, then, of the theory of a rub of the green? Of course, the answer is that there is no desire to make stymies absolutely impossible of negotiation. Obviously, there is material in the entire controversy for much profound debate. For our part, we do not venture to take a firm and decided position in the great dispute. The only rule that could give complete satisfaction to all concerned would be one providing that your opponent should never be permitted to stymie you, and never be allowed to object when you stymied *him*.

Foreign Correspondence

WATERLOO—THE COALITION CABINET—A FRENCHMAN ON ENGLAND—WOUNDED OFFICERS.

By JAMES F. MUIRHEAD.

LONDON, June 18.

To-day is the centenary of Waterloo, and even the most unsentimental can hardly refrain from animadverting on the similarities and contrasts of the situations then and now. Superficially, the contrasts are immense. Our enemy has become our ally; our most efficient ally has become our terribly efficient foe. But the similarities are really greater than the differences. Once more we are fighting with a European coalition against an antagonist bent on universal conquest, or at least on European supremacy. Our ideas of democracy, liberty, and national independence have developed and strengthened since 1815, but then we honestly believed (as we believe now) that we were fighting in their behalf. Looking back from this vantage point, we can easily descry mistakes, weaknesses, vacillations, hypocrisies—if you will, even crimes—in England's conduct in diplomacy and war; but we contend unhesitatingly that she was right, on the whole, and that her action was eminently serviceable to the cause of civilization and human progress. How far this was due to the happy accidents of geography may be a matter of discussion; but the fact remains that the very existence of the far-flung British Empire may be taken as a proof that it has performed a function regarded by the other great Powers as, in the main, useful and beneficial. If we can hereafter look back on the results of the present war with equal self-justification, we shall be proud indeed. And we pray that, whatever faults we have committed in the immediate past, we may be able to resist the temptation to use the force of circumstances for our own profit, rather than as Europe's trustee. "Our business," to use Lord Castlereagh's words, "is not to collect trophies, but to bring back the world to peaceful habits." It is, too, to be hoped that the plenipotentiaries who try to inaugurate a new Golden Age, after the cataclysm of 1915, will be more happily inspired than the unimaginative diplomatists of the Congress of Vienna. They must clearly understand that they are acting for humanity, or at least for Europe as a whole, and not in the interests of ancient dynasties or individual privileges. If a repentant and regenerate German people were to give us the opportunity, we should be as glad as we were in 1815 to treat our triumph as won over the principle of militarism rather than over a nation or country.

The Coalition Ministry has not yet had much opportunity to show how well fitted it is to carry out the gigantic task that faces it; but so far the indications are favorable. The great problem is the efficient organization of our military and industrial forces and, with that, the reconciliation of our traditional clinging to voluntary service with the urgent need of the moment. We realize that Germany is formidable, not on account of her poisonous gases, Zeppelin raids, sinking of trawlers, and other evidences of what seems to us a somewhat petty malignity, but on account of her virtues—her discipline, her devotion, her endurance, her admirable and far-sighted coördination. We have little or no desire to emulate her in the first field, but in the second we are quite willing, *ab hoste doceri*. It is of the essence of a free and independent country that opinions should differ as to how the difficulty is to be met. Coleridge has emphasized the enormous difference between those who possess an idea and those who are possessed by it; and it is between these two classes that this conflict arises. Just as the extreme pacifists are so possessed by their idea that they cannot see there is a moment when its ventilation may be unseasonable, so the enthusiasts for individual liberty of action are loath indeed to believe that a juncture may come when even that has to be temporarily sacrificed for a higher, or at least a more urgent, good. On the other side, we have a somewhat noisy, but perhaps not very large, band who are so impressed by the German virtues that they believe there is nothing for it but to adopt their programme *en bloc*. The way of safety lies, doubtless, in the golden mean of compromise. It is possible that compulsory conscription, in either the military or the industrial sphere, might produce moral harm that would more than offset its superficial advantages. The moral pressure to enlist is steadily making itself more and more felt by all those of military age. The recent advance of the recruiting age to forty has distinctly increased the discomfort of the unmarried slackers between twenty and thirty. No doubt there are a certain number who are "waiting till they are called upon"; but it is not yet certain that this "call" need be more than some such measure as a national registration of the militarily fit.

In the industrial sphere, the scheme of our new Minister of Munitions seems a fairly good shot at the bull's-eye of compromise. On the one hand, there has been a very strong and persistent cry for the suspension of all trade-union regulations in restriction of output. On the other, the equally obvious conviction has ruled that it is impossible to exact forced labor that might conceivably inure to private profit. Mr. Lloyd George's proposals attempt to meet both these difficulties. The temporary suspension of the trade-union rules must be accompanied by a temporary limitation of profits in munition and armament works. In the "controlled establishments" there will be special provisions in reference to strikes, lockouts, mobility of labor, compulsory arbitration, the infliction of fines, and so on. Those who are willing to work in such establishments are to sign a declaration valid for six months. It is not, apparently, intended to put the ammunition workers into khaki (like the Liverpool dockers), or to submit them to anything that could fairly be called military discipline.

The reality of Zeppelinism has lately been impressed on Londoners by the issue of official instructions from Scotland Yard as to what households should do in the event of a raid. The effect on the British people may, perhaps, be summarized in the words of M. Jean Cruppi, formerly French Minister of Foreign Affairs, who recently visited London, and is publishing his impressions in the *Matin*. He writes: "Our English friends are not troubled with an excessive gift of imagination. Hard facts are needed in order to bring them to a sense of realities. In this present war it has taken them some time to realize that the superb effort represented by the British navy on sea had to be supplemented by a supreme effort on land. Under the impulse of men like Mr. Asquith and Lord Kitchener, this effort is being made to the full. After ten months' war, the visitor to England is surprised less by what remains to be accomplished than by the work already done. Everything had to be created, both the man and the gun. . . .

"Englishmen of all classes and creeds are one in an inflexible anger, in the implacable determination to lavish blood and treasure until Germany has been beaten to her knees. . . . Never before have the irresistible forces of the United Kingdom appeared to me so full of energy and so imposing. These forces are in full operation, and they are marching forward to their goal."

Yesterday I visited two young officers in hospital. One, a Canadian, had been struck by shrapnel in three places, had had a bullet through his arm, and had suffered three weeks from gas-poisoning. A pleasant recompense for these evils had just reached him in the shape of a captain's commission, at the age of twenty-one. The other youngster (nineteen) had undergone an operation, and had been gratified by receiving as his first visitors, on emerging from his chloroform-sleep, the King and Queen of England. King George and Queen Mary are, I understand, quite unwearied in their work of visiting the wounded, often seeing two or three hundred officers and soldiers in a day, and exchanging a few personal words with every one of them. And the nurses in charge allege that they show no evidence whatever of being bored!

PARIS AND MUSIC—A PROGRAMME OF GOOD WORKS—A CRITICISM OF GERMAN MUSIC.

By STODDARD DEWEY.

PARIS, June 19.

Among the multitudinous good works to which the needs of this cruel war have given birth, one of the most curious is the "Aide Morale" in Paris. The moral aid which is given is an hour or two of free entertainment for the people on Sundays. It is intended to cheer and encourage, as well as to inform; and it is given at the *mairies* (ward halls) of the populous quarters. There, indeed, the civil life of the people centres—their marriages and registration of births and deaths, and all the rest.

First, there is a little talk, usually by some one who is somebody—to keep up faith in the outcome of the war. Then there is a concert, with recitals, also by somebodies; and each number is explained to these listeners, unused to theatrical art, by one who acts as the chairman did in the old-time music-halls of London. In a few words, he presents each singer or actor or performer, and tells just what the song or recitation or music means—which might often be done profitably for more pretentious audiences.

During the seven months the work has been going on 112 such moral-aid entertainments have been given, with the help of 250 singers, musicians, and actors, poets, historians, and even savants. There have been more than 100,000 hearers—enough to leaven well the popular lump.

The halls, of course, are free; but the total expenses, which have to be met by personal contributions, include another good work or two. One is the helping out of theatrical *artistes* who are so commonly without employment now that war has stopped the city's regular amusements. All told, a little over $3,000 covers expenses so far.

A side work which dovetails in with the rest is supported differently. This is the "Vestiaire des Artistes"—to supply necessary clothes and gowns and such like. For this, women of fashion are asked to contribute their passing dresses, which are not precisely fitted for the poor and refugees. One of the successful cartoons of this extraordinary season has been a sister of charity looking glummish at a canary-headed lady, who offers her a fossilized slit skirt. But to these *cigales*, whose habitual flow of fine dresses stopped

Quand la bise fut venue

such toilet materials are a godsend, enabling them to continue earning their legitimate living. This part of the work has grown far beyond these city-hall entertainments; and it is estimated that gifts have been received to the value of $15,000. The well-known social worker, Madame Moll-Weiss, has organized this combination of practical aids, moral and magnificent. She also has a "mothers' school"; and she has found time to occupy herself with another phase of real art—the making of "fruit briquettes," a sugared dried-fruit paste cut in squares handy for soldiers' eating.

For the benefit of a similar war-charity—free meals for impoverished *artistes*—a more elaborate entertainment, somewhat difficult on the artistic side, has been successfully realized by Madame Felia Litwinne. She has long been a beloved *prima donna* in France, and her native patriotic feeling has helped her out. At Nice and Monte Carlo, and now in the immense Trocadéro Hall of Paris, she has given a short, varied, characteristic programme of song, chorus, and dance music, representing "scenes of Russian popular life." She has had the practical sense to arrange the scenes without theatrical complication, so that they can be produced in ordinary concert halls.

Even without artists of such original quality as Madame Litwinne has found for the purpose, beginning with herself, her programme is an easy model for musical entertainments, intended to instruct and impress as well as amuse. For the intellectual element is also easy, just as the music is delightful.

Pierre Lalo, the battling musical critic of Paris—he is a son of the composer of "Le Roi d'Ys"—has been writing characteristically of "German taste and Italian taste":

"It is true that, during 150 years, Germanic countries produced a great number of magnificent musical geniuses, and that during those years no other country could rival them. But it was only during that period; in the middle ages music was Italian, not German; at the Renaissance, it was French and Flemish; in the seventeenth and to the middle of the eighteenth century it was sometimes Italian and sometimes French. It is only with Handel and Bach that the greatness of German music begins—and it has ended with Wagner. . . .

"For twenty years my professional duties have taken me each year to Germany, and I can say without exaggeration that I know the country well. I have many and many a time had occasion to verify and to say, 'The German people, among all the peoples of Europe, is one in which the worst musical taste is found.' No doubt, it is a people that makes a deal of music, and it has an animal need to hear much, just as it has to eat and drink much; but all music is good to it, and it makes no difference between the better and the worse. In numberless concerts which swarm in every German city, the public takes as much pleasure in hearing some *pot-pourri* of the leader of the orchestra as in one of Beethoven's symphonies. The programmes of German lyric theatres form an extraordinary mixture of classic masterpieces and horrible productions, which no other country in the world has been willing to stand for half a century.

"The choruses which their choral societies sing, and which are now sung by their regiments—and which are given us as a sign of German artistic superiority—'sound well,' maybe, in the open air, as evening falls; but—by themselves—they have no musical value. No, there is no comparison between the material faculty of singing in parts, which implies no refinement of feeling or mind, and the proofs of taste and delicacy given every moment, at every street corner and turning of the ways, by the peasants of Tuscany and Umbria."

M. Lalo concludes by asking: "What, in comparison with such marvels, can German towns and country teach their inhabitants? Only ugliness and coarseness. Between the Italian mind and the German mind there can be no agreement."

It may be as well to add that no one has criticised more savagely the "music-hall" quality of recent Italian compositions than M. Lalo, who thus appreciates popular Italian taste.

THE ITALIAN GOVERNMENT AND THE LAW OF GUARANTEES.

By HOMER EDMISTON.

MILAN, June 14.

The question that was so much discussed before Italy's declaration of war against Austria, as to what would be the effect of such a declaration on the relations of the Holy See with Austria and Germany, has been answered in a way that, in part, had been foreseen by many. It was hardly to be believed that in this event the presence of the Prussian, Bavarian, and Austrian Ambassadors to the Vatican would be tolerated in Rome. But the prediction that the Pope would ask the entire diplomatic corps to absent itself during the war, has not been verified.

During the agitations that preceded the declaration of war, certain Austrian and German prelates and laymen in Rome exerted all kinds of pressure, direct and indirect, upon the Vatican authorities and upon the Pope himself to induce him to transfer his court to some neutral country, preferably Switzerland, on the ground that his own liberties and those of the Church would be violated if he stayed in Rome. But the Pope, too fine a diplomat and too good an Italian to be imposed upon by such ingenuous manœuvres, gave his zealous and disinterested counsellors to understand that they had exaggerated the dangers of his position.

On May 23, the day that war was declared, the Italian Government issued the following declaration:

"A statement has been published in regard to the intention of the Italian Government, in case of war, not to allow the diplomatic represenatives to the Holy See of those states with which Italy should go to war, to remain in the country. This statement is without foundation."

From this it was inferred that the Government had been assured that the departure of the diplomatists in question had already been determined, and that it maintained the Law of Guarantees, because it was under no necessity of doing otherwise.

On May 26 the *Osservatore Romano*, the official mouthpiece of the Vatican, denied the report that the Pope had requested the sovereigns of the countries at war with Italy to retire their representatives at his court. But it did not deny that he had prevailed upon the Ambassadors themselves to go. The same paper contained a mild allusion to the restricted liberties of the Sovereign Pontiff in his dealings with foreign countries. But it is to be observed that the Pope's letter, to which I refer below, made no mention of this subject.

The German and Austrian press, being filled during the next few days with violent diatribes against the Italian Government for its alleged violation of the Law of Guarantees, the Ministry was constrained to issue the following second declaration (May 31):

"With regard to the permanence in this country of the diplomatic representatives to the Vatican of those states with which Italy is at war, or has broken off diplomatic relations, certain German newspapers allege that the Italian Government not only has neglect-

ed to guarantee the safety of the said representatives, but has also announced through its official press that the Law of Guarantees would temporarily be suspended if they should not voluntarily hasten their departure.

"This statement is in every part of it false. The truth is, on the contrary, that in reply to a number of questions put by the German Embassy to the Foreign Office, it was said that the particular sovereignty of the Supreme Pontiff being guaranteed by our laws, the Italian Government is determined to maintain it in all circumstances and in strict conformity with the requirements of these laws. The additional assurance was given that the Ambassadors of foreign Powers to the Holy See might in any event freely reside in Rome, and that the Italian Government would take all possible precautions to insure their safety."

Thus were the provisions of the most competent and moderate observers completely nullified. As I have already remarked in my letter of May 1 (*Nation*, May 27, p. 593), so eminent an authority as Professor Scaduto, of the University of Rome, is of opinion that at the time the Law of Guarantees was passed it was the understanding of both Chambers that in case of war the Government, by act of Parliament or even on its own responsibility, could suspend the immunities of ambassadors accredited to the Holy See by Powers at war with Italy. It was also generally expected that the present Government would adopt this course. But Salandra and Sonnino, in spite of the very real dangers of the presence in Rome of Austrian and German ambassadors, with permission to correspond in cipher with their home Governments by mail and telegraph, preferred to maintain in their strictest interpretation Italy's pledges to the Papacy. It may, of course, be conjectured that Sonnino, whose good faith nobody at least in Italy dares to impugn, may have been reasonably certain, in giving his assurance to the German Embassy, that he would not be called upon to fulfil it. But with or without such reasonable certainty, a man of his high and austere rectitude, if convinced that his country's faith was plighted in this sense, would have kept it whatever the consequences.

Only a few days ago the Italian Consul in Zurich was compelled to deny officially some statements of Austrian papers about violations of the Law of Guarantees on the part of the Italian Government, which he did in these terms:

"The Pope continues to exercise his apostolic mission with every possible liberty. The Law of Guarantees remains in full force, and the Pope sends his dispatches in cipher now as before the war, while his diplomatic couriers travel with sealed envelopes without being subjected to the slightest censorship."

A few days after the declaration of war, Benedict XV, in place of an Allocution to a Consistory which he had hoped to call, addressed a letter to the Sacred College through its Dean, Cardinal Serafino Vannutelli. Several of its members, that is, Italian bishops and archbishops, had already pronounced patriotic discourses from their pulpits, and, of course, no such utterance was expected of the Pope. But the letter contained two noteworthy passages. He lamented that "our beloved Italy" had been drawn into the conflict, and also that "on land and sea means of offence have been adopted that are contrary to the laws of humanity and to international law." As to the first expression, no Pope had said anything like it since 1870; as to the second, the allusion was clear to German methods of submarine warfare, to the use of asphyxiating-gases, and to other barbarities in France and Belgium.

In my letter to the *Nation* of December 10, I mentioned the case of Father Semeria, the famous preacher and liberal theologian, who had been expelled from Italy by Pius X. He has just been appointed chaplain to the general headquarters of the Italian army. This means not only the rehabilitation of a learned and enlightened priest, but also, along with other similar instances, a complete accord, that is, in matters of administration where they have a common interest, between the Vatican and the Quirinal. Perhaps the most significant circumstance of all is that the Pope has given permission to the Marchese Patrizi Montoro, an officer in his household, to volunteer for service in the Italian army.

Notes from the Capital

PRESIDENTS AND THEIR PREMIERS.

We have heard so much, during the international complications of the last few months, about what would have happened if Taft or Roosevelt had been elected President in 1912, that it may be of interest to look back at recent Administrations which have had threats of war dinned in their ears, and see what happened. We need revert no further than to Benjamin Harrison's term, when some of the seamen from the U. S. S. Baltimore were maltreated by a mob in the streets of Valparaiso, and the Government of Chili was called upon for reparation. Chili had, just then, enough troubles of her own to excuse, in her opinion, a little delay, even if no account were taken of the local *mañana* habit. Harrison, however, was a man of peppery temper; he was also painfully conscious that his Administration was far from popular at home. To embarrass the situation yet more, he had for his Secretary of State Mr. Blaine, of whom the Chilians, justly or unjustly, had grown suspicious, and between whom and the President had sprung up a perceptible coolness, due originally to essential differences of temperament, and increased by the activity of sundry political mischief-makers. Then came a dramatic climax.

The President, weary of fruitless negotiation with Chili, allowed a hint to escape from the White House that he should cut short her dilly-dallying by a given day. On the morning stated, nothing satisfactory having eventuated, the press was duly warned that an important special message would be read in Congress at noon. It was: a message which sounded so jingoistic a note as to startle the country. But that night the further news leaked out that Mr. Blaine had had at his Department, at the very hour the President's message was leaving the White House for the Capitol, an official dispatch from Chili announcing the willingness of her Government to meet ours on a friendly footing for an adjustment of differences. Of course, the whole matter soon reached a peaceful conclusion; but the rift between the President and his Premier widened thenceforth till it became an absolute breach. Blaine's sponsors always contended that the reason the news of Chili's pacific attitude was not disclosed in time to prevent the sending of the message to Congress was that the dispatch was in a cipher which took long to translate, and that Harrison, meanwhile, was in a hurry to head off anything which might rob him of his laurels as a theatrical champion of American rights. Harrison's defenders retorted that Blaine had deliberately held back the amicable dispatch, being eager to see Harrison exhibit himself in a ridiculous light before the country.

When Cleveland was faced with a possibility of war, in consequence of his message to Congress calling attention to British aggressions in Venezuela, he had for Secretary of State Richard Olney, a lawyer and student of world-politics, who ranked in the Democratic party of that era about as Elihu Root ranks in the Republican party to-day. Olney was not only an eminently capable adviser, but truly loyal to his chief, whether agreeing with him in all particulars or not. That cloud was dissipated by the good statesmanship then in control in England, and the rights of Venezuela were ascertained and conserved by a course of moderation reflecting the highest credit upon all parties to it.

The position of President McKinley, when he had a like problem to deal with, differed from that of either of his immediate predecessors. The Cuban rebellion had reached, as has the current strife in Mexico, the proportions of an international nuisance. It had, however, the marked difference that, instead of being largely a squabble among a few factionists ambitious of power and wealth, it was the effort of a subject people in America to free themselves from a European despotism. This idea stirred up a pugnacious element among our citizens, especially in the West, till they forced the President's hand. McKinley, who was a man of peace, found himself plunged into a war he had striven hard to avert, and with a Secretary of State at his elbow whom he had placed there, as President Harrison is known to have placed Blaine, and as President Wilson is assumed to have placed Bryan, as a concession to temporary political expediency. Poor John Sherman had been, in his day, a power to be reckoned with—a lawyer of note, a financier, a party leader of nearly the dimensions of a statesman; but the burden of years had brought on a dotage in which feebleness of body was combined with a shattered memory and a loss of the faculty of concentration. Fortunately, before the last stages of negotiation with Spain had passed, the old gentleman came to realize his inadequacy for the work which was falling to his lot, and retired to private life, never again to emerge.

Certain experiences Mr. Wilson has passed through during the twenty-eight months he has filled the executive chair can be guessed only from the phenomena which, in spite of his reticence and his desire to avert gossip, have reached the people's eyes and ears. With a Secretary of State whose one real forte was emotional oratory, who was neither a lawyer nor a diplomatist, and who had already, before the culmination of the Lusitania episode, made himself the chief target in Washington for tolerant raillery from all over the country, the President was evidently preparing to make the best of a thoroughly uncomfortable situation, when relief came in an unexpected form. It remains now to be seen whether Bryan will follow the prudent aftercourse of Sherman or the suicidal aftercourse of Blaine.

VIEILLARD.

Two Editors

RECOLLECTIONS OF E. L. GODKIN AND W. P. GARRISON.

By VISCOUNT BRYCE.

In 1870, when I first visited the United States and made the acquaintance of Edwin L. Godkin (to whom I had been introduced by Leslie Stephen), the New York *Nation* was still in the freshness of its youth. It was, to the best of my recollection, the only weekly journal of political importance in the Atlantic States, and its type was a new one in the country. Its founder had no doubt been influenced by the example of two weeklies that were then playing a great part in England. The *Saturday Review*, established in 1855, was for the first ten years of its life, and to a less degree for the first twenty, the most brilliant journal that England had known, commanding the pens of an extraordinarily large number of men of first-rate literary talent. It was, however, much stronger on its literary than on its political side, for in politics it was always critical rather than constructive, having no positive views to advocate, and influential chiefly by its keenly destructive cynicism and air of intellectual superiority—attributes which made John Bright call it the Saturday Reviler, and provoked Thackeray into dubbing it the Superfine Review. The *Spectator* was a very different sort of organ. Unlike the *Saturday Review*, in which all sorts of different minds and casts of opinion were visible, the *Spectator* was written almost entirely by two men, Richard Holt Hutton and Meredith Townsend. Hutton was the greater of the two, and indeed one of the best English public writers of the nineteenth century, but Townsend's vivacious and almost reckless audacity in stating his views, always ingenious and often paradoxical, helped to give the paper a distinctive character. Down till 1886, when it parted from Mr. Gladstone on the question of Irish Home Rule, it was a bulwark of the Liberal party.

The *Nation* resembled the *Spectator* in devoting its opening pages to comments on current events, and also in the definiteness of its political programme, while it recalled the *Saturday Review* in the pungency of its tone as well as in the excellence of its literary criticism. It was, however, no mere imitation, either of those journals or of any other, but a new creation which brought new elements into the American press. The American journalism of those days had plenty of vigor. Horace Greeley was perhaps the most conspicuous single figure, but there were plenty of other strong men. The style of writing was, however, as a whole (for there were exceptions, such as Mr. Dana, of the *Sun*) less polished in style than it has since become, and based on a less solid foundation of knowledge than public writers in the first rank are now expected to possess. Literary criticism in particular was at a rather low ebb. For careful reviews of books by competent scholars it was generally necessary to go to the few monthlies, and even there such reviews were not always to be found. One of the commonest complaints made was that there was little discrimination in literary appreciations. The *Nation* had from the first three distinctive merits. It was brilliantly written. It was full of wit. It was conspicuously independent and individual. Though it started as a definitely Republican organ, it never obeyed any political leader, never laid itself out to defend any party platform, and always presented a definite set of doctrines or principles, as those which the editor held with full personal conviction. These principles reflected Mr. Godkin's mind. He was a stringent economist of that old orthodox type which has gone so much out of favor in the present century. No reader could ever doubt either his clearness or his courage. The paper was the man, and the man was the paper. This individual strain helped to give interest, and with interest, power, to the *Nation*, for we are all interested by a strong individuality, even if we do not wholly like it.

E. L. Godkin was stringent in his criticisms, and as he made many friends (for he was a charming companion and a loyal comrade), so he made a good many enemies. The fiercest of these enemies were to be found among those Tammany leaders whom he incessantly assailed. But even with men who had the same aims as his own and were working honestly for them, he sometimes dealt rather hardly. I used now and then to suggest to him that he did not make sufficient allowance for the difficulties in which honorable and public-spirited men are placed by the exigencies of practical politics. They must now and then consent to compromises. They have to work along with persons whose ideals are lower than their own, and cannot always say all they think about such persons, nor pursue the course which they personally prefer, when it becomes plain that success cannot at the moment be attained. It was the rigidity of the standard he applied that made his judgments severe, not any personal bitterness, still less any disappointed ambitions, for he had no axes to grind and never sought anything for himself. He was not, as some people thought, a cynic, for the cynic, taking the world as he finds it, applies a low standard. Mr. Godkin was rather to be called austere, because he applied a high standard. He worked constantly and earnestly for righteousness, and did a great deal through his newspaper to stimulate patriotic efforts for reforms in government, especially in municipal government, in days when reform was by no means so popular as it has happily become within the last fifteen years.

When he assumed the editorship of the *Evening Post* he wrote there with his usual force and boldness. But he seemed to me to be less in his element in a daily paper than he had been in a weekly, for his gifts had fuller play in what may be called the political essay than in the leading article. The admirable quality of his style was seen to better advantage when read leisurely once a week, for the fineness of the diction and the sparkle of the wit could be better appreciated. One can keep a file of a weekly journal, but in these days it is impossible to file a daily paper with any hope of being able to turn back to the articles which attracted one by their literary brilliance.

When Mr. Godkin took up the *Evening Post* he left the book-reviewing department of the *Nation* to his fellow-worker, Wendell P. Garrison, who carried on that work till failing health compelled his retirement some eight or ten years ago. The reviews of books had been a strong point with the *Nation* from the first. Mr. Godkin wrote a good many himself, and his wide acquaintance with learned men enabled him to enlist many eminent contributors. At least two of these (I mention only those who have since been lost to us), Goldwin Smith and Charles Eliot Norton, were among the most famous writers of their time. A better literary editor than Mr. Garrison it would have been impossible to find. He wrote very little himself. I remember no book of his except his life of his father, William Lloyd Garrison. But he was an excellent judge of good writing, and took endless pains always to search out not only the most accomplished writers, but the men most competent to deal with any particular subject. His standard of excellence was as high as that of the best literary journals of Europe. It may, indeed, be doubted whether any of those journals maintained so uniformly high a level. The book notices for which he was responsible as editor were free from bias, were replete with knowledge, were thorough and discriminating in their treatment. Whoever will look through the files of the *Nation* will find cause to admire the care Garrison took to secure the best kind of work; and one reason why he got such work was because those who wrote for him appreciated his own zeal, and liked to do their best for one who felt that no trouble was too great to make sure of getting the best. I will not venture to assert, but I may be permitted to suggest, that among the influences which have raised literary criticism in America so much above the level at which it stood fifty years ago, the example set by the *Nation* under the two men I have mentioned may be reckoned.

The fame of journalists is apt to be fleeting, because it is not preserved by such monuments of positive achievement as commemorate the labors of great officials or legislators or party leaders. It is therefore all the more fitting that tributes should be paid by those who knew them to the memory of these two men. Differing in many ways, they were alike in their independence, their public spirit, their high sense of duty. Warmly attached to one another, they did good work for their generation, and they did it in an unselfish spirit, valuing the best traditions of their profession.

The "Nation" from the Inside

AN INTIMATE STUDY OF "THE CHIEF" AND HIS DEVOTED LIEUTENANT.

By W. C. BROWNELL.

Crossing Beekman Street some time in 1879 from the old *World* office to the old *Nation* quarters, and establishing myself at the third desk in the editorial rooms of the latter, was to me an event of more moment than if I had changed hemispheres. It was, of course, much more than graduating from daily into weekly journalism, though that in itself was desirable enough in the case of one whose first eight years out of college had been an experience of much variety and interest, no doubt, but one containing an element of drudgery that had finally lost any disguise of novelty. Moreover, the *World* office was no longer what it had been in the days of Mr. Marble, most appreciative of chiefs and most captivating of men. And the weekly in question was the *Nation*, association with which would have been the acme of any newspaper man's ambition who had distinctly literary predilections. It was certainly undreamed of by me when the good Stedman, always on the lookout for opportunities of beneficence, hearing Mr. Godkin speak of a vacancy in his office, introduced me to him, and so paved the way for me to, if not paradise, at least a veritable Land of Beulah.

To me, at any rate, the *Nation* had always worn a halo. I used to read it in college—what it contained that I was up to—and try unavailingly to think the *Round Table*, a short-lived Democratic venture, a real rival to it. Then in early Park Row days I had known Dennett, who was an intimate of some of my own circle on the *World*. And Dennett was from a literary point of view the most remarkable talent New York journalism has ever had; see Mr. Godkin's memorial of him in "Reflections and Comments," in which he speaks of Dennett's death as being an irreparable loss to the *Nation*. Acquaintance with Dennett would have keyed up any young writer's standards. His articles were fluid rather than articulated, and perhaps they would have gained in effectiveness if they had had more "argument." But his genius, which was unmistakable, was wholly untinctured with ambition, and he wrote as if to please himself, though he could have had no severer critic. Of course, the substance of what he wrote was commensurate with his rare capacity and solid attainments; it is hard to hold one's hand in speaking of these. But his form was dictated mainly by fastidiousness. I remember his following a proof once to the printing-office to change "cheerful" into "cheery" as the epithet for some rascal or incompetent he had been writing about. What could be "neater" than his article on "Knickerbocker Literature," whose writers "we remember as forgotten"? In brief, the opportunity of following in his footsteps, however *longo intervallo*, was so stimulating as almost to overcome the diffidence it inspired.

The moral atmosphere of the office was ideal. I mean more in the extended, and not alone in our specific English sense, though in the latter it was perhaps even more marked. There was not only no temporizing, compromising, compounding with candor, in either major matters or in trifling; there was no partiality or ingenuity or bland indifference by which the devil may be, and so often is, whipped around the stump. There was in the *Nation's* field and conception of its function no temptation to anything of this sort, to be sure, which consideration may conceivably qualify its assessment of merit on the Day of Judgment—a day when we may hope the sins of daily journalism will, in consequence of the same consideration, be extended some lenieney—but certainly cannot obscure the fact of its conspicuous integrity. There were people then—as now—that complained of its fairness; which involved, to my mind, the most naïve attitude imaginable, since it was the *Nation's* practice that had provided the objector with his criterion of fairness in journalism. Of course, he might assert that this was only a way of saying that the paper made extraordinary claims which in his estimation it failed to justify; but this was verbiage, the fact being as I have stated it.

But I also mean by moral atmosphere the peace, the serenity, the gentleness, the self-respect, the feeling of character, that pervaded the office. We seemed, to my sense, so recently filled with the reactions of Park Row phenomena, "to lie at anchor in the stream of Time," as Carlyle said of Oxford—which, actually, we were very far from doing; there was never any doubt of the *Nation's* being what is now called "a live wire," especially among those who took hold of it unwarily—as now and then some one did. Mr. Garrison shared the first editorial room with me. Mr. Godkin had the back office. The publication offices were in front, occupied by the amiable Mr. St. John and his staff, which included a gentle and aristocratic colored bookkeeper who resembled an East Indian philosopher—plainly a Garrisonian protégé. The silence I especially remember as delightful, and I never felt from the first the slightest constraint; Mr. Garrison had the courtesy that goes with active considerateness. The quiet was broken only by an occasional interchange of conversation between us, or by the hearty laugh of Mr. Godkin, whose laugh would have been the most noteworthy thing about him, if he had not had so many other noteworthy characteristics; or by a visit now and then from Arthur Sedgwick, in my time not regularly "on" the paper, who always brought the larger world in with him (the office *was* perhaps a little claustral as a rule), or the appearance of Earl Shinn with his art or dramatic criticism—both the best written, if not also the best, we have ever had in this country, and the latter, I think, so distinguished as to be unique.

Of course, there were visitors, contributors and candid friends, but mainly we worked in almost Quakerish tranquillity five days in the week during my incumbency. Naturally, after amalgamation, some years after my advent, with the *Evening Post*, the pace quickened, or seemed to. I remember I began at that time the Summary of the News—the first routine, strictly to be so called, connected with my not inactive service on the paper. Spontaneity so largely prevailed as to seem the actually prescribed rule of the office. One followed one's own initiative, though naturally within individual lines. The tone of the office unified everything, at least to an extent that permitted this. And I may note the significant and extraordinary circumstance that though there was little or no explicit direction, we all three proof-read the entire paper, and each "corrected" on occasion the editorial as well as the contributed material in ultra-democratic fashion. "We are perfectly free with one another's copy," said Mr. Garrison to me when I came and showed some embarrassment at this arrangement. He was an incarnation of the democratic spirit, and the notion of permitting susceptibilities to interfere with possible improvement in either accuracy or eleganee would have been as foreign to him as any other form of littleness. He was somewhat hard on the conventional at times, but it was because he conceived it as littleness.

"How do you stand on politics?" Mr. Godkin asked me when I came to the paper, adding with a smile, "You know, we are accused of being too Democratic as it is." In view of the *Nation's* experience over the Tilden-Hayes election, it seemed to him a little humorous to be taking over a member of the *World's* staff, in however modest a capacity. I could conscientiously answer that I stood with the *Nation*, practically, though I had reached the position from the opposite direction. In the late seventies, in circles of any political detachment, it was quite true, as I remember Mr. Sedgwick saying, that "to call oneself either a Republican or a Democrat" was "slightly ridiculous." All the same, I confess there were times when I felt a shade out of tune in the office, owing to those obscure sentimental survivals that are sympathetic rather than rational. "You must be one of those old Jeffersonian Democrats," Sedgwick once jocularly remarked to me. The fact that nine-tenths of the American people were inveterately guided by feeling rather than logic, of itself, restricted the eminently "utilitarian" *Nation's* support to the "Remnant"—or what the editor of an evening newspaper of the day stigmatized as "a damned small crowd." Its occupancy of a different, rather than, as was so often supposed, a "superior," plane (with corresponding manners!) preserved it from the popularity for which, of course, it never made the smallest bid. An obituary notice

in a Kentucky paper that created merriment in those days remarked that "while the late Colonel Yell, of Yellville, left his official accounts in some confusion, his heart always beat warmly for his native land." The latter consideration was generally regarded as an important one, and people in general looked for more protestations to that effect than the *Nation* (whose establishment itself was evidence enough, could they but have realized it) condescended to make.

Mr. Godkin had the detachment towards American feelings of this strictly irrational order of a native Englishman—which in spite of his Irish birth he eminently was, and, as Thackeray said of Swift, no more an Irishman than a man born in Calcutta is a Hindoo. Mr. Garrison had the Garrisonian detachment—than which nothing could be more complete in the matter of prejudice between our organized parties. It was occasionally a little difficult to attain this serenity and consider only ideals and causes apart from traditional sympathies of one sort and another. But it was a great education. The first lesson was avoidance of the vague, the loose, the sprawling vein always encouraged by the invasion of the emotions into the field of the intellect. The country at that time had no real politics. Rational reform—*imprimis* civil-service reform—was necessary before our system could be brought to bear on our problems. To this end the *Nation* was devoted in a spirit of high consecration—to use language it would have regarded as inflated. And of the educational movement that has since accomplished very considerable results towards that end it was the herald, the standard-bearer, and the protagonist.

It was markedly, even sharply, critical, but it was certainly constructive enough. No one had any doubt where it stood even in days when independent journalism was scouted by the old school of editors, in the words of one of whom "the people like a paper to stand for something"—meaning to back one's own side through thick and thin like a paid attorney. Its body of doctrine was plain, and, quite reasonably, it took its readers' familiarity with it for granted, and was not everlastingly expounding it. Its principles formed the basis, and not the burden, of its discussions. When it did lay down the law—as it occasionally did!—it rather pointedly neglected the view of persuasion taken by Matthew Arnold (whom Mr. Godkin thought, quite justly, I had a tendency to overwork), in calling it "the instilment of conviction." No doubt it often convinced, but it never instilled. The tone was rather that of President Seelye, who remarked to his students, "I do not ask you to believe, but defy you to deny." It plainly had the justification that the current political phenomena were not differentiated enough to need any formal application of its principles, being rarely up to its standards, or indeed to any other.

The result was, accordingly, not the exposition of the doctrines of Bentham or the "Manchester School," or any other doctrinaire propagandism, but critical controversy conducted with reference to the dictates of culture and common-sense. And controversy of this kind was Mr. Godkin's natural element. Retrospectively, one may feel that, considering his opponents, he had it all his own way. At the time, at any rate, it was chiefly notable that he had few to help him—nobody certainly at all comparable to him. The polemic that he waged every week with such zeal, such zest, such gayety, combined with such fundamental seriousness and formidable power, was backed by an equipment that was an unequalled arsenal of resources. If we had no real politics, real politics had been the study of his life, and he brought to bear on material that superficially hardly seemed to merit it the treasures of a mind stored in history and economics and statecraft, as well as trained by systematic reflection. This opulent mental furniture and these remarkable powers were, however, so much at his command as instruments that he could utilize them to their utmost in work which, as I say, would not naturally be deemed consonant with their befitting exercise, but which was performed with far more effectiveness and to far better purpose by their aid. This was because he humanized them so perfectly. There was in the first place simply no element of pedantry in his composition. Pedantry in others was favorite game with him, and he divined and discovered and derided its rather subtly varied manifestations with a delight far beyond the capacity of the crude to experience. In the next place, *quicquid agunt homines* and —oh! especially—the men themselves interested him inexhaustibly. But any one can readily see the advantage from a literary and, so to say, settled point of view of a fundamental article on Roscoe Conkling, for example, consisting of a sustained parallel between that eminent commander of henchmen and a Renaissance condottiere, compared with an "editorial" discussing his chances of reëlection. Such treatment it was which, continued week after week, with no let-down of any kind whatever, made literature of the *Nation's* customary two leaders. Of course, one should add in fairness, success in this particular kind and to this degree is to be looked for only in a weekly; but there are weeklies and weeklies.

There were few anywhere at that time comparable with the *Nation*. The English weeklies equalled it in reserve and authority, perhaps, but not in force. Certainly not in humor, which in Mr. Godkin's composition was the quality that gave edge to all his others. No journalist of his seriousness ever had so much or used it better to serve his seriousness. It was not ironic, but partook rather of his fundamental heartiness. How had I ever before meeting him prefigured him as probably "donnish"! I don't mean that personally he was exuberant or expansive, or that shyness did not struggle with cordiality at times in his general personal relations outside the circle of his intimacies. But in his writing his abounding humor was precisely to be described as hearty in the sense that it was spontaneous and in no degree studied. He eschewed sarcasm, and his method of dealing humorously with a subject—preferably a personality, of course—was a frank assumption of its belonging in the category of the comic, where he had great fun with it. The method is less obvious than it sounds. In his hands it was as subtle, at any rate as unexpected, as it was effective. It was especially effective in the controversies conducted in the *Nation's* own columns, where—a solecism in the journalism of the day—every opportunity was extended to an opponent. I remember one with Dr. James Freeman Clarke over "Non-sectarian Theology." Mr. Godkin had asserted there was no such thing. Dr. Clarke wrote voluminously, mixing up theology with religion and giving what he called a *résumé* of the *Nation's* position. Mr. Godkin printed the protest and began his brief rejoinder with something like: "The *Nation* did not say what Dr. Clarke says it did, and his saying so makes us think that he is not good at *résumés*." Once one of the perky Boston purists wrote to explain, in justice, he said, to himself, an error into which he had fallen in attacking the *Nation*. To which the editor replied that the *Nation's* columns were not the proper place for his apologies to himself. Also I recall a delicious incident in connection with the Rev. Henry M. Field, our neighbor of the *Evangelist* next door, who brought in a protest against our having, in an article on the egregious Talmage of Brooklyn, interfered with what he called "the broodings of the Spirit." "Take it back," said Mr. Godkin pleasantly, "and boil it down If I printed it as it is, I should bowl you over too easily." Dr. Field did so, but was bowled over, all the same, in great shape. Nothing, however, would be more misleading than to imply that Mr. Godkin was in the least at the mercy of his humor. His forte was argument, and he used humor as an adjunct.

Again, Mr. Godkin's style was beautifully adapted to his powers, and, equally with them, a native gift. It was so easy, such a triumph of simplicity, that his sentences seemed to come directly into his mind, and thus, never at the pains of deliberating, he wrote with great rapidity—so rapidly, indeed, that his handwriting—real caligraphy to look at—was often illegible, and the expert Garrison had to come to the printer's aid. "There is always the right word," I remember his saying once; "there are no synonyms." "'Reliable' and 'trustworthy,'" observed the scrupulous Garrison. "Well, 'reliable' is shorter anyhow," he retorted. Perhaps he did have a weakness for conciseness. The copious elephantine precision of Fitzedward Hall, probably our greatest linguistic savant, irritated him acutely. I remember witnessing with joy his reducing by half one of Hall's interminable and intricately correct articles, out of sheer exasperation. Garrison, who was never exasperated, looked at the proof rather ruefully.

He probably had to explain to Hall, who was, besides, one of his pets, and, being an unimpeachable authority, of real value to the *Nation*, of course.

Copiousness was naturally interdicted to the *Nation* in any case. Its field was universal, and its space was limited. Brevity was, therefore, a necessity, and yet the essay-like character of much of its matter tended to fulness. Mr. Garrison circumvented this with positive genius, and, though never interfering with their freedom of opinion in any task he had assigned them, with what probably seemed ruthlessness to those contributors who needed room to turn around in. But it was Mr. Godkin's own writing that set the standard and made all kinds of empty elaboration seem out of character. He never had the illusion that a newspaper article can achieve absolute comprehensiveness, and he had the wonderfully simplifying method of making his points and leaving them, without considering all conceivable objections and qualifications. And, of course, his example as to avoiding the vague, the general, the sentimental, and sloppy fringe of the subject was as marked in the purely literary as in the political field. For it would be a great error to think of his work as political only. He wrote also book reviews of importance and social articles (what we used to call "breviers"), and both better than any one else. He had eminently the light touch. As he wrote of Dennett, in words that were wholly applicable to himself, "he was a man to whom the ball of conversation was really a ball, and not an anvil or a barrel of flour."

I have spoken of him and of the *Nation* interchangeably, I perceive, and it is true that in a real enough sense he *was* the *Nation*. Mr. Garrison would certainly have said so. In the latter's later years it was a genuine grief to him, I think, that the fact was occasionally lost sight of. No chief ever had a more devoted, more admiring, lieutenant. For several years I was an almost daily witness of an attitude on his part which, given his own worth in every respect, constitutes the highest affirmation of Mr. Godkin's claim to the position he has been accorded by all competent judges. Yet it is also true to say that without Mr. Garrison the *Nation* could hardly have existed. He not only kept all its machinery going, but kept it working smoothly and in strict correspondence with its exacting standards. These could be followed more or less automatically in the office—with attentive effort! But consider the heterogeneity of its contributors—the impressive list, with inevitable changes, is still published, I believe—and the task of inducting them into conformity, especially when, as I say, he carefully studied their individual independence. His success was due to his character. To an extremely fastidious, even rigid, literary scrupulousness, he added a conscience that marched with it. Every one must have felt that whatever he did was inspired by a sense of justice, but one inveterately accompanied by a kindliness distinctly and actively friendly. He had the tolerance of innocence itself for the unfortunate, the neglected, the perverse, the queer. He lived habitually on a plane where precedent and convention had in themselves no sanction, no meaning. And the columns of the *Nation* in many subtle ways were infiltrated with his moral independence and ideality. He dispensed the books and selected the reviewers—always waiting till he got just the right man, sometimes long after publication. He wrote much himself, always with a certain crystalline distinction, but his chief work was the highest form of "editing," through which the reputation of the *Nation* was secured in only a less degree than it was by the writing and general direction of its chief.

The Founding of the "Nation"

RECOLLECTIONS OF THE "FAIRIES" THAT ATTENDED ITS BIRTH.

By HENRY JAMES.

My recollections of the very early life of the *Nation* should fall by their slight intrinsic weight into a clear enough form and make a straight and simple story, and yet to take them up in the portentous light of our present public conditions is to become aware at once of a danger which ought perhaps to stay my hand. That danger, I feel, is the exhibition of a complacency out of all proportion to the modest little facts themselves, such light matters of history as they must assuredly appear. My difficulty comes from the sense that to turn from our distracted world of to-day to the world of the questions surrounding, even with their then so great bustle of responsibility, the cradle of the most promising scion of the newspaper stock as that stock had rooted itself in American soil, is to sink into a social lap of such soft, sweet material as to suggest comparatively a general beatific state.

The whole scene and the whole time flushed to my actual view with a felicity and a unity that make them rather a page of romance than a picture of that degree of the real, that potentially so terrible truth of the life of man, which has now learnt to paint itself with so different a brush. They *were*, they flourished, they temporarily triumphed, that scene, that time, those conditions; they are not a dream that we drug ourselves to enjoy, but a chapter, and the most copious, of experience, experience attested by documents that would fill the vastest of treasure-houses. These things compose the record of the general life of civilization for almost the whole period during which men of my generation were to know it; an immense good fortune to us, since if the backward vision feeds upon bliss by the simple fact of not being the immediate, the importunate, or the too precariously forward, this bliss naturally grows with the extent of the pasture. I measure the spread as that of half a century—only with the air turning more and more to the golden as space recedes, turning to the clearness of all the sovereign exemptions, the serenity of all the fond assurances, that were to keep on and on, seeing themselves not only so little menaced but so admirably crowned. This we now perceive to have been so much their mistake that as other periods of history have incurred, to our convenience, some distinctive and descriptive name, so it can only rest with us to write down the fifty years I speak of, in the very largest letters, as the Age of the Mistake.

That title might, of course, be blighting to retrospect if one chose to take it so; it might present the whole time as too tragically stupid, too deplorably wasted, to be lived over again critically without sickness and shame. There is, however, another way of taking it, which is to live it over personally and sentimentally, exactly to the sought confusion and reprobation of the forces now preying upon us, exactly to the effect of saving it at least for the imagination if we may not save it for the reconciling reason. To look at it in the light of its good faith is to measure the depth of its delusion, not to say the height of its fatuity, but the good faith may nevertheless figure for us, it figures at least for the author of these remarks, thanks to its vast proportions, the inattackable sphere of romance, all at one with itself—and this, too, while remembering that the romantic condition does involve certain dangers and doubts, if only for the thrill of tilting at them and knocking them quite over. We had that thrill in ample measure, and our difficulties went down before us. To think of all this is to cultivate the complacency into which such a trivial fact as that I contributed, in my young innocence, an "important" article to the first number of the enterprise is capable of beguiling me; the fact tastes so, to memory, of our innocence; our innocence tastes so of our confidence, and our confidence of the appearances that crowded gracefully about it. These might have been the very fairies themselves, the invoked and approving godmothers who surround in any proper legend the earliest pillow of the new-born great, a group with no interfering "bad" fairy in this case, or none worth speaking of now. I might recall an influence that would serve indeed, a hand stretched out to rock the cradle, by the apprehension of most of the company, quite with the wrong violence, and in that manner gain credit as one of the very few witnesses now left so to testify; but I prefer to retrace the fashion after which I seemed to see the very first and greatest blessing possible flutter down upon the infant scene.

This was in the course of a visit to Shady Hill, at Cambridge, where my admirable friend, the late Charles Eliot Norton, spoke to me of his having just returned from New York, whither he had gone, as he smilingly said, on affairs of the *Nation*—the freshness of the joke was, of course, fleeting. The light that was so to spread and brighten then first

broke upon me, as I had also never heard before pronounced the name of E. L. Godkin, with whom I was soon to begin to cherish a relation, one of the best of my life, which lasted for long years. He "sounded" at that hour, I remember, most unusual and interesting, his antecedents being not in the least commonplace, as antecedents went with us then; and memory next jumps for me to the occasion of a visit from him in Ashburton Place (I then had a Boston domicile); where, prodigious to consider, he looked me up, in the course of a busy rush from New York, for the purpose of proposing to me to contribute to the weekly journal, for which every preparation—save, as it were, that of his actual instance!—had been made, to all appearance, most auspiciously, and of which he had undertaken the editorship. The verb to contribute took on at once to my ears a weird beauty of its own, and I applied it during that early time with my best frequency and zeal; which doesn't, however, now prevent my asking myself, and with no grain of mock humility, little indeed as humility of any sort costs at my age, what price could have seemed to attach to antecedents of mine, that I should have been so fondly selected. I was very young and very willing, but only as literary and as critical as I knew how to be—by which I mean, of course, as I had been able to learn of myself. Round *my* cradle, in the connection, the favoring fairies, and this time with never a wicked one at all, must have absurdly elbowed each other. That winter of Ashburton Place, the winter following the early summer-birth of the confident sheet, fairly reeks for me, as I carry myself back to it, with the romantic bustle of getting my reviews of books off.

I got them off, bustle as I would, inveterately too late, it seemed, for the return of a proof from New York; which is why there also lives on with me from those so well-meant years the direst memory of a certain blindly inveterate defacement of what I was pleased to suppose my style, a misrepresentation as ingenious as if it had been intended, though this it was never in the smallest degree, and only owing its fatal action to its being so little self-confessed. I was never "cut" that I can remember, never corrected nor disapproved, postponed, nor omitted; but just sweetly and profusely and plausibly misprinted, so as to make a sense which was a dreadful sense—though one for which I dare say my awkwardness of hand gave large occasion. The happy, if imperfect, relation went on, but I see it as much rectified during the winter and spring of 1875, which I spent in New York, on a return from three or four years of Europe; to the effect of my being for the first time able to provide against accidents. These were small things, and the occasions of them small things, but the sense of those months is almost in a prime degree the sense of the luxury of proof. The great thing really, of course, was that my personal relation with Godkin had become in itself a blest element.

I should like to light a taper at the shrine of his memory here, but the altar is necessarily scant, and I forego the rite. I should like also, I confess, to treat myself to some expression of my sense of those aspects of my native city to which I then offered their last free chance to play in upon me; but though such a hint of my having on the occasion had to conclude against them does but scant justice to the beautiful theme—I really should be able, I think, to draw both smiles and tears from it—I find myself again smothered. I had contributed, on one opportunity and another, during my stretches of absence in Europe, just as I had done so during '67 and '68, the years preceding my more or less settled resumption of the European habit, and just as I was not definitely to break till this habit had learnt to know the adverse pressure that '76, '77, and '78, in Paris and in London, were to apply to it. I had ceased to be able to "notice books"—that faculty seemed to diminish for me, perversely, as my acquaintance with books grew; and though I suppose I should have liked regularly to correspond from London, nothing came of that but three or four pious efforts which broke down under the appearance that people liked most to hear of what I could least, of what in fact nothing would have induced me to, write about. What I could write about they seemed, on the other hand, to view askance; on any complete lapse of which tendency in them I must not now, however, too much presume.

A Young Man's Oracle

THE EDITOR OF THE "UNPOPULAR REVIEW" RECALLS HIS RELATIONS WITH THE "NATION" IN ITS EARLY DAYS AND HIS FRIENDSHIP WITH E. L. GODKIN.

By HENRY HOLT.

The editor of the *Nation* has asked me to write of its early relations to the publishing trade. I told him that I could not write of the *Nation* and confine myself to that, without mixing in my personal recollections of its great founder and one of its literary editors, any more naturally than I could write of the Heaven now before me, by Lake Champlain, and confine myself to the region's production of potatoes and fish. Perhaps I could so write with an effort and many excisions; but I don't believe the result would be as satisfactory as it would if I write without restraint, and give the whole of the matter as it was related to the whole of me, and few things in my long life have related to so much of me. That last fact is, of course, worth mentioning only by way of explanation.

The *Nation* was hardly started when Godkin, though personally unknown to me, became my infallible pope, and it had not been going long before he became my friend; and for several of his later years he was my next neighbor in the country, with the houses so situated that we often met several times a day.

Then, during the brief career of Dennett, one of the first literary editors—a genius, who, at the start, did perhaps even more than Godkin to make the paper known, though not to give it weight—Dennett and I were intimate friends.

After all this was premised with the present editor, one night at the Century, he got to reminiscing, and I told him some of my recollections of the early days of the *Nation*. Then he found that he wanted "anything *but*" that I should confine myself to its relations to the publishing trade, but that he still wanted me to *begin* on them. Well, I will; but I am a very old man, writing about the best days of his youth, and I'm going to write as I please, and the editor has even been reckless enough to tell the very old man to write as *much* as he pleases; but I have told him to cut out as much as *he* pleases.

My recollections of the relations of the early *Nation* to the book publishers are inevitably mixed with my recollections of the relations of its editors to *this* book publisher, and I think the present editor will get out of me more of what he wants if I don't try very hard to disentangle them.

The *Nation* was started in July, 1865, and after a little preliminary skirmishing in connection with that model publisher, G. P. Putnam, I began the publishing business with my present house, in November of the same year. I believe we have had an advertisement in every number of the *Nation* during the virtually fifty years since, unless one or two may have been omitted by accident.

I still vividly remember my surprise and enlightenment when Dennett happened into my office just as the first volume of Taine's Italy came in from the binder, and I handed him a copy, and he said: "Let me see! To whom shall I send this for review—who knows Italy?" And after a little reflection he decided to send it to Howells. Now, so far as I know, doing this as a matter of course was something new in American journalism. It must have been done exceptionally and spasmodically by two or three of the heavier periodicals, such as the *North American* and the *Atlantic*, but the general habit was to turn everything over to a "book reviewer"—a "literary gentleman," such as one newspaper about that time complacently assured the publishing world, by circular, it had added to its staff. This novel course by the *Nation* gave it an authority looked upon by those as ignorant as I was with almost superstitious awe, and it was a very short time before its favorable verdict was accepted by everybody as final; and its unfavorable verdict, by everybody but the interested parties—and poor young me.

I recall an illustration. Some time in the late sixties appeared in the *Nation* an unfavorable review of Miss Yonge's "Landmarks of History," which we had just published. We wrote asking to be put in communication with the author of the review, with a view to getting him to revise the

BURLINGAME PUBLIC

book, which, by the way, he did. Soon after we sent our letter, the *Nation* had a paragraph on the matter, saying that our course was strangely unprecedented—that the publisher's natural course under such circumstances was to complain and withdraw his advertising, or withdraw it without complaining.

The publishers didn't know what to make of the *Nation's* strange ways, nor, for that matter, did many people know what to make of the *Nation* generally. It had to educate its constituency, as genius proverbially must. The publishers had been used to having everything that was not glaringly ignorant or immoral gently treated, if not praised. Dennett had no mercy for ignorance or stupidity or affectation or quackery, and very little reverence for tradition. Moreover, he was a generalizer as well as a fighter. Works in pure literature, not calling for special outside knowledge, he often reviewed himself, and if a publishing house was much addicted to the goody-goody and namby-pamby or the merely ponderously respectable, he, although honest, was very apt to let the house's general character affect his impressions of its new books. One very respectable publisher indeed asked me if I knew why the *Nation* never gave anything of his a favorable notice. I've told you, but I didn't tell him.

Dennett's pitching into the Knickerbocker School, in the number for December 5, 1867 (Vol. V, p. 459), set the whole literary and publishing world by the ears—and gave the *Nation* a great advertisement—and added, of course, to its reputation for originality and irreverence and ill-nature and all sorts of things. Since I've known more of the journalistic world, I've wondered if there was not a good deal of deliberateness about this policy of "attack"—one well recognized as effective in building up a circulation, and successfully followed not long after Dennett's death by the new management of an old daily. But that daily attacked, as the *Nation* never did, conspicuous people who did not deserve it, and to a degree that, despite that paper's having changed hands several times since, makes its name offensive to-day in the nostrils of not a few of us old people. Well, whatever the motives, the early *Nation* unquestionably did more than all other influences to raise the standard of our literary criticism, and, as I stick to my last, to educate the publishing trade. It has been a good while since any of us were apt to assume, when a book was pitched into, that it was because of any personal feeling regarding the author or the house. And yet one of the owners of the daily to which I have referred actually told me, in the presence of other men at the Century, that he supposed his paper had taken sides against us with a house with which we were quarrelling because they advertised with the paper and we did not. When I told him why we did not, I was slapped on the back by the most eminent man present. The *Nation* was among the leaders in the policy of without fear and without favor.

Perhaps it was consciousness of his friendship for me that made Dennett stand up so straight that he leaned backwards, and let him into one of the few big blunders of his career, in writing sarcastically, in the number for December 19, 1867 (Vol. V, p. 502), of the first book of poems by Sill. We published it, and he knew that I had a special interest in it because Sill and I were classmates and close friends. And perhaps his passion for rectitude was over-stimulated by my youthful enthusiasm and indiscretion permitting me to try, very argumentatively, to influence him in advance.

Dennett was a complex genius, lately graduated from Harvard, recommended to Godkin by Lowell or Norton, and with a make-up foredoomed to unhappiness and early death. Yet he was physically a big, strong fellow. And such a jaw!—not prognathous, but firm, and very broad at the angle. Whitelaw Reid had one like it. Dennett was perhaps the wittiest man I ever knew, though Godkin himself was a close second, if a second. Dennett's wit was very much *sui generis*, and apt to be paradoxical. Once he and I were lunching with Bobbie Weeks, another classmate and dear friend of mine, whose poems Dennett used to print in the *Nation*. Bobbie said something about the anxieties regarding a future life. This Dennett met with: "I trust you're not so lost to decency as to be anxious about the salvation of your soul?" I didn't ask, and have often wondered during the nearly fifty years since, whether Dennett meant that such anxiety was indecent, or deprecated on Bobbie's part a modest doubt of his own deserts that would have been very characteristic of him. Within a few years after, to my lasting regret, the main question was settled for them both.

It is very doubtful whether any journalist but Horace Greeley ever had so enthusiastic a group of such adoring followers as Godkin's. His group never was as large a percentage of the public as Greeley's, and of course was a different set of people, from the opposite pole. How he did make the Philistines squirm, and how they did hate him! But no editor of my time has begun to have the authority among educated people that he had. I doubt if any editor of any time has had as much.

Why, among many men who were young when the *Nation* was young, Godkin was little less than the object of a cult. And I am now meeting middle-aged men in his own field who never knew him! I believe the present editor did not, and I'm not sure that even Paul More, his immediate predecessor, did; and I meet young people who never heard of him. When people talk that way, I feel as if they had told me that they had never heard of the equator: for I am far from sure that Godkin was not our greatest man since Lincoln.

Yet he was one of the best hated men in the country. Though his greatest mistake was advocacy of the ballot for the negro, the time came when the mossback Republicans hated him worse than they hated anybody else, and Tammany for a time hated him just as badly. At a gathering somewhere in the nineties, I think, where a lot of us gave him a loving-cup, he told us that Mrs. Godkin had once, unknown to him, kept him followed by detectives to protect him from Tammany. Probably there never was a just and upright man hated by more kinds and sorts of people, or better entitled to be "loved for the enemies he made." Yet probably no private citizen, if an editor is a private citizen, ever had a following more to be desired.

After some time worshipping him as an unseen god, I think I first saw him at a church that then stood on Fortieth Street, near Sixth Avenue, opposite the Park, where O. B. Frothingham, with great eloquence and self-devotion, and a moderate sprinkling of the other kind of "devotion," used to dispense to more or less "brainy" people—who then stuck to the church habit more than they do now—what, as it had to have a name, was called Unitarianism. In the congregation, my attention was attracted to a rather thick-set man of about thirty-five with dark hair, moustache, and imperial, who was accompanied by a tall, brown-haired, singularly elegant and beautiful woman. It was among the fortunate circumstances of my life that I soon came to know them well as Mr. and Mrs. Godkin. She died not many years later—a great loss to her friends, and to him an ineffable one. He could not then bear New York without her, and went to Cambridge for some years, but kept up his editorship by mail. After considerable time, he married a woman of a contrasting type, but talented and devoted to him. She did not long survive him.

Very early in our acquaintance—perhaps before we were personally acquainted at all—I used, with a very young man's ignorant enthusiasm, to regard him as the *fons et origo* of all wisdom. Of course, I don't so regard any one now, but still think he was as near it as anybody I have known.

Now for a few little personal reminiscences. He had a knack of putting in a phrase the key to some wide subject that the average man could think about a good deal without really getting into. For instance, once when I was bemoaning "the law's delay," he said: "Of course, you can't get quicker justice without more courts." That's a very large part of the truth, but there's a good deal of it in the slow procedure of nearly all of the existing courts.

So early in our acquaintance that Godkin was probably greatly surprised, I went to him for advice regarding working to help an educational institution, some of whose peculiarities I disapproved, and knew he did, and which we had both criticised (I only by letter) in the *Nation*. He broadened my vision, as he always did, by saying, substantially: "Of course! They need help and, in spite of all their shortcomings, deserve it."

I cannot fix the date, but very early in my acquaintance with Godkin, though obviously after we had become rather intimate, we were

walking home one night from some dinner, and I told him that I was thinking of getting up a syndicate to buy and carry on the *North American Review*, then for sale by J. R. Osgood & Co., who succeeded Ticknor & Fields, and preceded, with an intervening change or two, the Houghton-Mifflin Co. I proposed that he should edit it (it was then only a quarterly) in connection with the *Nation's* machinery, and my house should publish it. He said he was ready, and would help to raise the money. Soon after we went together to talk it over with a friend of his given to writing, *and* possessing money. While the syndicate was under way, I met Osgood one night at the Century, and he told me that he had just sold the *North American* to Allen Thorndike Rice. The price, I think, was four thousand dollars; but we wanted much more to boom it. I thought I had an option on the *Review*, but Osgood thought differently. And that is how near Godkin came to being editor of the *North American*, and, what is of more importance, how near the *North American* came to having Godkin for its editor; and (the suggestion seems to me very funny) after he gave up work, probably another man who a dozen years later started another *Review*, very different from the *North American* of then or now.

As bearing on a present-day discussion, I remember that, although Godkin married in New Haven, and visited there not a little, he told me that he could not send his boy to Yale, because he would not on any account subject him to the danger of a religious revival. I thought that danger outgrown when, some fifteen years later, I sent my first boy there.

I was too young, and too ignorant, as I am now, to know whether Godkin invented the use of quotation marks in sarcasm, or the "deadly parallel" column, but he at least gave them a new efficiency. I'm confident that he brought "cussedness" into general use, and also "a felt want." He got it off the last time I remember seeing him, after his first "stroke" had affected his speech.

I yield to the temptation to give here a strange thing which he said to me once as we were riding together on the Riverside Drive. The public has a right to it as coming from a great man. We both had heavy reason to discuss the questions of immortality, and he, with the ponderous superiority to the emotions he really felt but disregarded in settling any general question, said: "I would compromise on annihilation." In such a matter, he was not a man with whom one could go farther into detail. I doubt if any question regarding anybody's state of mind ever puzzled me as long and as often as that, and yet as I've thought it over during a couple of days since I wrote the sentence, I believe I have the solution, and it is a very interesting, though a very simple, one. I think the statement was merely a piece of heroic fealty to the philosophy of the time—the typical frame of mind among men who had minds, in the period between the appearance of "The Origin of Species" and a decade after the foundation of the Society for Psychical Research—the period when, as Godkin himself once phrased it to me, when we were discussing the falling off in literature, "Science killed the imagination," and with it smothered, for the time, not only literature, but art, religion, and all consciousness of the immensity that surrounds our experience, except as a field for mechanical discovery, with its resulting worship of material things. With that consciousness went the highest of the hopes and inspirations that humanity had cherished longest and most widely.

For some twenty or thirty years, about then, under the influence of Spencer's "First Principles" and sundry of Huxley's works inspired by Spencer, the best minds shut themselves up like clam-shells to all these influences. I have heretofore thought Spencer himself the most striking illustration of this that I have personally known, but now that strange icy thing at the bottom of Godkin's heart caps the climax, and throws a flood of light on the negative side of his character and his influence. The world regarded him and his paper as "cold." Those who knew him intimately, or even merely socially, knew that that was not the whole truth, and yet knew that there was a grain of truth in it—a mighty big grain in public questions where the emotions were concerned. He made it a virtue, and, in its place, it is a great virtue, to settle all questions with the intellect alone. His mistake was in applying it rigidly to *all* questions—to the very biggest. Why, even the mechanics of the starry heavens contain no questions as big as some in the little human heart.

I wonder if Godkin's strange and almost fatal recoil from the emotions resulted in any degree from their having caused his greatest professional mistake, almost at the outset of his career, in advocating the ballot for the negroes—a mistake whose terrible effects needed for their offsetting his arduous, brilliant, and beneficent success in reforming the civil service. He owned up to his mistake like a man, but I suspect that it always weighed heavily on his conscience, and helped the influences of the time to narrow his philosophy. But I'm not taking upon myself to blame him for his philosophy: it was for too long a time my own, and I think that he partially outlived it.

You didn't want my long episode on that philosophy, Mr. Editor, when you asked me to write about the *Nation's* relations to the publishing business, and I had it no more in mind before my paper was nearly done, than you did; but it has more to do with the *Nation's* relations to the publishing trade, and to everything else, than all the other things that I, or anybody, can say.

Godkin's advocacy of negro suffrage was by no means the only case where he owned up. His enemies used to say he never did. The files of the *Nation* prove the contrary, though he seldom had occasion to. Here's another case where he did.

Some time about the late sixties, the *Nation*, in criticising somebody, said, substantially: "It's Herbert Spencer's reputation over again: each authority considers him an authority on all subjects but the authority's own"—as if a philosopher were to grub his own facts any more than a cook to grub his own potatoes. Youmans, Spencer's great apostle in America, for whom I had sometimes swung the censer, came to me with: "That must be answered. I'm not *persona grata* at the *Nation:* they think I'm so prejudiced on this subject that they won't take anything from me" (I think he was mistaken), "but they'll take something from you. I'll give you the facts, and you send them a letter." "The facts" were testimony from several great specialists (Hooker is the only one I remember) virtually declaring Spencer one of themselves. Later, by the way, Darwin was quoted, in the "Life and Letters," as saying: "We all bow the knee to Spencer." Well! I wrote the letter, and we had quite a nice little shindy, the *Nation*, of course, having the last word. I'm telling all this because, some time later, Godkin came to me one night at the Century with: "You remember your controversy with the *Nation* over Spencer's reputation? Well, I've just read his 'Philosophy of Style.' I don't know anything about the topics in dispute between you and my contributor, but I do profess to know something about English style. Spencer's work on it is a masterpiece, and, judging what I don't know by what I now do know, I am ready to presume that all you claim for him is well founded."

By that time our little controversy had become ancient history, so I didn't even suggest his reviving the subject in the *Nation*.

This country has had no journalist to equal Godkin, unless Franklin was a journalist. America did not produce him to the same extent that it produced Carl Schurz: for Godkin developed younger. Schurz, I think, came here younger, and, as we all know, to escape governmental tyranny, and Godkin, I have always suspected, came to escape social tyranny. He could not brook social inferiority, or even the ascription of it. Had he been born in the peerage, or near it, I believe he would have stayed at home. His enemies called him a snob. He cared as much for social position as for intellectual position, and, happily, he achieved it. Few other journalists, if any, were ever so thoroughly at home in the very best American society. I believe that he never went back to Europe until he had made his great place here, and then he was made much of in the really best English society. But even there he had to go in to dinner behind my lord duke, even if my lord duke was but a foolish boy; and here he did not have to go in behind anybody, though he was very apt to go in last, but with the hostess on his arm.

Being in temperament a thorough aristocrat, of course he could not make a popular paper, and did not care to. Though he was the greatest journalist we ever had, "the people" never knew even his name. Yet his influence was probably greater than Greeley's, because it was greater on people of

influence. He was an authority with authorities. During his best period, not a few of the great Boston group were still alive, and it was to them he went when a great affliction had made New York intolerable to him.

I may have known men of wider knowledge than Godkin, though I doubt if I ever knew one as well equipped for Godkin's specialty, and I may have known men of greater intelligence and greater wisdom, but I doubt if I ever knew one whose knowledge, intelligence, and wisdom were better balanced, or added up a bigger total, and I have known not a few of whom others would have said the same thing.

I cannot recall at the moment that any great journalist ever left a great book, unless we include Addison and Steele and Franklin among the journalists, which they certainly were not in the sense that Greeley or Bowles or Godkin was. But I long thought that Godkin could write a great book. His knowledge of history, economics, jurisprudence, and statecraft was all up to the expert grade. He agreed, as early as '76, to write, for the American Science Series, a work on Government. We often talked about it, and he often told me: "Now I'm going to do it." He would have done it if he had never taken up the *Evening Post*. I think it must have been before he did that that he told me he had written probably a third of the book, but after he had been on the *Post* a good while he admitted: "I am overcome by the journalistic habit." And yet, even after that, I think, there were times when, for a week or two, we were writing and talking about it. I vividly remember once meeting him on the street and his opening the subject and proposing to come to my office "Tuesday" for a long talk about it. But he never came—at least for that purpose. My favorite saw with the writers of that series was : "For a non-technical book, you need ignorance as much as knowledge: come to me for the ignorance." Well, regarding his *magnum opus*, Godkin came to me for lots of it, but my recollections are mainly of talks on the street or in the cars. He was too busy to come to my office much, and at the club or at home we talked of other things. I never saw the manuscript of even the "third" of his book. I don't recall that I ever made a real effort to, though since his death I must have said something about it to his wife or his son.

He did leave a couple of volumes, compiled at somebody's instance, perhaps by somebody, from his editorials; and they illustrate, on the *lucus a non* principle, what a great journalist he was. I used to tell him jokingly that if he didn't hurry up his work on Government, I'd cut him out with one I was writing. While I was making that humble work, which might perhaps have amounted to something if he had not broken down before it could be submitted to his criticism, I turned with hopes of help to his books, but I got very little from them. They were "works of occasion." His great power had used his great knowledge for daily exigencies, and with great effect, but had not put it in a shape for permanent use.

I think I'll try to get a look at that manuscript of a third of his contemplated book on Government. It is too pathetic that so great a man should survive to mortal sight only in the recollections of a few friends who themselves cannot long survive—to mortal sight.

Reminiscences of an Octogenarian

THE APPOINTEE OF LINCOLN TO A JUDGESHIP OF THE COURT OF CLAIMS AND AN EARLY EDITORIAL WRITER ON THE "NATION," JUDGE NOTT, NOW IN HIS EIGHTY-EIGHTH YEAR, TELLS OF HIS INTIMACY WITH GODKIN.

By CHARLES C. NOTT.

It would give me great pleasure to contribute reminiscences of my connection with the *Nation*, were it not that I have played editor for the *Nation* so much that I am afraid I may feel bound as such to reject my own contribution.

I had a club acquaintance with Mr. Godkin before the *Nation* was established, and had reviews in it almost from the beginning. In 1871, as the great conflict was approaching for the overthrow of Tweed, I wrote an editorial intended to accompany the meeting at Cooper Institute which began the campaign. Mr. Godkin accepted it for that purpose, and gave it its title, "The Bottom of the City Difficulty." A few weeks later Mr. Garrison wrote asking me to contribute an editorial every fortnight, and thereby alternate with Mr. Godkin in the leading editorials.

This went on for several years. Mr. Godkin and I were in close agreement, such close agreement that it was not necessary for us to confer by writing to each other. Occasionally an editorial was tentative, *i. e.*, it was written some time before its publication, where there was a doubt in my mind as to the course the paper would take. The only one I can recall at the moment is the one on the Second Presidency of Gen. Grant, published immediately after his reëlection. The *Nation* had been handling his first Administration without gloves for some time, but with his reëlection there came a belief and hope that he would be less under the control of his "wicked partners." The difficulty with me was to say all that the paper could say, and at the same time not say too much.

Once in a while Mr. Godkin or Mr. Garrison would telegraph a request that I furnish the editorial on some unexpected subject: and sometimes the subject was one which I did not feel equipped for. The editorial on the death of Mr. Sumner was such a one. I knew that my own admiration for Mr. Sumner was not as warm as Mr. Godkin's, and very far below Mr. Garrison's; and I knew that the *Nation* could not go off in bursts of laudation, as some papers would, but must present Mr. Sumner to its readers for what he was worth. Yet this editorial, which I did not wish to write and which I thought would disappoint both Mr. Godkin and Mr. Garrison, was, I think now, the most successful editorial I ever wrote.

But the close accord in which Mr. Godkin and I were editorially prevented the accumulation of material for biography. When Mrs. Godkin was collecting material for his Life, I was obliged to tell her I could find but two letters, and they were unimportant. The *Nation* in those days was at war: war against slavery; war against the reconstruction iniquities; war against the Freedmen's Bank robbery; war for civil-service reform; war against the District of Columbia ring; war against the Republican bosses; war against the Democratic party; war against the abuses in the departments. There were battles all the time, and the paper stood unsupported and almost alone, an authority among the intelligent few, and an influence among newspapers, but without a powerful circulation or a remunerative advertising patronage. I wonder now, more than I did then, at the unswerving resolution with which Mr. Godkin could break with anybody, even with men who had helped to establish the *Nation*, and hold unswervingly to his own course. But with all the warfare and doubts and difficulties, there was little correspondence. In all these years I can recall but three letters relating to my part of the work. In one he said briefly that an unexpected editorial upon a department abuse had been a bomb in the enemies' camp. In another he said that a review of a horse book (Col. Dodge's "Many Riders in Many Lands") had made him laugh so that he had to hold his sides. In a third letter he said that an article of mine, a letter on an economic subject, "A Good Farm for Nothing," was so pathetic "that it brought the tears into his eyes." The horse review had not been intended to be humorous, and the farm letter I regarded as strictly economic, and it puzzled me why they affected Mr. Godkin as they did, and so much so, that he took the trouble to write and tell me.

In 1884 I was driving from Washington to Williamstown. In a remote part of Pennsylvania, I ran into a wayside telegraph office to inquire whether the Republican Convention had nominated its candidates. On returning to the wagon I asked Mrs. Nott to guess who they were. She said that she could not; I told her to guess the two men whom she would regard as the worst possible candidates, from the *Nation's* point of view. She promptly replied, "Blaine and Logan"; and they were the men. A few days later, on a Saturday afternoon, I drove up to Minnewaska Lake and found that the new hotel had been opened only two hours, and that there were only two guests in it. At the supper table we confronted those two guests across the table and found that they were Mr. Godkin and his bride.

Mrs. Nott's guess of the Republican candidates was, of course, told to Mr. Godkin. We laughed, but it brought up what was a sore subject to him. The next day Mr. Godkin and I spent together in the surrounding woods. We were uninterrupted for hours in our communings, as we had never been before and were never to be again. After talking over the new discord of Blaine and Logan, Mr. Godkin reverted to the many discords which were behind us, to the constant warfares in which we had been compelled to fight. Each of us, he said, was by nature inclined to be constructive rather than destructive, to build up rather than shoot down. He spoke sadly; he had been hoping for better things, but it seemed to be his fate that he must always fight something, and that the *Nation* must always be on the negative side, and that now, after all these years of effort, the best we could hope for, and the thing we must fight for, was the success of the Democratic ticket, which was something we did not wish for.

After many hours spent together in the summer day, and a long tramp in the wild woods, we returned to the hotel "late for supper," *i. e.*, our wives had finished theirs. Mr. Godkin was in fine appetite, notwithstanding our political disaster. The young lady of the mountains, who waited on the table, happened to come to him first. He gave his well-considered order with clearness and emphasis. "Tell the cook," he said, "that I want a porterhouse steak; tell him I want a good sized one, rather thick if he has such a one, and not overdone; to be careful not to overdo it; and I want——" and he ran on with his wants. My eye had chanced to fall on the young lady when Mr. Godkin said "tell the cook"! She was rather small; rather a pretty girl, bred in the free air of the mountains, and "as good as anybody." I saw a happy, disdainful smile light her face as she stood there, with her head cocked a little on one side, and (as she would have said) "let him talk all he wanted to."

When Mr. Godkin had talked all he wanted to, and his order was as complete as good English could make it, the young lady spoke.

"No cooking in this hotel on Sunday after two o'clock, except tea and coffee," she said. "No, you can't have an egg cooked, nor bacon, nor nothing. No cooking in this hotel on Sunday after two o'clock, 'cept tea and coffee."

This was the only time in our long acquaintance when I ever saw Mr. Godkin quail. He gave up the fight, the only fight I ever knew him give up. But his defeat did not take away his appetite; he had a good manly appetite, which could make a good supper on cold roast beef and hot English breakfast tea; and he did. But the next morning he told Mrs. Nott that he thought that the most virtuous half hour of his life was the half hour at the supper table last evening.

The memory of that girl comes before me now as a picture. She was a little thing, pretty, and tricked out in her Sunday finery. Her day's work was over, and in a few minutes her beau would be there. She was a picture of feminine superiority as she looked down on Mr. Godkin and "let him talk"; and she brought out her, "No cooking done in this hotel on Sunday after two o'clock, 'cept tea and coffee," with oh! such a triumphant air! Oh, if she had only known who the man was that she was putting down, how the little minx would have disdained all men.

The Hazards of Reviewing

THE FOUNDER OF THE "AMERICAN JOURNAL OF PHILOLOGY" RELATES THE INNER HISTORY OF REVIEWING FOR THE "NATION."

By BASIL L. GILDERSLEEVE.

Fifty years ago the *Nation* was born. It bore a prophetic title. The nation was not yet. What purported to be the nation stopped at the Potomac, for those of us who lived south of the river refused to recognize in our hearts the "wards of the nation" as fellow-citizens. We were conquered provinces governed in large measure by persons whom in our pseudo-classical Southern style we called "satraps." We were living among the horrors of the reconstruction period, of which no true American nowadays can think without a blush of shame or a flush of resentment. The editor of the *Nation* was an alien critic of American life and institutions, a man of rare powers, of singular charm to those who were admitted to his intimacy. The early contributors bore famous names, names that abide among the glories of American literature, but they represented then for the most part the advanced school, the advocates of the liberation of the slaves, triumphantly anti-Southern.

Among the Southern men there were those who had been trained in the best Northern schools, in the best European schools. They did not recognize any hopeless mental or moral inferiority to the men of the new order, and they set to work to create a Southern literature, to make textbooks for the rising generation. It was, as we look at it now, a pitiful business. We were a breed of politicians and fighters. Of professional literary men there was but a handful, and there was a sting in the story—a pure invention—that at a meeting in Charleston a resolution was passed that the South have a literature of its own, and that the Hon. William Gilmore Simms be requested to produce that literature. A Northern business man who had published an *Army and Navy Journal*, or something of the sort, during the war, when he found his occupation gone, tried to exploit the local patriotism of the South by getting up a series of Southern textbooks, with results that will not be forgotten by those who invested their money or their time in the venture. Magazine after magazine was started. For some of them I myself worked diligently. We indited scathing reviews of bad Northern textbooks. We should have been better employed in improving our own. But the new generation of Southern men recognized the true state of things. To win a hearing among our own people, it was necessary to seek a wider public. It was not until Southern men with a turn for literature invaded the North and began to contribute to Northern magazines that the South became a factor in the literary life of the country.

Whatever we Southerners might think of the politics of the *Nation*, the high literary standard it set up, the excellence of its reviews, could not be denied; and my first connection with the *Nation* began in an attempt to gain access to the columns set apart for Notes and Correspondence. It so happened that in the early seventies I received from the publishers an edition of a famous Greek author, at that time not overedited, an especial favorite of mine, an admirable test of one's appreciation of what may be called the lean beauty of Greek. The editor, a pioneer, transcended everything that I had ever known or imagined in the way of incompetence. Up to that time I had emitted my growls at our American performances in local journals, but this time my indignation rose to a white heat, and I prepared what I considered a blasting review for publication in some periodical of wider circulation. I bethought me of some English weekly, but finally I determined to send my performance to the *Nation* as a test of its impartial attitude towards the great universities of the North, into which, according to the publishers, this scandalous manufacture had been introduced as a textbook—"which supplied a long-felt want." But a counter-blast was not long lacking. The Grecians who had heedlessly accepted the book rejected it with scorn. The publishers took alarm, and asked me to return my copy, to be replaced by a revised edition; and when I declined to relinquish the precious document, entreated me at least to surrender the title-page, which I weakly did, and so robbed myself of a priceless unicum. Meanwhile I received a letter from Mr. Garrison—a charming letter—in which he informed me that the book had been withdrawn, and expressed the hope that my ire had been sated, so that the publication of the review would not be necessary.

This was the beginning of my correspondence with Wendell Phillips Garrison. The combination of two such names as Wendell Phillips and Garrison was not calculated to make music in the ears of an old-fashioned Southerner, but of all the many things that I have missed in my long life I shall never cease to regret that I was not privileged to know personally the literary editor of the *Nation* of my time. That time was not very prolonged, nor were my contributions to the *Nation* very frequent. The establishment of the *American Journal of Philology* in 1880 made heavy demands upon such time as I could spare from my exacting duties as a teacher. Sometimes I could manage to di-

vide the matter of a review between the *Nation* and the *Journal*, as in my reviews of Robinson Ellis's "Ibis" and Riemann and Goelzer's "Syntaxe Comparée," the technical part falling to the *Journal*, the wider aspect being represented in the *Nation;* but it is many years since my name figured in the list of contributors, and I was surprised at the reminder of the present editor that I belonged to a significant past, the formative period of the *Nation*. I cannot take credit to myself for any notable contribution to the good work—the great work, as it may be called. In earlier days I used to keep an account of my little articles as they appeared in newspapers and magazines, but I have no record of what I have written for the *Nation;* and I must trust to a faulty memory for details. In one of his essays, Philip Gilbert Hamerton dwells on the artistic value of forgetting. As an etcher he knew the meaning of shade and shadow, and so I am going to jot down the history of some of the articles that I can recall, and proceed to verify if I can, for verification is part of my profession.

In the main I kept to my special line of study, and can barely recall one or two little things outside the classical domain. The first important commission I received from the *Nation* came, I believe, from Mr. Godkin himself. In 1880 I went abroad for the summer, and sent to the *Nation* an account of my visit to Mill Hill, the seat of the scriptorium presided over by Dr. Murray—now Sir James Murray, as our English friends never fail to add. It was the first account published, and as a trip to Mill Hill was in the nature of a pilgrimage, I was heartily welcomed by the illustrious editor, who accompanied me on my way to Hampstead, where I was to dine with another celebrity, Sweet. As we walked across fields, Dr. Murray (now Sir James) confided to me that the only people that took an interest in the English language were Scotchmen and Americans. Twenty-five years afterwards the Scotchman and the American were to meet at Oxford as old friends. While I was at Oxford, in 1880, I witnessed the performance of the "Agamemnon" at Balliol College, of which I volunteered a report to the *Nation*, and this led to the commission just mentioned, to give an account of the Harvard "Œdipus" (1881), an account which was afterwards reproduced in the volume dedicated to that performance. The preliminary article—there were two—was prepared at leisure. The report proper was written at finger-speed on the Fall River steamer, to catch the day of publication. I have had some little experience as a writer for the newspaper press—scarcely any as a reporter. To write under pressure is exciting for a novice. The result is not necessarily slipshod. The best words often come to the front, if one has any best words, and generally it is a wholesome exercise for a scholarly man to face in imagination an audience that will not tolerate what has been called the worst of styles—the allusive style. One may flatter one's self that it is perfectly legitimate to use a phrase that makes absolutely clear sense in itself, while it conveys to those who know the Free Mason sign an esoteric meaning. But no average reader is fooled by that process, and the resentment abides, as I have learned from an experience of many years. The world insists more and more on being born anew every day, according to Goethe's dictum; and no range of literature is supposed to be familiar to anybody. Academies are set to preserve such traditions, but academicians themselves, if they wish to reach a wider public, must forget their academic business. I have often meditated on the future of traditional culture, but as anything I might write on the subject would be interpreted as a plea for the classics, I am content to die in my nest.

Whatever may be the fate of the classics, Greek plays have of late years developed a remarkable vitality, of which the Berlin "Antigone," the Balliol "Agamemnon," and the Harvard "Œdipus" were the harbingers. Sophocles interpreted by Mounet-Sully, Euripides as rendered by Gilbert Murray, hold the stage, and that masterpiece of art and indecency, as it has been called by a French scholar, the "Lysistrata," has proved to be a success in France, Germany, and England. The eternal human in Greek cannot die. Far less ambitious than the Harvard "Œdipus" was the Philadelphia performance of the "Acharnians" of Aristophanes (1886), in anticipation of which I prepared a rather hasty outline of the play for the *Nation*.

A diligent search through the tablets of my memory might reveal other contributions of similar compass, but it seems rather egotistical to call especial attention to things that were expected to perish with the using. If in any degree I have done my part as a specialist to prepare the way for other and more elaborate performances, I have had my reward. Nothing that I have written for the *Nation* deserves reproduction, and I am more than willing to pronounce on all my contributions the doom with which a critic in the *Nation* recently dismissed a little volume of lectures entitled "Hellas and Hesperia," as utterly unworthy of preservation in book form: "These lectures seem, on the whole, hardly to present the 'fresh aspect' of the subject which the terms of the foundation lead the reader to look for; nor do they possess as a series the unity that under these terms would entitle them to publication in book form." In the eyes of that Rhadamanthus no plea for mercy availed. No such combination as confession and avoidance existed in his vocabulary. The tone of the notice is in striking contrast with the *Nation's* many kindly appreciations of my later work, and I cite it to show that there is no favoritism in the court of America's chief critical review. Every old slave of the press knows how what may be called the commercial review is got up. If unacquainted with the subject, the reviewer skims the introduction, and reproduces it in other words, with occasional irrelevances and pregnant hints of defective treatment. One of my books on which I had bestowed much toil was dismissed with a few slighting words, the bulk of the notice consisting of the list of errata with which I had furnished the readers.

As I have already intimated, my political sympathies with the *Nation* were not close in the beginning. Of later years there has been a certain accord at points, but only at points. Once in my long career I overleaped the bounds of my classical paddock, and at the express request of the editor of the *Atlantic Monthly*, Mr. Horace Scudder, I wrote an article begun as mere literature and finished under the pressure of strong emotion. It was entitled "The Creed of the Old South," and was widely noticed. This is what the *Nation* had to say of it: "A poetical view of the Southern cause in the Civil War." I made no protest against the criticism. I make none now. Perhaps, after all these years, poetry may appear more philosophical than history.

Some little byplays, some little humors of journalism, come up to my mind as I review my connection with the *Nation*. The *Nation* has an army of watchful readers. The editor must do his best in selecting his contributors, and he cannot tell when some specialist will pick a hole in the critic's coat. It is not good policy to call attention to slight mistakes, and in my capacity as editor I discourage "anti-criticism" and the publication of lists of errata.

I have just recorded an instance of the sad use that may be made of them by a malevolent critic. To be sure, in my own journal, I call attention to my own slips with somewhat persistent regularity, but it is only because I can make copy of them. Mr. Garrison once sent me a caustic note by a noted scholar, in which he demonstrated my incapacity for writing a review which fell more properly within his domain than mine. My great blunder, it seemed, was the omission of the *h* in "svarabhakti." But I kept to myself my amusement at the severity with which another reviewer denounced the typographical error of an *ι* subscript in *θνῄσκω*, the *ι* subscript in *θνῄσκω* being at that time the last agony of Greek exactness. Another curious mistake I did not withhold from Mr. Garrison, but no public recantation was made. Every one who has been in the Duomo at Florence will remember the effigy of the famous English condottiere, Sir John Hawkwood, whose name appears now as Aguto in Italian, now as Acutus in Latin—as close an approximation to the English form as was convenient for the Florentine tongue. The writer for the *Nation*, a native Italian, by the way, had some misty notion as to the change of the name, and in a review of some book on Machiavelli incidentally referred to the famous free lance, John Sharp. A private correspondence ensued, with polite regrets on both sides.

One editorial trouble is the failure to remember the name of the reviewer to whom the review of the first part of a book is entrusted. So it fell to my lot to notice the first half of that classic translation of the Odyssey by Professor Palmer (1884). The second part was assigned to another hand,

and the tone of the two reviews differed greatly.

One more reminiscence out of that now somewhat distant time and I have done. One of my articles for the *Nation* dealt with a translation of one of the airiest of Greek authors, admirably done with a feminine deftness few men can equal. The translation bore a woman's name, but I protested against the uncertainty in which the reviewer was left because of the failure to indicate whether the translatrix was maid or wife. Certain risky passages of the original were rendered with an uncanny dexterity that left a Grecian in doubt whether the happy result was due to intimate knowledge or rare good luck; and in the absence of personal information I could only guess at the solution of the perilous egg-dance. Some years afterwards I met the translatrix, who at once taxed me with the authorship of the review. Finally she said: "I am grateful to you for attacking my morals, of which I am positively certain, and sparing my Greek, of which I am not so confident." This is one of the many by-products of my work for the *Nation*. I only wish that these reminiscences were worthier of the honor the editor has done me in associating my name with the earlier stages of the high career of the *Nation* as an organ of independent criticism—literary as well as political.

An English Scholar's Appreciation of Godkin

By A. V. DICEY.

Forty-five years have passed since I wrote my first article for the *Nation*. One of the happiest results to myself of my connection with that paper was the creation of a friendship with E. L. Godkin which remained undisturbed to the day of his death. I will not, however, write of my personal reminiscences. My wish is to dwell wholly on my estimate of Godkin's work and on the causes which made him one of the most successful and influential of newspaper editors. Such an appreciation of the career of a very remarkable man may have some interest for the readers of the *Nation*, just because it proceeds from an Englishman, who must from the very nature of things have stood outside American politics. My deep respect and affection for Godkin provides some security that I shall speak of the first editor of the *Nation* in that spirit of perfect sincerity which was one of Godkin's many high qualities and was a virtue which he expected to find in every contributor to the pages of his newspaper.

No critic of Godkin's work can fail to be struck with its extraordinary success and with the many circumstances which, in 1865, seemed to make it all but certain that his attempt to create at New York a newspaper which should be perfectly independent of any political party, and which should within the course of a few years make its editor a leader of public opinion throughout the United States, would end in complete and rapid failure. Yet the undeniable results of his effort may be thus summed up: Godkin, aided, as he would have been the first to tell you, by allies of high intellectual power and of great energy, created a weekly newspaper which certainly stood on a level with and, as some Englishmen would say, rose above the best weekly journal to be found, during the Victorian era, in London, or indeed in any part of the British Empire. Year by year, the influence of the *Nation* extended far and wide. One has often heard it said that, wherever throughout the United States there existed a college, however small, there you were certain to find at least one copy of the *Nation*, and wherever the *Nation* was read, there Godkin was sure to exert influence. He aroused either firm faith or strenuous opposition. He never failed to arouse discussion. His words were certain to tell upon opinion. The editor of the *Nation* had, before sixteen years had passed, become a power in the land.

The obstacles which seemed to make the attainment by Godkin of moral authority among the men who were fifty years ago the youth of America an impossibility were many and formidable. He had indeed lived and worked for some years in the United States. He had obtained the warm friendship of some among the wisest of American citizens. He was in 1865 already known to a limited circle of acquaintance as an effective writer in English newspapers. But to ordinary American citizens he was a stranger. He had but recently been an alien. He was not the representative of any one American party. The *Nation* itself could not from the nature of things possess any of that prestige which in England at any rate has, at different periods, belonged to an established newspaper, and notably to the London *Times*, between, say, 1853 and 1865. Then, again, Godkin pretty rapidly acquired a sort of personal authority differing in kind from the influence which has occasionally been gained by a powerful English newspaper. The impressive "we" of the English periodical press has a real meaning. It is the outward and visible sign of a mystery almost as curious as some of the important fictions, or semi-fictions, of the British Constitution. It signifies that the power of a successful English newspaper belongs to the paper, and one supposes ultimately to its owners, rather than to its editor. As time passes and memoirs or letters reveal the secrets of the past, we come gradually to know that the editors of the *Times* have at certain crises influenced to no small degree the course of English politics. But this fact has been combined and even connected with the ignorance of the readers of newspapers of the name and the character of the man by whom a paper is edited. Any one who carries his memory back to 1865 will recollect that not one in a thousand of its readers at that date knew or cared to know who was the editor of the renowned periodical. Editors came and went, but these changes were not known to the public. The public were guided, or thought they were guided, by the impressive "we" who reuttered to the public the current public thought of the day.

The editor of the New York *Nation* at the same date was known and felt to be Godkin. His followers knew who was their leader; his opponents had not the least doubt who was the foe by whom their follies, errors, or crimes were denounced. Then, again, Godkin was by nature a fighter. He thoroughly liked a fight. He fought for good causes, but when he fought he struck hard and gave very telling blows. It is impossible that such a man should not arouse vigorous opposition, but the difficulties of the contests in which Godkin was engaged were increased by the fact that he was often opposed to popular sentiment, which he was apt, often quite rightly, to identify with popular folly; and then, too, the wholeheartedness with which he fought in favor of any principle which commanded his intellectual and moral assent occasionally led him to confound adherents who, either from wrongheadedness or under the unconscious bias of self-interest, failed in strict adherence to a true principle, with fools or knaves who opposed a cause which they knew in their hearts to be good. It is in reality the plain truth, though it is a truth which Godkin's success itself conceals from critics who have never studied with care the conditions under which Godkin in 1865 founded the *Nation*, that his success as an editor appeared to his friends and to himself to be doubtful, and was achieved in the face of great and, it seemed, all but insuperable obstacles.

What, then, were the causes of his success? One cause was the possession by Godkin of certain definite talents. He was endowed by nature with all the gifts of a pamphleteer, and these he had improved by the whole course of his education and life. He possessed a clear and vigorous style, and his power of expression was the natural result of his mode of thought. He reasoned logically and delighted in coming to sound and practical conclusions. Vague ideas and vague ideals were intellectually and morally repulsive to him. He had early perceived that vagueness of thought led to unwise conduct, and vagueness of expression might often cover courses of action which were morally ambiguous. He used fair and vigorous argument for the confutation of fallacies relied upon by political adventurers, and for the exposure of the follies into which selfish leaders may conduct an ignorant or an enthusiastic people. And he constantly attained his end. His power, further, of reasoning was set off by great command of language. He had, indeed, made himself a true man of letters, who, by the way, ought never to be confounded with that very inferior person, a literary man. He was no ardent admirer of journalism. He has warned the Ameri-

can public that newspaper reading is apt to be the death of the taste for reading books.

A little study of Godkin's writings is quite enough to prove that his knowledge of the matters on which he wrote, in so far as it did not arise from his observation of life, was due to the careful perusal of books, and of good books. Then he had a talent absolutely essential to the success of a pamphleteer. It is the gift of "appositeness," or, in other words, a writer's habit of interesting himself in the matters which are passing before every one's eyes, and which at a given moment occupy the thoughts of his neighbors. It will be found that men of considerable intellectual power are sometimes disqualified from gaining influence as pamphleteers or journalists, because such men have a tendency to turn their minds at a given moment towards subjects which, whether important or not, have no interest for the ordinary public or the so-called general reader. An illustration best shows the nature of this error. Vain, indeed, would be the labors of a man who in this year 1915 addressed the English public about woman suffrage or proportional representation. Englishmen who care about the conduct of public affairs are thinking about the war, and nothing but the war, and probably they are right in turning away their minds from every subject not connected with the conduct of the war. But whether they are wrong or right, no born journalist will ever waste his skill in trying to force upon the English world topics to which that world will pay no attention. It was one proof of Godkin's genial nature and common-sense that he always brought his powers of thought and his capacity for lucid exposition to the examination of questions which at a given moment both concerned and interested the citizens of the United States.

But let no one suppose that the gifts of a pamphleteer are enough to insure his success as a leader of opinion. Cobbett was at one moment the leading journalist or pamphleteer of his day. He possessed shrewd sense, homespun eloquence, and independence of judgment. He is still credited by admirers with a genuine interest in the welfare of the poor. But as a leader of public opinion his career was a failure. He lacked the virtues which in England, as in America, transformed an active agitator into a trusted leader of men.

The second cause of Godkin's success was of a quality which, where it exists, every man perceives, but very few of us can define. It is best described by the term "character." Instead of attempting definition, I propose to enumerate some few of the traits by which Godkin convinced all men of sound judgment that the editor of the *Nation* was a man of character. From the very opening of his career as a journalist, and years before the *Nation* was founded, he had shown the capacity for acquiring the trust of every man who really knew him. Very soon after his arrival in the United States he gained the esteem of a body of friends mostly connected with the University of Harvard, who formed the glory of Boston. It is hardly an exaggeration to say that the *Nation* was originally created in order that the men who trusted Godkin might find for him a field in which his genius could be best employed for the advantage of the whole American commonwealth. It soon then became apparent that Godkin, besides his trustworthiness, was endowed with a gift which does not necessarily fall even to an able and a perfectly honest pamphleteer. Though he gained his influence by his pen, he was by nature a man of action as much as a man of letters. It may well be that an eminent writer and a man inspired with high public spirit is by nature nothing but a critic. Such a man may well play an important part in the formation of public opinion. He may warn the country against the acceptance of popular fallacies. He may denounce politicians who are undeserving of trust, but he will hardly be numbered among the leaders of a people or a party. Criticism, after all, for the most part, deals with negations. It warns men against errors; it does not tell them how to act on some critical occasion. Now, Godkin was no mere critic. His thought lay very near to action. He was a good adviser; he had the capacity for pointing out in a time of difficulty the right course of action. If he was once convinced, say, that a judge of New York was guilty of judicial misconduct, Godkin could never stop at exposing the offender's errors. Godkin was not satisfied till he had driven the corrupt judge from the office he disgraced. If a statesman was accused of conduct which morally unfitted him for high office, Godkin was certain to press the accusation home, and, until it was disposed of, was ready to move heaven and earth in order to prevent a political leader of fame and of influence from obtaining a position of which Godkin deemed him unworthy.

This capacity of making action the immediate result of thought is so closely connected with the highest statesmanship that admirers of Godkin may occasionally regret that he had not the opportunity of playing a direct part in the public life of the country whereof he ultimately became a citizen. It also suggests a last feature in Godkin's character and in his views of public life on which it is worth while to dwell with emphasis, just because it will hardly be noted, except by the body of men, now rapidly dying off, who have been, speaking broadly, Godkin's contemporaries. When he came to the United States, Godkin was a mid-Victorian who thoroughly shared and sympathized with the liberalism or radicalism which from, say, 1845 to 1880 colored the whole public life of the United Kingdom. And Godkin, be it remarked, accepted the political creed of the mid-Victorian era in its wisest and in its noblest form. He accepted the maxim then adopted by almost every Liberal that the object of rational government should be the attainment of "peace, retrenchment, and reform." He was no pacifist. He sympathized, like most Liberals of the day, with the Crimean War, which was popularly held to be an attack on European despotism and certainly did facilitate the liberation and the unification of Italy. But he maintained throughout life that, though war might be sometimes a necessity, peace was the necessary condition of progressive improvement, and he has been heard to argue, not without force, that Roman success in war was at bottom grounded on the discipline imposed by severe training in the virtues of civil life.

Retrenchment, or the cutting down of unnecessary expenditure by the state, was to the best of my belief always with Godkin desirable, because the lightening of taxes both relieved the pressure of taxation upon the poorer classes and in effect increased the area of individual freedom. Reform, lastly, was with mid-Victorian Liberals, and certainly with Godkin, a matter of wider significance than any mere improvement in the constitution of Parliament. It meant the gradual, the considered, and therefore the effective, removal of every demonstrated evil which could be curable either by legislation or by the improvement of social habits or sentiments. It also was the rejection no less of the dull conservatism which aimed merely at keeping all things, or at any rate all things not absolutely evil, exactly as they were, than of the revolutionary schemes which, even if unconnected with lawless violence, assumed that even the best institutions existing in the civilized world ought to undergo a fundamental change. No one can doubt that Godkin, whose knowledge of life was wider and far more varied than that of many statesmen, and whose Irish birth and education had in many directions extended his sympathies, gave a very wide sense to reform. Still it is perfectly plain that, like a true mid-Victorian Liberal, he was neither an obstructive Conservative nor in any sense a revolutionist. He was in short a mid-Victorian reformer.

I shall be told, as all surviving mid-Victorians daily are told, that our political creed was a narrow one. Personally I am not prepared to plead guilty to this charge. I venture absolutely to deny its truth as regards Godkin. In him at least were strongly developed two virtues which will ultimately be admitted to be characteristics of the Victorian age. The one was the stern belief that reform, and constant reform, was the law of progress, and that reform must be based upon the dictates of enlightened common-sense. The other was an intense hatred of injustice, and especially of injustice which, being committed by mobs, is the odious parody of judicial punishment. Godkin at any rate might at all times use the words to be found somewhere in the works of the wittiest as well as the most sensible of English pamphleteers: "I am an enthusiast for common-sense; I am a fanatic for common justice."

The "Nation" and Its Ownership

By OSWALD GARRISON VILLARD.

At the outset let it be said that into no journalistic enterprise did ever commercial considerations enter less than into the launching of the *Nation*. It was not, and never has been, in the *Nation's* half-century of existence, a question of profits, but of presenting certain definite literary, political, and social ideals and of urging them with all the power of righteous, patriotic purpose as expressed by such able pens as Mr. Godkin's and those of a long list of brilliant contributors, on both sides of the Atlantic. It is true that when J. Miller McKim, the Philadelphia Abolitionist, father of a son, Charles F. McKim, whose genius will never be forgotten in the history of art and architecture in America, gave the final impetus which made it possible for the new venture to take its initial plunge into the literary ocean, his prospective son-in-law, Wendell Phillips Garrison, was ready for a position as executive officer of the new craft. But what Mr. McKim and his associates wanted was primarily an organ to fight on for the principles which underlay the long and successful struggle for freedom in America.

The *Liberator*, a militant organ for a specific purpose, had ceased publication on December 29, 1865; the *Nation*, with a younger Garrison, fresh from Harvard and his service on the *Observer* and *Independent*, was to busy itself, second only to "the maintenance and diffusion of true democratic principles in society and government," with the "earnest and persistent consideration of the condition of the laboring class at the South . . . with a view to the removal of all artificial distinction between them and the rest of the population, and the securing to them, as far as education and justice can do it, of an equal chance in the race for life." The Federal Government was content to free and enfranchise the blacks, to scratch the surface of their material and educational needs by the Freedmen's Aid Bureau and schools—and then to turn them adrift and let them sink or swim, survive or perish, as best they might. Whatever else may be said of the *Nation*, no one can deny that it has never lost its interest in this still vital problem, or failed to devote much space to the championship of the least understood and the worst treated of our fellow-citizens.

As Mr. Rollo Ogden has pointed out in his life of Mr. Godkin, it was not an easy task to carry on the *Nation* under the ownership of the group of forty men who supplied the first $100,000 of capital. With the chief stockholder, Major George L. Stearns, Mr. Godkin soon had serious but needless trouble, involving groundless charges of bad faith or worse. At the end of the first year the bulk of the capital had disappeared, despite a considerable revenue from advertising and subscriptions, and a reorganization followed, with "virtual liquidation." To the original Nation Association there succeeded E. L. Godkin & Co., which comprised some of the original stockholders, others being bought out. Thereafter the new craft remained afloat, but always in rough waters from the business point of view. While it started off with 5,000 readers and grew with considerable rapidity thereafter, it made a fortune for no one, at best assuring a comfortable living to its small staff of editors and employees.

This was partly due to the difficulties inherent in the problem of maintaining a weekly entirely without popular appeal and conducted upon the very highest standards of literary taste and sound scholarship, and partly to the fact that neither Mr. Godkin nor Mr. Garrison was deeply interested in the business side. Indeed, when the *Nation* was amalgamated with the New York *Evening Post*, Mr. Godkin's interest in the financial success of the enterprise faded away almost entirely. His like as a brilliant and sound and farseeing leader writer we are not likely to behold again; but his very qualities and the bent of his mind precluded his being both a great editor and a great publisher. The combination, if not an impossible one, is of the rarest. The same was also true of Mr. Garrison, whose absorption in the weekly grind of editing left no room for concern as to the business management of the *Nation*, which never attracted to itself a business manager commensurate with the ability of its original editors. When E. L. Godkin & Co. sold out in 1881, the *Nation* had receded from the high-water mark of its chief success—a subscription list and weekly sales aggregating 12,000—and was again in difficulties. Since then, under the shelter of the *Evening Post*, it has gone its way calmly and equably, attracting of late years a steadily widening readership, until it is in most respects stronger to-day than ever before.

To both Mr. Godkin and Mr. Garrison financial profits could naturally make no appeal. Their lives were devoted to things spiritual and intellectual; their rich rewards came in the appreciation and gratitude of men of light and leading, which was theirs in the beginning and in the end, and in the consciousness that they had profoundly influenced the thought and conscience of their time. That was the success they aimed at—to make the *Nation* the monitor and the mouthpiece of intellectual America, and in this they succeeded. The high praise early won by them from such men as Charles Eliot Norton, James Russell Lowell, Whittier, and Longfellow, George P. Marsh, Charles W. Eliot, and a host of others in America and England, particularly in the academic world, compensated them richly for much abuse and misunderstanding, of which perhaps the most trying was the oft-repeated charge that because they criticised America in order to help her, they were thereby disloyal Americans. Never were there more single-minded and devoted patriots than these, nor men who more ardently clung to and cherished and upheld every fundamental democratic doctrine which underlies our institutions and our organic law.

With the *Nation* again nearing a lee shore, there came to its rescue in 1881 Henry Villard, another loyal American. A native of Germany, the fervor for republican institutions which animated him was partly inborn and partly due to the German idealism of 1848—so different from that controlling the Germany of to-day. Himself a reporter and war correspondent of twenty years' experience, he had long cherished the idea of establishing a great daily which should be perfectly free to speak the truth and be independent politically, as were then but one or two journals of the day—so slavishly worn were the bonds of party. An extraordinarily rapid success in the business world made possible the carrying out of this plan by the purchase of the *Evening Post* and of the *Nation*, and the combining of both, with the *Nation* somewhat in the position of the weekly edition of the *Evening Post*—a condition not now obtaining, since the *Nation* is again developing along its own lines. This afforded Mr. Villard the additional satisfaction of providing editorial positions for Mr. Godkin and for his warm personal friends, Carl Schurz and Horace White, as well as assuring to his brother-in-law, Mr. Garrison, the control of the *Nation*. With Mr. Godkin's advancement within a year to the position of editor-in-chief of the *Evening Post*, Mr. Schurz retiring, Mr. Garrison became the editor and the soul of the *Nation*. From 1881 until his retirement the *Nation* was precisely what Mr. Garrison thought it should be, both on the editorial and the business side, and no man ever gave his life more happily, more earnestly, or more completely, to the object of his daily labors.

It is true that both newspapers suffered on the business side from the self-abnegation of Mr. Villard, who placed the control of both publications entirely in the hands of the editors. When his advice was sought he gave it freely, but had the properties had the benefit of his close personal supervision and of that unusual news instinct which made him so distinguished a war correspondent, and also the aid of his sagacious business judgment, both must have profited greatly. Mr. Garrison, it goes without saying, was as free in his editorial chair as if he owned every dollar of stock of the *Nation*. His was an enviable position in that he had all the privileges of ownership and none of the responsibility. Few editors have been as completely free from the harassments of the business office or as able to speak their minds about anything and anybody, precisely as they saw fit without the slightest regard for any consequences. If this was a rare privilege it is on record in the words of the many friends and contributors who gave him so handsome a testimonial on his retirement in July, 1906, that he knew how to live up to it, to preserve it from abuse, and to honor it.

As to the future, it can only be said that as long as the present ownership continues, the *Nation* on its business side will be conducted in strictest conformity to the standards and ideals of Wendell Phillips Garrison and Henry Villard.

The "Nation's" Critics

A RESTATEMENT BY AN EARLY MEMBER OF THE STAFF OF THE AIMS WITH WHICH THE "NATION" WAS FOUNDED AND OF THE CRITICISMS WHICH THEY EVOKED.

By ARTHUR G. SEDGWICK.

My first connection with the *Nation* as a contributor was when I was living in Cambridge and practicing law in Boston, and editing with Oliver Wendell Holmes (now Justice Holmes) the *American Law Review*. For a year, I think, I wrote continuously for the paper, sending an article every week from Cambridge, in 1868 or 1869. I made the acquaintance of its editor—a source of lifelong friendship and instruction—through my brother-in-law, Charles Eliot Norton, who, as editor of the *North American Review*, had encouraged me to try my hand at writing, and who was one of the most interested promoters of and contributors to the *Nation* from the beginning. Afterwards, from 1872 on, in New York, I had a much closer connection with the *Nation*, being in the office for several years with W. P. Garrison and J. R. Dennett. It was during this period that Mr. Godkin, after the death of his wife, went to live in Cambridge, remaining there for some two years. From 1881, for some three years, I was connected, as assistant editor of the *Evening Post*, with both papers at the same time. During one summer at a later period I went back, at Mr. Godkin's request, for a number of months to the office of the *Evening Post* to assist editorially while he was away. From 1865 to 1895 there were years when I wrote nothing, and periods when I may say that I wrote rather voluminously, not merely political and legal editorials, but social articles, paragraphs for the Week, literary notes, and book reviews.

It was understood from the first, of course, that the *Nation* was to be essentially different from any of those publications of which America had been and continues to be prolific, in which devotion either to an established party or to a cause, be it abolition, temperance, peace, female suffrage, or the importance of not eating meat, or of drinking water only between meals, is the breath of its life. Its tone was not to be that of the clarion which inspired the generation awakened to battle by "Sartor Resartus." Its object was to be the cultivation of reasonableness. The onset sounded by it was that of the critical, the scientific, the enlightened, the sound, the cosmopolitan, the rational. The promises of the prospectus, indeed, were very moderate and restrained. It chiefly promised "greater accuracy and moderation" than were then to be found in the daily press; "the maintenance and diffusion of true democratic principles"; "sound and impartial criticism"; and that it would not be the "organ of any party, sect, or body."

The force and significance of this quiet programme lay in the fact that nothing but very courageous and independent editing could carry it out, as it involved independence not only of party, but of any sinister influence or interest of any kind. Such a paper honestly conducted, having disinterested criticism in view as its aim, would have neither patronage nor puffery to profit by, so that its prospectus was an avowal of the belief that it could make its way without these aids to success. Could any newspaper so succeed? The prevailing belief in the newpspaper world of America at the time was that it could not; that it was an idle dream.

Mr. Ogden, in his "Life and Letters," has, I think, given a remarkably correct account of the launching of the *Nation*, and the impression produced by it, and the sequel. At any rate, it tallies closely with my observations, both as an outsider before I began to write for it, and afterwards. On the whole, the impression produced by the first number was good, though, as Mr. Godkin is quoted as saying somewhere, the town remained strangely quiet when the event took place.

Then suddenly the *Nation* was discovered to be English—English like the *Saturday Review* and the *Spectator*. The editor was also discovered to be English, and, if I remember right, grave fault was found with him for making, on one occasion in the early history of the paper, the Queen's speech a leading topic in the Week. I think if any one will take the trouble to compare dispassionately the *Saturday Review*, the *Spectator*, and the *Nation*, he will be surprised to find how utterly different the first two were from the last. Indeed, in England no one found any substantial likeness even between the first two, still less all three. Those who took the *Saturday Review*, who really enjoyed it, often detested the tone of the *Spectator*, or were amused by it. Those who succeeded in rising to the heights of the *Spectator's* editor must necessarily feel themselves to be soaring above the *Saturday Review*. But the gulf which separated both from the *Nation* was the substantial gulf which separated, in those days how widely, England from America. Godkin, with his essentially English education, had adopted America as the country of his second birth, just as he had adopted democracy as his political faith. He was at the same time at home in both orders of thought, and penetrated with extraordinary clearness the errors and fallacies underlying and producing international prejudice and misunderstanding. Once clearly perceived, he laid them bare. This was one of the things that made him so accomplished a newspaper man in that day, when the ends of the earth were beginning to be rapidly brought together. The errors which Englishmen in those days inevitably fell into in looking at America, and *vice versâ* those which Americans fell into in looking at things English, he seemed able to perceive and discard intuitively.

Nowadays, greatly through him, this matter is comparatively an open book for critics. Newspaper articles, novels, speeches, and even sermons bring it within reach. We know what singular mistakes Americans make about the English way of looking at Church and State in Ireland and elsewhere, and why, just as we have recently seen how the Germans, with all their thoroughness and penetration, are fond of thinking of the English as too much occupied with the threatened "Irish revolt" and the "Indian mutiny" to go to war effectively abroad. In private life the unravelling and dissection of international prejudice and conflicting national characteristics has been an amusing study for novelists, but in this whole field the editor of the *Nation* was an early master. This species of insight was no doubt then European rather than American. We had lived remote from the rest of the world for so long that we had but a faint idea of how the peculiarities of our civilization struck others. The pith and point with which the *Nation* analyzed these was only matched by the wisdom and irony with which it exposed to view both sides of the shield. A good instance was Mr. Godkin's success in dealing with the difficult question of the Alabama claims, when, first all Americans, and then a good many Englishmen, seemed to be on the point of taking leave of their senses. It was not merely the capacity for holding a just balance; it was the faculty for seeing and exposing the absurdity of the fallacies underlying the extreme view on either side—the faculty for seeing through "Idols of the Tribe," of which only highly trained minds are capable.

In turning over the pages of the first numbers, one is struck with the solidity of the literary criticism, and, at the same time, with the remoteness of the world in which it was produced. In the first number an article on Matthew Arnold's Essays at once fixes the attention. It is what would now be called arresting, but it is as good as anything ever written about him. Carlyle, Henry Kingsley, White's Shakespeare, all are discussed with a fulness of knowledge and grasp that remind us very little of the hack criticism of either that day or this. There is in the literary part of the paper more variety than in the political, though the difference is less perhaps than one would expect in view of the fact that the political part was so much the work of one man. However it may be nowadays, at that period the United States was far better supplied with contributors capable of writing critically on letters or art than on politics. Why was this? It certainly was not so in England. The *Times*, the *Saturday Review*, and the *Spectator* all found it possible to get any amount of good political writing, neither partisan nor personal. Partly perhaps it was because the political writing which at that day had been cultivated here was neither non-partisan nor independent. The early list of contributors to which the publisher of that period, Mr. Richards, drew attention, bears witness to the paucity of writers accustomed to deal with the political

topics of the day in a critical manner. It contained many names deservedly famous, beginning with Longfellow, Lowell, and Whittier, but there is hardly a political "leader writer" among them. There are probably a good many reasons—not a single one—why the breed of political journalists, at once critical and anonymous, has never flourished greatly in America as it has in England, but whatever the explanation, the fact remained that so few hands could be relied on for this sort of work. In the same way, it was difficult to get what was one of the staples of English weeklies of that day, social articles. Under these circumstances, it is no wonder that in both these fields we recognize the hand of Godkin, who, it should likewise be remembered, was not only distinguished as an editor, but was conspicuously an extraordinarily productive writer. I remember at one time trying the experiment of seeing how nearly in quantity I could approach him, with results disastrous to my self-love. I forget exactly how many pages of the *Nation* he could do, week in, week out, but the only literary "output" with which I recall having been able to compare his was the prodigious feats of Walter Scott recorded in his diary. Scott's writing, being narrative, was in kind more easy to produce. Critical editorial writing of the first order is not usually produced *currente calamo*.

In this respect, second to Godkin himself, I should mention J. R. Dennett, born a poet, and made over into a journalist of very great powers. Everybody who was near him in time at Harvard knew him at least by the reputation his class ode made in 1862—Lowell speaks of it somewhere as having made a marked impression. He had very wide knowledge, both in literature and all "humane" reading, an incisive, and at the same time delicate, humor, and great fertility. His "South As It Is" remains his most enduring monument, likely, I fancy, to be referred to, as time goes on, as the most valuable contemporaneous picture of the South after the end of the Civil War. This was his smallest contribution to the *Nation*. He really *wrote* the *Nation* in enormous quantities, paragraphs for the Week, political editorials (he had an extraordinary amount of knowledge of the details of contemporary politics, and also that exact memory for them which is so rare and valuable), social articles, and book reviews of remarkable originality. I am told that his work in great part cannot be identified—the often inevitable fate of anonymous writing. His conversation was as good as his writing, and I should call it as companionable talk as any I have ever known. It was he, I think, who got to the bottom of the eternal question of woman's equality; at any rate, to the entire satisfaction of those who had had it called to their attention for the first time, by declaring that, in the nature of things, it was impossible that a woman should have the feelings of a gentleman.

The *Nation* was not only found fault with for being English in tone; it was accused of being the organ of those in the pay of British gold—an accusation which, I am told, has again been brought against it in certain quarters during the past year. At the same time, its unwillingness to join what was at that time the Free Trade Crusade was imputed to it for a sin by the crusaders. Referring to the promise of impartiality made by the paper, and the results in the way of objurgation, we find a neat reply in an early number (Vol. II, p. 481, April 19, 1866):

The difficulties of starting such an enterprise as that in which we are engaged, and which in some ways breaks through the most sacred traditions of the newspaper world, are greater than most people imagine, and if we had not during the nine months of its existence received a good deal of hearty abuse, we should have been greatly surprised.

In writing of 1865, we must always bear in mind the remoteness of that period—the great Victorian period. We had not yet learned to call it so here. Many knew and deplored it in America as the age of Barnum and Humbug. One of the early numbers of the *Nation* bears witness to this in an article on Museums. It begins: "Barnum's Museum is gone at last" (it had been destroyed by fire), and is a plea for a real Museum, such as we now have. We pause in reading it, and smile when we reflect that fifty years ago, to most Americans, a museum signified a place such as Barnum's, with its Happy Family, or the memorable Boston Museum, which served also as an asylum for the drama against still surviving Puritan prejudices. In New York the opera was an "Academy of Music." "We ask," says the *Nation* with emphasis, "for a real museum." As we read the article, we recall the period also as one of a general and suddenly awakened vast conception of the American future. We were a great and victorious democracy, and we must have everything that aristocracies and monarchies had. We were American, and must have whatever Europe had. We were a land of undeveloped richness, and we must produce a new kind of millionaire who would be the most wonderful benefactor the world had ever seen. In fifty years the dream was to be extraordinarily realized. The *Nation* saw the vision clearly.

Another charge constantly brought against the *Nation* was that of cynicism. The true test of cynicism is whether the object is cynical. Do you wish to make the good cause triumph? Then you are not a cynic, though you may employ the method of one in satire. Because it employed irony, satire, and ridicule, it was declared cynical; and, of course, the sequel to this was that, the *Nation* being cynical, it made sport of what was fine and noble, and opposed causes which it should have supported. This accusation was one to rankle, and, if I remember right, those who resorted to it were effectively challenged to prove their case. If the fact were so, let them make a list of the fine and noble causes which the *Nation* might have supported but had derided.

Looking back at the journalism of that day, nothing is clearer than that the *Nation* helped the good cause on by stoutly maintaining the canon of unsigned contributions and absolute editorial control. All expressions of opinion were avowed as those of the paper itself, and all articles and reviews were paid for to be published by the paper, and to be revised and amended both for style and occasionally for matter. This rule we used to regard as the secret of good and responsible journalism, as it once was of quarterly reviewing. The opposite view, whether practiced in the French daily press or in the American magazines, leads and is meant to lead to a diminished responsibility.

There was another reason at this time for a rigid rule of anonymity, which is very convincingly stated by the editor in Vol. II, No. 61, p. 822 (June 28, 1866):

An article of which the author is known is hardly ever judged on its merits. If he is still obscure, most people will not take the trouble to read what he says; if he is famous, they will devour the veriest twaddle that comes from his pen, and insist on fresh supplies every day.

To submit to being an anonymous contributor to the *Nation* required a good deal of self-sacrifice. The ideas governing the conduct of the paper were essentially those of the editor; the style, by a constant influence and association, more and more his; and the editorial contributor had to learn to write under him—valuable training, no doubt, for the youthful writer who feels in him that he is an unrecognized genius of the first rank, but sometimes galling for such as actually had made names for themselves.

The following paragraph from the Week is to be found in Vol. I, No. 1, p. 2. It is a good illustration of the sort of critical writing introduced into American journalism by the *Nation*, and of its early "paragraphing" at its best:

Mr. Jay Cooke has been seduced into authorship by his success as a broker, and has written a pamphlet to prove that the national debt is a clear addition to the national capital. Considering the amount of nonsense which has been written about national debts for the last hundred years, there is nothing very wonderful in this; what is wonderful is that several of the morning papers, in spite of the pressure on their space, should have thought his disquisition worth publishing. Mr. Cooke's success as a seller of government bonds no more qualifies him to instruct the public on the nature and uses of a national debt than success as an engine-driver would qualify a man to lecture on the nature of elastic vapors. There is a very simple antidote for his really mischievous delusion. It consists in remembering that what has been lost to the Government during the war was really not the money, but the things that the money purchased—the powder, land, iron, forage, and other stores, as well as the labor of a million of men, all of which has been destroyed, and the national capital has therefore been diminished by the exact amount of this value. The individuals who supplied them have lost nothing, but the community has—a distinction which Mr. Cooke has failed to perceive.

This paragraph is said to have caused indignation in Philadelphia.

It is not too much to say that this sort of critical writing, the essence of civil, restrained analysis which is satirical chiefly by force of its completeness and incisiveness, is not very commonly met with at any time. Any man who knows how to employ it is a man of mark, and his paper will always be a paper of mark. He is a trained and equipped man.

I am inclined to think that, as time goes on, the manner in which satire made itself felt in the *Nation* will be considered one of its most convincing claims to lasting repute. There are those who think that a successful use of satire is in some way connected with an aristocratic state of society. To flout the mob, the *hoi polloi*, with a mixture of irony and wisdom is for the privileged—the supermen. One can certainly imagine with difficulty a great socialistic, equalitarian cultivation of satire, except perhaps by George Bernard Shaw, who is an exception to all rule. Nor will much great satire be found in the literature of the extension of the suffrage, or the development of the "new freedom." But however this may be, one would not like to think of English or American literature or journalism desatirized! What should we do for Swift, Poe, Thackeray, Junius, Cobbett, Franklin, Lowell, and Arnold?

If I do not attempt in these random notes an "appreciation" of the principal person in the office of the *Nation*, it is because it might lead me too far in the expression of an admiration which deepened with years and was at the root of friendship of which I cannot speak as an entirely cool critic. Nevertheless, one or two things may be worth calling to the attention. One is that the severity of manner which many people noticed in Godkin was in great part due to a seriousness of character which ran through everything and did not spring either from arrogance or a sense of importance. Most of those visitors to whom editors are "exposed" are, it must be confessed, bores, if not, indeed, something worse—applicants for favors, often such as they know themselves to be anything but entitled to. The politic editor learns to treat them with suavity, with a kindly indulgence; but Mr. Godkin was not politic. Democracy has made such havoc with old notions of manners that anything like distance or coldness is resented as an affront. To be all things to all men is the ordinary journalistic rule; but then to be all things to all men was not what the *Nation* undertook to be. Through this attitude he hurt the feelings of those whom he had not the slightest desire to offend and to whom he desired to listen properly. I remember a case in point. A man of standing, whom I knew, wrote an article, or letter, to which he wished to call the attention of the *Nation*. I knew him to be somewhat sensitive, and, having introduced him, withdrew, leaving him alone with the editor. Afterwards I found that he had had an interview, but never brought up the subject he had in mind at all, apparently because he thought his reception chillier than it need have been.

As I came to know Mr. Godkin very well and see that his manner was connected with deep-seated peculiarities of character, and to perceive how free he was from the superficial or histrionic, I grew to think that he was more severe, perhaps, with himself than he was with others. Notoriety he hated; posing he knew nothing of. When all is said and done, we must recognize his disposition English, his aims American, his character his own. His sense of humor (he loved absurdity at one end of the scale, as he loved wit at the other) was as genuine as it ever was in anybody. He was by no means incapable of enjoying a joke at the expense of the great venture itself. The list of literary names advertised in the first number of the *Nation* to give it weight struck a good many people as giving too much. It was decidedly a list of contributors to give one food for thought. The editor of a lighter publication well known at the time immediately published an announcement in his columns consisting of the list, introduced by the statement that "None of the following writers contribute to the columns of the ———" (his paper). This delighted Mr. Godkin as much as if it had not concerned him in any way.

That he was very sensitive to imputations on his integrity, or good name, or independence, has been, oddly enough, made a cause of complaint against him, *e. g.*, that he was improperly influenced in the cause of free trade; that before the war, when writing for the *Daily News*, he had been "employed" in the interest of the Government of the United States; that he did not observe the terms of the trust by which the *Nation* was founded. But had he not been thus sensitive, what would have been said? Without its integrity, its good name for impartiality and independence, what would the *Nation* have been? The idea of those who derided his sensitiveness seemed to be that he, being an editor who attacked right and left, ought not to mind being attacked in turn. He would have agreed cordially to this view, but he would have said: "Exposing a humbug, or a charlatan, or a swindler, or any other kind of a rogue, does not involve an obligation to pretend to enjoy it heartily when I, not being any of these things, am denounced as a humbug, charlatan, swindler, or rogue. Sensitiveness under these circumstances is exactly what an innocent man always shows. If the press in America has reached that point that editors and their friends, when accused of villany, laugh, then so much the worse for America and its press." This was undoubtedly the view taken of the subject in former times.

The editorial rooms of a "critical weekly" like the *Nation* are, of course, very different from those of a daily newspaper. Not only is the number of persons actually at work small, but there is no daily hurry and writing against time. News is not continually coming in which has to be instantly made public and also commented upon editorially. Contributors are not continually bringing in copy, and mysterious callers are not forever asking for audience about something of great importance to themselves, if to themselves only. One can write with a feeling of leisure—write and reflect. But for these very reasons the life is not one of daily incident, and it is difficult or impossible to recall constant crises of great interest, when momentous news was coming in over the wires and thousands were gaping up at the bulletin board to find out what it might be.

But the *Nation*, for a critical weekly, was more effectively combative than any other we can just now think of. We do not recall in connection with it constantly manufactured crises of half real, half unreal journalistic interest. What presses itself on the memory is the pleasure of taking part in contests—appeals to reason stoutly fought out and often fought out more than once, such as the desperate struggle over the Ring, the Alabama claims, the Hayes-Tilden dispute, the great anti-Butler campaign in Massachusetts, and the long controversy over the regulation of railway rates. When it is said that these debates had a most important effect in clearing up the issues before the country, I think the true cause must be held to be the remarkable generalship displayed in them by the most skilful and keen species of journalistic control that I have ever known. Then there were particular articles which for one reason or another attracted attention or animadversion. I remember one such of my own with mingled satisfaction and regret on the subject of the "Emma Mine." It cost the *Nation* a good deal of trouble, time, and expense, through an oversight which may be worth recalling as a warning to writers for the press, though it really only shows that almost anything may be overlooked by those who have every reason to be careful.

The Emma Mine was a venture in which Gen. Schenck's name became involved. It took in many people and created an international scandal. An unfortunate stockholder issued a pamphlet giving an account of the mine and his connection with it. I undertook to make an article out of this pamphlet, and had neither desire nor temptation to make it libellous, or to exaggerate it in any way, because the narrative was inherently striking, amusing, and edifying; nor was it libellous to embody the narrative properly in an article. The statement was made in the pamphlet, however, or perhaps put into the mouth of some one connected with the matter, that those who had floated the shares had previously "plastered and ingrafted" the walls of the mine with silver ore for the purpose of getting a favorable report on the ore from an eminent mining engineer. It will be readily perceived that, true or false, such a statement would be exceedingly difficult to substantiate. Unluckily, I simply copied the statement, and no one in the office who read the proof perceived that I had involved myself, or rather

the *Nation*, in a highly libellous statement, if not true, and one which, if true, it would be practically impossible to get witnesses to prove. It entailed, I remember, a long litigation and a large expense, and in the end it was, I think, settled by a vindication which consisted of what amounted to an admission that the *Nation* had no means of proving the mine to have been plastered and ingrafted with silver ore. The public verdict, however, on the Emma Mine was very different.

An early article which caused a great commotion and was considered by "hostiles" (critics of the *Nation* came to be divided by the editors into "Hostiles" and "Friendlies"—the white man's division of the Indians) as proof positive of the evil animus of the *Nation*. This was an article describing the United States as a "Paradise of Mediocrities." The author of it was no doubt one of the best friends and stanchest and most courageous supporters of the *Nation*, and an American who never flinched. If I remember right, the authorship was not really secret, but the odium entailed by the publication of the "Paradise of Mediocrities" fell as usual upon the *Nation*. I doubt if American self-esteem, then far more sensitive than now, had ever been more wounded by anything published since "Martin Chuzzlewit" and "American Notes" than by the appearance of this article. The "muckrakers" have destroyed sensitiveness. *"It is hard to say it, but there are very few first-rate things in America, and scarcely any first-rate work done here."* The writer of the article was willing to admit that the Croton Water Works, Central Park, and the new Academy of Design at the corner of Twenty-third Street and Fourth Avenue, were exceptions. Another exception, curiously enough, was the *thoroughness expressed in four years of civil war*. Moreover, we were not always to remain as we were. Our scholarship and learning were mediocre, and we worshipped the great goddess Mediocritas, but we had the germs of good in us, and our democracy was not to end in mediocrity. But the sting of the article was in its title. Here was a new paper just started, inviting subscriptions of Americans, deliberately writing down America, or rather the United States, as a "Paradise of Mediocrities." Was this impartiality? Was this disinterested criticism? Then, for Heaven's sake, let us have no more of it, nor of the *Nation*. The outrage was keenly felt. Can it be that in that distant day we were "parochial"? Read these early numbers to-day and ask yourself whether the *Nation* was, after all, anything other than it promised to be—a really conscientious organ of disinterested criticism. Later, when it discussed the great "nose-pulling case" in Massachusetts, it was accused of supporting an estimable Bostonian who was trying to "establish caste" in New England. From treason and "incivism" to snobbishness, there was no sin or crime of which Godkin did not stand accused. The Athenians had not been told that Socrates was more wicked.

The "Nation" and Its Contributors

By GUSTAV POLLAK.

Few periodicals in the history of journalism can claim, like the *Nation*, to have preserved their original features essentially unchanged during fifty years of continuous existence. The *Nation* of the present day may safely challenge comparison with the number which, on July 6, 1865, was issued by Edwin Lawrence Godkin, as editor-in-chief, and Wendell Phillips Garrison, as literary editor. Perhaps not many subsequent issues have surpassed the initial number in solidity, maturity of judgment, and attractiveness of style. Then, as now, the leading editorials and the book reviews appeared anonymously. The imposing list of contributors, which in the course of time came to include the foremost names in American literature and science, was represented in the first number by half-a-dozen men, the most conspicuous of whom was Charles Eliot Norton. To him, to Frederick Law Olmsted, and to James Miller McKim, the founding of the *Nation* is principally due. Olmsted's connection with the incipiency of the *Nation* was the closest. He had elaborated with Mr. Godkin the scheme for a journal such as actually emerged in 1865, and he was, until the firm of E. L. Godkin & Co., in the following year, assumed control of the paper, its temporary proprietor. He died, famous as the landscape architect of Central Park, in his eighty-second year, August 28, 1903.

It is difficult to overestimate the aid rendered to the *Nation* by Charles Eliot Norton during the years when the experiment of conducting a journal of its character in this country was on trial. "If the paper succeeds," wrote Mr. Godkin, in one of his letters to Norton (July 6, 1866), "I shall always ascribe it to you"; and when the success of the *Nation* was assured, Mr. Godkin could say: "Its existence is largely due to the support and encouragement which you gave me."

Norton's contribution to the first number of the *Nation* was a review of Richard Grant White's first volume of his edition of Shakespeare, followed, in the second issue, by a memorable essay on "The Paradise of Mediocrities"—more hopefully patriotic, as we now see, than was conceded at the time. From among Mr. Norton's contributions during the early years of his active connection with the paper, one recalls a few whose very titles show the variety which his pen lent to its columns: "Draper's Civil Policy of America," "Tuscan Sculptors," "Waste," "The American Lectureship at Cambridge, England," "Sir Alexander Grant's Ethics of Aristotle," "Mr. Longfellow's Translation of the Divine Comedy," "Mr. Emerson's Poems," "The Harvard and Yale Memorial Buildings," "Female Suffrage and Education."

Among the other contributors to the initial number of the *Nation* were Prof. E. W. Gurney, of Harvard ("Matthew Arnold's Essays in Criticism"); the essayist, Charles Astor Bristed, better known by his pseudonym of "Carl Benson" ("Critics and Criticism" and "Club Life"); G. P. Marsh, the philologist and diplomat ("Were the States Ever Sovereign?"), and Henry James, father and son, the former of whom, well-known as a Swedenborgian philosopher and a gifted essayist, wrote on "Carlyle's Frederick the Great," the latter on "The Noble School of Fiction." Prof. Gurney held the chair of history at Harvard, and for a time taught Roman law. As Dean he was President Eliot's principal adviser in the extension of the elective system. He was for a year editor of the *North American Review*, after Mr. Lowell and Mr. Norton withdrew from it. His contributions to the early numbers of the *Nation* were marked by his extensive knowledge of the classics, modern as well as ancient, and his wide reading in the fields of philosophy, law, and politics. George Perkins Marsh, for more than twenty years United States Minister to Italy, was one of the foremost American scholars of his time. Equally interested in matters of philology and the natural sciences, he published a "Compendious Grammar of the Icelandic Language" and a remarkable work on "The Earth as Modified by Human Action." Besides his striking series of articles on the subject of State sovereignty already referred to, he contributed to the early volumes of the *Nation* a number of papers, entitled "Notes on the New Edition of Webster's Dictionary," and wrote on such subjects as "Pruning Forest-Trees," "Agriculture in Italy," "The Mont Cenis Tunnel," "Physical Science in Italy," and "The Proposed Revision of the Bible." At the age of eighty he still contributed to the *Nation* a charming "Biography of a Word" and a letter on Lanciani's "Aqueducts of Ancient Rome." He died in July, 1882, at Vallombrosa, in his eighty-second year.

Other writers were probably represented in the first number of the *Nation*, but their identity can no longer be established. A comment, under the heading of "A Strange Story," on a letter written to the *Evening Post* by a chaplain of the First New York Volunteers, foreshadows the campaign against Gen. B. F. Butler waged by the paper for so many years with extraordinary skill and effectiveness. Mr. Godkin's own article on "The Essence of Reconstruction" and his paragraphs in the Week sounded the keynote of the *Nation's* campaign on the Southern question. And with the initial number began the *Nation's* long fight for civil service reform, in a paragraph on the need of protecting the President against the assault of "office-seekers, pardon-seekers, delegations and busybodies of both sexes, who threatened to make an end of him."

> It is lamentable [Mr. Godkin wrote] that some way cannot be hit on of sifting the President's business before it comes before him. This is done to a certain extent with his letters, but the men and women who want to see him reach him,

chaff and all. The easiest way of doing it would be to render access to him more difficult. Whether this could be arranged without raising doubts of his "democracy," we must leave it to others to determine.

It took fifty years and the determination of a latter-day President to realize Mr. Godkin's prophetic hope.

The second number of the *Nation* introduced, in a review of Praed's poems, a new member of the staff, John Richard Dennett, who for nine years, with the exception of a short period spent at Harvard as assistant professor of rhetoric, devoted his rare talents entirely to the *Nation*. Like Mr. Garrison, he was only twenty-six when he became connected with the paper, and his maturity was as remarkable as that of the literary editor. The experience gained by Mr. Dennett, shortly after his graduation from Harvard, on a cotton plantation in South Carolina, and his thorough familiarity with all the phases of the Southern question, enabled him to act as the *Nation's* correspondent in the Cotton States, and he wrote in this capacity for the first two volumes of the paper a series of articles on "The South as It Is," which attracted wide attention. The first of these letters appeared in the third number. Through the whole of his short career the shadow of the disease to which he finally succumbed was upon him. "Of what he might have accomplished with a constitution better adapted to his surroundings," wrote the *Nation*, "one got an idea, however faint, from his extraordinary powers of apprehension, which we have rarely seen equalled and never surpassed."

Two other writers, whose connection with the *Nation* as more or less frequent contributors was lifelong, appeared in the second number—Daniel C. Gilman and Octavius B. Frothingham. It is interesting to notice that the future president of John Hopkins, in discussing the projected Cornell University, unconsciously outlined his own plans for the founding of a university, which he was later to carry into effect at Baltimore. He said in the number of the *Nation* referred to:

> The new university, we presume, will not be fettered by precedents, but will mark out for itself a new path, enlightened by the past, but adapted to the present. . . . It may be intrusive for us to offer a suggestion to the managers of the new university, but we cannot refrain from doing so when we reflect how constantly in this country one error is repeated. It is not bricks and mortar, but men and books, which constitute a university. We delight in appropriate and decorated architecture. . . . But we trust that a desire for suitable edifices will not prevent a supply of higher wants. Let first-rate teachers be first secured. Let no expense be spared to secure the highest educational ability which the country will afford. Then, as the scholars assemble, as the courses and plans of the university are developed, let such buildings go up as will best provide for the wants which have been created.

Besides Mr. Frothingham, widely known as the head of the First Independent Liberal Church of New York, another clergyman of great scholarly attainments, Dr. Joseph P. Thompson, contributed to the second number of the *Nation*. Dr. Thompson, in addition to filling the pastorate of the Broadway Tabernacle in New York city from 1845 to 1871, was, successively, editor of the *New Englander* and the *Independent*, and was recognized as a profound student of Oriental literature. His connection with the *Nation* lasted until his death, in Berlin, in 1879. Dr. Noah Porter, president of Yale from 1871 to 1886, also began to write for the *Nation* with the second number.

The name of Arthur G. Sedgwick, whose association with the *Nation* and Mr. Godkin was probably closer, and certainly more continuous, than that of any other member of its staff, and whom, fortunately, the paper may still claim among its occasional contributors, occurs in the annotated file before me as early as the third number. The mere quantity of matter contributed by Mr. Sedgwick to the columns of the *Nation* for more than forty years was prodigious; the style of the youthful contributor impressed one, in his very first article, as unmistakably the *Nation's* own. What was true of him, was true of the *Nation's* contributors in general. It was observed, early in the history of the paper, that a peculiar literary flavor and a certain uniform elevation of treatment, no matter what the subject, were among its chief characteristics. Mr. Lowell, in a letter to E. L. Godkin of September 25, 1866, remarked: "Every Friday morning, when the *Nation* comes, I fill my pipe and read it from beginning to end. Do you do it all yourself? Or are there really so many clever men in the country?"

With the third number of the *Nation*, Russell Sturgis, an authority on architecture and kindred subjects, began to write on the fine arts, his contributions continuing until his death, February 11, 1909. In the same issue appeared the first of three notable papers by Henry Villard, entitled "Army Correspondence."

The list of "regular or occasional contributors," published in that number, contained the names of Henry W. Longfellow, John G. Whittier, and James Russell Lowell. Whittier wrote a poem, "To the Thirty-ninth Congress," for the issue of December 7, 1865, but it does not appear that either Longfellow or Lowell, interested as they were in the new venture, felt moved to contribute to the first volume. Lowell, with characteristic humor, and with his equally characteristic inclination to procrastinate, wrote to Mr. Godkin under date of January 10, 1866:

> I have got something half written for you and hope to finish it to-day—some macaronic verses on the editorial sham-fight at Richmond, under some such title as "Kettleo-Pottomachia." I am not yet sure whether it is not dull. However, I will send it, and you can use it or not, as you like. I had begun an essay on "Autographs" when I was drawn off by this. Meanwhile, I have raked out of my desk a little poem which I wrote for an autograph for the St. Louis Fair two years ago. (The Muse doesn't come often to professors!) I do not know that it has ever been printed, and don't think it has. I send it merely to justify my name on your list of contributors. I will send you the macaronics in a day or two, and you may put them in the fire if you like.

Evidently, the "macaronics" referred to are identical with the poem printed in the *Nation* of January 25, 1866, under the title of "A Worthy Ditty. Sung before the President his Excellency at Washington, to a Barrel-Organ Accompaniment." The "little poem," entitled "What Rabbi Jehosha Said," appeared in the previous number.

Mr. Lowell's poetic contributions to the *Nation*, though infrequent, were well-timed, and always produced a telling effect. They were generally on the political subjects of the day, such as his caustic "The World's Fair" and "Tempora Mutantur," both printed in August, 1875, and his "Campaign Epigrams," in the number of October 12, 1876. In a different vein were his touching tributes to two of his friends—the great physiologist, Jeffries Wyman (*Nation*, September 10, 1877), and Edmund Quincy (May 31, 1877), himself a valued contributor to the *Nation* from its foundation. Of Mr. Lowell's prose writings in the *Nation* only a few can now be identified with certainty, such as a review of Henry James, jr.'s, "Tales and Sketches" (June 24, 1875), two essays on "Forster's Life of Swift" (August 5 and 26, 1875), and a review of White's "Natural History of Selborne" (April 27, 1876).

The fourth number of the *Nation* marked the advent of two writers who were among the most important and prolific of all the contributors to its columns—William Francis Allen and Michael Heilprin. Allen was an historical scholar of rare attainments, who held the chair of ancient languages and history in the University of Wisconsin from 1867 until his death, in 1889. The *Nation* said of him, in its obituary notice, that he was perhaps the most constant, if not the most voluminous, contributor in the quarter-century of the journal's existence. Scarcely a number had appeared without something from his pen. His first essays were political, and connected with his visit to South Carolina in 1865. On that journey he noted down the old slave songs—words as well as music—which he afterwards embodied in a volume ("Slave Songs of the United States") that has remained the best work of its kind. The range of his interests was remarkable. He wrote in the *Nation* on minority, personal, or proportional representation, on civil-service reform, on city government, village communities, etc., and he reviewed, with competent knowledge, books on ornithology, political economy, English literature, and ancient and modern history. His character was in keeping with such mental endowments.

There was a certain intellectual and moral kinship between William F. Allen and Michael Heilprin. The extent of Mr. Heilprin's scholarship, as revealed in his contributions to the *Nation*, was during his lifetime known to comparatively few. On his death, in May, 1888, the editors wrote of him:

How great is the loss sustained by American scholarship through the death of Mr. Michael Heilprin, the general public, owing to the man's invincible modesty, cannot know. To this journal and its readers it may fairly be pronounced irreparable, so largely has he contributed during the past twenty years to whatever reputation the *Nation* may have acquired for literary accuracy or breadth of information.

From the day he furnished in his first article—on "The Crisis in Austria"—a comprehensive sketch of the political history of the Empire since the revolution of 1848, Mr. Heilprin gave the *Nation*, in the words of the editors, "the benefit of his extensive command of all the leading tongues of modern Europe, besides the Latin and Greek classics, the Hebrew, and other Oriental speech." And as in his articles on European affairs, so in his critical reviews, Mr. Heilprin set an encyclopædic standard for the *Nation* to which few literary periodicals in any language have been able to conform.

With the appearance of such writers, the work of creating a *Nation* public was now well under way. From the beginning, and until they laid down their pens, Mr. Godkin and Mr. Garrison had, in their conduct of the paper, only one aim in view—to make it representative of the most enlightened American opinion. That they felt it necessary, in the beginning, to "educate their writers" (as Norton wrote to Lowell), as well as their readers, merely added zest to their task. But the paper was fortunate enough to have among its early contributors several who possessed something more than the art of "weekly journalizing." Young in years, but with all the maturity and grace of the master of the craft, James and Howells wrote sketches and essays for the *Nation* which have long since passed into literature. The first volume contains, from Mr. Howells's pen, such reminiscences of his Italian days as "A Pilgrimage to Petrarch's House at Arquà," "A Visit to the Cimbri," "A Day in Pompeii"; and for the second he wrote on "Certain Things in Naples," on "Massimo d' Azeglio," "Men and Manners on the Way from Ferrara to Genoa," etc. In addition, Mr. Howells contributed in 1865 and 1866 editorial articles to the columns of the *Nation*. Henry James, jr., was barely twenty-two years of age when he wrote his article for the first number. Among his contributions to succeeding volumes of the *Nation* were critical papers on Miss Braddon, Walt Whitman, Eugénie de Guérin, and Dickens's "Our Mutual Friend."

Until a few months ago there was still among the living one of the most valued of the contributors to the first volume of the *Nation*—Prof. Thomas R. Lounsbury, who utilized his experiences in the Civil War in an editorial on "The West Point Military Academy" (December 28, 1865). He subsequently gave the *Nation* the benefit of his insight into military matters, in such papers as "Ought Soldiers to Vote?" and "The Militia System"; among his contributions to literary criticism were reviews of "Dowden's Shakespeare," "A Dictionary of English Phrases," and "Mrs. Oliphant's England."

Gradually the foremost American authorities in many fields gathered to the support of the editors of the *Nation*, solicited or unsolicited, most of them to remain true to the paper throughout life. Among these earliest friends—to mention only a few—were the scientist and philosopher, Chauncey Wright; the philologist, William Dwight Whitney; the jurist, Francis Wayland; the diplomatist and student of Russian history, Eugene Schuyler; the philanthropist, Charles Loring Brace, and the art critic, W. J. Stillman, widely known as the United States Consul, during a memorable period, at Crete and Rome. His relations with Mr. Garrison were of the most intimate.

Chauncey Wright gave a course of university lectures on psychology in Harvard College in 1871, and three years later conducted there a course in mathematical physics. Prof. William James wrote of him in the *Nation* at the time of his death, in September, 1875, at the early age of forty-five: "If power of analytic intellect pure and simple could suffice, the name of Chauncey Wright would assuredly be as famous as it is now obscure, for he was not merely the great mind of a village—if Cambridge will pardon the expression—but either in London or Berlin he would, with equal ease, have taken the place of master. . . . As little of a reader as an educated man well can be, he yet astonished every one by his omniscience, for no specialist could talk with Chauncey Wright without receiving some sort of instruction in his specialty." Wright's contributions to the *Nation* included articles on "Speculative Dynamics," "Sir Charles Lyell," "McCosh on Tyndall," and "German Darwinism."

Eugene Schuyler's varied diplomatic career was interestingly reflected in the articles and reviews furnished to the *Nation* during the quarter-century of his connection with it as a frequent contributor. He began to write for the paper with its ninth number, and a week before his death, on July 16, 1890, as Consul-General of the United States at Cairo, the *Nation* had a brief contribution from his pen. He wrote on "The Progress of Russia in Asia" not long before he was made Consul at Moscow, and during all his subsequent changes of residence—at St. Petersburg, where he was Secretary of Legation; on his travels in Central Asia; at Constantinople, where he was Consul-General; while holding the Consulship at Birmingham, and as Minister-Resident to Greece, Servia, and Rumania—he continued to write for the *Nation*. His most important work is his two volumes on Turkestan.

The foreign correspondence of the *Nation* assumed from the beginning the character it has ever since maintained. Edward Dicey, for many years editor of the London *Observer*, sent his first letter to the *Nation* in August, 1865, and Auguste Laugel, a noted contributor to the Paris *Temps* and the *Revue des Deux Mondes*, began in December of that year a series of letters which ranged for a period of forty years over a vast field of French literature and political history. Laugel's connection with the United States dated from the Civil War, during which he accompanied the Orléans princes who served on McClellan's staff. He died in November, 1914, at Paris, at the age of eighty-four. Friedrich Kapp, one of the most prominent of the German patriots who sought our shores after the Revolution of 1848, and whose works on early German-American history are of lasting value, acted, after his return to Berlin in 1870, for many years as the *Nation's* Berlin correspondent. His connection with the paper began with the first volume, to which he contributed articles on Bismarck and the Prussian constitutional crisis. Dr. von Holst, the eminent author of the "Constitutional and Political History of the United States," who first began to write for the *Nation* in 1869, became one of its foreign correspondents after his return to Europe in the seventies. Jessie White Mario, a noble-souled Englishwoman, married to one of the Idealist leaders of the *risorgimento*, was for forty years the principal Italian correspondent of the *Nation*. Another valued writer from Italy for many years, after his withdrawal from Cornell, was Willard Fiske, widely known for his Petrarchan collections. The polyglot Karl Hillebrand wrote occasional letters from Florence, outdone in absolute mastery of a foreign idiom by the Pole, E. Gryzanowski, whose comments on Italian events and philosophic discussions of certain aspects of the Franco-German war ("International Ignorance," "Popular Notions of Prussia," etc.) are among the most brilliant pages of the *Nation*. Conspicuous among the correspondence from the British Isles were the London letters of Lieut.-Col. Robert D. Osborn, who had made India and Afghanistan his special province, and the first-hand discussion of Irish matters, as keen and far-sighted as it was patriotic and humane, sent by Alfred Webb from Dublin. Leslie Stephen also wrote much, for a number of years, on British topics. That the *Nation* is still privileged to retain on its list of London contributors the names of Lord Bryce and Prof. A. V. Dicey is one of its chief distinctions. It is more than forty years since the *Nation* printed the first contributions of James Bryce and Professor Dicey. The number of June 18, 1874, contained the former's review of Cleasby and Vigfusson's Icelandic Dictionary—possibly not the first of his contributions to the paper. It is safe to say that few important contemporaneous events in British public life and the deaths of few British leaders in politics, literature, and science have been left uncommemorated in the pages of the *Nation* by its distinguished English contributors.

It is not possible, within the space at my disposal, to do more than allude to some of the important events in our own country of which the *Nation* for fifty years has been the spectator and—as must be conceded—one of the most influential of commentators. Mr. Godkin, in his "Retrospect," on the twenty-

fifth anniversary of the paper, touched upon the great political and social changes that had taken place within that quarter of the century. Surely not less remarkable has been the transformation since then. It is profitable to recall some of Mr. Godkin's comments on the events of the earlier period. The bare facts stated emphasize the share which the men who spoke through the *Nation* had in promoting political progress. What Mr. Godkin said, as to the passing away of the military spirit, is of peculiar interest at the present day. In the issue of July 3, 1890, he wrote:

In the year in which the *Nation* was started there was hardly any political observer who did not look for the permanent retention among us of the military spirit, for a considerable increase in the standing army, and for an increased disposition to use it either for purposes of foreign aggression, or for the more complete and peremptory assertion of a strong central authority. All did not go as far as Wendell Phillips when he declared in that year, in a speech in Boston, that our old farming and reading republic was at an end, and that a strong military and perhaps predatory republic was to take its place. But certainly few looked for the rapid disappearance of the army, and the almost abrupt banishment of military topics from the forum of popular interest, and for the eagerness with which a community which had just been throwing all its powers into a fierce military struggle, diverted its energies to the business of money-making. There was something very fine, as well as unexpected, about this; and it called forth the admiration, as well as the surprise, of the civilized world.

Mr. Godkin did not have to quote from the early columns of the *Nation* to remind his readers what part the paper played in the dark days of Reconstruction, and what share it had in ushering in a new era in the South, with justice to both the negro and the whites. Nor did he allude, in his "Retrospect," to the services rendered by the *Nation* during so many years to the causes of sound money and of civil service and tariff reform. Five years earlier, on the completion of its twentieth year, Mr. Godkin had spoken of some of the difficulties which beset the *Nation* at a very early period, and had dwelt with pardonable pride on some of its achievements:

Almost in the first number it questioned the wisdom and soundness of a plan then in favor among many of its friends for having the Supreme Court do the work of reconstruction, by deciding what was or was not "a republican form of government." At a somewhat later period it questioned, amid much obloquy, the necessity and value of the impeachment of Andrew Johnson, on the success of which a large proportion of the Republican party had set its heart. It maintained that even if Johnson were impeachable, his conviction might work mischief by throwing the Government into the hands of extremists, among whom Benjamin F. Butler was the most influential, and that his acquittal would simply be the end of a piece of elaborate and expensive folly. In one month after the failure of the trial the whole country, including its chief promoters, was ashamed of the undertaking. The *Nation*, too, undertook to expose the pretensions of Butler to be considered an honest and useful politician in 1867, or many years before his party found him out, and while criticism of him still, in Massachusetts at least, seemed an expression of indifference to the results of the war. In fact, it was nearly ten years in advance of popular opinion about this particular politician, and has had the satisfaction of seeing its very earliest diagnoses of him accepted by all Republicans at last. . . .

The *Nation* opposed the greenback theory from the first moment of its appearance, and when it had such very respectable Republican champions as the late Oliver P. Morton; and advocated a return to specie payments when a large number of leading Republicans doubted whether a return would ever be practicable, and, if practicable, desirable. It was, if not the first journal to engage in regular and persistent advocacy of civil-service reform, after Mr. Jenckes, of Rhode Island, had brought it up in Congress, certainly the first to place it in the front rank of public questions. The first foreign complication, its discussion of which attracted any attention, was the Alabama case, in which it, from the opening of the negotiations, attacked the theory of consequential damages, then in much favor with the public, and continued to attack it amid some obloquy, until it was rejected as an absurdity by the Geneva Tribunal. The silver craze it opposed from the beginning, and has had the satisfaction of seeing the correctness of most of its positions as regards the use of silver in the United States acknowledged by most of its opponents.

The political course of the *Nation*, after its consolidation with the *Evening Post* in 1881, is properly part of the history of the latter journal. In Mr. Garrison's hands the *Nation's* literary reputation was secure, while Mr. Godkin was engrossed by his daily labors on the *Evening Post;* and after he had laid down his pen, and Mr. Garrison assumed entire editorial control of the *Nation*, it suffered no loss of prestige. The men who conferred on the *Nation* part of their own scientific and literary lustre continued to write for it, and a new generation worthily filled the gaps caused by death. Of the giants who have passed away, and who, with their services to the paper, had given their friendship to its editors, during the first twenty-five years of its history and a good part of the second period, only a few can be commemorated in this place. One of the foremost, who did not quite round out the first quarter-century of his important contributions to the *Nation*, was Asa Gray, the great botanist, who died in January, 1888. Some of his articles, such as "Variation of Animals and Plants under Domestication" (*Nation*, March, 1868), "Evolution and Theology" (January 15, 1874), his summing up of the conclusions concerning insectivorous plants (April 2 and 9, 1874), "What is Darwinism?" (May 28, 1874), and his review of "Darwin's Insectivorous and Climbing Plants" (January 6 and 13, 1876), have become permanent parts of the literature on their subjects. Professor Gray's last contribution to the *Nation* was an exhaustive review of Darwin's "Life." His expositions of Darwinism and kindred philosophical matters were not the least of his great services to science. In his letters to Sir Joseph Hooker and to Sir Charles Lyell, Darwin frequently expressed his deep appreciation of Gray's approval and criticism. He wrote to Lyell in 1860: "No one, I think, understands the whole case better than Asa Gray."

Several of William James's brilliant papers on philosophical and physiological subjects first saw the light in the columns of the *Nation*. One recalls, among others, his "Moral Medication"—a review of Liébault's "Du Sommeil et des Etats Analogues" (*Nation*, July, 1868)—his paper on Taine's "Intelligence" (August, 1872), his discussion of "Vivisection" (February, 1875), his "German Pessimism"—a review of Pfleiderer's "Der moderne Pessimismus" (October, 1875)—and his article on Maudsley's, Ferrier's, and Luys's treatises on the Mind and Brain (June, 1877).

To the manysidedness of the great mathematical astronomer, Simon Newcomb, the pages of the *Nation* bear ample testimony. The titles of some of his contributions to the earlier volumes speak for themselves: "Bowen's American Political Economy" (*Nation*, May, 1870), "Proctor on the Moon" (October, 1873), "The District Investigation" (June, 1874), "Price on Currency and Banking" (December, 1875), "Walker on the Wages Question" (July, 1876), "Who Are the Friends of Negro Suffrage?" (January, 1877), "The Life-Insurance Failures" (March, 1877), an obituary article on Prof. Joseph Henry (May, 1878), "Education at the Naval Academy" (June, 1878), "The Signal-Service Succession" (December, 1880). That even in his later years Professor Newcomb continued to be stirred by the practical questions of the day, was evidenced by such articles in the *Nation* as his "Shall We Raise a Statue to [Boss] Shepherd?" (October, 1902), "The Functions of the Senate" (November, 1903), "The Cost of Life-Insurance Business" (July, 1905), and "What the Navy Needs" (December, 1905).

Particularly intimate were the *Nation's* relations with Gen. J. D. Cox, Grant's high-minded and ill-used Secretary of the Interior. "For a generation," Mr. Garrison wrote in his obituary article, "we have enjoyed with him an intimacy characterized by entire mutual esteem through all vicissitudes of opinion; enlivened by constant intercourse by letter, in connection with that attached and cordial collaboration which has lent so much weight to the reviews of this journal." A few of the subjects treated by Gen. Cox in the *Nation* were: "General Joseph E. Johnston's Narrative" (May, 1874), "General Sherman's Memoirs" (June, 1875), "The Army of the Cumberland" (December, 1875), "The House of Representatives" (an editorial, April, 1878), "Parliamentary Procedure" (editorial, September, 1878), "Howard's Nez-Percé War" (August, 1881), "Van Horne's Life of General Thomas" (October, 1882).

Henry C. Lea, the historian of mediæval

Europe, author of the monumental "History of the Inquisition in the Middle Ages," often chose the *Nation* as a medium for expressing his views on some of the many subjects that engaged his attention.

Charles Francis Adams, jr., kept up an active connection with the *Nation* and its editors during all his life. The first of his contributions, as nearly as can be traced, was an article on "The Secret of the Rise in Steel" (*Nation*, March, 1870). In subsequent issues he treated, among many other subjects, "Railroad Subsidies" (October, 1870), "The 'Pooling' of Railroad Receipts" (November, 1870), "Railroad Investments" (August, 1872), "The Farmers' Clubs and the Railroads" (April, 1873), "The Experience of a Great Corporation" (October, 1874), "The Railroad Usury Law" (April, 1881), and "Sewall's Diary" (a book review, July and August, 1882).

It would be an interesting task, did space permit, to follow in the pages of the *Nation* the development of American thought during the fifty years of the journal's existence. That the work of the editors and the writers of the *Nation*—many of whom had so largely aided in the country's progress—was constructive in the best sense of the word, will, after the lapse of so many years, be readily conceded. The story of an important epoch in our economic history is told in such contributions as David A. Wells's luminous comments on matters of internal revenue and on the enormous discretionary powers of the Secretary of the Treasury (October, 1872), and his article on the absurdities in American local taxation (February, 1873); in Edward Atkinson's papers on the contraction of the currency, and in Prof. W. G. Sumner's discussions of the tariff and bimetallism. To enumerate the most noteworthy articles in the *Nation* on subjects connected with the natural sciences, philosophy, jurisprudence, history, Biblical criticism, philology, and a large field of belles-lettres, is to tell the great names of the last fifty years. A few may still be added to the list of the warmest friends of the paper from its early years. None, perhaps, was closer to Mr. Godkin than Francis Parkman, of whom he said: "He impressed me, of all the men I have ever known, as the most of an American." Parkman was not a frequent contributor to the *Nation*, but what he wrote was generally on the subjects nearest to his heart. One recalls his reviews of "Découvertes et Etablissements des Français dans l'Ouest et dans le Sud de l'Amérique Septentrionale" (September, 1876), "Montcalm et le Canada Français" (May, 1877), and "The Chronicle of the St. Lawrence" (July, 1878). Francis James Child, author of the classic "English and Scottish Ballads," and one of the men whose achievements in letters and devotion to the highest interests of the country have made their university illustrious, was from the inception of the *Nation* one of its most valued contributors. Few of the literary men of New England wrote more constantly for the *Nation*, or were more in sympathy with Mr. Garrison's ideals, than Thomas Wentworth Higginson. With him may be linked, as holding all his life a message for freedom, in thought and action, John White Chadwick, for forty years pastor of the Second Unitarian Church of Brooklyn. His connection with the *Nation* began in Volume I, with a notice of the life of Edward Irving, and his last review was printed shortly before his death, in 1904. Col. George E. Waring, who by his work as a sanitary engineer placed New York city and the whole country under deep obligations, began in the early seventies to write for the *Nation* on the subjects which he had so thoroughly mastered. Another specialist of high renown, who for thirty years gave the *Nation* the benefit of his extensive knowledge, was Prof. W. W. Goodwin. The most notable of his contributions to the *Nation* were the articles on Schliemann's discoveries. One who did much important work for the *Nation* in its early years should be remembered—Earl Shinn, who, while studying art in Paris, wrote some graphic letters to the paper, and for a number of years was its principal art critic. The editors said of him that he employed a vocabulary of remarkable scope and originality, and delighted as much in the strokes of his pen as of his brush. One of his early *Nation* letters from Paris attracted the attention of Lowell, who wrote to Mr. Godkin (July, 1869): "I haven't seen a better piece of writing than that French *atelier*. It is the very best of its kind. Cherish that man, whoever he is."

Not the least important part of the *Nation's* work was done by men who cultivated a restricted specialty with life-long devotion, content with the appreciation of the discriminating few. There leap to one's mind two writers on military affairs, Gen. Francis W. Palfrey—"as fine an example of patriot and Puritan stock as this generation has seen," Mr. Garrison said of him—who wrote admirably on Antietam and Fredericksburg and other campaigns of the Civil War, and John Codman Ropes, an eminent student of military history in general and the admirer and authoritative historian of Bonaparte—and yet no imperialist. Robert Traill Spence Lowell, the elder brother of James Russell, enriched the columns of the *Nation* with articles, written in a peculiarly racy style, on his favorite subject—Newfoundland. The Rev. Samuel Beal, professor of Chinese at University College, London, wrote learnedly and agreeably on Buddhism, and Lieut.-Commander Henry H. Gorringe, remembered for his semi-naval exploit in bringing to these shores the Alexandrian obelisk, treated of the Interoceanic Canal, the North African Inland Sea, and other gigantic projects around which his fertile mind played. And there was the stanch American, Fitzedward Hall, many years of whose romantic life were spent in England, teaching Sanskrit, Hindustani, and Indian Jurisprudence, who sent to the *Nation* the fruits of his minute studies in English lexicography. But I must resist the temptation to speak of so many more, who ought to find a place in the list of *Nation* friends and writers.

Some of the earliest contributors, fortunately, remain with us, a few still to labor on in the pursuit of ideals identified with them and the *Nation*. Charles W. Eliot's pen is as tireless to-day as when he began to write on scientific subjects for the *Nation* in 1866, and Basil L. Gildersleeve still graces any subject he touches upon, as in the days when—thirty-four years ago—he wrote his inimitable letters in the *Nation* on the performance of "Œdipus Tyrannus" at Harvard. One of the most important and most prolific of the writers for the *Nation* survives in the person of C. C. Nott, born in 1827, President Lincoln's appointee as Judge of the Court of Claims, who enlightened the earlier generation of *Nation* readers on some of the weightiest aspects of Constitutional law. It is a pleasure to include with these living witnesses of a bygone period contributors like Gen. A. A. Woodhull, who has furnished the *Nation* with so many valuable papers, during so many years, on climatology, modern theories of infection, and other medical subjects; Prof Charles H. Moore, long identified with American art and art criticism; Prof. C. H. Toy, equally prominent at Harvard in another domain, that of Hebrew and other Oriental literatures; the eminent botanist, Prof. George L. Goodale; Horace White, whose important discussions of economic subjects cover almost the entire period of the *Nation's* existence, and the bearer of a name forever associated with the founding of the *Nation*, herself a cherished contributor to its columns, Miss Grace Norton.

While thus dwelling, with not unpardonable satisfaction, on its past achievements, the *Nation* faces the new tasks before it with new hope. Twenty-five years ago, Mr. Godkin, looking forward as well as backward, wrote:

> The leading colleges of the country have been almost transformed since the *Nation* was started, and a class of advanced students have come into existence who were unknown and unexpected at the close of the war. The schools of political science which the principal universities now contain turn out yearly both writers and thinkers whose contributions to the literature of political philosophy, history, archæology, political economy, and administrative law are extremely important, and have placed the country in the very front rank in fields of inquiry in which it was, five-and-twenty years ago, almost wholly unrepresented. Not only have they made the task of conducting a critical journal like the *Nation* increasingly easy, but they carry on periodicals of their own, in which the best thought of the time on political and economic questions finds adequate expression.

The history of the twenty-five years now closed has borne out Mr. Godkin's prophecy. With its old traditions and the impulses of a new life stirring throughout the land, the *Nation* of the future may hope to be worthy of the *Nation* of the past.

Fifty Years of Books

A SKETCH OF BOOK PUBLISHING IN THE UNITED STATES IN THE HALF-CENTURY SUCCEEDING 1860.

By GEORGE HAVEN PUTNAM.

The year 1860 was for the United States one of general prosperity. The crops, both in the South and in the North, had been above the average, and in most divisions of business there had been substantial recovery from the depression that followed the financial disasters of 1857. The political contests, which turned in the main upon the fight for the restriction of slavery, and which had brought out from the South threats of the dissolution of the Union, were bitter; but the people of the North were not actively impressed with any threat either of the breaking up of the Union or of civil war. They could not free themselves from the feeling that in 1860, as in previous decades, the threats of disunion were part of the political game and did not call for serious consideration. In the South, the belief was prevalent that whenever the slave States might decide that it was necessary, for the purpose of maintaining their peculiar institution, to withdraw from the Union, their independence could be obtained without war. The Southerners had no thought that the men in the North would be ready to fight rather than to see the republic destroyed. It seems probable, therefore, that the threats made throughout the South, during the spring of 1860, of separation from the Union, and of war in case that separation should be opposed, were not permitted to interfere very seriously with the business undertakings and investments throughout the country.

The publishing trade, which had suffered severely during the disasters of 1857 and in the years succeeding the panic, had fairly recovered its normal status and its hopefulness for the future.

In 1860, as had been the case for the preceding quarter of a century or more, Boston might fairly be considered as the chief centre of literary and of publishing activities, particularly in connection with the production of books by American authors. Philadelphia, while maintaining the traditions dating back to the printing press of Benjamin Franklin, and sending out from year to year an increasing group of books of importance, had lost ground relatively. The productions of its presses represented in the main the work of local writers. Philadelphia was not attracting to itself the literary workers of the other States. New York, already taking assured lead in the general business of the country, was, during the years succeeding 1860, making large strides in the developing of its printing and publishing business. Its presses were not, like those of Philadelphia, in the main dependent upon the productions of the writers of the neighborhood. The city was, like a magnet, attracting to itself from all parts of the continent not only the active-minded men who were concerned with trade, with finance, and with commerce, but hundreds of those who had intellectual ambitions and who hoped in coming to the great city on the coast to find or to make opportunity for the expression of their thought and for a literary career.

New England, which loyally accepted Boston as its metropolis, could, however, during this period lay claim to much the larger number of authors whose works possessed a national importance and in not a few cases a transatlantic reputation.

Hawthorne, whose first writings were printed in New York in 1849, had won immediate fame for himself by his romance, "The Scarlet Letter," issued by Ticknor & Fields in Boston in 1850. With the name of Hawthorne, these enterprising publishers were able to associate those of Emerson, Whittier, Lowell, Holmes, Whipple, and many other active-minded New Englanders. Early in the sixties, Ticknor & Fields took over from the firm of John P. Jewett & Co. "Uncle Tom's Cabin," by Mrs. Stowe. This book had not only crystallized anti-slavery sentiment throughout the English-speaking communities of America and of England, but had done much to shape, in regard to the anti-slavery fight in the United States, the opinion of the whole world. Mr. Jewett, who had been fortunate enough to obtain the publication, ought to have been able to make from this book the foundation of a successful business.

In the years following 1860, Mrs. Stowe followed up "Uncle Tom's Cabin" with a long series of volumes accepted as belonging to the best literature of the age. At about the time when Ticknor & Fields were securing the writings of Mrs. Stowe, they took over from the firm of Phillips, Sampson & Co. the recently established *Atlantic Monthly*. In those years, the *Atlantic* served chiefly as an expression of the thought of New England. Widening its sources of contributions and extending its influence, it has now won recognition as the leading literary monthly of the United States.

The publications of the firm of Ticknor & Fields were in later years taken over by the firm which is at this time doing business under the name of Houghton Mifflin Co. With the advantage of the foundation of the group of American authors brought together by their predecessors, and with additions to the list of authors, American and English, of the later generation, Houghton Mifflin Co. have retained a position in the very first group of the publishers of America and of the world.

Little, Brown & Co., whose firm dates back to 1837, were in 1860 leaders among the publishers of New England, as they are today among the publishers of the country. Their principal interest had been in the production of authoritative law books, but they had in their hands in this period the important historical works of George Bancroft and Francis Parkman. Parkman's first book, like that of Hawthorne, had been published in New York, and he had been so far discouraged with the result that he had doubted whether he would continue work as an author.

The firm of Roberts Bros. began in the later sixties a publishing business which, largely through the efforts of its literary manager, Mr. Niles, won prompt reputation for its recognition and effective management of good literature, English and American. The firm obtained early prestige and business connections through the enormous success of the "Little Women" and later books of Louisa Alcott. Mr. Niles came into personal relations with English authors and, years in advance of the beginning of the system of international copyright, he arranged to make payments to these authors for the American editions of their books. The death of Mr. Niles, after some twenty-five years of publishing service, brought the activities of the firm to a close, and its business was taken over by Little, Brown & Co. After the annexation of Roberts's list, this firm widened out its undertakings in general literature. It continued for many years, as the representatives of A. & C. Black, of Edinburgh, to publish in imported supplies the successive editions of the Encyclopædia Britannica. The work found an increasing sale, which finally warranted the production in 1889 of an edition printed on this side of the Atlantic, and the control of this American edition came over to the New York house of Charles Scribner's Sons.

One of the reasons, in addition to the increasing demand for the work from American readers, for bringing into print an American edition was to include certain articles by American authors. The English contributions could not, under the copyright conditions prior to 1891, obtain protection in the United States. It was the hope, however, of the Scotch publishers and of their American representatives that it would be possible to protect, at least in their entirety, volumes which were made up in part of American material. To further such protection, these American articles were, before being issued in the Encyclopædia, brought into print in separate copyrighted volumes. The attempt on the part of the Blacks and their American representatives to protect their great undertaking from appropriation by American reprinters in Philadelphia and in the West brought about a long series of litigation beginning with 1879. The earlier decisions given in the United States Court in Philadelphia were adverse to the claim of the producers of the Encyclopædia for the control in this country of their material as connected with the Encyclopædia title. One of these Philadelphia judges went out of his way to specify this attempt as an impudent interference with "a legitimate American industry" (namely, that of printing unauthorized editions of British books).

In the twenty years succeeding 1879, there came about a steady development of judicial opinion connected with, if not based upon,

a like development on the part of the opinion of the whole literary community, in favor of such interpretation of the principles of common law as would enable the producer of a work to maintain the good-will property that had been built up for the title of such work as a result of efforts and investments extending over a series of years. The later editions of the Encyclopædia were able, therefore, to obtain protection not only because the material was in part American in origin, but on the simple ground that a great good-will property had been built up by the producers of the Encyclopædia, and that it was to the interest of the American community that investments in undertakings of this character should be encouraged. The series of decisions which have brought to a close undertakings constituting "unfair competition," and the establishment of protection for "good will" connected with a title, date from the fight to prevent fraudulent issues of the Encyclopædia Britannica from being sold in this country. The management of the American editions of this work has, therefore, been of first importance in connection with the history of international publishing undertakings.

The great educational house of Boston, with a second house in New York and branches all over the country, during the last quarter of a century, is that of Ginn & Co. Ginn's list of textbooks has done much to maintain for Boston a substantial proportion of the book output of the country.

The publication of books for young people constituted the chief interest during this decade of the firm of Lee & Shepard, of Boston, with which in later days was consolidated the house of D. Lothrop & Co., which had also been active in the production of children's books. "Oliver Optic" and Martha Finley, the author of the Elsie books, were writers whose volumes obtained the largest popularity with the children of this generation.

New England had at this time several publishing centres outside of Boston. In Andover, the interests of orthodox theology, under which heading were classed Congregational and Presbyterian writers, were taken care of by W. F. Draper. His business closed only as late as 1910, after the Andover Theological Seminary had been merged into the Theological School of Harvard University.

The publishing house in Springfield, which might be considered also as a publishing house for the country and for the whole English-speaking world, was that of Merriam, which had developed from decade to decade the famous dictionary first compiled by the New Englander, Noah Webster.

Hartford was carrying on a business important in bulk, if not perhaps in literary quality, in the production and sale of subscription books; that is to say, of books that were distributed by canvassers throughout the country. In later years the publication of subscription books was developed to greater proportions in New York and in Philadelphia.

In New York, at this time, the leading publishing houses were the Harpers, the Appletons, Charles Scribner, G. P. Putnam, Sheldon, Hurd & Houghton, Randolph, and Carter.

The Harpers, whose book-publishing business was begun in 1832, were carrying on their two periodicals, *Harper's Monthly* and *Harper's Weekly*. They had an important educational list, which years later was transferred to the American Book Company. They were adding from year to year noteworthy books in general literature from American authors; and they had what was probably the most considerable list of that day of American editions of books originating in Great Britain. Some of the British fiction, such as the stories of Thackeray, and later of Thackeray's daughter, Anne, afterwards Lady Ritchie, Miss Mulock, Charles Reade, etc., came into print first in the pages of the magazine. In the absence of international copyright, a firm which, like the Putnams, the Harpers, and others, had direct correspondents in London, while not in a position to obtain exclusive control in the States of the books of English authors, was able to make an early market for such books and frequently to crush out any competing editions. The payments to English authors were not large, but in the greater number of cases at least they were all that the market would afford for books that could not be protected.

Partly with a view of reaching a wide general public, but chiefly, I imagine, for the purpose of making effective the fight against other publishers who were reprinting books asserted by them to be "Harper authors," the Harpers started a little later than the time now in question the publication of the Franklin Square Library of fiction. The numbers in this series of paper-bound quartos sold at 15 cents, and the library came to include the names of many of the most popular of the British fiction writers of the day. The reprinters, who were not prepared, in the absence of any copyright protection, to accept the claim of the Harpers to the control of English authors to whom they had made courtesy payments, were flooding the market with similar cheap paper-bound issues of these authors. But few of these reprinters succeeded in maintaining even for a brief term any remunerative business in the publication of unauthorized reprints. John Munro, a capable Canadian, who had gone early into the reprint business, did, however, make a success with his ventures. Munro and the other printers of such unauthorized issues were naturally the most vigorous opponents of the various attempts to secure international copyright, which finally resulted in the act of 1891.

The house of Appletons, whose business had been organized a little later than that of the Harpers, had an important educational list which was transferred later to the American Book Company. They published successive editions of "Appleton's Encyclopædia," which was the best literary work of reference as yet produced in this country. The scientific lists of the Appletons, selected largely under the counsel of Dr. E. L. Youmans, came to possess distinctive importance. It was Dr. Youmans who brought the house into correspondence with British writers like Spencer, Tyndall, Huxley, Darwin, and others; and it was also through Dr. Youmans that was instituted the International Science series. This series had importance not merely on the ground of the value of the material prepared by writers of authority on the several subjects considered, selected from all parts of the world, and presented at a very moderate price for American readers, but because it helped to constitute an important precedent in international publishing. It was the contention of Dr. Youmans, a contention which had been maintained for years before by George P. Putnam, that publishing undertakings ought not to be limited by political boundaries. Literature and science and art were the property of the whole world. Dr. Youmans took early advantage of the method, the importance of which had also been emphasized by George P. Putnam as far back as 1848, of the lessening of the cost of good books by dividing among a number of markets the amount of the compensation due to the author and of the cost of production of illustrations, maps, etc. Under such a plan, the International Science series, or the later similar Putnam international series, the "Story of the Nations" and the "Heroes of the Nations," could be produced in several national editions, from which the author obtained full compensation based upon the widest distribution; while it was possible to give to the final consumer, the reader or student, a large amount of authoritative material suitably printed, at a very much more moderate cost than would ever have been possible in the case of the same work produced for one market only.

The practice that was maintained by such houses as the Appletons, Scribners, Roberts, Putnams, Holt, and others, in advance of an international copyright law, of making payments to transatlantic authors, helped to develop on both sides of the Atlantic public opinion in behalf of an international copyright system. It became possible to refer to these international series as examples of books which, while making due recognition of the rights of the author, gave inexpensive material for the needs of the American public.

The house of Scribner had been founded by Charles Scribner in the early fifties. The firm took from the beginning of its operations an important part in international relations. In these earlier years, as in later times, its group of theological publications, comprising works from both sides of the Atlantic, had been of distinctive importance; but its managers had also been interested in coming into early relations with English writers. In coöperation with English houses, they brought out the American editions of many important series, such as the works of Froude, the "Epochs of History," the Hibbert Lectures, and the writings of Stevenson. Their list of American authors includ-

ed some of the most popular writers of the half-century from Marion Harland and Frank Stockton to Thomas Nelson Page. The connection of the firm with the ninth edition of the Encyclopædia Britannica has already been referred to. Among the popular Scribner authors of this earlier period may be mentioned Dr. John G. Holland, who interested himself later in bringing into existence the earlier *Scribner's Monthly*. The heads of the house of Scribner had from an early date been active with the Appletons and with the Putnams in the work for international copyright.

The list of George P. Putnam included during these years the works of Washington Irving, Bayard Taylor, Susan Warner, and a number of other American authors. It included also an increasing list of the authorized American editions of English books. Mr. Putnam originated and carried on during the years of the Civil War the "Rebellion Record," which has since proved an indispensable quarry for the work of historians of the war. Mr. Putnam was the first American publisher to invade England, and he carried on publishing business in London from 1841 to 1848. Since 1848, the Putnams have maintained close publishing relations with Great Britain, and their books bear the imprint of New York and London. Up to the time of his death, in 1872, George P. Putnam gave unremitting effort to the work of obtaining international copyright. It was his belief that an international copyright relation was not only essential for the good repute and ethical standards of the book-reading communities of the United States, but that it would prove of essential service for the interests of publishers, of authors, and of readers on both sides of the Atlantic. During the last quarter of the century, the Putnams brought into print authoritative editions of the series of the Writings of the Fathers of the Country from Washington to Lincoln.

Anson D. F. Randolph, who was also interested from an early date in the international copyright undertaking, had given his energies chiefly to the development of a retail business. He had brought together upon his list a number of religious authors, most of whom were his personal friends, and he also had some books of a popular character, such as the "Stepping Heavenward" of Mrs. Prentice.

M. W. Dodd, the founder of the firm later known as Dodd, Mead & Co., had given his attention largely to books of a religious character. Even such fiction as the Schönberg-Cotta books was largely of this nature. Under the management of Mr. Dodd's son and successor, Mr. F. H. Dodd, the business of the firm was widened out with undertakings of large importance. The most noteworthy of these was the International Encyclopædia. After some twenty-five years of development, a reshaped, one may perhaps not venture to say a final, edition is now in the press. Dodd's literary monthly, *The Bookman*, is rendering excellent service to the interests of authors, publishers, and readers.

The house of Sheldon concerned itself partly with educational books, and largely with popular religious literature. The Sheldons made a great success with the American editions of Spurgeon's sermons, from which, notwithstanding the absence of copyright protection, the author obtained important returns.

Robert Carter & Bro. controlled a large part of the business of supplying the books for Sunday-school libraries, Presbyterian and others. They had on their list a number of wholesome popular books for young people, such as the "Rutherford Children," by the Warner sisters. The firm brought its business to a close after the death of Robert Carter in the early eighties.

Ivison, Blakeman & Co. and A. S. Barnes & Co. were during this period probably the largest educational publishers in the country. It was, I believe, under the direction of Henry Ivison that the great combination was made between the New York educational publishers and two houses of the West, which resulted in the organization of the American Book Company.

The interests of the medical profession were supplied in New York by William Wood and by the medical department of D. Appleton & Co. The authoritative publishers of scientific and technical publications were John Wiley & Son, whose house dates back to 1837, and David Van Nostrand. The most important production, speaking commercially, of Van Nostrand, was Casey's "Tactics," which was put together rather hurriedly in 1861 in order to meet the urgent needs of the newly constituted volunteer army. The "Tactics" was printed in three volumes, and in the years between '61 and '65 Van Nostrand placed "in the field," so to speak, no less than 300,000 sets.

Nearly every youngster who went into the ranks during these years was impressed with the thought that he might wake up any morning and find himself a brigadier, and that it was important to have the necessary preparation. He was, therefore, not content to purchase the first volume, which provided the Manual of Arms and the routine for the soldier, but he put into his haversack also the two volumes giving the principles of regimental and brigade drill and of larger military movements. These books were scattered over every battlefield of the Confederacy.

The firm of Henry Holt & Co. was founded in 1866 under the style of Leypoldt & Holt. From the beginning its undertakings, outside at least the list of textbooks, were all to be classed as belonging to literature with a high literary standard. Among the transatlantic authors whose books were issued (before the copyright law of 1891) in authorized editions, the most noteworthy were Mill, Maine, Taine, and Symonds. One of their latest publishing undertakings, the *Unpopular Review*, represents a personal interest of its editor, the founder of the house. The issues for the first two volumes have been described, and with justice, as presenting the most noteworthy collection of essays that have thus far been brought into print in the United States.

The Century Company, which began business in 1870 with the publication of the *Century Magazine* (a development of the original *Scribner's*), succeeded in the course of a few years in building up a valuable list of hymn-books and a group of important works of reference, of which the Century Dictionary was the most noteworthy.

Funk & Wagnalls, a house under Methodist management, had obtained a circle of readers throughout the country for their religious publications. Their most important undertaking was, however, the great Standard Dictionary. Their well-edited periodical, the *Literary Digest*, has been of noteworthy service in furthering the circulation of books.

The imprint of the firm of F. H. Revell & Co., of New York and Chicago, has been associated with a series of popular religious works and of fiction largely religious in its character.

After the year 1870 New York became more and more the centre of the publishing activities of the country. Authors found in New York, first in magazines and later in the larger book-publishing facilities, better opportunities for presenting their productions to the public than were offered in any other city. A country made up of many communities, with diversified interests, with local pride, with great variety of local characteristics, will never, however, accept the domination, or even for long the assured preëminence, of any literary centre. By 1880 the city of Chicago, which had long been an important centre for the distribution of books, began to take charge also of their production.

The firm of S. C. Griggs & Co., succeeded by that of A. C. McClurg & Co., brought into publication various series of textbooks, largely prepared by Western educational workers and, therefore, particularly addressed to Western interests; to which has been added a group, becoming in these later years of increasing importance, of works in general literature.

Among the New York firms whose operations do not date back further than the past twenty-five years, but whose undertakings are assuming increasing importance, are to be included F. A. Stokes & Co. The Stokes imprint has been associated with a long series of books on art and with popular and successful fiction by authors from both sides of the Atlantic.

The firm of Doubleday, Page & Co. has within a few years' time built up a great publishing and manufacturing business. The most successful divisions of the Doubleday list are the books on rural science and noteworthy works of American and English fiction.

In the early eighties the publishing activities of Indianapolis were initiated with the publication of the first volume by James Whitcomb Riley. This book obtained at the

outset but a local fame, but in the succeeding quarter of a century the poems of Riley have found increasing circles of readers throughout the entire country. The publishing energies of Indianapolis, under the direction of such enterprising houses as Bowen, Stewart & Co., and their successors, Bobbs, Merrill & Co., have steadily developed.

The publishing activities of San Francisco may be said to date from the issue in 1875-76 of the historic study by H. H. Bancroft of the "Native Races of the Pacific Coast of North America." In 1883-90, Mr. Bancroft brought into print his great "History of the Pacific States of North America," a work which is a magnificent example of initiative and of executive capacity in combining under one general control the contributions of a great group of investigators. The Bancroft house, whose imprint appears on both of these works, has not, however, been able to continue its publishing activities. The most important of the books printed in San Francisco during the past quarter of a century belong to the department of law. In this department should be mentioned also the magnificent series of law publications issued during the past thirty years by the West Publishing Company, of St. Paul, Minn. The operations of this firm began with the printing of local law reports, but have widened out so as to include the shaping of law material for the use of the profession in all the forty-eight States of the Union.

The publishing undertakings carried on in Cleveland by the firm of Burrows Bros. & Co. call for mention. In the course of the four or five years succeeding 1895, the firm brought into print a series of authoritative works on the history of the early explorations of the Territory of the Northwest. To Cleveland is also to be credited the important series of "Early Western Travels, 1748-1846," edited by Professor Thwaites, and issued with the imprint of the Arthur H. Clark Co.

The publishing undertakings of Ohio include the important lists of textbooks published in Cincinnati by two educational concerns which joined afterwards in the organization of the American Book Company, with headquarters at New York.

As a result of the interest of certain of the great British publishing houses in obtaining their share of the American market, branches were established of Macmillan & Co. and of Longmans, Green & Co. The enterprising managers of the New York houses were not content to bring their English productions into competition with the lists of the American houses, but have succeeded during the half-century in getting the control of a number of works by noteworthy American authors. A similar course has been followed by certain of the American houses which have, in like manner, established branches in London. The business of the Putnam house in London goes back to 1837. During the past twenty-five or thirty years the Harpers, the Appletons, and the Lippincotts have carried on in London branch houses under their own names.

In Philadelphia, one of the most important divisions of publishing has for many years been that of medical books. The firm of Henry C. Lea, succeeded later by Henry C. Lea's Sons and by Lea & Febiger, has associated its imprint with some of the most noteworthy productions in medicine from both sides of the Atlantic. Other important medical lists are those of Presley Blakiston & Sons and of J. B. Lippincott Company. With the last-named house, however, the medical books constitute but a small division of the publishing undertakings. The house has brought into print during the past half-century a very important group of standard works of reference, of which perhaps the first in point of date was the "Dictionary of Authors," by S. Austin Allibone. The firm of Henry Carey Baird & Co. has for nearly three-quarters of a century given attention to technical works and to science applied to manufactures.

The interests of the book trade in the United States have been admirably presented, and, one may say, directed, by the *Publishers' Weekly*, which during the past twenty-five years or more has been under the direct management of R. R. Bowker. The *Publishers' Weekly* represents, in my judgment, the highest standard of trade journalism that has been reached on either side of the Atlantic.

The publishing business during the past half-century has, of course, been affected by the general conditions which control all business, and by such influences, favorable or adverse, as have a special effect on business in luxuries, to which class books must be considered to belong. Its conditions have further been very materially modified by the establishment in 1891 of international copyright relations with Great Britain and with the principal cities of the Continent, conditions which have been modified by the later statute of 1909.

The publishers took an important part in the work which brought about the international copyright relations of 1891. The Publishers' Copyright League, which was practically a reconstitution of an association originally organized by G. P. Putnam as far back as 1837, worked through its executive committee, in coöperation with a similar league of authors, composers, and artists, and after efforts which had extended back for more than half a century, the two leagues finally succeeded in effecting the enactment of the statute of 1891. Under this act, copyright protection was accorded to transatlantic authors whose states extended reciprocal protection to American authors. The Act of 1909 gave more liberal conditions for the works of transatlantic authors the original issues of which were produced in languages other than English. The international copyright relations which were established as a result of the Act of 1891 practically brought to an end the old-time practice of piratical publishing, that is to say, of the production of unauthorized editions of works for which no payments were made to the authors. The statute is not in line with the copyright statutes that have during the same half-century been put into force in Europe. The European states had combined in 1887 in the Berne Convention, under which authors could obtain throughout the territory of the states belonging to the Convention, and free from any restriction of local legislation, full protection for their productions.

In order to secure the enactment of the American statute, it had been necessary to accept the restrictions imposed by the labor unions, and approved by the protectionist majority in Congress, which made necessary the manufacturing in the United States of the editions of the works, whether transatlantic or American in origin, which were to have protection of American copyright. The objection was naturally raised that the matter of protection ought to be considered in a tariff act, and was not properly germane to copyright. The rejoinder, however, on the part of the protectionists was simply to the effect that, unless the bill conceding copyright to foreign authors should carry this manufacturing condition, it could not be brought into law. Even with these restrictions, the international copyright arrangements marked a decided advance in literary relations and in the standard of national action; but both the act of 1891 and that of 1909 present serious inconsistencies and inadequacies. It is only in the United States that a copyright statute gives protection with the one hand and undermines this with the other. In every other state which possesses a system of copyright, the producer (in the case of books, of course, the author) and his business representative or assign, the publisher, has given to him under the law the full control of his production. He has a right to place the work in the market or to withhold it from sale. The author or publisher is placed in a position to fix such selling price as may be thought wise or desirable, and the publisher is free to make advantageous arrangements for the control of selling conditions.

The American statute, on the other hand, after in form giving to the producer and to his assign the full copyright control, in later provisions undermines the home copyright market by giving to institutions, associations, and individuals the privilege of importing, without reference to the restrictions of copyright, any transatlantic books or transatlantic editions that they may desire to purchase. One result of this breaking down of the American market has been to hamper the production of the international series. The American publisher is naturally unwilling to assume any large share of the investment in international publishing undertakings when he is able to secure not the control of the market of his own country, but merely the privilege of competing within that market with the European editions of the same work. The further result has been the lessening of the production of American editions of books originating on the other side of the Atlantic. It is the impression of Congressmen that if you will

only remove restrictions and prevent "monopoly," you will further production. With books, the exact opposite is the case. A publisher will not assume the risk and investment for an important publishing undertaking, the American edition, for instance, of a transatlantic work, unless he can be assured of the control of his own market. If an American edition is not produced, the American reader who needs the book must content himself with procuring a copy of the transatlantic edition, which will in a large number of cases be much more costly than would be the book produced to meet the special requirements of the American market.

The American publishers have, during the past few years, been working under increasing difficulties in connection with the decision that the Sherman Act (the framers of which had, of course, very different purposes in view) must be construed by the courts as applying to the production and distribution of books. In the United States, alone of all the book-producing countries of the world, the book trade, representing the joint interests of authors, publishers, and booksellers, is not permitted to maintain regulations for the conduct of its business. In Germany, for instance, since the organization in Frankfort, in 1523, of the book producers and dealers, there has been a scientific regulation of book-distributing methods. As a result of the authority left in the hands of the central organization, book-buyers in Germany have been able to obtain in all German-speaking communities, at the lowest possible prices, and prices which are absolutely uniform, the writings of the authorities on their several subjects. The same has been true for nearly as long a period in France, Spain, and Italy, and during the past twenty-five years in England. The confusion that comes into the minds of Congressmen, and of many thousand citizens behind the Congressmen, in regard to the term "monopoly," is now standing in the way of the maintenance throughout the country of intelligently managed book-shops, and unless Congress can be brought to a better understanding of the nature of the problem, there must be a serious undermining of the book trade throughout the country. The increasing use of books sold at cut prices as advertisements for other goods, brings, of necessity, a crushing disadvantage upon the operations of legitimate booksellers. The hope of authors, publishers, and booksellers, and of all citizens who are concerned with the production of patented and other "standardized" articles, is for the enactment of legislation permitting, for the advantage of the community no less than for that of the producer, the regulation of the prices of standardized articles. The Stevens bill, now on the calendar of the House, has the support of a number of concerns producing standardized articles, which have organized the Fair Trade Association. If some such legislation can be enacted, and a consistent copyright system be secured, the business of publishing in the United States should be assured of satisfactory development.

Historical Writing

ITS TREND DURING THE YEARS 1865-1915 AND THE OPPORTUNITIES WHICH THE PRESENT HOLDS FORTH.

By WILLIAM ROSCOE THAYER.

The *Nation's* half-century of vigorous existence bridges what is popularly regarded as a complete transformation in the principles which govern the writing of history. In 1865 the doctrine of evolution had taken hold of the younger historians as a gospel to be followed joyously, trustfully, triumphantly. Almost every other field of intellectual activity was being cultivated by the "scientific method." Taine, with his wonderfully clarified gift of exposition, had popularized the idea that the history of the fine arts or of literature, of institutions and of religions, could be explained by the formula of development, which ran its inevitable circuit in each from birth to death. Man was a part of material nature; material nature was governed by fixed laws, the investigation and codification of which was the task of Science; therefore, man's most intimate self, his will power and his acts, his intuitions and the products of his imagination, could all be brought within the formulas of natural law.

The method of scientific investigation in history had been elaborated long since by the Germans, who, under the lead of Ranke, professed to write history as they would write a treatise on chemistry or medicine or philology. The historian must make himself as impartial as a photographic plate. The earlier ideal made him a judge, whose duty it was, in commenting upon historic movements and personages, to render an impartial verdict: but the scientific historian held himself above good and evil, and in describing the past he regarded it as none of his business to let you surmise that he had any preference between, say, the acts of St. Francis of Assisi and those of the Duke of Alba. True to his rôle of sensitized plate, he took whatever was in front of him.

It is late in the day to say that every one worthy of the name of historian long ago accepted the scientific method of investigation; but perhaps it is not too late to assert that this method was not invented by the Germans. Gibbon practiced it; so did Thucydides—to mention no others—and as both Gibbon and Thucydides possessed other qualities which have not been vouchsafed to German historians, and as they wrote in English and in Greek—languages which, as vehicles of prose, the German cannot approach—their histories are more, much more, than examples of the scientific method.

The attempt so to dehumanize yourself that you study with equal insensibility the doings of atrocious monsters and of beneficent heroes, has never really succeeded. Let the fanatic possessed by that delusion try never so hard, the very human nature which he denies, and which he thinks he has stripped off, will glide back into his work. To narrate human history, you must be human, intensely human, and not pretend that you are *sub*human, or *un*human or *super*human.

The historian uses, as a matter of course, the scientific method, just as the judge uses it, who hears all the evidence before forming an opinion. But let us not delude ourselves into supposing—as so many who discuss this subject do—that the mere use of that method qualifies a man as an historian. Method is only machinery, a tool, an instrument, a key; but what results from its use depends upon the individual user. A hundred surgeons, all taught by the same method, pursue their profession with very different achievement.

I may remark in passing that of the two modern German historians who are generally ranked at the top—Mommsen and Treitschke—although both are masters of the scientific method, neither has succeeded in hiding his personal equation. You cannot read ten pages of Mommsen's "History of Rome" without perceiving that you are dealing with Theodor Mommsen and no other—with a vigorous mind and a broad scholar who, whether consciously or not, interprets the story of Rome according to his preferences and beliefs; and Treitschke is a vehement special pleader, undisguised and unashamed, who makes no more pretence that his doctrines are not the only true doctrines, than Macaulay pretended that Whiggism was not by nature superior to Toryism.

Fifty years ago, when the *Nation* came into the field, Macaulay had recently died; Carlyle, though still vigorous, had long since delivered his message and revealed his methods; and Grote had completed his "History of Greece," a work which, conceived in the "pre-scientific" days, still embraced all the special learning that bore on his subject. Except that Grote is the better writer, you could hardly tell now that he and Mommsen were not writing according to the same canons—Grote making the story of Greece an example of Republicanism, and Mommsen making the story of Rome a glorification of Imperialism.

Midway between this older group and the younger stood Froude, born in 1818, a disciple of Carlyle in aims and methods, the possessor of a remarkable pictorial gift, but lacking certain qualities, moral rather than intellectual, which have tended, in the long run, to diminish his fame.

With Freeman (1823-1892), Stubbs (1825-1901), and Gardiner (1829-1902) "scientific" historical writing in England reached its height. They exerted a deep influence on historical students in the English-speaking world, and reinforced what were supposed to be the special glories of their German models. Freeman, intellectually restless, opinionated and disputatious, not only loaded his "History of the Norman Conquest" with a ponderous ballast of footnotes which a German dryasdust might envy, but threw out controversial articles on particular points; and, when he came to the "History of Sicily," he decanted his fermenting erudition in in-

numerable appendices—up to XX, YY, and ZZ—which must astonish the latter-day readers—if there still be any of that elephantine fragment.

In his "Constitutional History" Stubbs had a subject which, like a treatise on jurisprudence, was peculiarly fitted to a depersonalized treatment. But when he came to write his lectures and other works, his personality had free play, and, in his own account of how he prevented John Richard Green from reading Renan's "Life of Jesus," we have first-hand evidence that he was, for all his "scientific" training, fundamentally dishonest. For any historian who deliberately tries to prevent another from reading arguments opposed to his own view cannot be called honest.

Samuel Rawson Gardiner reached, it seems to me, the highest level that this school of historians can ever hope to reach. He was precise as to facts, unbiassed in judging persons, thorough in collecting material, and sober in discussing it. But can a history truly represent life if it leaves on you the impression of monotony? If it hardly differentiates, in its attempt to be minutely accurate in events, between the important and the negligible? If it never glows or throbs? Perhaps among some of the seventeen volumes of Gardiner—I have not read them all—these defects may be remedied; but when I look at the shelf on which those seventeen volumes repose, and remember that had Gardiner lived, he would have gone on, to the end of time turning out a volume every sixteen months—so that we can compute how large the output would be by now, and how much larger in 1950—I feel as one does who stands on the brink of a glacier and learns from the guide-books where, at its unchanging rate of speed, it will be at any given date. Every student of historical writing should read in Gardiner's work; but he will imitate it at his peril.

Separated by only a decade from the three supposedly "scientific" historians, came John R. Seeley (1834-1895), John Richard Green (1837-1883), John Morley (1837), George O. Trevelyan and James Bryce (both born in 1838). The last three are the veterans of to-day, bred in their historical work at the moment when enthusiasm for the evolutionary treatment of history was in spate and the scientific method was revered as infallible. Is it fanciful to say that these three men exemplify in their works the happy balance, the desired union of qualities without which historical writing must be doctrinaire? Mr. Bryce's earliest book, "The Holy Roman Empire," shows the most patient erudition in the assembling of material, together with critical finesse in examining and objectivity in presenting it; his later works, such as "The American Commonwealth," are not less erudite and critical, but they gain immensely in value because of their subjective presentation. The conclusions arrived at are James Bryce's; had a sexless, soulless, impersonal quiddity uttered them, they would have left us indifferent or unimpressed.

Mr. Morley also began his career in authorship with biographical studies, in which, although he displayed complete detachment as to facts, he still allowed himself freedom as to interpretation. In him, the critic, especially the literary critic, has always competed with the historian; and, indeed, no man can be a penetrating historian who does not know the literary background of his chosen period. The "Life of Gladstone" is a masterly synthesis, enfolding not only the political, but also the intellectual and religious elements of his subject—an interpretation of a very high order. If Mr. Morley in his youth trusted to formulas as to how history should be written he long since rose above them.

So, too, Sir George Trevelyan illustrates how the true historian, absorbed in his passion to see life and to interpret it livingly, forgets the rule of thumb. It is forty years since he wrote his "Life of Macaulay," the best biography, as I think, of any man of letters, except Boswell's "Johnson"; and now he has just completed his notable history of the American Revolution, in which there is surely no lack of scholarship, no neglect of "sources," no carelessness, no haste.

Of Seeley it must be said that, although educated according to "scientific" rules, he also showed the same tendency to be human rather than to be consciously abstract. A life of Stein might be a noble contribution to biography, but Seeley failed in sense of proportion and in the art of selection. So the life he wrote has large humps and hollows, superfluities and skimpings, as if an artist should set out to draw a horse and achieve a Bactrian camel.

John Richard Green, on the contrary, possessed a fine talent for perspective; but what distinguished him still more was his gift of narration. *History*—let us never forget—is five-sevenths *story;* and a story must have unity and consecutiveness; it must flow on as the stream or river flows; it must be varied by the alternations of sunshine and shadow, of night and day, but still preserve its oneness. No amount of erudition in a narrative historian will ever make good defects in the story-telling quality.

One historian, who belongs chronologically with the earlier group, must be classed, by his product, with the later. This is Goldwin Smith (1823-1910), a man of amazingly rich equipment, who passed through the successive stages of intellectual experience from the fourth to the tenth decade of the nineteenth century, and then, at the age of seventy-six, published "The United Kingdom," a work written without reference to any school or *ism*—the fruit of a lifetime of study and meditation, shaped by a keen and sometimes savage wit.

Of the younger British writers of history I will not speak in detail. Each school has its champion among them. The learned Professor Bury insists that history is "scientific" or nothing, while the versatile and vivid Mr. George M. Trevelyan, standing in the opposite camp, teaches by example the futility of cramping any representation of life into the straitjacket of doctrinaire formulas. In the main, however, contemporary British historical writers start with the assumption that they must know their subject thoroughly, and then they aim at producing works which have, as the best English histories have always had, strong human interest and pertinence.

In the United States, the course of development in historical production has resembled that in England, but with one striking difference. Most of the college professors of history here during the past fifty years got their final education in Germany; and in characteristic American fashion they have run to an extreme. They have worshipped the German method, as if it were everything, forgetting that the German historians themselves—Droysen, Sybel, Treitschke, and the rest—made history a vehicle for their national propaganda. Our professors have for some time had the machinery: but it is noteworthy that the three leading American historians of this period—Francis Parkman, Henry Adams, and James Ford Rhodes—were not, so to speak, machine-made. Parkman, whose "Pioneers of France in the New World" came out precisely in 1865, and who combines in so many respects the chief requisites of an historian, taught himself. Mr. Henry Adams, although he served as assistant professor of history at Harvard for seven years, is the last man in the world to be anybody's disciple; his methods are his own, just as his extraordinary gift of expression is his own. Mr. Rhodes had no formal training; and, while he seems sometimes to hold the "scientific" formulas in such respect as they might claim if they were the *end* instead of merely the *means*, the traits which stamp his history—poise, sympathy, insistence on being just—never came from formulas.

The time appears to be at hand when, through a clear understanding of the purpose of history, its subdivisions and collaterals will not be mistaken for the great subject itself. If a law school should teach its students nothing more than to run down the titles to deeds, or to draw a will, it could hardly be more restricted than those American history departments have been which made the tracking of original sources the beginning and end of history. Conveyancers are indispensable in the ordinary business of life, but they do not take the place of the Marshalls and Storys and Choates; nor is the "original researcher" equal to or a substitute for the historian. This is coming to be seen.

And with this realization the conviction is spreading that it is not what principles or method the historical writer professes, but what he writes, that counts. The writers of fiction are classified as realists or romanticists, impressionists or veritists, but the label is no guarantee of the worth of the novel. So likewise the great historian will be great not because he embodies the doctrines or mannerisms of a school, but because of his own inalienable and untransmissible qualifications.

Former Editors of the "Nation"

EDWIN LAWRENCE GODKIN.

Edwin Lawrence Godkin, founder and first editor of the *Nation*, to whose gifts and influence many articles in this issue have paid tribute, was born at Moyne, County Wicklow, Ireland, on October 2, 1831. Both his parents were of English ancestry, and his father, the Rev. James Godkin, a Presbyterian minister with a marked gift for writing, after being forced from his pulpit on account of his espousal of the cause of Young Ireland, became a journalist of some distinction. Thus, the young Godkin, the eldest child of his father, came legitimately by his birthright.

Mr. Godkin received his early education at a preparatory school at Armagh, and later, at the age of ten, was sent as a boarder to Silcoates School, Wakefield, Yorkshire. At school, where the fine old-fashioned system of a little Latin and perhaps less, perhaps more, Greek seems to have prevailed, we find no record of any particular distinction, save that in his day there was a mania among the boys for bringing out magazines, and that competition was finally discouraged by the unapproachably lofty tone established by the organ for which young Godkin was responsible. A delicate boy, Godkin, after leaving school, pursued his studies for some time at home under the tuition of an uncle, the Rev. John Edge, thereafter entering the classical department of the Royal Institution, Belfast, under Dr. (afterwards Sir) Thomas W. Moffett. In 1846 he entered Queen's College, Belfast, where, although he won a scholarship, his biographer, Mr. Rollo Ogden, remarks, "his academic career was rather promising than distinguished," for we are told that "he was fond of dancing parties and amusements." After graduating at Queen's College in 1851, he went to London to study for the bar at Lincoln's Inn. Almost immediately, however, he found employment with Cassells, a house with which his father had been connected, and for a time he was sub-editor of their magazine.

In 1853, at the tender age of twenty-one, he published his first book, "A History of Hungary," a work of considerable merit, of which years later, writing to Charles Eliot Norton, Godkin said characteristically: "I am forced to admit that the philosophical reflections scattered through it are fearfully profound. Indeed, on looking through it, I am surprised that the production of so much wisdom at that early age did not exhaust me more." The stress of daily and weekly journalism leaves but little time for the writing of books, and it is to be regretted that Mr. Godkin was never able to finish the "Memoirs" which he had planned. "Reflections and Comments" was, however, published in 1895 by the Scribners; "Problems of Modern Democracy" by the same house in the following year, and "Unforeseen Tendencies of Democracy" by Houghton Mifflin in 1898. In addition, Mr. Godkin was the author of numerous articles in American and English magazines, and contributed to the Encyclopædia Britannica.

In the same year in which he published his first book, Godkin may be said to have definitely commenced his journalistic career with his correspondence from the Crimea to the London *Daily News*. A connection was thus begun that lasted through many years of Mr. Godkin's life. Of the Crimean letters and of those which he wrote later from the United States it is sufficient to say that they set a standard for foreign correspondence which has seldom been equalled, hardly ever surpassed, and that the memory of the author is cherished to this day in the office of the *Daily News* with scarcely less respect than is accorded to it in the American offices with which his connection was so much more intimate.

Mr. Godkin returned from the Crimea to England in 1855, and for some months of the next year was on the editorial staff of the Belfast *Northern Whig*. In November, 1856, he came to America, finally obeying the call which he, like many another Irish youth, had long been hearing. After undertaking a tour of the South, in the course of which he contributed a series of remarkable letters to the *Daily News*, he settled down in New York to read for the bar, to which he was admitted in 1858. In 1859 he gave further pledges to the land of his adoption by his marriage with Miss Frances Elizabeth Foote, of New Haven.

A tour abroad followed which lasted for some two years, and in the course of which Mr. Godkin did signal service to the cause which he served for forty years thereafter—that of promoting mutual understanding between the land of his birth and the land of his adoption—by setting before English readers the American point of view of the Trent affair. After his return to America he was for a short time on the editorial staff of the New York *Times*. On July 6, 1865, the ambition of his life was realized and his real career commenced when the *Nation* was founded and he was installed as first editor.

Various incidents of Mr. Godkin's subsequent career have been recorded in this issue by the pens of his contemporaries and associates. It remains only to make note here of a few outstanding dates. In 1881 Mr. Godkin began his editorship of the *Evening Post*, at first sharing the responsibility with Carl Schurz and Horace White, but after two years becoming editor-in-chief, still, however, enjoying the coöperation of Mr. White. On June 14, 1884, he married for the second time, his bride being Miss Katherine Sands. In the autumn of 1899 Mr. Godkin, who for some time had been in failing health, resolved to retire from the editorship of the *Evening Post*, after eighteen years of strenuous service, instead of the ten which he had fixed as the maximum of his labor when he originally accepted the position. In the spring of 1901 he made his final trip to England, for which through some months of ill-health he had had an intense longing. He never returned to America, but died at Greenway, Devon, on May 21, 1902. It was appropriate that the finely worded inscription over his grave in the old churchyard at Hazelbeach, Devon, should be written by James Bryce, his friend of thirty years, who more than any man of our time is comparable to him for loyal service rendered to two countries.

WENDELL PHILLIPS GARRISON.

Wendell Phillips Garrison joined the staff of the *Nation* at its inception as literary editor, and soon by a natural process undertook the general supervision of the editorial side of the paper, relieving Mr. Godkin of the details of management and correspondence with contributors and leaving him more free to devote himself to editorial writing. On the amalgamation of the *Nation* and the *Evening Post* in 1881, Mr. Garrison became general editor of the former, a position which he continued to fill with conspicuous ability and distinction until his retirement, after forty-one years of devoted service to the paper, in 1906. Mr. Garrison was also for many years literary editor of the *Evening Post*.

The third son of William Lloyd Garrison, the Liberator, and Helen Eliza Benson, Wendell Phillips Garrison was born at Cambridgeport, Mass., on June 4, 1840. He was educated at the Boston public schools, the Quincey, the Dwight, and the Latin, and entered Harvard in 1857. After his graduation in 1861, he was engaged for two years in private tutoring. In January, 1864, he joined the staff of the *Independent*, at that time edited by Theodore Tilton. The following year he came to the *Nation*, and to trace his career thereafter would be largely to trace the history of the *Nation*. The distinguished services which he rendered to literature and to criticism in America were fittingly recognized when, on July 6, 1905, two hundred contributors of the *Nation* entered into a conspiracy, as he afterwards termed it, to present to him a memorial on the fortieth anniversary of his connection with that periodical. The dedicatory inscription was written by Goldwin Smith, and ran: "Presented to Wendell Phillips Garrison as a token of gratitude for the service rendered to his country by his forty years of able, upright, and truly patriotic work in the editorship of the *Nation*." The secrecy with which the arrangements for the presentation were made was the best tribute that could be paid to Mr. Garrison's modesty and self-effacement, which, next to his high intellectual integrity, were the most outstanding qualities of his nature. It was characteristic of him that in the beautiful acknowledgment of the honor which he penned in the *Nation* of the following week he should seek to transfer the whole credit for the results of his forty years' labor to Mr. Godkin.

It is on his work as an editor that Mr. Garrison's chief reputation rests, but in addition to the numerous critical articles and reviews which he contributed to the *Nation*, he published some books and wrote occasional verse, distinguished for its literary grace and felicity, in which the sonnet form predominated. Among his publications may be mentioned: "Life of William Lloyd Garrison," four volumes, in coöperation with his brother, Francis Jackson Garrison; "What Mr. Darwin Saw on His Voyage Around the World," and "The New Gulliver."

Mr. Garrison was twice married, the first time to Miss Lucy McKim, in 1865, and the second time to Mrs. Anne McKim Dennis, in 1891. He received an honorary A.M. from Harvard in 1895. He died on February 27, 1907.

HAMMOND LAMONT.

Hammond Lamont, third editor of the *Nation*, was born at Monticello, Sullivan County, N. Y., on January 19, 1864, the eldest son of the Rev. Thomas Lamont, pastor of the Methodist Episcopal Church of that town. He attended the local schools at the various places to which his father was called, finally preparing for college at the Albany High School. He entered Harvard in the autumn of 1882, and graduated with the class of 1886. The following year, after a winter of private tutoring in New York city, Mr. Lamont began his newspaper career as a reporter on the Albany *Argus*, serving subsequently as editor of the Albany *Morning Express* and

Albany *Evening Journal*. In the spring of 1890 he went to the Pacific Coast, and in the succeeding two years gained a considerable reputation in the newspaper field at Tacoma and Seattle. In 1891 he married Miss Lillian Mann, of Nyack, N. Y.

During the eight years from 1892 to 1900 Mr. Lamont relinquished his increasingly brilliant journalistic service for that of teaching, in which he was no less successful. In 1892 he returned to the East, to become instructor in English at Harvard. After three years there he accepted the associate professorship in English at Brown University, three years later becoming full professor. He remained at Brown until 1900, when he returned to the newspaper profession, as managing editor of the New York *Evening Post*. In 1907 he succeeded Wendell Phillips Garrison as editor of the *Nation*, continuing in that capacity until the day of his death in May, 1909.

Mr. Lamont was distinguished by extraordinarily wide general information, and by unusual clearness, accuracy, and vigor of English style. As an editor he was conspicuous for his unflinching scrupulousness of conscience and the firmness of his professional standards. Joined with these qualities were warmth of human sympathy and an almost unerring sense of justice, which won for him the personal affection and the highest respect of his associates, both at college and in the editorial room.

He was editor of several textbooks in English, especially well known being his "Specimens of Exposition" and "Burke's Speech on Conciliation with America," and author of an "English Composition."

PAUL ELMER MORE.

Hammond Lamont was succeeded in the editorship of the *Nation* by Paul Elmer More, who, in addition to being literary editor of the *Evening Post*, had served as assistant editor of the *Nation* during Lamont's brief editorship. Mr. More was born at St. Louis on December 12, 1864, the son of Enoch Anson and Katherine Hay (Elmer) More. He graduated from Washington University, St. Louis, in 1887, and received his A.M. there in 1892, and his A.M. from Harvard in the following year. Washington University bestowed on him an honorary LL.D. in 1913. He was assistant in Sanscrit at Harvard from 1894 to 1895, and was associate professor in Sanscrit and classical literature at Bryn Mawr from 1895 to 1897. In 1901 he went to the *Independent* as literary editor, a position which he held until he joined the staff of the *Evening Post* in the same capacity in 1903. He became editor of the *Nation* in 1909, retiring from the office in March last year, that he might find more leisure for his own writing.

Of Mr. More's great services to the *Nation* it is not appropriate to speak in this formal notice. Happily, they were not discontinued by his retirement. He remains a frequent and valued contributor, and in an advisory capacity the wide scholarship and the discriminating taste which have given him front rank among American critics are still put freely at the disposal of, as they are warmly appreciated by, his associates of the *Nation*.

Mr. More is the author of a number of volumes of critical essays—which must now be approaching, if they have not already achieved, double figures—known as the "Shelburne Essays," the title being taken from the country town in New Hampshire, where for two years the author lived a kind of Thoreauesque life, and where he conceived and began to put into execution the plan of his literary work. Among his other published volumes may be mentioned "A Century of Indian Epigrams," "The Judgment of Socrates," and a translation of Æschylus's "Prometheus Bound." Since his retirement, apart from his work in the *Nation*, Mr. More has contributed principally to the *Unpopular Review*.

Two Valued Contributors

On this occasion, when links with the days of Godkin and Garrison are especially cherished, it is fitting to commemorate the services of two devoted employees of the *Nation*, who, more fortunate than the present editors, remember the old régime and were trained to its precepts. Both were associated more particularly with Mr. Garrison, whose fine considerateness and conscience and loyalty they still vividly reflect. That neither has since known a man quite Mr. Garrison's equal may, perhaps, explain their solid Toryism. Averse, for whatever reason, to *novis rebus*, their presence in this office should give comfort to older readers, who may have feared that certain tendencies in modern journalism would blind the eyes of younger men to the *Nation's* original vision. In James Hamilton and Howard Anderson the *Nation* has a strong anchor to windward.

In length of service, Mr. Hamilton takes precedence. Coming to the *Nation* in October, 1868, he has remained ever since its clerk of subscriptions, and may be seen in the Counting Room by day, and often by night, jealously guarding his sheets from withdrawals. That these sheets happen to be a vivid yellow is one of the ironies in the life of a man so opposed to sensationalism. Another is the preoccupation with vacations by one who will never take a vacation himself. Though he is constantly busied these summer months with changing the addresses of others, his own address remains, summer and winter, 20 Vesey Street.

Howard Anderson has been for twenty-nine years superintendent of make-up. A soldier under Gen. (then Major) Woodhull, he was brought by the latter to the attention of Mr. Garrison, who divined the character of the young man and promptly employed him. Though Gen. Woodhull has frequently bestowed friendly services upon the *Nation*, this one act, no less than others, stands out at the present time as invaluable. For "Andy" has the soldier's precision and neatness, and, quite apart from any soldierly training, an inflexible conscience, which demands that even what is Greek to him shall be Greek to a Grecian, too; and nothing could better reveal the man than his care in setting up, always by hand, the excerpts which the *Nation* not infrequently publishes from this ancient tongue. Much more considerate of Greek accents than Jowett, he is chagrined if the galley proof shows a mark awry. It is in itself a tribute to him that, though he is in a position to retire to less exacting work, his loyalty to the *Nation* and his love of intellectual interests still hold him to his present responsible post.

The *Nation* is glad to bear witness to the rare qualities of both men, and trusts that for many a year they may continue to perpetuate in this office the personality of Garrison, who was in every way a most powerful influence in their lives.

Book Notes and Byways

BEGINNINGS OF MODERN JOURNALISM.

EARLY RECORDS OF THE "LONDON GAZETTE."

Some isolated facts regarding the *London Gazette* seem sufficiently valuable to deserve presentation collectively. The journal has had perhaps the longest continuous existence of any periodical in the language, and during all these years it has been the official organ of the English Government. To-day, as in the time of Charles II, its announcements are considered the most authoritative statements available in matters of state.

The present article deals with some facts regarding the early history of the paper, and more particularly with the conditions affecting its publication during the reign of Queen Anne. Before 1700 the *London Gazette* had a comparatively uneventful career; in spite of a growing interest in political journals after 1650, it remained for years merely the medium for domestic and foreign news of an official nature. Later its importance became greater, especially when the political groups began to organize their news agencies more thoroughly, so that during Queen Anne's reign the *Gazette* may be said to have served the Government as earnestly as any periodical then serving a party.

This journal appeared first as a bi-weekly, and was issued at Oxford. At the time the court of Charles II was in residence there because of the prevalence of the plague in London, and for the same reason Oxford was the seat of the 1665 Parliament. Under the press of such circumstances a court journal became a necessity. The first issue consequently appeared on November 14, 1665, as the *Oxford Gazette*, and this name was used until the court returned to London shortly after. Then, on February 5, 1666, the twenty-fourth edition came out bearing the heading still in use, and at the same time publication from Oxford was discontinued. Meanwhile the *Oxford Gazette* had been reprinted regularly in London as well, so that the court news was current in the metropolis even though the city was under plague restrictions. Thomas Newcombe, known as a printer of Commonwealth organs, brought out the reprints "for the use of some members and gentlemen who desired them."*

Shortly after the *London Gazette* had been well established, there appeared in the city a French edition, called *La Gazette de Londres*. From the existing copies of this journal it appears that the French version was issued first near the close of 1666.† As the evident intention was to send this edition to the Continent, one is not surprised at finding some changes from the matter in the English form of the journal. Variations appear among the earlier issues, but copies issued during 1703 have proved to be literal translations. This peculiar phase of its development cannot be studied at all carefully with so few numbers as remain of the

*H. R. Fox Bourne, English Newspapers, etc. (1887), I, 39.

†See *Notes and Queries*, Series VIII: V. 309, for a different date. The British Museum has copies of *La Gazette de Londres* for May and June, 1682. The earliest of these copies, that for May 15, is No. 1,621; consequently the first issue must have come out during the month of October, 1666.

French journal. It apparently ceased to appear in 1705.

An interesting matter is the extent to which the *London Gazette* was under control of the court party through so long a term of years. At the time of its establishment Joseph Williamson, Under-Secretary of State to Charles II, chose Charles Perrot, an Oxford Master of Arts, as editor, and contemporary accounts prove that he held the office as late as January 12, 1669-70.* This appointment at once stamped the paper as a Government organ, and after the turn of the century further developments made it more definitely recognized as the property of the ruling political party. In 1706 it was determined that "the two under-secretaries on each side [North and South] have the supervision of the news to be inserted in the *Gazette* which came from any place within their respective provinces."† Under this plan of divided duties the officials of the State Department continued to promote the *Gazette* in efficient fashion, so that at the end of the eighteenth century Edmund Malone commented upon the remarkable continuity of the control from the time of Charles II until his own day.‡ Malone noted, too, that the State Office made all appointments of gazetteers, frequently revised proof of articles in the press, and directed completely the financial affairs of the journal. More specific evidence of these facts will appear from other contemporary records.

Among the State Papers of Queen Anne's reign exist some accounts of the *London Gazette* for the first half of June, 1710.§ These records show what disposal was made of all copies issued during the half month, what were the receipts, and what the disbursements. Issues 4,698 to 4,703, six in all, came from the press between June 1 and June 13, 1710, and in each case except the last, 8,500 copies were printed: only 8,250 copies were in the issue for June 13. At each issue 1,087 papers were given away. Of those remaining the number sold, in order of date, was as follows: 5,382, 5,287, 5,366, 5,488, 5,358, and 5,530. The total number of copies sold was therefore 32,411, and the average number per issue was 5,402. Such a circulation was remarkable for that time—at least according to the traditional notions of the condition of periodical literature in that period. The income from these sales amounted to £64 16s. 6d., while the publishers also got from advertisements £38 10s.—over half the sum gained through the public sales. From these two sources, therefore, they realized a gross income of £103 6s. 6d. for the half month.

The account-book contains also an itemized list of payments made during this period, so that it is a simple matter to determine the net profits of publication. Charges for paper stock, type-setting, and printing amounted to £40 12s., and thus a sum of £62 14s. 6d. remained available for payment of editors and correspondents. The next demand met was that of the gazetteer, Richard Steele. The sum paid him, £11 12s., was his full salary for the two weeks, inasmuch as he received annually for his services £300 according to the terms of his appointment. Mr. Delafaye was paid £2 0s. 2d. for some cause not recorded, and fifteen shillings went for "Corr[espondence] to Whitehall, Judges, &c." These deductions having been made from the gross profits, the administrator of funds still had £48 7s. 4d.

Further entries indicate that this administrator was the Earl of Sunderland, Secretary of State for the Southern Department. The account-book bears no signature, but the form of entry and the fact that the *Gazette* had previously been in the control of the State Department lead one to believe these were Sunderland's own records. Since the Earl was merely the paymaster of minor members of the *Gazette* staff, one should not charge him with peculation simply because the largest payment during the two weeks went to him* under the entry, "The Right Honourable the Earl of Sunderland's Moiety of the Profits of the *Gazette* from the first of June to the 15th of June inclusive, 1710, £24 3s. 8d." This sum is half of the total remaining after the payment of all accounts related to editing and publication. The natural conclusion from this is, that the two Secretaries divided equally the gross profits in order to pay the salaries of their assistants. The Honorable Henry Boyle, Secretary of the Northern Department, must therefore have had a sum equal to Sunderland's so as to pay correspondents throughout his section of the country.

The following items in this account (which is concerned only with Sunderland's portion), seem to prove that the Secretaries supported several news-gatherers. The entry to Sunderland's credit precedes a heading, "Out of which sum paid," and following this is a list of small payments ranging from sixteen shillings to £3 17s. The individuals named as recipients are Mr. Paizant, Mr. Bo[rr]ett, Mr. Brocas, Mr. Whitaker, Mr. Newcomer, Mr. Smith, and Mr. Marlow. These items, with one of ten shillings for "office cleaner," and a bill of some sort for £2 10s., brought Sunderland's expenditures up to £15 8s. 6d. It seems, therefore, that he retained £8 15s. 2d., the remainder of his "molety," after satisfying all claims against the *Gazette* from within his district.

The men listed as recipients of these payments were of such slight importance as to be entirely ignored by contemporary writers—at least no names of the list (excepting that of Smith) appear in the standard biographies of the time. But the small sums are on a level with the payments made to correspondents for other journals, and this perhaps is fair evidence that the present record is the account of Sunderland and his correspondents. Apparently Mr. Paizant received a trifle less than thirty-four pounds per annum, while others of the group got as little as seven pounds during the same time.

Our most authoritative record of circulation for the *Spectator*—that of Steele himself†—shows that during its best days the daily issue was about thirty-two hundred copies, or a total per week of nineteen thousand and two hundred. A comparison of this total with the sixteen thousand copies of the *London Gazette* issued weekly as early as June, 1710, proves the existence of a large and intelligent reading public before the *Spectator* had developed its own clientèle. Reluctantly or not, therefore, we must revise our opinions of Addison and Steele as pioneers in the work of popular journalism. We cannot presume that through their help "the people of England really learnt to read,"* when confronted with such records of paid circulation as these of the *Gazette*.

Politically the *Gazette* accounts are interesting as proof of thorough party organization. The modes of distribution show better than anything else how sedulously the Government sought to influence public opinion through the columns of this paper. As early as 1688 a news-letter reported to its readers that a Government order had been sent forth to keepers of coffee-houses and public inns forbidding them to keep "any written or any other news, save the *Gazette*."† This was curtailing the freedom of the press with a vengeance, for the coffee-houses were the most important news centres in London. As an offset to this drastic treatment, publishers of opposition newspapers had their journals distributed free of charge, sometimes to the public-houses and often throughout the residence districts. But they were at a great disadvantage in such work, for the Government was able to outwit them through its general organization. When necessary, papers were suppressed at the post-office and Government journals went out to the addressees in their stead; excise commissioners in country districts disseminated government literature; and inn-keepers under state pay used their influence for the administration party.

The most comprehensive scheme of the sort is revealed by still other unprinted state papers.‡ The document referred to contains six pages of entries dated from June 12, 1703, to December 12, 1711, and all of the sixty-five items refer to newspaper distribution. The accounts seem to be those of a father and his son, whose business was to pay the keepers of coffee-houses for gathering news for the Government. This was done partly through cash payments, partly through the regular gift of newspapers. Twenty-two different coffee-houses were thus kept subject to the will of the Government, and the effect of such control upon the circulation of news can easily be imagined. The landlord could unsuspectedly act as an informer, and he could determine completely what reading matter should fall into the hands of his patrons.

‡The Windham Papers (1750-1810), ed. by Lord Rosebery (1913): 1, 89-90.

§*S. P. Dom. Anne*: Vol. 16, fol. 89.

*It probably is only a coincidence that the end of Sunderland's term of office and the date (June 13, 1710) when these *Gazette* accounts come to a close, coincide exactly. As this seems to be the only itemized account of the sort in existence, one might argue that it is the work of another set to investigate Sunderland's methods. Some color is lent such an assumption by the fact that the account is unsigned. But no outward evidence connects this record with the known devices of the Duke of Somerset, which presumably led Queen Anne to dismiss Sunderland as one step towards a reconstruction of the government.

†The *Spectator* for Saturday, December 6, 1712, reads: "An edition of the former Volumes of *Spectators* of above Nine thousand each Book is already sold off, and the Tax on each half-Sheet has brought into the Stamp-Office one Week with another above £20 a-Week arising from this single Paper, notwithstanding it at first reduced it to less than half the number that was usually Printed before this Tax was laid." This means, then, that after August, 1712, the six issues per week averaged 1,600 copies, and that before that date the average issue had been 3,200.

*Henry Morley (1891) edition of the *Spectator*, p. xx. Any number of similar assertions might be collected elsewhere.

Correspondence.

A GERMAN PROFESSOR'S SATISFACTION OVER THE SINKING OF THE LUSITANIA.

To the Editor of The Nation:

Sir: In your letter of May 13 you ask me my opinion as to the sinking of the Lusitania. Well, I will give you my opinion: I regret the loss of so many lives, but I find the sinking of the Lusitania was *just, necessary,* and *useful,* and I may add that the whole German nation has the same opinion.

(1.) Just, because the Lusitania was a cruiser of the British navy. In Whitaker's Almanack, 1915, p. 255, you find the Lusitania mentioned as a merchant-cruiser at the disposition of H. M. Admiralty. I think that a cruiser of the British navy can be sunk even without warning.

(2.) Necessary, because the Lusitania carried large stores of ammunition. Many thousands of lives of our brave soldiers were saved.

(3.) Useful, because the world sees that the war of the submarines is not a "bluff," but very serious.

I regret that many passengers were killed; but (a) the passengers, and especially the Americans, were warned; (b) their lives would probably have been saved if there had not been such large stores of explosives, in *violation of the American laws.* When American citizens go to Dunkirk or to Verdun, they go there at their own risk and peril. It is quite the same when they cross the war zone under the British flag.

That is my opinion.

Paul Darmstaedter.

Göttingen, Germany, June 2.

SIXTY YEARS AFTER.

To the Editor of the Nation:

Sir: Your readers might like to know of the following, written at the time of the Crimean War, by Ernest Jones, the Chartist poet, and included in his "The Emperor's Vigil and the Waves and the War," published in London in 1856. It appears singularly appropriate at the present time, sixty years after.

Henry Gray.

London, June 2.

BROTHER-LANDS.

The Englishman to the American.

No hostile stranger-nations we,
To war with impious hands:
One land around a common sea;
One people in two lands.

In vain our kindred shores to part
Are waves between us thrown,
The tide that warms a British heart
Is that which flits your own.

No beacon ranged on either beach
But like an angel stands,
To call new hopes from each to each,
And link our loving hands.

No ship that sails from either shore,
While to and fro it plies,
But weaves the thread of friendship o'er
The gulf that 'twixt us lies.

No pilgrims from our harbours part,
Or come with eager oars,
But give you more of England's heart,
And more to us of yours.

No song that soothes our children's rest,
But unto yours is dear;
No lay that stirred our soldiers' breast
But yours have glowed to hear.

No fame that flashed on Britain's brow,
But gleams on yours alike;
Then, if ye can, abjure us now,
Forget it all—and strike!

A RECORD OF NON-MILITARISM.

To the Editor of The Nation:

Sir: As I was looking over some files of the *Nation* for Germany's record on a certain occasion, I ran upon some interesting comments upon another matter pertinent to phases of the present pro-German discussion. First, that Germany is as free as we are, is an argument constantly urged; in fact, one professor has recently declared that Germany is the freest country on earth. Secondly, on the one hand we are told that our belief that Germany is militarist is entirely erroneous; on the other hand, three thousand German university and high-school teachers "are filled with indignation" to see that the enemies of Germany, with England at their head, make a distinction between German knowledge and that which they call Prussian militarism; and a Dr. Grävell writes: "Militarism is the outward manifestation of inner intellectual force, morality, and prosperity."

The following summaries of paragraphs which appeared in the *Nation* in the years 1903 and 1904 seem pertinent to the arguments cited above:

March 19, 1903 (p. 221):
Emperor William pardons a convicted army duellist who killed a civilian. He had been sentenced by a military court to two years.

May 21, 1903 (p. 407):
Emperor William has once more placed himself upon the side of the military reactionaries by accepting the resignation of his brother-in-law, Prince Saxe-Meiningen, because he published a humane order to his army corps, encouraging the private soldiers to report ill-treatment on the part of officers, stating that it was not the Emperor's wish that men should suffer in silence.

June 4, 1903 (p. 447):
Huessner, German ensign, recently killed his lifelong friend Hartmann, private of artillery, for failure to salute him properly. Lieutenant Brüsewitz, who stabbed a civilian for similar offence, got four years; pardoned in two years.

June 18, 1903 (p. 487):
Two ensigns, while out walking recently, met some drunken sailors, and passed to a side street to avoid them. A drunken sailor followed, and struck Ensign von Abel on the back of his head. He at once reported the case to his superiors. What was said to him is not known, but he went directly to his rooms and there killed himself.

February 4, 1904 (p. 81):
Killing of a Saxon lieutenant by a brother officer, whose family honor had been betrayed—the same reason which recently led another lieutenant in Pirna to fight nine others of his regiment. In Dresden, on the same day, an officer who fought a duel with the well-known novelist, Georg von Ompteda, was sentenced to six months' imprisonment. He had eloped with the novelist's wife.

September 8, 1904 (p. 189):
German newspapers abound in horrifying tales of the ill-treatment of soldiers by brutal officers. . . . In Pillau, an artillery lieutenant has been punished for making a soldier carry a heavy part of a breech apparatus around the drill ground in his mouth. In Glogau the military court has been investigating the death of a soldier who was so barbarously treated that he threw himself before an express train to escape his tormentors. It was proved that a sergeant had ill-treated him no less than one hundred and thirty-seven times. In nearly every case the brute struck his victim, and now and again starved him altogether. The sergeant was punished for two hundred and fifty-one offences by imprisonment for only a year and a half. . . . This feeling of dissatisfaction has been increased by a remarkable order (published by the *Vorwärts*) in which the Emperor ordered secrecy in trials similar to that of Lieutenant Bilse.

W. E. Swift.

Indianapolis, May 30.

THE PRINCE DE LIGNE.

To the Editor of The Nation:

Sir: The centenary of the Prince de Ligne, that brilliant cosmopolite of the old régime, was announced for celebration last year. A prospectus was issued, appropriately bearing at its head, in fraternal collaboration, the names and medallions of the Emperor of Austria and the King of the Belgians. A distinguished Comité d'Initiative was prepared to honor in the usual manner the name of the Prince. What remains for our interest is the republication, from his extensive memoirs, of the more characteristic and vivid portions.

This Austrian, who might have outstripped Heine for the title of the wittiest Frenchman since Voltaire, appears not only as one of the most gracious and gallant figures of his day, but also as a specialist in monarchs, an amateur of war, and a link between the old fashions and the new, between the hard enamelling of the *Marquises* and the *sensiblerie* and self-analysis that followed Rousseau. Along with the Abbé Galiani and Frederick the Great he ranks among those foreigners who wrote French with the greatest ease and finish; he is credited, indeed, by Sainte-Beuve and M. Lanson with having a style and spirit essentially French in verve, *esprit,* and worldly charm. He was admired by people so various as Mme. de Staël, the Duke of Wellington, and Mme. Vigée-Lebrun.

He haunted almost every court in Europe; he was the familiar and friend of the Austrian kings, of Frederick and of Catherine the Great; he judges Gustavus II and has the chivalrous attitude of Burke towards Marie Antoinette, the "unfortunate and adorable." Curious of all life, he wandered from capital to capital, a worthier Casanova, an honored and belovèd vagabond, postponing with secret regret his sterner ambition in order to cull the flowers of each rapid season. The chief traits of his character have been vividly touched off by Sainte-Beuve; his youthful lack of family feeling, significant of the time; the growing desire to please and be pleased, resulting in his complete amiability; his flirtations with nature, then so artificially loved; the mingled sense and sensibility of his later stages; his final rôle as master of ceremonies at the Congress of Vienna. His correspondence reinforces the effect of his adaptability, suavity, gayety, together with his facility as an honorable arch-flatterer and his astonishing vigor and buoyancy; his good qualities were admired by that most difficult of critics, a travelling companion and fellow-diplomat—the Comte de Ségur.

The volumes recently announced for republication illustrate just the four aspects of the Prince de Ligne which seem most important—the memoirs of his busy life, an account of his English gardens, his military ideas, and the letters describing his tour with Catherine the Great in 1787. It is in this last particularly, the "Lettres à la Marquise de Coigny," that we find in small compass all his phases and fancies. It is a question of depicting to a coquettish Parisian correspondent this luxurious journey in the Crimea, where court

gossip is contrasted strangely with the description of Tartaric embassies, where classical souvenirs and Iphigenia are incorporated, in the remarkable Letter from Parthenizza, with Rousseauistic revery and feeling. There is the fixed royalism which has scant respect for Franklin and which esteems that *république* is a "frightful and impossible word." There are shrewd judgments of contemporaries, the "policing" of Mme. de Geoffrin, the stiff competence of Ségur, and the whirl of Parisian life, "where one adores, but has no time to love." There are philosophical discussions and careful examples of *esprit:* the pompous old chamberlains of the Empress are beautiful ruins; "Louis XIV would have been jealous of Catherine II, or he would have married her—*pour avoir au moins un beau lever.*" There are instances of rather precious compliment and coquetry and much dwelling on the satisfactions of luxury. There are trivialities, fireworks, *bouts-rimés,* and escapades. There is even a certain cool detachment from crowding actualities, as when the Prince discerns through all the junketing a trend towards war. In language recalling Molière and anticipating to-morrow's perplexities, one practical monarch exclaims: "Mais que diable faire de Constantinople?"

But the best perfumed pages are those where, with a new fragrance of thought and feeling, Ligne, in the Letter from Parthenizza, muses over his honey-seeking career. Here is frankness, here is "the document," though wilfully arrayed in the garb of nascent Romanticism.

Catherine has given him a piece of land, just where Euripides and his followers had placed the legend of Iphigenia in Tauris. He leaves the Durbar of princes and swims gallantly ashore to take possession of "the most beautiful spot in the world." No sooner seated on a Turkish carpet, with the temple of Artemis and polite Tartars in the background, he recalls the tyrannies of Thoas and quotes Voltaire's "Henriade." A complete neo-classicist would have stopped there, glanced at the scenery, and cheerfully returned to Catherine. But a strange new poison ferments in the veins of Ligne; he feels that he is a different man and that he has the "opportunity for self-examination and for reviewing all the inconsistencies of my life."

They are what we may have guessed. This monarch-butterfly, in all his flitting from court to court, has achieved no solid store of any kind. He recalls, one by one, even with a touch of pride, the royalties who have favored him, and yet now he wonders at himself. So much travelling, campaigning, pleasure, and temporal prosperity—and what is the end of it all? Why can he not, he asks, simply enjoy nature without this brooding? For a moment he lulls himself with classical reminiscences—Thetis and Ovid—for a moment he remembers the mild joys of his gardening and dreams, dilettante-wise, of establishing himself in Tauris. The prick of his deeper ambition returns to sting him. "But I, what do I here?" He pronounces the word "mon cœur" and bursts into tears—without knowing why, without profound sadness. A love-experience comes to complicate the mood. He perceives that he has been inconstant as the rest of mankind and that he has "worked too much for the gallery." He mounts a Tartar steed and plunges into the night—thus the butterfly returns to the flower.

This is but an instant in the career of the Prince de Ligne and the record has the artificiality of most deliberate confession, but it remains a "lyric meditation," as M. Lanson has styled it, of considerable literary and personal importance. The real mistress of the Prince was war—what he called "la jolie guerre." It was a mistress rather than a master-passion, but through all the later years of his retirement, the military life was his ideal, his memory, and still his desire. It is curious how all the flowers faded before this more metallic lustre; curious that it should need a wave of romantic sensibility to reveal in Petronius the soul of Cæsar.

MR. VEILLER'S PROPOSED HOUSING LAW.

To the Editor of The Nation:

Sir: To differ from any conclusions of Mr. Lawrence Veiller seems rather ungrateful. Mr. Veiller is so well recognized as the father of housing reform in this country, and the results that are directly attributable to his efforts are so important and far-reaching, that one's impulse is to accept his findings as definitive; yet there seems real danger in his latest book. "A Model Housing Law" was published about a year ago, and seems to have occasioned little comment. The effects of the general adoption of such a law would be so far-reaching from the point of view of sociology and economics, and would so hamper the development of the architecture of this country, that the book should not be accepted as a standard for lack of discussion and criticism. This book purports to cover all the possible conditions of "housing" in cities, towns, or even "on the prairies," where, the book states, extremely bad conditions of housing have been found. The proposed law is defined as covering all "private dwellings," "two-family dwellings," and "multiple dwellings." The last-named class is divided into two groups, A and B. Group A is defined as covering tenement houses, flats, apartment hotels, bachelor, studio, duplex, and kitchenette apartments; Group B includes "hotels, lodging-houses, boarding-houses, furnished-room houses, lodgings, clubhouses, convents, asylums, jails, and all other dwellings similarly occupied, whether specifically enumerated or not." In brief it would include every place where human beings sleep. The law is recommended for adoption by the various States regardless of climate.

Any one who has struggled to fit the provisions of the New York Tenement law to a multiple dwelling in the suburbs, or to a large high-class apartment house, will appreciate the difficulty of writing a general law which shall cover all the possible conditions arising in widely differing classes of buildings.

The New York Tenement law was quite frankly framed to cover a special set of conditions arising in the Borough of Manhattan, where the unit, of a lot of 25x100, is an almost constant factor, and the housing of the poor, or less well-to-do portion of the community, was the chief if not the only consideration. Without in the least degree wishing to discredit the really immense benefit which has resulted from the adoption and application of this law, it seems to me necessary to protest against certain tendencies towards absolute standardization which the law involves.

The same tendency is even more clearly marked in the "Model Housing Law." Though it is avowedly a set of minimum provisions, it is written around (or within) the customary American unit of the rectangular lot with a narrow frontage. While it is true that there are certain provisions which might apply to a less stereotyped system of city planning, the tendency is to force, or at least strongly to suggest, the adoption of a fixed type of house.

There seems to be a real danger in cramping the imagination by fixing attention on a type which, after all, is only a minimum solution of conditions that are in themselves undesirable.

As has been stated, the law is framed to cover all classes of housing, from one-family houses in cities and villages, to apartments, hotels, and even jails. It seems very unwise to attempt to standardize accommodations where conditions vary so widely. For example, under the proposed law, the minimum size of any room is 90 square feet. Now 90 square feet in a high-class apartment house is not an unreasonable minimum. It is, however, a question whether a minimum of 90 square feet in a tenement would itself be an improvement on the 70 square feet required in the New York law, in view of the possibility of putting four, instead of two, people in a room. This could easily be accomplished by the use of "double-decker" beds.

It has been found necessary, in the case of certain workingmen's towns, to insist that families consisting of the parents and grown children of both sexes should occupy at least three rooms. It is manifestly impossible to insist on this condition unless the accommodations can be furnished at a reasonable rent. Under condition of congestion this might be made difficult, if not impossible, by such a liberal provision.

Certainly, a minimum of 90 square feet in all dwelling-houses regardless of situation, number of windows, etc., would be very unfair and unnecessary. In planning small houses in the suburbs or in a village it frequently happens that a room of perhaps 8x9 feet, or 7x9 feet, can be arranged with windows on two sides or even with one window only. Under this law such a space could not be used either for a single bedroom, or even for a sewing-room!

The proposed law requires that all alcoves or alcove rooms must have an area of not less than 90 square feet, and that they must have independent windows as if they were rooms. This is very well for tenements, but it is also proposed to apply this provision to all private houses, hotels, clubs. The clear intention is to force the use of rectangular rooms exclusively. Under this law a closet projecting into the corner of a room would produce what might be technically an alcove. A safe or elevator enclosure projecting into the lobby or office of a hotel or club would form an alcove which not only must be of legal area, but must be independently lighted by windows. It is difficult to imagine planning a club or the entrance floor of a hotel in the light of so drastic a limitation.

Mr. Veiller proposes to limit the height of *all* stories for their whole area to a minimum of nine feet. There seems no good reason for attempting to regulate the story height of detached dwelling-houses in the suburbs or country, and there is certainly every reason why an attic story or other story in a roof should be allowed in such houses. Such

a provision would impose a flat-roofed architecture on the whole country, and would make impossible such charming and commodious houses as those designed by Mr. Charles Barton Keene and Mr. Aymar Embury II.

It has seemed to the writer that a legal and perfectly valid distinction could be drawn between what are commonly regarded as tenement houses and high-class apartment houses, on the basis of cost per apartment or room. That, for example, fireproof-houses costing over, say, $1,000 a room, could be regarded as a separate class, and that such absurdities as the universal requirements of an arbitrary provision for "legal" light in halls found in the New York Tenement law, which are included in this proposed law, might be avoided. The law states that all public halls must be lighted by a window in one end, etc., and was evidently framed with the usual small "tenement" house in mind, and seems reasonable for this class of dwellings. This has been made to apply to halls 150 feet long in the case of high-class houses occupying a whole city block, or site 200x200 feet, and must be accepted as a literal compliance with the law; it constitutes "legal" light. Though there are several other provisions in the proposed law to which exception might be taken, enough has been said to suggest the unwisdom of trying to apply one set of conditions, however well they may regulate any limited class of buildings, to all human habitations. Certainly, it seems clear that any attempt to standardize *all* living conditions to conform to a single yard-stick is a mistake.

LOUIS HOLMES BOYNTON.

University of Michigan, June 2.

ESPRIT D'ESCALIER.

TO THE EDITOR OF THE NATION:

SIR: That Pope, like the rest of us, could prepare an excellent rejoinder when the occasion had passed, the unscrupulous editing of his own correspondence seems to make plain. One instance of this gift which does not seem to have been noticed—or is it merely unconscious humor?—occurs in the letter purporting to have been written to Addison in apology for "Dr. Norris's Narrative" (Works, Croker-Elwin, VI. 398). The opening sentences of that letter contain an allusion to the fable of "The Sun and the Owls" in these words:

> I am more joyed at your return than I should be at that of the sun, so much as I wish for him this melancholy season; but it is his fate, too, like yours, to be displeasing to owls and obscene animals, who cannot bear his lustre. What put me in mind of these night birds was John Dennis, whom I think you are best revenged upon, as the sun was in the fable upon those bats and beastly birds above mentioned, only by shining on, etc.

All very obsequious and proper, until we notice that in the *Tatler* (229) Addison had told this fable apropos of himself and his critics; to quote only the last sentence:

> Gentlemen, I wonder how you dare abuse one that, you know, could in an instant scorch you up, and burn every mother's son of you; but the only answer I shall give you, or the revenge I shall take of you, is, to "shine on."

Addison probably took the fable from "L'Estrange" (434), but Pope is far more likely to have got it from the *Tatler*. Is this chance or conscious irony? Does he stumble upon this appropriate fable, or does he find a subtle recompense for Addison's majestic repudiation in thus parroting to him his own rather pompous sentiments?

Now, as is well known, this letter was never sent to Addison, or, if it was, it was sent in almost the same words to Caryll first. In that connection, of course, the fable was without extraordinary point. I confess, with some shame I admit, almost to a hope that in this instance the version to Addison was actually prepared when it pretends to have been; but there is no particular reason for assuming that this letter differs from others of the sort which were clearly revised and altered only when needed as evidence in the 1735 edition.

Whether or not Pope was conscious that he was quoting Addison to Addison very pertinently when he transferred this letter from Caryll, either in 1713 or 1735 (in the latter case for the benefit of himself and the public), can hardly be determined. If he was not, he missed a joy peculiarly adapted to his palate. Few of this sort, he missed, certainly. M. ELLWOOD SMITH.

THE QUINCENTENARY OF JOHN HUSS.

John Huss, His Life, Teachings, and Death after Five Hundred Years. By David S. Schaff. New York: Charles Scribner's Sons. $2.50 net.

The Church. By John Huss, translated with Notes and an Introduction by David S. Schaff. New York: Charles Scribner's Sons. $2.50 net.

The Christian world has celebrated this year, on the sixth day of July, the five hundredth anniversary of the death by fire of John Huss, the protomartyr of the Protestant Reformation. The approach of this anniversary has given the impulse to several notable publications. "The Life and Times of Master John Hus," and "The Hussite Wars," by Count Lützow, appeared in 1909 and 1914, and were noticed in these columns. Their special interest was in the ardent national sentiment which animated them and which was needed to counteract certain attempts to minimize the importance of the work of Huss by showing its essential dependence upon the leadership of Wiclif and its reactionary effect upon later Bohemian life.

Now we have from an American scholar two books as to which no party animus can be assumed. In his "Life of Huss" Prof. David S. Schaff, of the Western Theological Seminary, has undertaken to give a concise presentation of the reformer's work and thought. In his translation of Huss's treatise on "The Church" he gives to English readers an opportunity to study the most distinctive contribution of the Hussite movement to the cause of reform. It is worth while to review briefly here the chief claims of Huss to the attention of the modern student and to the gratitude of all who value the heritage of the Reformation.

In the first place, Huss shares with all the other great leaders of the religious revolution—with the single exception of Calvin—the character of a national representative. As Wiclif stood for the English spirit, Luther for the German, and Zwingli for the Swiss, so John Huss was first, last, and always the spokesman of Bohemian nationality. It is true that Bohemia, a fiercely Slavonic country, had long been dominated by Germanic culture. For centuries its kings had claimed and sometimes exercised the right of suffrage in the elections to the German imperial throne. Just before the time of Huss's activity three of these kings, descendants of the German house of Luxemburg, had gained the imperial crown for themselves. In the University of Prague, founded by the Luxemburger Charles IV in 1347, the three Germanic "nations" of the Saxons, Bavarians, and "Poles" stood with their three votes over against the single vote of the Bohemian "nation." The obligation of Bohemia to German civilization was unquestioned; but already before the time of Huss the new spirit of national self-consciousness was becoming increasingly impatient of this alien beneficence. The deposition of King Wenzel from the imperial throne in 1400, however justified by the interests of the Empire, left a sting in Bohemia, the effects of which were clear enough when the spirit of revolt began to show itself.

Huss's education was exclusively Bohemian. He was never outside the country until the fateful journey to Constance. His religious thought was moulded by the teaching of native scholars whose views on the most important questions which later occupied him were essentially the same as his own. Only after he had thus laid the foundations of his own thought did he receive the decisive impulse of Wiclif's writings. On this point we feel that Dr. Schaff is rather too much inclined to follow the extreme view of Loserth and his followers as to Huss's indebtedness to Wiclif's teaching. The argument of the deadly parallel column which Loserth so effectively employed does, indeed, show that Huss, like most of his contemporaries, did not hesitate to make use of the words of another to express his own ideas; but it is far from proving that the ideas were not his own. The more we become acquainted with the writings of Huss the more clearly does his essential originality appear. He undoubtedly found in Wiclif a precious source of inspiration and encouragement, but it would be almost as false to make him a mere copyist of Wiclif as it would be to make Luther merely a disciple of Huss because when he came to read the defence of his Bohemian predecessor he was cheered and sustained by the discovery that so noble a spirit had reached conclusions similar to his own.

The national character of Huss's work is evident from the beginning. His earliest reputation was won as a preacher in the Czech tongue in connection with an institution definitely founded to provide popular

preaching as a supplement to that in the regular churches. As preacher at Bethlehem Chapel—the name has an almost Methodistical suggestion—Huss succeeded for a long time in keeping his peace with the local ecclesiastical authorities while all the time attacking with increasing boldness the obvious evils of a priesthood secure in its intrenchments of tradition and privilege. It was a moment when such attacks were the common expression of disgust at the condition of the nominal headship of western Christendom. The year 1409 saw the long existing schism in the papal government rather intensified than solved by the election of a third pope at the Council of Pisa. It was not wholly an accident that in that year the Bohemian national party made its most dramatic anti-German demonstration by so changing the constitution of the University of Prague that the German element, instead of being allowed a decisive majority, was henceforth to have but one vote against three in the hands of Bohemians. The secession of the Germans left the University doubtless in one way weakened, but in another greatly strengthened by the intensifying of the national spirit. Of this reorganized university John Huss was the first rector, evidence enough in itself of his share in the racial conflict. In Bohemia as elsewhere, notably in Germany itself, the two causes of national independence and religious reform joined hands in instinctive resistance to the common enemy—a universal and infallible hierarchical church. An excommunication procured by the local ecclesiastical powers from the wretch John XXIII served only to mark Huss out still more clearly as the man of Bohemia, the trusted leader to whom all the elements of reform were looking for guidance.

But now again, and not for the last time, it was to be shown that reform of the outward things, to be effective, must be based upon some principle that would lift all reformatory endeavor up to a higher plane and show that it was not mere complaining against the limitations incident to all human institutions, but something deeper, grounded in universal instincts of right. Wiclif had found his principle in the ultimate authority of Scripture. Huss followed him in this, but used by preference another phrase more pregnant with meaning for the future. He liked to speak continually of the *lex Dei* or the *lex Christi* as the final appeal of every Christian man. The value of this phrase for controversial purposes is evident at once. Its very vagueness was its strength. The law of the Church could be and had been codified, brought to book, taught in the schools, added to, commented upon, made the cornerstone of the imposing structure against which the criticism of good men was growing continually fiercer and more uncompromising. A hundred years later the first step in Luther's revolt was to fling the book of this law of the Church into the fire and start over again upon the new-old basis of the Freedom of the Christian Man. So far Huss was not willing to go; but the principle was as clear to him as it ever was to any one.

The *lex Dei* was the supreme appeal from every human tribunal to the ultimate rightness of things. In spite of its partial embodiment in Scripture, it was as plastic as our appeal to the "higher law." We rest ordinarily upon the law as it is; but we know that behind and above that is a higher something which in a case of serious doubt we are bound to follow and to which we make our last appeal. That, as we understand it, is what Huss meant by the *lex Dei*, the higher something to which all human law must conform and, failing to conform, must be amended until this disparity no longer offends the conscience of the world. Obviously, such a doctrine was a mortal affront to all established authority. It was asked, and very properly, what would the world come to if any such vague idealism as this were to take the place of fixed and proved law? The answer was, that this was right, and the law of man must see to it that it be conformed to the law of God.

That is Huss's first claim to our lasting gratitude: that in a world of legalized religion he proclaimed the ancient gospel of a higher law. His second claim is the logical outgrowth of the first. Admitting that there was a supreme law, it must be made practical. After all, it must be interpreted by human judgment and administered by human hands. There was no question that both interpretation and administration were the function of the Church; but what was the Church? This is the question which Huss attempts to answer in his most important work, the treatise "de ecclesia" now translated for the first time into English; in fact, so far as the translator knows, for the first time into a modern language. It was, of course, inevitable that the definition of the Church as here given should be clouded in a maze of scholastic learning, that Scripture and tradition, history and science, should be called in and handled according to that curious method of alluring irrelevancy which passed for reasoning in the mediæval mind. But for our present memorial purpose this definition may be greatly simplified. In the last analysis it is this: that the Church consists of all those who belong to it, a proposition apparently so self-evident that it does not need to be stated. And yet, simple though it be, it was only through a profound revolution in the method of human thought that it had come to be possible even to formulate it.

The philosophy of Nominalism, revived and reinvigorated by the Englishman William Ockham, who died a generation before Huss was born, wrought into the political theories of Ockham's intimate friend, Marsiglio of Padua (Dr. Schaff uses the unwarrantable form *Marsiglius*), and easily discernible as the scarlet thread running through all the literature of the Schism, had penetrated the whole intellectual life of Europe as deeply and as subtly as the philosophy of evolution has penetrated the thought of our day. Huss himself was not an avowed Nominalist; neither was Wiclif, and yet their idea of the Church as the group of individuals truly owning the Christian name is a distinctly nominalistic conception. Stated negatively, it was that the Church did not consist of the Pope and the cardinals, with the rest of the hierarchy and the laity dependent upon them for doctrine and discipline. These were all matters of human invention, convenient for practical purposes if only controlled by the final judgment of the true Church based upon the law of God.

But now, who were the members of this true Church? Not every one who had been baptized into the Christian name, but only those who were chosen (*prædestinati*) to receive the grace of persistent righteousness. The rest were the foreknown (*præscити*)—and here we come to the edge of that jungle of speculations about election and reprobation, freedom and bondage of the will, and all the rest of it, in which theologians have lost themselves and brought their followers to despair. We are concerned only with the practical outcome. If membership in the true Church were thus dependent upon personal, individual conditions, then any alleged member might in reality be himself deceived and be deceiving others. For example: was it quite certain that any given pope was a member of the true Church? Not necessarily, by any means. He might be a reprobate. It all depended upon whether he were a true follower of the *lex Dei*. If not, then the evidence was all against him. It followed, of course, that the whole institution of the Papacy and all that went with it were not of the essence of the Church at all. The Church could get on very well without it. There was but one head of the Church, namely Christ, and all Christians stood to him in the same relation of obedience and service

So far Huss seems to have been fighting the battle of those better elements in the Church which were moving irresistibly towards the settlement of all existing religious questions by a resort to the ancient method of a General Council. The chief promoters of the Council at Constance were distinctly reformers. "Reform of the Church in head and members!" was the battle-cry of an increasingly large proportion of the thinking men of Europe. In favoring an independent council outside of Italy they proclaimed their allegiance to the doctrine afterwards officially declared at Constance, that the "Council is above the Pope," because it is the representation of the Church as a whole. In the programme of Constance, in addition to the healing of the schism and the purification of the Church from heresy, the cause of Reform figured as of equal importance. To many its importance was primary, as a necessary condition of any permanent union.

And yet, this would-be reforming Council burned John Huss as a double-dyed heretic. This has always been one of the puzzles of

history; but the explanation is fairly simple. It is, that the Council itself was on trial before the judgment of Europe. It was an untried experiment, this gathering of prelates, princes, doctors of law and theology to discuss matters which had never been discussed before in any such open and unrestricted fashion. It was to sit in judgment upon three conflicting popes, and might even come to prescribe the conditions upon which a new head of Christendom could claim the undivided allegiance of the western world. To accomplish these great results it needed, above all else, the sympathy of what we may roughly call its constituents. Especially must it keep itself free from any taint of the "heretical" doctrines which, clustering about the memory of Wiclif, were infecting the faith of every country represented. If it wished to control the Papacy, it certainly could not begin by abolishing it. If it would restore the regular working of the canon law, it could not afford to play with any vague notions about a higher law. Before proceeding to the work either of union or of reform, the Council must demonstrate its orthodoxy in some unmistakable fashion, and what better way to do this than to make an example of the bold innovator who had incautiously put himself in its power?

That is the simple explanation of the apparent paradox of a reforming council destroying a too zealous reformer whose worst heresies were the supremacy of the divine law and the single headship of Christ over his Church. The tragedy of Huss's betrayal and imprisonment, the farcical attempts to persuade him to recant, the foregone conclusion of his trial, and his heroic death need not be rehearsed here. They are the stock material of religious persecution always and everywhere. The real tragic moment was when, in his public hearing before the full Council, Huss made his appeal to the supreme law of Christ and the whole assemblage broke into derisive laughter.

It remains to speak briefly of the two companion volumes here in review. Dr. Schaff's narrative of the life and services of Huss makes no pretensions to originality in the sense of bringing new contributions to our information; but it bears every evidence of careful study of all available material. It does not seek to magnify unduly the character of its hero. It presents him as a very human person, strong in his opinions and without fear in declaring them, of blameless life, beloved by his friends and respected by his fair-minded opponents. The worst that could be said against him was to call his conviction obstinacy and his boldness insolence. The book will be serviceable to scholars as giving a summary of the most recent views and directing the student to the best original material. To the larger public it will commend itself by its readableness and the clearness of its arrangement. The story moves with dramatic directness from stage to stage up to the final crisis. The examination of the circumstances attending the tragic close is made with great candor and with entire appreciation of the motives of those who combined to crush a man dangerous to them because the people heard him gladly.

The accompanying volume, the translation of the "de ecclesia," deserves the especial gratitude of all who desire to go behind narratives and read at first hand what the leaders of thought have written. Its style, involved and wearisome in its detail, is simplified as far as possible by the use of easily understood English forms. The division into twenty-three chapters makes easy the reference to special topics. The Introduction gives a clear summary of the whole argument. If one would comprehend why John Huss, once in the clutches of the "Church," could not be allowed to escape, one cannot do better than to read this elaborate exposition of ideas which, if adopted, would make a church of that kind impossible.

NAPOLEON.

Napoleon and Waterloo: A Strategical and Tactical Study. By Capt. A. F. Becke. With eleven maps. Two vols. London: Kegan Paul. $8 net.

The Story of Napoleon's Death-Mask. By G. L. de St. M. Watson. New York: The John Lane Co. $2.

Napoleon I: A Biography. By August Fournier. Translated by Annie Elizabeth Adams. New popular edition. Two vols. New York: Henry Holt & Co. $3.50.

A hundred years have come and gone since Napoleon won his last great victory at Ligny and suffered his last great defeat at Waterloo. No period of his life has proved more fascinating nor called forth a greater literature than those three days from June 16 to 18, 1815. After all that has been said by the writers of justificatory memoirs, by eye-witnesses and alleged eye-witnesses, by Siborne, Chesney, Ropes, Houssaye, Grouard, and by all the others, it takes courage on the part of Captain Becke to attack the question again with the hope of saying something new. Yet this is what he succeeds in doing. And he does it, not so much by the production of any considerable amount of hitherto unknown material, as by his searching and constructive use of scattered bits of evidence which have been in print, but which have not been fitted together into a consistent whole. Instead of being led down long by-paths of controversy about Ney and D'Erlon and Grouchy, the author starts with a good analysis of Napoleon's masterly conception of an advance with "two wings and a reserve," and he obtains unity and clearness for his whole account by his adherence to Napoleon's own point of view.

By advancing with the left wing under Ney, the right wing under Grouchy, and the reserve under his own immediate direction, Napoleon hoped to drive a wedge in between Wellington and Blücher, as he had driven one in 1796 between the Sardinians and the Austrians. Then, while one of his enemies was being gripped and held by the "advanced strategical guard" of one French wing, the other enemy would be caught and dealt an annihilating blow by Napoleon commanding the reserve and the other French wing. The whole conception is clearly indicated in the all-important dispatch to Ney from Charleroi on the morning of June 16. In it, however, Napoleon stated: "I shall bring it [the reserve] into action on either wing just as the actual circumstances may dictate." Here lay the ambiguity. He did not know until some hours later whether it would be the English or the Prussians on whom the annihilating blow should first fall. From this fact sprang the fatal mistakes of Ney, and the unfortunate march and countermarch D'Erlon's corps, which fought neither with Ney on the left at Quatre Bras nor with Napoleon on the right at Ligny; it oscillated uselessly between the two battles when its presence at either would have been decisive. Captain Becke, disagreeing with Houssaye and the critics of Napoleon, places credence in D'Erlon's own statement that this unfortunate mistake was due to the fact that General La Bédoyère, who was entrusted with Napoleon's order to Ney to send D'Erlon to Ligny, instead of taking the time to seek out Ney, met D'Erlon's troops on his way and took it upon himself to order a change in their direction from Ney to Napoleon. Thus D'Erlon's corps appeared an hour too soon, and in an unexpected quarter, and was mistaken by Napoleon, in the midst of the battle of Ligny, for a hostile force on his flank. It is impossible to indicate all the other interesting points which the author scrutinizes in great detail. With two considerable volumes, he has plenty of space to say all the things which he could not compress into his good Waterloo article in the last Encyclopædia Britannica. He frequently takes occasion to emphasize practical military truths which are as applicable to-day as a hundred years ago, but his work is by no means merely for the military specialist. On the whole, his enthusiastic admiration of Napoleon makes him incline to be too easy on the Emperor and too severe on his subordinates. He gives rather a loose rein to his rhetoric, is somewhat repetitious, and has not read by any means all the Germans have to say on the subject. Nevertheless, his account of the Waterloo campaign is the most full and satisfactory account in English.

Nearly six years after his flight from the field of Waterloo, Napoleon lay dead at St. Helena, and a mould for a death-mask was taken from his head. It has been stated by nearly all writers heretofore who touch upon the subject that this mould was made by Dr. Antommarchi. For certainly the Italian doctor was present at the death-bed and unqualifiedly asserts in his famous "Last Moments of Napoleon": "I moulded the face, and proceeded to the autopsy." Now Mr. Watson comes forward with an

exceedingly interesting essay, full of delicious irony, in which he brands Antommarchi's statement as false, and exposes the whole legend which has grown up around it. With some knowledge of the technique of making plaster casts, and from a careful study of the contemporary evidence, he shows beyond a doubt that it was Dr. Francis Burton (uncle of the famous Sir Richard Burton) to whom belongs the honor of making the original mould and cast. Having made a cast, he left it at Longwood overnight to dry. When he returned, the front, or face, part of the cast was gone. Madame Bertrand had taken it off and packed it up. Burton tried at St. Helena and in England to recover possession of what he regarded as his lawful property, but he never succeeded. Several years later, when he had died and could no longer defend his rights, Antommarchi asserted that his was the pious hand which had preserved for posterity the great Emperor's last features, and posterity was invited to buy copies of the cast (which he duplicated from the one held by the Bertrand family). The history of this death-mask and the growth of the legends connected with it is a curious one, and has lost nothing in its telling by Mr. Watson.

Professor Fournier's excellent biography of Napoleon, first published in German in 1885, has for a dozen years been accessible to English students in a one-volume translation edited by the late Edward G. Bourne. In 1904-6, however, Fournier revised and enlarged his biography so that it should take account of the great advances which had been made in the study of the Napoleonic period. From this revised German edition Miss Annie E. Adams made a good two-volume English translation, which was first published in 1911 and which is now reissued from the same type, but in less expensive form. It has a few maps and a well-selected and very convenient bibliography. It is, as those familiar with the earlier work of Fournier would expect, one of the very best biographies in English of the great Corsican —impartial, well balanced, accurate, and broad in its point of view.

A NEW ENCYCLOPÆDIA.

Cyclopedia of American Government. Edited by Andrew C. McLaughlin and Albert Bushnell Hart. New York: D. Appleton & Co. Three vols. $22.50 net.

The most important problem in advanced education, said Andrew Dickson White, speaking as long ago as 1879 before Johns Hopkins University, is "the proper provision for higher instruction in subjects bearing directly upon public affairs." Coming from one of our most discerning educators, at the time president of Cornell University, this comment struck the keynote of the address that followed. It may be taken as marking roughly the beginnings of a movement in education which begot in many institutions of learning courses more or less effective in such subjects as history, economics, politics, jurisprudence, international law, diplomacy, and sociology. The publication (1881-1884) of Lalor's "Cyclopædia of Political Science" marked progress, and has ever since aided the general cause towards the promotion of which President White's thought was directed. In the particular field of American government such works as Woodrow Wilson's "Congressional Government" (1885) and Lord Bryce's "American Commonwealth" (1888), followed by a host of relatively minor but useful volumes, attempted to present and to interpret political problems of confounding magnitude and variety with which a generation of productive thinkers has been concerned. For some time there has been need of gathering into compendious form for reference the results of much effort in this field.

A "Cyclopedia of American Government," edited by Professors McLaughlin and Hart, in coöperation with some 240 contributors, seems to have been designed to meet this need. Addressed to some extent to the lawyer and the economist, the work is especially directed to all "those whose interests and duties call them to the study of public affairs," to editors, librarians, teachers, students, general readers, and writers. In the work there are about 2,900 topics ranging from "Abattoirs" to "Yukon"—more than three times as many as are to be found in Lalor. The topics, varying in length of treatment from a few lines to a dozen or more pages, embrace an extensive field. In the course of our examination of the materials in the volumes, the question has constantly arisen: Does the title "American Government" justify any such range?

What is American government? Neither in the editorial Introduction (I, v-x), nor under "Government" (II, 88), are there what seem to us well-matured considerations of this basic theme. The editors' analysis of the subject under five leading heads and twenty-eight subdivisions fails to be impressive or to appear to have been carefully worked out. Further examination of many details in the text of the volumes only quickens the thought that discriminating judgment should have established such principles of elimination as would reduce the number of topics without sacrificing to any great extent the usefulness of the compilation. If the three fields of history, economics, and political science can be differentiated—as our friends of the American Political Science Association believe—then the present work, in view of its title, is overburdened, we should say, with topics in both history and economics. There is, moreover, a tendency to admit easily matters of sociological import which have often only indirect relations to the main theme. Upwards of two hundred biographical sketches may be found useful, although these are limited in most instances by so strict a standard of brevity, irrespective of the relative importance of names, as to seem undiscriminating and stereotyped. Finally, space has been devoted to a great variety of political slang phrases, too many of which are worth little, if any, serious attention. We acknowledge the difficulty of this fundamental problem. We cannot, however, discover that it has been squarely faced. At any rate, the real merit of the work is reduced by the failure (as we conceive it) of the editors carefully to define the particular field to be cultivated.

The long array of contributors—many of them highly trained and conscientious scholars, others capable experts in practical administration—may be taken as fair evidence of much good and trustworthy work. To have omitted from the list of contributors the name of President W. F. Slocum was doubtless an oversight. But why should the list contain more than a dozen names, among these James C. Ballagh, Hiram Bingham, Richard T. Ely, Harry A. Garfield, Royal Meeker, Edward B. Moore, Calvin W. Rice, and Talcott Williams, who appear to have had nothing whatever to do with the actual work? If any serious work of reference with pretensions to thoughtful consideration has appeared within recent years more thoroughly besmirched from start to finish with typographical inaccuracies, we are unacquainted with it. The proof-reading in the final stages of printing must have been careless and unintelligent to a degree. Such matters of neglect, however, point to inaccuracies still more serious which we must touch upon in conclusion.

We should naturally look for accuracy on so well-worn a topic as the Monroe Doctrine. "In October, 1823, the Russian Government," we read, "sent out a circular against Spanish-American independence, and declared it contrary to the European 'political system,' which phrase clearly referred to the system of legitimate monarchy." The "circular" of August 30 and Baron de Tuyll's "note" of October 16, 1823, are here confused. The first concerned affairs in Spain and Portugal, and was brought to the attention of John Quincy Adams on November 15 following. The note was simply indicative of Russia's indisposition to receive diplomatic representatives from the South American states until recently subject to Spain. "The Latin-American states . . . in 1826 summoned a congress"—an altogether careless statement. The summary of the Olney Doctrine of 1895 will not stand careful comparison with the diplomatic correspondence in which that doctrine was developed. The subject should have been handled by an expert in history and international law, and not treated in an impressionistic fashion.

The following topics, several of which have been very carelessly written, all contain palpable inaccuracies that could not have passed the test of editors watchful of the details which make such a work strong and trustworthy: "Boundaries of the United States"; "Conservation"; "Cumberland Road"; "Public Care of Deaf and Dumb"; "Due Diligence"; "Education in Forestry" and "Forest Service"; "Public Aid to Expositions"; "Grand Committee"; "Hay-Pannce-

lote Treaties"; "Maximilian's Empire," and "Panama Congress." We see nothing to be gained from the superficial and trivial statements set down briefly under "Cost of Living," a subject quite worth presentation at the hands of some expert student of economic and historical factors.

The reader who is duly warned may still find under many topics legitimately concerned with important features of American government—such as Congress, the Constitution, the Courts, International Relations, Parties and Party Machinery, Administration, Finance, Elections, State and Municipal Institutions—much careful writing, with a sufficiency of bibliographical lore for direction into many aspects of these subjects. But, taken as a whole, this new cyclopedia is not merely disappointing; it is a grave reflection on editorial competency. Lalor served admirably a generation, and is still very useful. If this new compilation is to take rank with helpful works of reference written to promote the cause for which President White long since spoke urgently, it must be revised.

Finance

EUROPEAN SELLING.

Since the announcement of the British war loan, two weeks ago, selling of American securities by London in this market has increased substantially. It had almost ceased before the terms of the loan were made public; since then, the selling of our bonds from England has averaged something like $2,000,000 per day, with sufficient sales of stocks to bring up the total, for the period of nearly two weeks, to something like $40,000,000. The securities have been taken with no great sacrifice in prices. Some of the bonds which were sold most heavily declined two or three points; but, as a whole, the foreign sales had no larger effect than one of the familiar "realizing movements" of domestic origin, in ordinary times.

This resumption, by the English investor, of the selling of American stocks and bonds, is clearly enough attributable to the terms of the new British war loan, which offers to convert all older Government bonds into the new 4½ per cents, on attractive terms, provided the owner of such older issues will subscribe to an equivalent amount in the new war loan. Since the cash payment on that account must be made by July 20, the applicant has until that date to raise the money, and he is evidently raising some of it by realizing on his American investments. Therefore, the selling movement may be over in a fortnight. Yet it again directs attention to the questions, what the aggregate total amount is which may still conceivably come upon our market, what chance there is of its all being returned, and what the effect of that would be.

An important estimate of European holdings of our railway stocks and bonds was given out on Monday of last week. It was drawn from the actual statements of American railways, between October, 1914, and April, 1915, and was compiled by President Loree, of the Delaware & Hudson, under the auspices of the New York Federal Reserve Bank. Until its publication, Wall Street had largely pinned its faith to the estimate prepared for the Monetary Commission by Sir George Paish in 1910. That estimate named no less than $6,000,000,000 for Europe's investments in American securities, of which $3,500,000,000 were assigned to England.

This estimate gave no particulars and no basis of calculation. Mr. Loree's estimate gives a very different set of figures. Instead of $6,000,000,000, his computation, based on actual returns—more easy since the income-tax requisitions—estimates $2,576,400,000 as the par value of American railway securities held in Europe. Industrial holdings are not closely estimated. The conclusion is, however, that Europe holds 20 per cent. as much of our industrials as of our railway stocks and bonds; which would leave a total of about $3,000,000,000. Probably three or four hundred millions of this total have been already returned in the period since the figures were compiled.

England undoubtedly holds most of this. Holland has hitherto been credited with something over $500,000,000; an estimate made in 1905 by the German Government named $750,000,000 as a maximum of German holdings, and France owns possibly $250,000,000. These figures may not altogether hold to-day; Germany in particular has realized very heavily in the past five years; yet the conclusion that England now holds between $1,000,000,000 and $1,500,000,000 may be fairly inferred from this latest calculation.

The coming fortnight will show to what extent the British war loan's special inducements can dislodge these English holdings. Apart from that motive, or such other motive as may arise hereafter in the London security or money market, it is difficult to see why the English investor's general attitude should be changed. That remains to be seen. But the feeling has none the less grown on the American market that, granted long continuance of the war, return to us of the great bulk of such securities will in some way eventually be brought about. Supposing this to happen, how about our own financial situation? The most obvious comment would be, that the circumstances under which these general realizing sales would happen are as different as could be conceived from the circumstances which imagination conjured up last summer and autumn.

The picture drawn by apprehensive minds, while the Stock Exchange kept closed to avert the threatened "European liquidation," was of a New York market crushed down by sales which home investors (already realizing on their own account) were unable readily to absorb; of a foreign exchange rate, already heavily against us, driven to higher and higher figures by the pressure of sales of securities from Europe, and of a consequent dragging away of our whole stock of gold to Europe. As matters stand to-day, the New York stock market hardly wavers on actual foreign sales of $25,000,000 weekly.

Exchange on London is so abnormally in this country's favor that the resale of our securities is urged, simply to restore a normal equilibrium. As for our stock of gold, it is $50,000,000 greater than it was on August 1, 1914, is larger by far than the present banking requirements of the country, and is continuously increasing. Meantime the excess of our export trade of merchandise with Europe is rising to unprecedented heights.

To All Lovers of the Best in Music

The MUSICIANS LIBRARY

The Musical Courier says: "The Musicians Library is a boon to the musician; it is not only The Musicians Library, but it is a library for all people who believe in music, who are fond of the art, and who cherish musical ideals."

Musical America says: "Of The Musicians Library over 150,000 volumes have already been sold—to the everlasting credit of the musical public of this country and the enduring fame of its publishers."

Victor Harris, the successful composer and musician and conductor, says: "I now have a complete set of the famous Musicians Library. I would not for a moment remain without each volume as it comes from the press."

"As it now stands this magnificent collection is *an education in itself for the singer and pianist and teacher, and the musical public of the whole world* should be grateful for the vast expense and unending labor required in its production."

NEW VOLUMES JUST ISSUED ARE

One Hundred Songs of England

High and Low Voice

Edited by GRANVILLE BANTOCK

The most valuable collection of English songs ever issued, covering the period from the 13th to the 19th century. The Editor has contributed an authoritative discussion of English songs and the examples in the book.

Sixty Folksongs of France

Medium Voice

Edited by JULIEN TIERSOT

French folksong has charms and beauties wholly peculiar to itself. The Editor has made an admirable and interesting selection, which he has discussed in his scholarly introductory essay. Mons. Tiersot is an authority on the subject.

*Surplus as regards Policyholders	18,703,474.16

FIFTY YEARS' GROWTH

In less than fifty years after its organization, "THE HOME OF NEW YORK" became the leading American fire insurance company in Cash Assets, and has held this rank ever since. For more than ten years "THE HOME" has been first in Surplus to Policyholders.

Its remarkable growth has made "THE HOME" the largest fire insurance company in America, and this means that every policy issued by it is backed by the largest Cash Assets of any company. This is important to Policyholders, especially in emergencies like the San Francisco conflagration of April, 1906, when "THE HOME OF NEW YORK" was first to announce that it would pay all losses in full.

Girls Health

Is your daughter fragile and delicate? Would you like to see her grow robust and strong? Girls develop into strong, splendid, vigorous womanhood through following Camp Fire Ideals. They learn to look upon the common, every-day duties of life as opportunities for service full of romance and beauty. They learn to live—and love—naturally, joyfully, and with increasing appreciation of what true womanhood may be made to mean. All this is told in the new Camp Fire Girls book—a charming story, with more than 50 wonderful pictures of girls at work and play. The frontispiece is a portrait of the Camp Fire founder—Mrs. Charlotte Vetter Gulick. There is also a portrait of Mrs. Gulick in ceremonial costume. The book tells how Mrs. Gulick, working first for her own family and children, has carried the spirit of home and mother-love into a great, national, community movement which is sweeping over this country and the whole civilized world. The book is a joy and delight to every girl—and to every mother of girls. An exquisite gift book. Price $1.25 postpaid in the U. S. Ask your regular bookseller or send your order and remittance direct to—

GOOD HEALTH PUBLISHING CO.,

Strong Points which make success for the Postal Life—the Company of Service, Saving, Safety

1. *Old-line, legal reserve insurance* — not fraternal or assessment.

2. *Standard policy - provisions*—approved by the New York State Insurance Department.

3. Operates under *strict New York State requirements* and subject to the United States Postal Authorities.

4. *High medical standards* in the selection of risks.

5. *Policyholders' Health Bureau* arranges one free medical examination each year.

6. Privilege of making *monthly premium-deposits* without consulting the Company.

In addition to the foregoing there are three other points which make a strong appeal to the insuring public:

7. *A low death-rate.*

Mortality in the POSTAL'S non-agency business from 1905 to 1914 inclusive was only 45% of the expected, which means a distinct saving for policyholders.

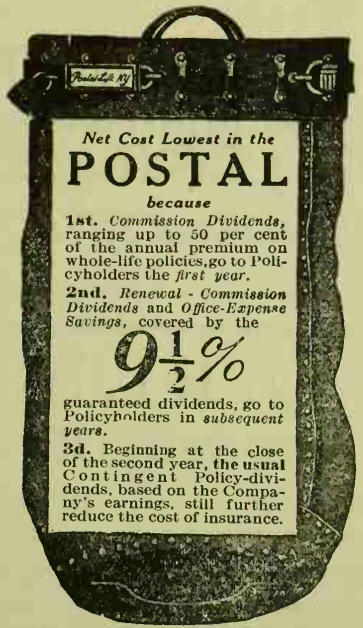
8. *Prompt payment of policy-claims.*

No red-tape—checks sent direct to beneficiary immediately on receipt of proper proof of death. No necessity for any collection expense.

9. *Absence of litigation.*

The Company stands ready to accept service by mail from any State, but as a matter of fact, no suits are brought on policies written without agents, because there is no misunderstanding, much less misrepresentation. Furthermore, claims are paid promptly, as stated.

Policy Reserves $9,000,000



Net Cost Lowest in the
POSTAL
because
1st. Commission Dividends, ranging up to 50 per cent of the annual premium on whole-life policies, go to Policyholders the first year.
2nd. Renewal - Commission Dividends and Office-Expense Savings, covered by the
9½%
guaranteed dividends, go to Policyholders in subsequent years.
3d. Beginning at the close of the second year, the usual Contingent Policy-dividends, based on the Company's earnings, still further reduce the cost of insurance.

Insurance in force $40,000,000

Find Out What *You* Can Save at Your Age

Just write and say: "*Mail official information as per The Nation for July 8th.*" And to find out how much you save, be sure to give:

1. Your full name. 2. Your occupation. 3. The exact date of your birth.

No agent will be sent to visit you. The commission-savings thus resulting go to *you* because you deal *direct.*

CHICAGO

A History of Permanent Value

Elements of the Great War

The First Phase

By Hilaire Belloc

A remarkably clear, fascinating and convincing treatment of the causes of the great conflict and an equally clear analysis, from a *military* point of view, of the first campaigns.

This is not a partisan document, but a dispassionate history which scrupulously separates fact from conjecture and sets down the judgment of the noblest elements of civilization.

It is the initial volume of a series which will be the crowning work of an author known for twenty years as historian, essayist, political journalist, and master of English style.

Professor C. T. Winchester, of Wesleyan University, author of *Principles of Literary Criticism*, says: "The First Part seems to me the clearest and most satisfactory account I have anywhere seen, in like compass, of the causes of the war, immediate and remote."

What a Single Dollar Will Do

for the Children of Dead Soldiers

One hundred and twenty-five children, little ones like those who were rescued from the region of Belfort, have been saved from parts of Alsace recently reconquered by French troops, Ypres and other Flemish towns devastated by months of artillery fire. Taken from the ruins of their homes, they have been protected by Mrs. Bliss, wife of the Secretary of the American Embassy at Paris, with the aid of Mr. A. F. Jaccaci, of New York.

Shelter has been found for them in convents and institutions that are providing a roof, but are so sadly impoverished that the children must go unfed unless food can be secured through others. The little ones are living on fifteen cents a day.

Every reader is urged to pin a dollar bill to the slip at the bottom of this page and mail it at once.

One dollar will care for a child during six days.

There are a good many other days, and a good many other children. If you can do more than this for them you will, but a dollar is all we ask. FREDERIC R. COUDERT, *Treasurer.*

TWO COMMENCEMENT ADDRESSES

By HENRY CABOT LODGE

16mo. Cloth. 45 pages. 35 cents postpaid

Senator Lodge's defence of the classics, which formed the subject of his address at the Radcliffe College commencement exercises, 1915, and his discussion of the function of a university library, at the dedication of the Widener Memorial Library of Harvard University, have been reprinted for the benefit of those who may wish to have these addresses in more permanent form.

Canyon-Like— Awe-Inspiring— Nature at Her Best

THERE'S an unusual charm about Canadian scenery.

Particularly beautiful are Canada's rivers. The Niagara-to-the-Sea route taken by the splendid steamers of the Canada Steamship Lines is mainly over rivers—first the island-dotted St. Lawrence, then the glorious Saguenay, with its Cliffs and the famous Capes "Trinity" and "Eternity." Neither words nor pictures can give any conception of their majestic beauty. You'll get some slight idea of them by reading "Niagara to the Sea." New edition of this book, beautifully illustrated, just off the press. Send for it, with 6 cents in stamps to cover the cost of mailing.

The "Nation's" Jubilee

NEW YORK SUN.

With complete appropriateness, the *Nation* celebrates its fiftieth birthday to-day by printing a review of the political and literary history of the United States in the half century during which our vigorous neighbor has recorded, criticised and moralized upon the incidents of more or less importance that have attracted its commendatory or condemnatory consideration. The survey of its own activities, to which not too much space is devoted, in its jubilee edition stimulates memories of a New York at least as interesting as the town we know and reveals a foundation capable of supporting another half century of success for this interesting weekly.

NEW YORK TRIBUNE.

The *Nation* has just issued a semi-centennial number, recalling and recounting the glories of a publication which long held a unique place in American journalism. The *Nation* has been preëminently an organ of criticism—of criticism fundamentally sound, though often jarring on the easy-going optimism of the American public. It applied the lash when opinion here was much more sensitive and resentful of such treatment than it is to-day, and its disciplinary labors brought it much prestige—and many bitter enemies. Its work on the whole has been distinctly inspiring and helpful. Journalism has greatly changed since it began its mid-Victorian career. The critical attitude is commoner to-day, and the *Nation* no longer stands alone in reflecting the activities of the keener critical spirit. But its field and opportunities remain, and we wish it long-continued prosperity and usefulness.

NEW YORK WORLD

So wide and strong and sane has been the journalistic influence of the *Nation*, so useful its columns to American historians, that it is rather a surprise to be reminded by its semi-centennial issue that it was born so late as 1865. Beside the venerable *Evening Post*, with which it has long been associated, it is but a child precociously wise. Of qualities more important than length of days, Henry James, Lord Bryce, William Roscoe Thayer, W. C. Brownell, Prof. Gildersleeve, Henry Holt, and George Haven Putnam form a goodly band of witnesses.

N. Y. EVENING WORLD.

In its exceedingly well filled and readable semi-centennial issue, wherein are many interesting memories of men, books, and events of the past fifty years, the *Nation*, with relish and good humor, tells this story on itself:

During its early days the periodical once published a list of contributors—a solid array—too solid, some thought. Immediately the editor of a frivolous publication of the time conspicuously reprinted the list in his own paper, preceded by the reassuring announcement: "None of the following writers contribute to these columns."

The reading public has changed since then. So has the *Nation*. And in neither has the change been for the worse. On the contrary, both have come closer together by a process of mutually helpful adjustment. And that adjustment still goes forward.

The general reader is more interested in the things that interest the *Nation*. The *Nation* is more interested to find and publish things that interest the general reader, to have even its weightiest contributors write in a manner the general reader will find agreeable. Which surely shows health and progress on both sides.

NEW YORK MAIL.

It is a little hard to realize that the New York *Nation* is only fifty years old. That justly celebrated weekly review of events, politics, and literature observes its semi-centennial with a very interesting special number, but one somehow feels that the *Nation* has come down to us clear from the days of rolling collars and rolling periods. The *Nation's* function has been criticism of many kinds. It has fulfilled the function.

A great number of distinguished names in American literature have been associated with the *Nation*—those of Godkin, Wendell Phillips Garrison, James, Brownell, Bryce, Dicey, and many others. The *Nation* always had an air of austerity, but that was because it had a Puritan conscience. Ability it also always had; and conscience and ability make a strong combination.

Retaining these elements of strength, the *Nation* should look forward to another useful half century.

HARTFORD COURANT.

The *Courant* has received the semi-centennial number of the New York *Nation*. As we have remarked frequently when these minor anniversaries come along, there is nothing remarkable to this paper in a semi-centennial celebration. We have "been there" three times already. It's a sign of health and progress to go so far, but there is a long beyond for the capable.

However, the *Nation* is and always has been unique. It has been the intellectual weekly of the country. Probably no other paper was ever published in the United States that exercised so wide an influence in comparison to the mere numbers of its circulation. It would be of interest to find the reader of the *Nation* who agreed with all it advocated. An old subscriber to the *Courant* a while ago stopped his subscription, and in the unwelcome letter he wrote that the paper so fully and uniformly expressed his own sentiments that he had no need for it. This was one of the strangest reasons for a "stop" that has come this way, and we venture to guess that the *Nation* never got one like it.

This special number is of amazing interest, especially to those who have been long in the newspaper business. It brings contributions from many distinguished readers, not a few of whom were connected with the paper, and their revelations of inside life in a newspaper are delightful. Viscount Bryce tells of the *Nation* which he knew in the seventies, and whatever he writes is enjoyable. W. C. Brownell, who went to the *Nation* from the *World*—a curious transformation—mentions in a very readable account of his experiences and recollections the fact that the three editors used to read each other's proofs and change them at will!

Among all the papers none is more interesting than that which is contributed by Henry Holt, the well-known Yale man and publisher, who says his firm has had its advertisement in every copy of the *Nation* since it appeared. Mr. Holt has a charming style and his reminiscences are extremely interesting, incidentally more so in so far as they reveal Holt himself.

We cannot review this special number. Every article in it ought to be read in full. Mr. Oswald Garrison Villard's account of the ownerships of the paper is an important bit of journalistic history, written, of course, in his entertaining style.

The Nation

NEW YORK, THURSDAY, JULY 15, 1915.

Summary of the News

The reply of the German Government, dated July 8, to the American note of June 10 was published in the morning papers of last Saturday. The contents of the note may roughly be divided into two parts. The first, obviously intended for home consumption, consists of an elaborate eulogy of German humanity and the familiar attribution to England of the entire responsibility for the sinking of the Lusitania; the second part contains proposals by which the German Government will, under certain stringent conditions, "permit" citizens of the United States to travel in the war zone with comparative safety. Comment on this curious document will be found in our editorial columns. With the exception of the German-American newspapers, the press of the country is virtually united in the opinion that the latest German note is utterly unsatisfactory. One extraordinarily naïve suggestion, which has the appearance of being officially inspired, was made in press dispatches from Berlin on Monday. It was that a solution of the difficulty might be found by the German Government's placing at the disposal of the United States for passenger traffic certain German steamships now lying in American ports, which should be allowed to fly the American flag for the duration of the war.

Despite Germany's official contention that it is impossible for submarines, in the rôle of commerce-destroyers, to observe the ordinarily accepted rules of civilized warfare, it is gratifying to note that the practice of giving warning to ships before attack has continued during the past few days to be the rule instead of, as formerly, the exception. Since we wrote last week news has been received of the sinking of only eight ships: four British, of which two were trawlers; two Russian, one Italian, and one French. So far as can be ascertained, only in the case of one of the Russian ships, the Leo, the sinking of which was reported in Tuesday's papers, was the warning omitted. As a consequence eleven lives were lost. If the reports of this case which are available as we write may be accepted as true, the offence of the German submarine was aggravated by the fact that it compelled, under threat of destruction, an American bark, the Normandy, to act as a screen while it prepared for the attack on the Russian ship. The Cunard liner Orduna, on her voyage from New York to Liverpool, was chased for three hours by a submarine, but escaped. Interesting statistics of Liverpool shipping were published on July 8. According to this dispatch, since the beginning of the submarine blockade, nearly 20,000 vessels have entered or left the port of Liverpool, and of these only twenty-nine have been destroyed.

Interest in the future action of Rumania and of the Balkan states generally is revived by dispatches from Berlin and Bucharest, under date of Monday, asserting that definite offers of territory have been made to Rumania by Austria-Hungary and that a time-limit of one month has been set for Rumania's decision. According to the dispatches alternative proposals have been made, the one set requiring in return only a guarantee of continued Rumanian neutrality and increased facilities for the transportation of munitions from Germany to Turkey; the other set, naturally more generous in scope, demanding Rumanian participation in the war on the side of the Teutonic Allies and Turkey.

The suit brought by minority stockholders to recover $102,000,000 from former and present directors of the New York, New Haven & Hartford Railroad was dismissed by the Supreme Court of Massachusetts on July 8.

It was announced on Tuesday that Thomas A. Edison had accepted the invitation of Secretary of the Navy Daniels to head an advisory board of civilian inventors and engineers for a Bureau of Invention and Development which is to be created in the Navy Department.

A severe storm, attaining the dimensions of a tornado, swept over Cincinnati and its vicinity on the night of July 7. Twenty-seven persons were killed and a large amount of damage was done to property.

The Government last week took definite action in regard to numerous reports that the wireless station at Sayville under its German control has been used for unneutral purposes, and that in spite of the censorship a way has been found to send messages containing information of military value. No confirmation of the reports has been published, but as the best means of securing the wireless station from unneutral use the control of the plant was on July 9 taken over by the Navy Department, with the acquiescence, it is stated from Washington, of the German Government.

The man Holt, or Muenter, who attempted to assassinate J. P. Morgan and placed the bomb in the Capitol at Washington, committed suicide in Mineola jail on the night of July 6. The circumstances under which it was possible for him to destroy himself remain, to say the least of it, obscure, and, it is understood, are to be the subject of what one may hope will be a searching inquiry. The somewhat tardy testimony of certain professors, one of whom at least had recognized the fellow when he was at Cornell, have established beyond doubt the identity of Holt with Muenter, the former instructor of Harvard, who was suspected of having poisoned his wife.

With his death, unfortunately, Muenter's career as a would-be assassin was not terminated. A letter addressed to his wife disclosed the fact that he had placed a bomb on a ship that was to sail from New York on July 3, and the bomb, it was stated in the letter, was timed to explode on July 7. Warning was sent by wireless to vessels within reach, and on Saturday of last week news was received that the Minnehaha was returning to Halifax with a fire in one of her holds caused by an explosion. The ship was laden with explosives for the Allies and carried no passengers. The explosion, however, occurred in a hold in which the general cargo was stored. The fire was controlled, and, after her return to Halifax, the Minnehaha resumed her voyage to England on Sunday. Whether Muenter acted alone or not remains to be discovered. The incident of the Minnehaha has at any rate served to bring to light the fact that unexploded bombs have recently been discovered on at least four other ships carrying munitions to the Allies from this country. On Monday was published a letter addressed to the *Times-Picayune* of New Orleans and signed by "Pearce"—the name affixed to the epistles which Muenter wrote to Washington papers explaining his exploit in the Capitol—in which the writer avowed partnership with Muenter and the intention of carrying on the dead man's work.

It is not expected that the situation in Mexico will be materially modified by the capture of Mexico City by Carranzista forces, under Gen. Gonzales, on July 10. As we write, there are reports that Villa in his turn has sent a large body of troops south and is again threatening the capital. To meet the Villista forces, it is thought, it may be necessary for Gonzales to evacuate the city and move northward, in which case the city would be exposed to attack by the forces of Zapata.

It was officially announced on Tuesday that subscriptions to the British war loan had reached a total of nearly £600,000,000.

Announcement was made in Pretoria on July 9 that Gen. Botha had accepted the surrender of all the German military forces in German Southwest Africa. A force, it is stated, will now be sent from South Africa to participate in the main operations of the war. The House of Commons on Tuesday voted its thanks to Gen. Botha, Gen. Smuts, and the forces of the Union of South Africa upon the successful conclusion of the campaign.

That portion of the English press which is controlled by Lord Northcliffe, supported by a certain section in the House of Commons, continues to give an unedifying exhibition of disunion. Mr. Lloyd George on July 7 issued a statement in reply to Lord Haldane's speech at the National Liberal Club on July 5 in which he defended Major-Gen. von Donop, chief of the Ordnance Department. Mr. Lloyd George characterized Lord Haldane's remarks on that occasion as "incomplete and in some respects inaccurate." The general opinion in England seems to be that Lord Haldane was possibly indiscreet and that Mr. Lloyd George failed to mend matters by his statement. In the House of Commons on Monday Mr. Asquith was asked a number of questions in regard to the failure of the late Government to solve the problem of munitions, all of which he refused to answer, on the ground that it was not in the public interest that the matter should be discussed at this time. Meanwhile, Mr. Lloyd George's efforts as Minister of Munitions are apparently meeting with success. In two weeks 90,000 workmen have been enrolled, and Lord Kitchener, in an important speech at the Guildhall on July 9, declared that the question of munitions was being dealt with in a satisfactory manner.

The Week

A French writer, George Bourdon, has recently published a book which he entitles "The German Enigma." He would find more material for it in the reply of the German Government to the two American notes. Take the Lusitania issue. The sinking of that ship, with the consequent loss of American lives, was plainly stated by President Wilson to be an act in direct violation of international law and in flagrant disregard of American rights. He called upon the German Government to disavow it, to make reparation, "so far as reparation is possible for injuries which are without measure," and to "prevent the recurrence of anything so obviously subversive" of the laws of war. To all this, what does von Jagow reply? He does not, indeed, venture again to set up the defence which he attempted in his note of May 28, namely, that the Lusitania was "armed." That she was, our Government categorically denied, and called for the German evidence, if there was any. Is it now produced? Not at all. The German Foreign Office has not a scintilla of proof for its former assertion. It merely indulges in general charges about all British merchantmen, and coolly lays all the blame for the killing of the Lusitania's passengers upon "the manner of conducting war employed by our adversaries." There is also a kind of intimation that the Lusitania ought, in decency, to have remained above water longer after being torpedoed, as if this in any way freed the commander of the German submarine from the responsibility for the direct consequences of his lawless act. In all this, evidently, there is no word of disavowal, no offer of reparation, no guarantee for the future. The reply, in this matter, is no reply at all. It is nothing but an evasion.

Much the same must be said of the other great point in controversy. The American Government had squarely asserted the right to trade freely on the high seas, without regard to any illegally declared "war zone," and also the right of Americans to travel in safety on merchantmen, whether under a neutral or a belligerent flag. This was stated at length and with much solemnity in the note of June 9, which closed by asking "assurances" from the German Government that it would "adopt the measures necessary to put these principles into practice." Does the German reply do this? In no way whatever that can be called satisfactory. It does, indeed, undertake to sink no American ships, provided they carry special markings and the German Government is notified in advance of their coming, and also provided our Government will "guarantee" that they have no contraband on board. The inference is that if they have contraband in their cargo, passengers and crew will be sent to the bottom without warning. This is such an entire misconception or perversion of the contentions of our Government as to be really more offensive than would have been a blunt refusal to consider our protests at all. So of the other conditions which the German reply undertakes to lay down for the use of the high seas by Americans. After our Government had affirmed in the strongest language the indefeasible right of Americans to travel freely, in what passenger ships they pleased, this attempt of the German reply to hedge that right about, with the air of making benevolent concessions, is something worse than pettifogging. It cannot be acquiesced in for a moment.

"It is ridiculous to suppose that Muenter was incited to his actions by any Germans in this country or in Germany, as has been hinted at in several newspaper reports," says Professor Münsterberg. No doubt he is right. But if, in point of fact, Muenter *had* been incited to his actions by Germans in this country or in Germany, we should like the learned professor to explain in just what respect those Germans would have been more guilty than was the German Government itself in bringing about the murder of the passengers on the Lusitania. Of all the actions of Muenter, real or pretended, none is regarded as more atrocious than his alleged setting of an infernal machine upon a transatlantic passenger steamer. But if that bomb had actually exploded, and caused a massacre of innocent non-combatants, would it not have been justifiable on precisely the same principle as that which is appealed to in justification of the Lusitania slaughter? There is no law of war, or law of nations, that makes it any more permissible to sink a merchant ship, without warning, by a torpedo from the outside than by a bomb from the inside. If the plea that "Germany is fighting for her life" suffices in the one case, it suffices in the other; nor do we see any form of outrage or barbarism which that plea, if admitted, would fail to cover with its immunity.

Members of the Social-Democratic party in Germany—now virtually the only Opposition in the Reichstag—are more and more finding their voices. They have their differences. There is a "minority" and a "majority." But whatever their divisions, they agree in this—that no peace should be sought which is not permanent, and that no permanent peace is possible if it involves forcible annexations of territory. This has been the bold position of the *Vorwärts*. It is held by both factions of the Socialists. The official head of the majority group reaffirms it in a dispatch from Berlin to the New York *Times*. He declares that "the entire Social Democracy is against a war of conquest." One of the more radical, or minority, leaders, Dr. Ernest Meyer, goes further. In addition to opposing annexations of foreign land, since they would imperil any peace based upon them, he would remove another direct cause of war—huge military preparations. "We desire," he affirms, "general disarmament and security against another disastrous war through far-reaching international agreements." This is a noteworthy utterance. And it finds echo in other countries. The more prolonged this war promises to be, the more awful its losses, the more dubious any decisive outcome by sheer force of arms, the more pervasive is the feeling that the world must take steps to insure itself against another catastrophe so appalling. Militarism is now having its most gigantic and frightful display. But as it goes on piling up the corpses of its victims and spreading its miseries as wide as the earth, there is a dawning hope that it will expire of its own supreme efforts and supreme hideousness.

It is such an aspiration that is keeping life and courage in the hearts of many in the titanic struggle itself, and of thousands who watch it breathlessly from afar. No one has given more poignant expression to this larger hope of civilization than Anatole France. A collection of his letters and other writings on the war has just been issued in Paris, the work to be sold for the benefit of crippled French soldiers. In its pages it is interesting to note how all the habitual cynicisms and ironies of M. France fall away from him. He is simply the master of a great style pouring out his soul in sad sincerity. He is a Frenchman, first of all, but he is also a Socialist, writing to his "confrère" Mr. Walling, of New York, and a man whose heart is filled with the love of all that is beautiful in civilization. And it is as a champion of mankind and one who, even in his old age, looks forward to securities for the future, that he expresses his deep longing for a

peace that shall be strong, radiant, and enduring. But for this very reason he sets his face like a flint against any talk of peace before the German armies are out of France and out of Belgium. With Anatole France, too, the great desire is not the crushing of Germany, but the extinction of the threat of militarism. The conflict has been precipitated upon France, and she is making the most cruel sacrifices; but she must persist, at whatever cost, until the next generation is freed from the fear and the peril that have haunted this one. Till that is made sure, any Frenchman who speaks of peace is, according to M. France, a traitor at once to his country and to civilization.

Edison's appointment is not as "head of a Navy Test Board," as certain headlines seem to announce, but simply as chief adviser to the Bureau of Invention and Development of which the Navy Department announces the creation. The prominence his name has received in connection with this Bureau already justifies one aim frankly avowed by Secretary Daniels in employing him. "Our chances of getting the public interested in and back of the project will be enormously increased if we can have, at the start, some man whose inventive genius is recognized by the whole world to assist in consultation." While such advertisement is useful, it appears that the Department has regularly been receiving from officers from three to five suggestions daily as to possible improvements in vessels, equipment, and yards. Mr. Edison and his expert civilian associates may prove of great value in developing mere hints into striking inventions; their connection with the Bureau will encourage outsiders to submit ideas for naval innovations; and the Bureau itself should take much better care of merely routine proposals than they have heretofore received. The United States has peculiar reason for encouraging its future Ericssons, Eadses, Maurys, and Lakes. At the same time, it is encouraging to find both Daniels and Edison taking the stand that enterprise and efficiency may be substitutes for enormous expenditure, and that a period of changing naval horizons is one for deliberate study of new problems, not for hasty action.

The Japanese have us at their mercy now, for the attention of the vigilant Hobson is distracted by a domestic plot. He calls it a "plan," but no soft words can disguise its ominousness. Like all deep-laid schemes, this one is alarming by its very simplicity. First, the President is to be renominated in spite of the one-term plank adopted at Baltimore. Mr. Bryan, the author of the plank, is to join in this infamous proceeding. Secondly, taking warning from the Convention that nominated him in 1912, Wilson is to write the platform of 1916 himself. Thirdly, he will put into that platform a plank binding the Democratic party to leave the question of prohibition entirely to the States. The courage that is required to reveal this conspiracy is appreciated by no one more than by Mr. Hobson, who is uncertain only whether his act means political murder or political suicide for him. As he is at present an ex-Congressman, having been defeated in his own State in his candidacy for the Senate upon the issue of prohibition, he seems to mean that he is threatened not with political death, but with political non-resurrection. Even so, it is easy to understand his excitement; but why does he not take the one sure course of defeating the plot? Instead of asking the President to sign the pledge—which he would have done for his late Secretary of State much sooner than for the Alabamian—let him throw a shell into the Wilson camp by announcing that unless the conspiracy is at once abandoned, he will prevent the renomination of the President, though at the sacrifice of accepting the nomination himself.

Just to prevent disappointment, the Colonel gives fair warning, as he boards the train for California, that he is not setting out to fire the Progressive heart. In order that there may be no mistake about his attitude, he administers a preliminary chill to that much-tried organ. "Any decent Republican" is now his slogan—unless Publicity Manager Payne is sadly in error. This shows what a great consoler is Time. Two years ago, no member of the gang that stole the precious nomination deserved a decent man's patience. Only a party Progressive could hope for honest men's votes in 1916. A year ago, keen eyes and a softer heart could discern a remnant among the Republican rascals from which something might be expected. To-day, the remnant consists of the thieves, while the mass of the Republicans are once more as white as snow. The next stage of the development is already in sight. How long will it be before the Colonel's closest friends put into plain words the invitation, "Give us anybody who can beat Wilson"? As Wilson is "a second Buchanan," and as the Colonel is a second Lincoln—both statements are made on the highest authority—we have a little lesson in logic from the Oyster Bay primer that is not at all hard. Mind you, the Colonel has not gone back to the Republican party: "He believes that it is not a time for men to worry about political ties"—especially about Progressive ties.

For Mr. Bryan merely to announce his adherence to the cause of woman suffrage would have been far too tame. So he lifted it towards the pseudo-sublime by adding the explanation that he had not joined the suffrage forces before because he had been too busy with other subjects, *it being his policy not to take up questions until they were capable of solution.* What a practical statesmanship is here! Now we understand his long hesitation over the question of Government ownership of railways. Mere politicians might propose half-way measures, like Interstate Commerce Commissions, but the real statesman waited until the railway question became capable of solution and then announced the solution. Having solved that problem, he pressed onward to others. If his countrymen were too stupid to accept the solution, why, there it was at their disposal whenever they might have better judgment. So with free silver. Whenever the country gets tired of dallying with the financial problem and makes up its mind to solve it once and for all, there is Bryan's answer, right in the back of the book. If he gives the impression of abandoning one problem after another, that is not his fault. Why should Euclid keep on demonstrating one theorem to an incredulous crowd when all the other problems were waiting for him?

The latest development in the Colorado situation gives promise of bringing to an issue that part of the mining-troubles which is perhaps of gravest interest to the people of the United States. As to the merits and demerits of the struggle so long carried on between mine-owners and mine-workers, it seems almost hopeless to come to any clear conclusion; but the question whether or not the whole system of the administration of justice had become corrupted by the power of the capitalists ought to be capable of decision. And it is upon this question that the charges brought in the District Court at Trinidad last week bear in the strongest possible way. They are presented in connection with the trial, some time ago, of John R. Lawson, a member of the national executive board of the United Mine Workers of America. Lawson was convicted of murder in the first degree, in connection with the fighting at Ludlow; and in the charges now made in court accusations

of the most atrocious interference with the jury are brought against the bailiff in whose custody it was. How much more than this will be, or has been, charged in the proceedings, we cannot say; but writers apparently responsible and competent have made, in the public press, accusations of far more sweeping and fully as serious character. It is a matter of genuine concern, not only for Colorado, but for the nation, that the truth of the whole matter be established; and there ought to be such focussing of public attention on the subject as shall give promise of bringing about this result.

If the Federal Government is to institute a system of rural credits, the proposal to settle the unemployed on Government land with easy-payment loans advanced by the United States is logical enough. If the Government is to steer clear of a complex and dangerous field, and try instead to stimulate the various States to enact rural credit measures, all cognate schemes for sending city workers to the farms had much better be left to State agencies. Washington dispatches declare that an inter-departmental committee appointed by Secretaries Lane and Wilson is now at work on a plan "operating through the Department of Labor, which would enable workers in congested cities to take up agricultural land on Government reclamation projects, or public lands," with use of public money. In such attempts the Federal Government has an advantage in its possession of huge tracts of open land. The States, as the investigations of the Massachusetts Homestead Commission have shown, would usually have to search out and purchase waste land. But for their ability to handle loans and instruct would-be farmers more intimately, local agencies are greatly to be preferred; the Government could surely arrive at some agreement with the Western States—where rural credits are most needed—whereby funds could be advanced to needy homesteaders brought from Eastern and Central centres. Through the Federal Employment Bureau some supervision might be maintained. While too serious attention cannot be directed towards the questions of rural credits and unemployment, both offer problems better to be solved by the commonwealths than by the nation.

The plea of guilty promptly made by seven of the 131 men indicted in Indianapolis for election frauds will be taken as an indication of the likelihood of a cleaning up for the capital of the State such as that by which Terre Haute has recently benefited. National Committeeman Taggart and Mayor Bell show their realization of the moral effect of these pleas by disavowing any acquaintance with the guilty seven. In this assertion they will be believed, as they will be held innocent of any wrongdoing until they are proved to be not innocent. But they can hardly be unaware of the reasons why the public finds satisfaction in the fact that, in these cases as in those at Terre Haute, men "higher up" are to be tried along with the obscure. It is not easy to see why mere clerks and judges of election, especially of primary elections, should tamper with the ballot-boxes and even resort to physical violence without some hint from above or at least the knowledge that such procedure would be welcomed by those whose fortunes it furthered. And it is these men, however few they may be, far more than the mass of the guilty, that the ordinary citizen would like to see caught. Some of them were caught at Terre Haute; and the country will hope that the same success may attend the trials at Indianapolis.

After Ohio, Indiana; after Indiana, Kentucky, and after Kentucky, Rhode Island. Are there more election frauds than ever before, or are their perpetrators less skilful? The differences among these cases are unimportant. In Indiana and Rhode Island the list of indicted includes names of greater prominence than similar lists in the other States. Both parties, nay, all three parties, are involved, one having been the grosser sinner here, another there. In all these States, what attracts the attention as much as anything else is the "wholesale" character of the indictments. But this seems to mean nothing more than that for once the officers of the law have been able to lay their hands upon a larger percentage of the guilty than is often the case. If these developments had taken place ten or fifteen years ago, the chief cause for surprise would have been, not that the men were guilty, but that they were caught. Our surprise now is on the other leg: we thought that the Australian ballot law and the general toning up of the political atmosphere had made election frauds obsolete. In a certain sense, they are, but efficient district attorneys are evidently needed to force some of our political wire-pullers to realize the fact.

Gov. Dunne's approval last week of the University of Illinois Appropriation bill, carrying $5,000,000 for the two years, is justly described as a notable event in American higher education. The sum is the largest ever appropriated by a single act to a single institution of the kind in the country; while its increase over the $4,500,000 voted in 1913 indicates the rapidity with which the revenue brought to the University by the mill-tax will grow. The bill met with some preliminary opposition, for while the mill-tax law provides that the income may be used by the University of Illinois alone, an attempt was made to force a division of it with the normal schools. Its passage unamended, by a virtually unanimous vote, with the support of all parties, confirms the law in a way that will now be binding. With the growth of property values in the State, the University should in its income shortly draw ahead of most of its rivals. It was under a Republican Administration that the mill-tax act was passed, and there were free predictions that the more economical Democrats, representing in greater degree the Irish Catholic influence of Chicago, would repeal or mutilate it. Yet the Democratic Governor Dunne has been its stanch defender. For this permanent and liberal provision for its growth, the University has chiefly to thank the sagacious efforts of President James.

The story of the chasing of the Cunard liner Orduna, bound from New York to Liverpool, as told by travellers just returned from England, has an important bearing on the submarine-warfare issue. The German submarine was sighted, it appears, at a considerable distance astern; and during the chase the submarine availed itself, of course, of all the speed that it could make by keeping on the surface. The Orduna put on full speed ahead, and also signalled by wireless for help; and when help came in sight, the submarine at once found safety under water. It is difficult to see, then, wherein lies the soundness of the assertion that a submarine cannot afford, like any other ship of war, to risk the chance of the arrival of assistance to a merchantman she desires to attack; on the contrary, she has a resource of safety which all other warcraft lack. The fact is that it is not the safety of the submarine, but the success of its operations, that is put in special peril by the giving of notice; the ignoring of the laws of war is desired for the sake of diminishing the chances of rescue for the attacked, and not in any peculiar degree for the sake of averting the danger of destruction to the attacker. Of course, even if the facts were otherwise, that would be no reason for abrogating the established rules of war. The safety of non-combatants on a merchant ship has never been regarded as conditioned on the exigencies of the warships that might desire to capture or sink her.

AMERICAN FEELING ABOUT THE GERMAN NOTE.

Comments by the German press, so far as sent by cable, on the reply of the German Government to President Wilson's protests are all of one mould. They praise their Government for its firm refusal to surrender a single German position. Equally of one mind are the American newspapers. As by a single voice they express disappointment and dissatisfaction with the communication from the German Foreign Minister, declare that the President cannot recede, and offer him hearty and non-partisan support in maintaining American rights and dignities. Thus it would appear that the Fourth Estate in the two countries is as much at variance as their Governments. Yet on neither side is there a pronounced spirit of belligerency. A deadlock is admitted on the main point at issue, yet there plainly persists the hope, open or tacit, that a solution of the crisis may be found without a rupture between Germany and the United States. We believe that a majority of the people in both nations sincerely desire that peace may not be broken.

By some German-American newspapers the German note—of which they naturally approve in general—is described as not only friendly but highly conciliatory. It seems to be thought that the German Government made a great effort to placate us. Few Americans had gathered this impression from a reading of the German reply, but they may have failed to take two things into the account—first, the native inability of the German Government to do anything gracefully; and, secondly, the difficulties under which it labored in having to satisfy public opinion at home. On the supposition that it really intended to make concessions to Americans in secondary matters, we must, in fairness, make allowance for an unfortunate manner. Disraeli spoke of a clumsy and tactless public man as possessing a "Bœotian grace." Prussian military people have that quality in the extreme. They are capable of offering, as an elephant, to brood the eggs of a partridge, and of being surprised that the warm-hearted advance is not welcome. So it may be that the phrases and proposals in the German note which seemed so heavy-footed and almost insulting were meant as a peculiarly gracious concession. Americans cannot do other than laugh at them or reject them, but it may be that we ought to recognize a kindly intent. At least, the door is left open to further negotiation.

Nor does one need to go further than the language of the German note itself to perceive that various influences, if not various hands, were at work upon it. It has certain sentences which were obviously meant for home consumption. Others betray the desire of the Foreign Office to promote an understanding with the American Government; but all the while there is, as it were, a shadow cast from behind. It is the military party, in especial the Admiralty, preventing the Foreign Minister from stating that there has been any change in the actual practice of German submarine warfare, or from saying anything about the Lusitania except what would heighten the enormity of her destruction without warning. In all this there is an awkwardness in phraseology, a blundering in the choice of words and in the methods followed, which seem as if calculated to give offence, though the fact may be that the reply was the result of a good deal of pulling and hauling, of tinkering and patching, mainly with the aim of preventing the German people from thinking that anything whatever had been yielded.

That anything material has been yielded, we are unable to see, on mature consideration of the German reply. The conditions attached to certain offers are either ridiculous or insufferable. And the *gaucheries* of attitude are almost as hard to put up with as the refusal to meet our just demands. Still, it is the part of sensible people—it is the business of statesmen—to overlook defects of manner so long as the thing earnestly desired may yet be striven for. And we make no question that it is at this time the hope of the great body of Americans that President Wilson will not stick in the bark of the mere terms of the German reply. What it proposes that is impossible of acceptance he can put aside in few words; and to the main position of his two Lusitania notes he will, of course, adhere. Yet he will be justified in thinking that the friendly tone of the German Government—even if uttered with an unhappy air—and its making of what it thought to be concessions—even if they amount to nothing—furnish him with a kind of leverage to press the business further.

It is not a question of compromise. Law, right, justice, humanity—and it is on these that our Government has taken its stand—cannot be compromised. We are working not only for our own interests, but for those of all neutrals and for the welfare of all nations. But in reasserting, as President Wilson doubtless will, the fundamentals of the American position, he may yet hope that Germany will come to a better mind. She may yet agree to set down as a promise what she has quietly adopted as a policy—not to attack merchant ships without warning, and to do everything possible to save the lives of non-combatants. The latest methods of German submarine warfare comply, so far as may be, with the rules of naval war. Let this be made the established practice, and we shall have no complaints for the future, while still insisting that the murder of Americans on the Lusitania was a criminal disregard of our rights and a gross violation of international law. That law cannot be set aside or changed by Germany alone. It can be done only by the consent of all nations. Such action she may yet be induced to await.

OUTLYING PHASES OF THE WAR.

The news of the surrender of all the remaining German forces in South Africa is not of high military importance, but has great dramatic significance and a wide suggestiveness. For one thing, it marks the extinction, temporarily at least, of the German Colonial Empire. Kiao-chau, the Pacific islands, and now the vast stretch of territory in South Africa—East Africa is as good as gone—have been lost to Germany. This was one of the great stakes which the Kaiser put at hazard when he decided upon a war into which Great Britain was certain to be drawn. The result was inevitable. Sea-power would attend to that. After all the Kaiser's exhortations to Germany to look to her future on and across the ocean, the whole colonial edifice, built up with such pains and at such cost, has now crumbled to the ground. The fated end in South Africa may not cause so much of a sensation in Berlin, or provoke so many cries of vengeance, as did the expulsion of Germany from China by the Japanese, but it cannot fail to give to serious Germans food for melancholy thought.

It marks for them the frustration of many hopes. Besides the actual loss of the colony upon which Germany had expended so much treasure, with not a little blood in the war with the Herreros, there is the further bitter reflection that the blow was dealt by the Boers, now loyal British subjects. What a change from the day when the Kaiser sent to Kruger his famously imprudent telegram! And to the German way of thinking, it would have seemed absolutely impossible, after the Boer War, that the Dutch burghers could be found so soon, and in a world-convulsion imperilling the very life of the

British Empire, fighting under the Union Jack. Germany was confident of a Boer revolt the moment the present war broke out and England's hands were tied. There was, indeed, a weak and speedily quelled revolution, which the Germans were suspected of fomenting—just as they were going to have India aflame and Egypt in insurrection—but the wise and tested colonial policy of Great Britain, giving self-government to the Boers, had its wonderful vindication in the rallying to the Empire of the great body of the Dutch in South Africa. It is a Boer, Gen. Botha, who received the surrender of the Germans. In that fact alone there is a whole history, as well as an entire body of political morals.

This South African phase of the war is but one of many reminders of the way in which the ends of the earth have felt the European cataclysm. There is good historic precedent for it. The great wars of the middle of the eighteenth century drove the American colonists into battle, as the Boers and the Australians and the Canadians have been driven during the past year. Our French and Indian wars were, as Macaulay stated in picturesque phrase, directly related to the aggressions of Frederick the Great and the huge embroilment of Europe. And what the reverberations of the Napoleonic wars were in America, both North and South, our own historians have told us. With the whole world so much more closely knit together now, and with belligerent nations having possessions and interests in every part of the globe, it was the more impossible that the maelstrom of the great war should not exert its suction far and wide. South African school children may for some time to come be taught, as American school children long were, a disproportionate view of the war in which their fathers were engaged. But in the end it will drop into its proper place as a remote incident of a mighty struggle which was centred elsewhere.

And there are countries nearer the conflict which are being pulled strongly under its influence. Greece, Bulgaria, Rumania, all are agitated, all seem on the verge of a decision one way or the other. A distinction is to be noted, however. If the decision is pro-German, it does not mean active military assistance. It means only neutrality. Whereas, if those nations—or any one of them—conclude to side with the Allies, they will take the field against Germany and Austria and Turkey. A keen diplomatic duel is going on in the Balkans. But if the Germans win it, they gain nothing but an escape from new enemies. The latest reports speak of alternate proposals made by Austria-Hungary with a view to securing either the neutrality or the active military coöperation of Rumania, but probably the most that the German Foreign Office ventures to predict is that Rumania and the others will remain neutral. Even that is doubtful. To Rumania has been offered a big price by the Teutonic Allies. They have assured her that she may have parts of Bukowina and of Bessarabia. But her eyes are turned westward to Transylvania; and the indications are that she will regard the terms proposed as unsatisfactory. The negotiation has confessedly reached the point of touch and go, and constitutes today one more heavy burden for German diplomacy.

That Germany entered the war in bungling fashion is a fact which few Germans dispute. They must be made the more keenly aware of it to-day by the wiping from the map of the last of the German colonies. Nothing but complete triumph on the continent could make up for that, and no such triumph is now in sight. The Russians are visibly stiffening on their own soil. If the French and English are making small progress, they are at least showing that they can stand off the most furious German drives. Even the mismanaged Dardanelles campaign promises better. And the German submarine warfare is not starving England or appreciably crippling English commerce. Germany is putting forth mighty efforts, and is doubtless able to do so for a long time to come; but the ideas of a Bernhardi about imposing her will on Europe and becoming the great *Weltmacht* are not in process of realization. Far from adding to her dominions beyond the sea, Germany has been stripped of all she had.

LOOSE THINKING AND WEAK ACTING IN RELATION TO CRIME.

An incident of the case of Muenter, alias Holt, which has justly aroused a great deal of attention and comment is the failure of one of his fellow-workers at Ithaca to reveal the identity of the Cornell instructor of 1914 with the Harvard wife-murderer of 1906. Professor Gould has stated, with entire frankness, that he was absolutely certain, almost from the first day he met him, that Holt was none other than Muenter; he explains his silence not on the ground that there was any doubt whatever in his mind as to the fact, but on the ground that he felt it right to let the murderer go on in what appeared evidently to be a new life, in which he was conducting himself worthily. We have no desire to pass any severe judgment on Professor Gould. It is easy to think of many reasons for his pursuing the course he did, reasons which with nearly all of us would have great influence and which perhaps with most of us might prevail over the stern promptings of civic duty. The consideration of the good and evil that went into the decision of this particular man in this particular—and highly unusual—case is of far less importance than the broad question of our habitual attitude of mind when we are called upon to strike the balance between easy-going sentiment and stern duty in any case of the kind. And this brings us face to face with the whole question of our attitude, not only individual and personal, but collective and governmental, towards the entire subject of crime and punishment.

It is upon this question of the mental attitude of the community, of the public authorities, and of individuals towards crime and criminals that the crucial difficulty of the whole problem of the humanizing of the prison system turns. The *Nation* has sincerely and earnestly supported the efforts that have been made in that direction by earnest, able, and high-minded men in this and other States; but it has never disguised the perplexities with which these efforts are, in the nature of things, attended. All meaningless hardship, all senseless severity, all physical or mental distress caused, not by well-considered penal policies, but by either parsimony or ignorance or maladministration—all these things must be fought against and abolished. And on the positive or constructive side, whatever can reasonably be done for the reform and rehabilitation of the prisoner, for making him a man again if he ever was one, and even for trying to make a man of him if he never was one—all this is noble work, and a great service to the State, as well as a splendid form of humane endeavor. The only question is, in what ways and within what limits this can be done without sacrificing or endangering the primary purpose of the criminal law.

That primary purpose, it must never be forgotten, is not the reformation of the criminal, but the prevention of crime. And of all agencies the most powerful is the instinctive association of the idea of crime with the idea of punishment and disgrace. That we ever forget this, that persons oth-

erwise of keen intelligence often overlook it altogether when they discuss prison questions, is only proof of the profoundly pervasive character of that association. The idea that murder is horrible and a murderer a pariah, that to be a thief is to be an outcast—these things are so inbred in us that we never stop to think of them as arising out of any external influences, or as subject to change through a change in those influences. Yet nothing is more certain. Most of us, to be sure, would not in any case be murderers, or even thieves; but of the multitude whose moral nature is more or less defective, whose ability to resist temptation is small, or whose sense of right and wrong is easily confused, who shall say how many thousands are held safe from crime—from the first steps that lead to crime—by that intuitive abhorrence or recoil which comes from the long tradition of the prison and the gallows? It is not that the man who is on the brink of crime makes an express calculation of the chances of punishment, though this, too, plays its part; it is that thousands never reach the point where crime is contemplated as a practical possibility, because the lifelong association of disgrace and misery with the idea of crime asserts itself when even a distant thought of committing a criminal act flits across their mind. And it is this strongest of all defences of society against crime, and of the possible criminal against his temptations, that is put in danger when we permit loose thinking and sentimental action to shove aside the stern realities of crime and punishment.

NEWSPAPERS AS INSTITUTIONS.

Recent exploits of certain members of the English press have not been more noteworthy than the violent attacks upon them. Boasting of having unmade and made a Government, they have, in turn, been accused of glutting personal vengeance, of sacrificing the good of the country to a newspaper sensation, and of meddling and marring in general. The public burning of one of these papers on the floor of the London Stock Exchange was an event which Carlyle would have said was "significant of much." It has, indeed, a significance, especially when taken along with other related occurrences, which is not lost upon the more sober and responsible of English editors. Mr. Spencer, in the *Westminster Gazette*, commented not long ago upon the fact that newspapers are now under a more jealous public scrutiny, and are subject to more suspicion and dislike, well or ill founded, than ever before. He did not resent this. He merely stated it as a phenomenon of the day, which those charged with the conduct of the daily press could not afford to overlook.

It would be easy to point to signs of a similar state of mind, respecting newspapers, in this country. For a considerable period now, it has been the fashion of a certain type of man in public life to bring railing accusations against the press. These politicians have found it an almost infallible means of getting a cheer from their audiences. That is the suggestive thing, the thing for newspaper men to consider. Mr. Roosevelt, when his hat was still in the ring, took many a fling at the newspapers. They had, in his opinion as expressed at one time, fallen far below the magazines in integrity and truthfulness; though latterly he had to confess sorrowfully that even the latter had gone off sadly—by which he meant, of course, that they had refused to go off with him in his various chases after the ideal and after offices. His scolding mantle he has since passed on, apparently, to Mr. Bryan, who loses no occasion to pay his disrespects to the press. It has become a favorite way with him of bidding for applause. "You may not be persuaded by my arguments, but, anyhow, we all agree that the newspapers are selfish, venal, reckless, and untrustworthy." (Laughter and cheers.)

Naturally, Mr. Bryan has his nostrum for this evil as for all others. He explained it in his address to the Press Congress in San Francisco last week. In a word, it is to make newspapers personal instead of impersonal. Every man who writes anything should put his name to it. This is a thesis which has been debated much more than Mr. Bryan is aware, and the sound public arguments against his proposals are more numerous and weighty than he dreams of in his slap-dash philosophy. We do not propose to discuss the subject now, and refer to what he said only because of one entire misapprehension into which he fell. As if in order to sugar-coat his pill to remedy the suppression of names in journalism, he said that it would be a great help to the young and rising writers connected with the press if they were to sign their productions. As the case stands, declared Mr. Bryan, they do good work for which they get no reputation at all, while they have the mortification of seeing all the glory which should be theirs swallowed up by "a corporation"—that is, the newspaper for which they work.

This is a misunderstanding which is really laughable. There are many reasons why American newspapers have, during the past thirty or forty years, more and more ceased to be known as the personal organs of their editors or owners, and have tended to become institutions. But let that pass. What is of present concern is the mental attitude of the men who make the paper. Have they this thirst for personal notoriety, this unwillingness to have the individual sunk in the general result, which Mr. Bryan posits? Very little, we are confident. The truth is plain to any one who knows a modern newspaper office from the inside that the institutional spirit has seized upon the workers. They are not thinking all the time about themselves, but about the paper. They personify it. They have slang names for it. They say: "Well, the old girl certainly did get a move on to-day." Little by little, they become absorbed in the team-play, rather than in every man fighting for his own hand. They come instinctively to think of their newspaper as something with a life of its own, wholly independent of the particular men who happen at the moment to be responsible. Editors and writers may come and go; it is the paper that goes on forever. This institutional sense sometimes gets so strong upon newspaper men that they almost believe the edition would somehow manage to get off the press, and make its appearance on the streets just as usual, even if all the staff were to be found dead in their beds some morning.

A concrete example of what we mean has just been offered in New York. The *Sun* has been moving from the building with which its name has been so long identified. The occasion was one to bring out the truth that there is such a thing as the impersonal *Sun*. It was not a set of editors changing their offices; it was the *Sun* going to a new local habitation. There have been special reasons why the *Sun* should have acquired this air of being an institution. Under changing managements, it has maintained a distinct personality. And it has been successful in binding a great variety of workers to it in a fine *esprit de corps*. Let Mr. Bryan go to any of them and tell them that, by not signing their names, they are sacrificing their talents to a greedy newspaper, and they would laugh in his face. For what are they there except for the greater glory of the *Sun*? This might be all Greek to Mr. Bryan, but it is the sober truth. And what is true of the *Sun* is true, in one degree or another, of a thousand newspapers.

ART LESSONS OF THE EXPOSITION.

It is admitted that the central attractiveness of almost every exposition lies in its art. It was so at Paris and Brussels, at Chicago and St. Louis, and for peculiar reasons it is emphatically so at San Francisco. The industrial exhibits may be enormous and varied, but they are rarely more than so much advertising; the scientific and mechanical exhibits reach but limited circles; while the architecture, sculpture, landscape planning, and decoration constitute the chief popular appeal and teach the most enduring lessons. There has always been regret that these artistic creations must be evanescent. It is rarely that more is saved than Chicago has in her Field Columbian Museum and in the statue of the Republic by French which the trustees have just ordered executed in permanent form with the $50,000 left in the treasury. Even so, the art serves its purpose. At San Francisco, the Mediterranean sky, the clearness of the air, and the beauty of background have given Jules Guérin, Karl Bitter, Edward Bennett, and Willis Polk an unexampled opportunity. Yet the award of the fair's prizes is passing with little note, and the East appears unaware that—as various critics have agreed—artistically this is probably the most successful of all expositions.

The unique quality of the Panama Exposition and its main value as pointing to artistic innovations is by common consent its color-scheme. This exposition had a director of color and decoration; and seldom before has the convention of white been dispensed with. The fair at San Francisco is spread out like a mosaic, and to it a magazine illustrator has given the favorite hues—warm copper, green, red, orange, and blue—of his pictures. The opportunity was peculiar to the setting of skies, foothills, and bay; but not only California, but in some degree others, might benefit by the success of the experiment. In our drier climates it should be possible to take a less tolerant attitude towards the monotonous façades and roofs and the lifeless windows and ornamentations of public and private buildings. Every traveller is familiar with the vivid tiles and walls of European cities, beside which we are hopelessly at the mercy of inexpert house-painters. This idea of the Exposition has taken so well that the local press speaks of the guards' pride in the tonal harmony of their drab and red uniforms. There is also a marked lesson to the West and Southwest in the whole architectural planning of the Exposition. Not ten years ago San Francisco rejected the opportunity to achieve an ideal plan, but here something like Mr. Burnham's proposals have received concrete form. The balance and order of the three courts of the Exposition—the central Court of the Universe in the midst of eight buildings, the two side courts each in the midst of four—gain by contrast with the terraced fussiness and incongruity of San Francisco in the background. The Buffalo and Chicago Expositions gave very perceptible impulses to city-planning in the East, and the West ought to realize that it has a number of cities that are reaching a size where thought must be taken quickly. The architecture of the individual buildings, again, undoubtedly contains hints for the Coast on the Occidental use of Oriental or semi-Oriental styles.

The sculpture of the fair has been less spoken of than the architecture for the very reason that it has properly been made subsidiary to it. But we have had abundant evidence of its quality, and it is full of promise that Western names have been added to the list of those who did work at St. Louis. Mr. Royal Cortissoz has appealed to the authorities not to miss their opportunity to perpetuate the Column of Progress, with successful bas-reliefs and McNeil's Adventurous Bowman crowning the top—"so fine a composition that one cannot regard it as a bit of ephemeral decoration." Praise of the same sort has been given to two figures by Adolph Weinman, of New York, in the central court—the Rising Sun and Descending Night; and there has been warm commendation for the symbolic statuary of the Exposition—The Pioneer, The End of the Trail, The Alaskan, The Trapper, The Indian, and various large groups. Considering the freedom offered in outdoor placing, it is a happy fact that Professor Neuhaus, of the University of California, has been able to congratulate the sculptors on a restraint not seen in the permanent statuary scattered throughout the West. This may have some connection with the greater opportunities offered in the painting of mural decorations above the doorways, in niches, and in outdoor and indoor panels. In sculpture, our expositions have invariably been schools for the artists as well as for the public; there seems every reason to believe that the opportunities offered at San Francisco will have proved an encouragement to a rising group on the Coast.

Artistically, the Panama Exposition has been more dependent than its predecessors upon this country alone, the missions to Europe for foreign contributions having been cut short by the war. But, in any event, it would have shown a greater reliance upon native artists. A glance over the list of eighty contributors to this part of the fair will reassure those who fear that we are still the slaves of Paris, Dresden, and Rome. Twenty of them were born west of the Mississippi; twice as many more on this side of the Atlantic. We are too prone to forget that a sculptor like Borglum could come originally from Ogden, Utah, and a painter like Guérin from St. Louis, and that such men owe a great part of their training to American schools. The achievements at San Francisco are in great measure our own achievements. It is possible to gain a greater measure of artistic self-confidence and boldness from the Exposition. From their cost, it is probable that large international fairs are becoming a thing of the past; but the succession of them in this country, from the time when the Centennial Exposition showed us our deplorable poverty, has been invaluable in educating us in the fine arts.

Foreign Correspondence

THE NEW WAR LOAN—ITS DEMOCRATIC APPEAL—THE UNITED STATES AND GERMANY.

By JAMES F. MUIRHEAD.

LONDON, June 25.

The topics of the moment (in addition to the daily happenings of the war) are the new war loan and Mr. Lloyd George's scheme for mobilizing the industrial resources of the country for the production of munitions.

Our economists have made it quite evident to us that, to meet the expenses of the war, we must devote ourselves to the increase of all forms of necessary production, and resign ourselves to a great decrease in the consumption of luxuries. An enormous amount of that postponed consumption which we call investment is imperatively necessary; and for the truly patriotic citizen, the only fully satisfactory investment must take the form of a loan to Government. The provisions of the new loan, as explained by Mr. McKenna, fortunately involve no clash between patriotism and self-interest. The 4½ per cent. interest it offers is considerably more attractive than the "sweet simplicity" of the Post Office Savings Bank's 2½ per cents. So far the scheme has met with little but approval; the main criticism has been that the terms are, perhaps, a little too generous for the investor, and that some (inevitable) hardship may be felt by holders of other Government scrip bringing in lower dividends. So far as practicable, however, this latter objection has been met by a liberal scheme of conversion. Perhaps the most interesting part of Mr. McKenna's financing is the attempt to tap a new source of supply in the accumulations of the workingman and other small investors. The terms are so

tempting and the facilities (for instance, in the shape of vouchers for five shillings and upwards, obtainable in any post office) are so convenient that there is some reason to hope that Mr. McKenna may be able to assert that he has democratized the finances of the state.

It is usually assumed that thrift and saving have not been the strongest points of the British workingman. We must not forget, however, that besides the large deposits in the Post Office and Trustee Savings Banks, the working classes have made enormous investments in building and coöperative societies. There are, I believe, many small industrial towns in some of our northern counties where hardly a "shop" is to be seen, practically the whole of the retail traffic being carried on through coöperative stores. However this may be, expert judges seem convinced that labor will take up a very large amount of the loan, particularly as so many skilled workmen are now earning unusually high wages. Moreover, the trades unions and the friendly societies are meeting the scheme with great good will, and large firms are encouraging their employees to invest, by the promise of bonuses. It is interesting to note that the plan seems to appeal strongly to women workers. It is hoped in some quarters that the moral stimulus of the facilities of the loan may turn out not wholly incommensurate with that of the prohibition of the sale of vodka in Russia. The objection that the issue of this loan will depreciate other securities is answered by the fact that such securities would depreciate in any case if the war went against us, and that this loan is intended to help us to forestall that danger. It is too early yet to assert that the loan has been a complete success; but the Bank of England has already distributed over 4,000,000 copies of the prospectus, and bonds and vouchers are being rapidly taken up.

In connection with this loan, more will perhaps be heard of the Right Hon. Russell Rea's idea that thrift should be made compulsory, and that people should be made to subscribe to the loan, just as they are obliged to pay their taxes. It is understood that Mr. Rea's scheme is looked upon with favor in high official quarters. In the first place, he would impound the greater part of the additional profits of all persons and firms whose profits have increased, not only through direct dealing with Government departments, but in consequence of the changed economic conditions produced by the war—such profits as those now being made by the general body of coal-owners and cargo ship-owners. In the second place, he would make contributions to the loan compulsory upon the large class of workmen now earning greatly increased weekly wages, who for the most part escape the payment of income tax. He would make it obligatory upon employers to keep a stock of the new five-shilling certificates, and upon employers to pay, and the workmen to receive, one pound's worth of such certificates in part payment of wages in all cases where the wages exceed three pounds, and additional certificates to the amount of one-half of the sum by which the weekly wage exceeds three pounds.

Mr. Lloyd George's scheme for the enlistment of an industrial army has also been well received; but there will be more to say about this next week. There is no question that Mr. McKenna and Mr. George have between them, in these last few days, succeeded in impressing even the most thoughtless with the gravity and urgency of the situation the country has to face.

In view of America's silence during Germany's continued torpedoing of neutral vessels and British unarmed merchantmen and fishing boats, we have all betaken ourselves to a renewed scrutiny of President Wilson's notes of May 15 and June 11, and have been relieved by the wide scope of the passages quoted below, which seem to go far beyond immunity for the lives and property of American citizens only:

". . . Lives of non-combatants, whether of neutral citizenship or citizens of one of the nations at war, cannot lawfully and rightfully be put in jeopardy by the capture or destruction of unarmed merchantmen. . . . Manifestly submarines cannot be used against merchantmen, as the last few weeks have shown, without an inevitable violation of many sacred principles of justice and humanity." [May note.]

"The sinking of passenger ships involves principles of humanity which throw into the background any special circumstances of detail that may be thought to affect the case—principles which lift it, as the Imperial German Government will be no doubt quick to recognize and acknowledge, out of the class of ordinary subjects of diplomatic discussion or international controversy. . . . The Government of the United States is contending for something much greater than the rights of property and the privileges of commerce. . . . The Government of the United States relies in these representations on the principles of humanity, the universally recognized understanding of international law." [June note.]

We therefore await with confidence the ultimate resolution of the President, convinced that the man who penned these sentences had a full and true appreciation of the real question at issue, and knowing that, with President Wilson, words are not used until the ultimate action has been foreseen and decided.

ELYSIAN FIELDS OF PARIS—RELICS OF CIVILIZATION SNATCHED FROM KULTUR.

By STODDARD DEWEY.

PARIS, June 26.

It is Sunday afternoon, and such a day as you have only in these moist climates, where the clouds float low and the heavens seem nearer. The sun has not yet burned the leaves nor dust stained them. An American lady, who knows the lingo of art, is in vocal ecstasy over the "pastel colors" of trees and grass and sky. We are going to see tapestries which have been saved from the bombarded Cathedral of Rheims and antiquities rescued from destroyed Belgian towns in the neighborhood of Ypres. They are exhibited at the Petit Palais, which is the Paris Municipal Museum in the Champs Elysées.

It is an "exposition for the benefit of *Gens de Lettres,* artists, and works of artistic solidarity—French and Belgian." There is need of the thing represented by this new word "solidarity," just as Roman law held certain single debtors solidly liable for an obligation of partnership—*promittentes singuli in solidum tenentur.* We are all of us solid in our love of Belgium and France in this devastation; and the guardians of the exhibits and those who sell notices and post cards do not lessen the solidarity.

They are young men, awkward and unused and anxious to show good will. One has his coat hanging over where his right arm should be; another has his left hand in a black sling neatly pinned against his breast, and one who sits at a table has crutches and one foot. So it is for all of them. They are the *mutilés* of war—a half-dozen from among the thousands who have escaped from the carnage with only loss of limb. They are stationed here, not to excite pity, for countless others like them pass you in the street; but to give them employment and a chance to earn however little for their living. How to do this is one of the heartrending problems which peace itself will not solve.

The tapestries are those at which passing tourists once stared as they hurried through the nave and transepts of the Cathedral Church of Rheims. They will be studied more carefully now that they may be seen nearer. It is astonishing how much you learn from them.

Two are of the "strong King Clovis." They were presented only in 1573 to the cathedral where the Kings of France were crowned, but they must be much older. There is not a trace of Renaissance ornament in them, while the twelve tapestries of the "Life of the Virgin Mary," which were presented in 1530, already show a hesitating return of Latin art to Gothic Gaul. One of these Clovis pieces represents his victory over Gundebert the Burgundian and Alaric the Visigoth, and a solidarity of other foes who were never thus together in real life. The weaver has mingled his figures as he did his legends, and a great strip across the tapestry has been replaced unskilfully. Bodies of heroes are mutilated in a puzzling way, which even our own war cannot rival. There is a church porch for architecture at one end and Flemish gables along the ridge of war, and a motley crowd going processionally to fight. They are led by a miraculous deer, who is known by his horns. He crosses a river not so broad as the back of the horse which is to carry over it strong King Clovis or some of his men. It is the delight of children to stand and pick out the separate figures, as in some puzzle. Women who tolerated Cubism before Modern History began are less patient, and pass on.

Across the hall, where the Virgin is being brought up by hand in the Temple, she, too, is engaged in tapestry-weaving. She is seated, and the threads pass over her lap on a sort of embroidery frame, while she holds the shuttle in her hand. The design shows what she has already woven—a long, narrow strip of Renaissance ornament. But houses and costumes and the letters of the legend above are Gothic, which means mediæval. Just as no one then looked at the strip of weaving and gathered from it that civilization was taking a new turn, so now we find it hard to believe that our whole world is at another turning of the way, although seventeen-inch mortars are exploding Culture at us. I could not pick out in the Clovis tapestries a single figure of a gun, not even an arquebus, but only bows and crossbows and stout-headed spears. And yet the world looks as if it went on much as in these late months. Of the years a little before the real Clovis, St. Je-

rome writes: "The inhabitants of the powerful city of Rheims have been harried away into Germany." This time we have saved the tapestries.

At every step in the hall where Belgian antiquities and objects of art are stowed there is something to stir feeling. There are late church ornaments and ancient cloth of gold; miniatures of prosperous Flemings after Rubens's day, and metal work of the little republics of trading Flanders, in the middle ages. Then Ypres had its thousands of looms and [some say] gave its name to "diaper" linen. From Poperinghe and Dixmude and Nieuport—places now flaming out again into sudden prominence as ruthless invasion destroys them—we have here the evidence of lives of peaceful toil and art and religion. It is what men used to call civilization. At the sight the heart grows big within one to defend it—and this is, perhaps, another benefit of such exhibitions.

The American lady in pursuit of artistic emotions stays at the tapestry of the "Nativity of the Virgin"—"Why, there was another Nativity we just saw in this same series."

A young man, not unacquainted with the Higher Criticism, says apologetically: "This is the Nativity of the Virgin; that was the Nativity of Christ. This is from the Apocryphal Gospels."

The inconsequential lady makes an irrefutable answer: "Apocryphal? Well, the Virgin Mary had to be born, too, didn't she? What a pity the Apocrypha is not in our Bible!"

With all these art industries in a narrow region where the same families lived their little lives, generation after generation, there must have been a popular education of taste and, in some ways, a diffusion of knowledge which is now wanting in our largest cities. Matthew Arnold was struck by Cardinal Antonelli's remark: "An Italian peasant may not be able to read; but stand him before a statue or work of art, and he will say, 'It's beautiful!' or 'It's ugly!' and most of the time he will be right." Of course, it would be better that the people should both read and have taste and other humanities, as well—and in all these the Belgians, whose homes are destroyed, are no whit inferior to their invaders.

Coming down the Champs Elysées, we could see the Boy Scouts' training parade in the Tuileries Gardens. The older ones have a uniform and real guns—without bayonets. The younger, who are by no means the least disciplined, are in khaki waists and breeches, with bare knees. This universal training is having its effect on the race. Doctors who have been just examining eighteen-year-olds, in case they should have to be called out for war, have been impressed by the very common superiority of their physique over regular conscripts of twenty. And their moral quality is higher tuned, as every observer can see if he opens his eyes.

Further along, towards the Boulevard, veritable soldiers—sans eyes or nose, or arms or legs in many cases—sit in their worn and stained uniforms at café terraces. This is allowed to the uniform on Sunday, but on other days only from five to seven o'clock. People around make room carefully for them, doing honor. And this, too, is moral and as it should be. What shall Peace bring to their broken lives and to those responsible for such breakage?

The Gaiety of Socrates

BEING AN EXTRACT FROM THE DIARY OF A PROFESSOR MEDITATING AFTER A PHI BETA KAPPA DINNER ON THE LOST ART OF BANQUETING.

Midnight, May 30, 1915. I have just returned from the Phi Beta Kappa banquet—sober, as usual, and full of noble ideals. Quite convinced that I ought to hitch my wagon to a star. Much impressed, as in 1914, by the necessity of giving up my frivolous way of life and devoting myself seriously to the career of a scholar.

Phi Beta Kappa expects every man to do his duty. Sooner or later I suppose I shall have to speak at one of these dinners myself. I have escaped hitherto; but my freedom in the past diminishes my chance of immunity in the future. When the good stories have all been told, when the silver-tongued orators all have spoken, when the resources of the committee on arrangements are exhausted, my turn will come—and what, in the name of invention, shall I say? This question disturbed me not a little this evening, as I glanced across the angle at the speakers' table, and noticed the abstracted expression of the speakers' faces from the soup onward, and, between courses, their silent rehearsal of words that were soon to fall from their lips with bright unpremeditated felicity.

All Phi Beta Kappa orators, it seems to me as I run over my acquaintance with them, may be divided into two classes: the historians and the preachers—the men with a long memory and the men with a long message. The historians—the older members usually, those who rocked the cradle of the Society in its infancy, like Professor Good and Professor Wise—delight us with reminiscences of Phi Beta Kappa as it was forty or fifty years ago—reminiscences which to us with shorter perspective have all the freshness of novelty. Theirs is a useful type of speech; for it impresses upon the minds of our novitiates the venerable antiquity of the organization with which they have just become identified. They will never forget, for example, Professor Good's impassioned picture of the days when the flowing bowl went round at the banquets of this Society; nor will they forget his plea for the perpetuation of traditions. Our younger orators, on the other hand, those who have not yet sunk into the retrospective attitude, those who look not downward and backward but forward and upward and onward—they sweep the strings of moral idealism, and urge the novitiates on to high and strenuous endeavor. In speaking of our younger orators, I am thinking of Professor Graves, and how his address opened with a solemn promise not to preach; and how in a moment it branched out into as many ethical heads as Hydra had or a sermon by Jonathan Edwards; and how it closed in a glowing peroration on the importance of abiding by our promises.

Now as I shall always be outranked in the field of society history by some orator of Nestorian memory, prudence and an ancestral line of New England clergymen point me to the moral disquisition. When my turn comes, I must *deliver a message*. What shall be my theme? PHILOSOPHY THE GUIDE OF LIFE? THE CONSCIENCE OF THE SCHOLAR? THE DUTY OF THE SCHOLAR? THE RESPONSIBILITY OF THE SCHOLAR? . . . Even as I write these words, there breaks upon me a great flood of light, and in the midst of the light is a great interrogation point. The essence of the question is this: Why do all our Phi Beta Kappa moralists exercise their great powers of moral persuasion upon the ninety-and-nine just men that need no repentance? Why do they seek to turn towards scholarly seriousness just those who can by no means be turned away from it? Why should *any one* think it necessary to rise in this Society and talk to its members about the responsibility of the scholar, the duty of the scholar, the conscience of the scholar? Is not this an attempt to gild refined gold and paint the lily white? To harangue such a society as this, on any such subjects as these, strikes me, just now, as one of a long list of unnecessary things: it is like talking to a life-saving crew about the importance of learning to swim; it is like talking to the 'varsity football team about the importance of taking exercise; it is like urging a group of sorority girls to take an interest in social life; it is like declaring the value of Greek to classicists, like P. E. More and Professor Babbitt; it is like recommending the Carnegie Foundation or a Company of Deans to "tighten up the screws" or to "humanize the machine"; it is like railing against college presidents at a convention of professorial anarchists like Dr. C—— or our own Professor Freelance. In conscience, duty, and responsibility, the members of our society live and move and have their being.

If ever I am called upon to speak before the members of Phi Beta Kappa, I shall not urge upon them the virtues for which they are already preëminent. I shall rather begin in some such way as this:

Ladies and gentlemen of this ancient and honorable Society: You have all heard the old story about the Phi Beta Kappa poem said to have been published some years ago in the *Atlantic Monthly* by a graduate of Harvard University—that great institution to which many of us owe all that we have and are. I shall therefore repeat it to you this evening. You will remember that the Cambridge poet tells us how in his poetic frenzy a trance fell upon him, and a wonderful vision appeared to him. You will remember that in the vision a little band of Harvard men, all members of Phi Beta Kappa, visit the Kingdom of Heaven, and inspect the throne, and are granted audience before the Almighty. And you will recall that the visit ended in the completest satisfaction to the visitors—and to the visited. And you will have in mind the last great climactic line in which the author, summing up the

impression made and received in Heaven by the Harvard Phi Beta Kappa men, says: "And God was pleased with them; *and they were pleased with him.*"

Ladies and gentlemen of the Gamma chapter, Phi Beta Kappa men and women are the same the world over. We who are met here together this evening are the intellectual cream of a great intellectual community. We have been chosen as Gideon chose the three hundred to go up against the Midianites. We have disciplined ourselves to hardness and austerity. We have shunned soft delights and lived laborious days. What pietists call the "temptations of the world" have been no temptations to us. I look around me; and I see heads grown gray in renunciation. I look around at the Dean of Men, and at the Dean of Women* and at Dean Tenace* and at Professor Pumps* and at Professor Cleek* and at Professor Brassey* and at Doctor Lofter,* and I say to myself: "Why talk to these great lonely thinkers of husbanding the diamond-studded hours, and eschewing the soft seductions of the dance, the lure of the bridge table, and the green enchantment of the golf links?" What do these things mean to any of *us?* We all, as I have said, have burned the midnight oil. We have sought that excellence which, as the Greeks tell us, a man must wear his heart out to attain. Sitting here this evening, with our golden badges of achievement upon our bosoms and a shade of weariness upon our brows, we represent the accomplishment of a remorseless purpose; we are the embodiments, in the intellectual sphere, of fulfilled desire. What remains to put the last touch upon our perfection? What can we do to keep ourselves, as Matthew Arnold would say, from a self-satisfaction that is vulgarizing and relaxing?

Ladies and gentlemen, when I am in doubt what I ought to think of any movement of ideas or any project or any organization in this community, I turn to that great responsible organ of community sentiment, the *'Varsity Daily;* and I inquire what the *'Varsity Daily* thinks of it. What does the *'Varsity Daily* think of the Phi Beta Kappa Society and its banquet? When this great voice of community sentiment reports a banquet of the athletes, or of the seniors, or of the Loyal Order of Hibernians, do we not regularly find its approval of the organization heralded in some such headlines as these?

FEST HALL SEES GREAT REVEL OF SENIORS.

EATS AND DRINKS ABUNDANT.

A Grand Time Was Had by All.

Now let me solemnly put it to your scholarly consciences, ladies and gentlemen, whether the *'Varsity Daily* has ever admitted that at our annual symposium "a grand time was had by all," or even that "eats and drinks" were abundant? In the cold gray dawn of the morning after, as we open the dew-drenched sheet, do we not rather find ourselves and our activities advertised by some such caption as this?

HIGH-BROWS HOLD ANNUAL SOLEMNITIES.

PROMINENT DEANS URGE HIGH STANDARDS IN ALL DEPARTMENTS.

O. B. WISE PUTS THE PUNCH INTO SCHOLARSHIP.

Ladies and gentlemen, I rise to-night to say that the more we plan to put the "punch" into scholarship, the more we should plan at certain intervals, such as this, to take the punch out of the scholar. I mean to mollify and unbend him; to make his wisdom smile; to smooth his wrinkled front; to shake his diaphragm with laughter; and, in short, to subject the tired tendons of his mind to the salutary osteopathy of ridicule. I rise to-night to suggest that the one thing needful to our perfection is a richer tincture of gaiety—gaiety sufficient to make our annual banquet a revel not a rite, a feast and not a function. If we are to make the key-man who is now playing billiards at the Club wish he were here, if we are to make the key-woman who is now dancing at Argentina Hall wish she were here, if we are to make our colleagues who are now viewing the legitimate moving pictures at the Orpheum wish they were here, we must, in one way or another, persuade the public, not merely that "eats and drinks" were abundant, but also that a "grand time" was had by all—a grander time than was to be had anywhere else from the western limits of the Country Club to the utmost shores of Crystal Lake.

In this matter I am in accord with the philosopher Spinoza, who says in his treatise on the "Improvement of the Intellect": "*It is essential to my happiness,* to try to make many others understand what *I* understand, so that their intellect and desire may entirely agree with my intellect and desire."

I recognize at once that many members of this company may be of Lord Chesterfield's mind, when he wrote to his son that no gentleman ever permits himself to laugh. It is the tenacity with which whole classes of society cling to this rigid principle of decorum that makes it so difficult for the wits of the world to add materially to the gaiety of nations. Thus Molière, who was one of the ablest of wits, says that it is a very serious business making honest people laugh. George Meredith carries on the idea, when he declares that all the great humorists have been grave men—permanently saddened, I suppose, by years of effort unavailingly directed towards making their contemporaries smile. The professor in particular is a hard case, as Mark Twain discovered to his dismay when he tried to make the professors at Cambridge cheerful. The professor, I say, is a hard case—which perhaps explains why he seems to live in perpetual fear of losing his character.

The thesis which I wish to advance to-night is nearly the converse of Meredith's. I wish to take up another aspect of the relation between gaiety and greatness. I wish to prove that all great men have been gay men. This will be just a little difficult; because it isn't true. If the whole truth were to be told, many great men, I fear some of them members of our own Society, are now in the fifth circle of Hell. In Dante's Hell, the fifth circle, you will remember, is hardly hot enough to be comfortable. It is the circle to which souls are sent who in life succumbed to spiritual gloom and despondency. There, the poet tells us, "fixed in the slime, they say, 'Sullen were we in the sweet air that by the sun is gladdened, bearing within ourselves the sluggish fume; now we are sullen in the black mire.' This hymn they gurgle in their throats." In spite of these depressing instances, however, there are cases enough of greatness coupled with gaiety to make at least a *show of truth,* which, as every graduate student knows, is all that is necessary to sustain a thesis.

It now becomes necessary to explain the gaiety of greatness, and to illustrate it. It is commonly assumed that gaiety is a token of a light nature; quite the contrary is the truth. *The gaiety of the great rises from their sense of surplus power—power more than adequate to any situation in which they may find themselves.*

This power manifests itself in the most exhilarating fashion when serious resolute men, such as we are, who have striven and suffered and achieved, as we have achieved, show themselves able to turn about and laugh at their own achievements, before they press on to new ones. The late William James, much to the horror of his colleagues, who were afraid that he would lose his character, frequently flashed out with that sort of spontaneous unprofessional gaiety. When I heard him speak on philosophy before the Harvard Graduates' Club, a great fresh breeze seemed to rise from his mind, and to sweep over the audience, and blow all the academic dust and conventions out at the windows. He had the power to be a professor of philosophy; and he had also the surplus power to laugh at being a professor of philosophy. I will give you an illustration. "Whatever universe a professor believes in," said William James, as he unfolded the doctrine of pragmatism, "must at any rate be a universe that lends itself to lengthy discourse." There is an example of gaiety rising from power more than adequate to the situation of a professor.

Another American scholar—likewise combining greatness with gaiety, but at our dinners more often remembered for the former quality than for the latter—was Ralph Waldo Emerson. Emerson had sufficient power of goodness to be a Unitarian minister, but he had a surplus power of goodness which enabled him to leave off being a Unitarian minister, and which emboldened him to cry in one of his essays: "Come, let us drink wine, and crown our heads with roses, and break up the tedious roof of heaven into new forms." There is an example of gaiety rising from power more than adequate to the situation of a Unitarian minister.

You will find this superfluous power also in that grim-visaged soldier of God, Oliver

*Unmarried members are indicated by a single asterisk.

Cromwell, of whom a contemporary writer tells us that, in riding to the battle of Naseby, the general drew his horse a little aside from his troops to laugh, thinking how the Lord was going that day to deliver the enemy into his hand. That is a case of gaiety rising from power more than adequate to the situation of a Puritan general.

I think, too, of the surplus power of that great classical moralist of the eighteenth century, Dr. Samuel Johnson, who, after an altercation with a friend, sent out peals of laughter so loud that his voice, as his admiring biographer informs us, seemed to resound from Temple Bar to Fleet Ditch. I never allude to that grave melancholy scholar without recalling how from time to time his gigantic gaiety banished his fear of death in hours of golden relaxation. "One night," says Boswell, "when Beauclerk and Langton had supped at a tavern in London, and sat till about three in the morning, it came into their heads to go and knock up Johnson, and see if they could prevail on him to join them in a ramble. They rapped violently at the door of his chambers in the Temple, till at last he appeared in his shirt with his little black wig on the top of his head, instead of a night-cap, and a poker in his hand, imagining, probably, that some ruffians were coming to attack him. When he discovered who they were, and was told their errand, he smiled, and with great good humor agreed to their proposal: *'What! is it you, you dogs! I'll have a frisk with you.'*" And the great lexicographer, the author of the "Vanity of Human Wishes," spent the rest of the night boating on the Thames and "frisking" through the city. Langton left them in the morning to go to a breakfast with some young ladies. "Johnson scolded him for leaving his social friends to go and sit with a set of wretched *un-ideaed* girls. Garrick being told of this ramble, said to him smartly, 'I heard of your frolic t'other night. You'll be in *The Chronicle*.' Upon which Johnson afterwards observed, 'He durst not do such a thing. His *wife* would not *let* him.'" Here we have an example of gaiety rising from power more than adequate to the situation of a great classical moralist.

I might carry this theme to superhuman heights. If I had the boldness of a Lamb, I might proceed to speak of the "inextinguishable laughter" of the gods. Or I might remind you of those occasions, authenticated by the prophets, when he that sitteth in the heavens laughs. Both are illustrations of that unimaginable power which is more than adequate to governing the universe. But prudence counsels me to check my adventurous flight below the sublimer levels of gaiety. We shall find it more profitable to confine our meditations to the laughter of mortals.

Ladies and gentlemen, when I meditate on the grim-eyed gravity of modern scholarship, I long to talk with some old scholar's ghost who lived before the Efficiency Experts were born. When I consider most thoughtfully the one thing needful to add the last touch of grace to a Phi Beta Kappa banquet, I think of the invincible gaiety of Socrates. He was the gravest man in Greece; but he was also the blithest. He was the best diner-out in Athens, and every banquet that he attended was a revel. He had the ugliest satyr-like face that the gods ever moulded for one of the children of men; but there was celestial sunlight in his mind. And whether he was discoursing on the divine and the earthly loves at the house of Agathon, or whether he was driving the sophist Protagoras into the intricate net of his dialectic, this superfluous celestial sunlight played about his crooked mouth in a feasting smile that filled the handsomest men in the city with envy and with rapture. And when he made an after-dinner speech, the guests forgot the buffoon and the Syracusian dancing-girl provided by their host; and they forgot the vine-crowned goblets of clear wine; for they had drunk the deeper intoxication of the Socratic gaiety; and when he rose to depart, the young men rose and followed him, like bees following the scent of honey, and they went out, walking and talking still, to meet the gray-eyed dawn.

Something like this, ladies and gentlemen, should be the result of a Phi Beta Kappa banquet. I do not despair of the emulation proposed. Though Socrates had a demon, he was not a god. Socrates was a man, such as we are. He was, in a manner of speaking, a professor, such as we are. He sought truth, such as we seek. He had felt poverty, such as ours is. He had a wife, such as ours are. And yet Socrates was gay! His good lady upbraided him, just as ours do; she berated him, no doubt, for wasting his time on his students; urged him to brush his clothes and take her to see the new comedy of Aristophanes; begged him to go with her and call on Mrs. Alcibiades; besought him to *"get in"* with the Pericles circle; scolded him for loitering in the market-place; insisted that he should bestir himself, so that they might take the position in Athenian society to which his talents entitled him. But Socrates smiled, and pursued his true calling. And when his friends asked how he preserved his charming serenity through the perpetual rainy season of his domestic life, he replied, with his victorious and contagious gaiety, that to live with his wife was an admirable discipline in virtue. That was an example of power more than adequate to the situation of being Xantippe's husband. And when Critobulus, a very handsome banqueter, gave as his chief reason for self-congratulation his possession of good looks, Socrates cut in with the question: "Why, Critobulus, do you give yourself this air of vanity, as if you were handsomer than I?" That was an example of power more than adequate to the situation of being as ugly as Silenus. And when Socrates was asked what he meant by his boast that he was the wisest man in Greece, he answered, still with that feasting smile, that he was the only man in Greece who knew that he knew nothing. This was an example of power more than adequate to the situation of being—a member of the Phi Beta Kappa Society. It was an example of the power requisite to the enjoyment of a Phi Beta Kappa banquet.

Ladies and gentlemen, other speakers will come after me in later years with a clearer gift than I to preach the gospel of gaiety. I am but a voice crying in the wilderness of our gravity. I shall be content, if of me it is said in the good time to come: "He was not gay himself, but he was the cause of gaiety in others." I shall be content, if at our next symposium the committee on arrangements acts upon the suggestion which I am about to make.

There is, as the philosopher Lotze tells us, a mystical power in our outward raiment and garniture. When Machiavelli read the classics, he put on his most gorgeous robes of state in order that his mind might the more readily enter into the intellectual splendor of Greece and Rome. When Socrates attended a banquet, he bathed, and put on his sandals, and a fresh robe. If we are to profit by these examples, all the members of our Society, and especially the speakers, will stream into this building at the appointed hour with a kind of festive and processional pomp; each man wearing a scarlet ostrich feather in his hat, and each woman borrowing a hint from the May-day masqueraders. Those who are gay in themselves will express their gaiety in their outward garb; and those who are sullen in their hearts will wear a visor as at a masked ball, or they will impersonate for the occasion some dead scholar who was gay. As we enter the portals, the toastmaster in a golden robe leading, and the valedictorian of that year dancing before him to the sound of a flute, the youngest and fairest of the novitiates will strew the threshold with daffodils or such early flowers as the spring affords. When we have taken our places at the board, the fairest of the novitiates, still moving rhythmically about the table to the enlivening strains of the flute, will pin a rose on the coat lapel of every professor, signifying the perfume of virtue; and on the head of every woman who is a doctor of philosophy they will place a garland of red and white roses, signifying the eternal youth of wisdom. Since King George and Lord Kitchener have dispensed with wine, we shall probably never be able to revive the tradition whose lapse Professor Good laments; but we shall pass from hand to hand a great vine-crowned loving-cup brimming with liquor potent enough to cheer and inebriate a Secretary of State. I cannot enter into the details of the programme; but I am sure we shall have some good speeches on the gayer aspects of science—perhaps some astronomer will tell us about the music of the spheres and how the morning stars sing together. We shall have some good singing; perhaps some member of the department of geology will strike the harp like Cædmon, and sing to us about the creation of the world. We shall have some dancing, too, and some examples of the mimetic art—perhaps some member of the department of German will give us an allegorical dance, symbolizing the progress of *Kultur* in America. Then the spokesman for the

novitiates, in a short and modest speech, will explain undergraduate politics, and tell us how he engineered his election into our society. Finally, that member of Phi Beta Kappa who has most clearly demonstrated in the course of the year that he has power more than adequate to being a member of Phi Beta Kappa will read a panegyrical poem commemorative of some scholar who though great was gay. And in the rosy dawn of the morning after, we shall find, as we turn to our great responsible organ of community sentiment, some such headlines as these:

HILARITY HALL SEES SATURNALIAN REVEL OF KEYMEN.

WISEACRES MAKE WISDOM SMILE.

A Grand Time Had By All.

BALAUSTION.

Poetry

THE SHEPHERD INVITES HIS LOVE TO LEAVE THE CITY.

By STUART P. SHERMAN.

Dear Phillis, since the world's perverse
And speeding now from bad to worse,
Let's breathe a sigh and cry, "'Tis pity,"
And up and leave the loathly city.

If you'll but drop your cold disdain,
And say the word, and take the train,
We'll go where happy lovers stray
By woods and waters far away.

Upon a bluff beside a lake
I'll build a cabin for your sake,
With fire-place where the logs shall glow
Like Indian campfires long ago.

When through our casements, opened wide,
The gray light wakes us drowsy-eyed,
We'll sally out, while rabbits skip,—
Barefoot, like them, for the morning dip.

Returning, see the rising sun
Gilding the treetops one by one,
Or guiding us with golden finger
Where the blue-eyed hairbells linger.

A brief grace said, we'll break our fast
With cream and blueberries while they last;
Then berries red and black are taken—
Topping them off with crispèd bacon.

And when the room is set aright,
The floor clean-swept and sanded white,
We'll wander where the spirit leads
Through dusky glens or flowered meads.

Sometimes we'll sit upon the cliff,
Watching the yachtsman sail his skiff,
Or send our wayward fancies flying
Whither the wide-winged heron's hieing.

Or spy near by the crimson caps
Of fair coquettes a-swim, perhaps;
And laugh to see the pretty sillies
Flecking the waves like water-lilies.

But if you are in pensive mood,
When stillness holds the enchanted wood,
We'll lie beneath a hemlock olden
Where shadows check the sunlight golden,

And I will make you pillows rare
Of sweet fern-brake and maiden-hair,
And when your peerless head reposes
I'll crown you queen with fresh wild roses.

And we will read some famous woe
That lovers had long, long ago—
How Merlin fared with her he met,
And Aucassin with Nicolette,

What pain and joyance Iseult knew,
And Guenivere, so false, so true,
Till all their sad and sweet distress
Is linked with your breathless loveliness,

And I will ask all birds that sing
And every fair and joyous thing
To raise in voices dutiful
High hymns to my lady beautiful.

And when the wood-thrush sings no more,
And the waves break louder on the shore,
And the ruby beacon flings its shimmer
Over the deep where the dim stars glimmer,

When the moon makes magical the night,
And the wide heavens are filled with light,
When through the quivering leaves above us
The wood gods whisper that they love us,

O, then we shall wander hand in hand
Down the white reaches of the sand,
No sad thought back nor forward casting—
Wishing the night were everlasting.

Notes from Two Capitals

THE PRESIDENT'S UNDERSTUDY.

The Vice-President, whose native State of Indiana is washed by the billows of the Ohio and Wabash Rivers, comes thus naturally by a naval policy of his own. As nearly as it can be made out from fragmentary reports, he disbelieves in building any more giant warships because a submarine costing only $700,000 can destroy a super-Dreadnought costing ten times as much. Though this declaration may not change the Government's course, it will attract attention because it came from him, for Mr. Marshall is the surprise—slangy critics call him the "singed cat"—of the present Administration. From a man with a rather low, wide forehead, a heart-shaped face, and a not impressive amount of avoirdupois, they had not expected much; but for a fact, few men who loomed upon public life as lately as he have been more frequently quoted.

Imagine the late John James Ingalls, of Kansas, reduced in stature by about a foot and broadened just a trifle, his parchment skin supplanted by a more transparent complexion with live tints in it, and a genial air in the place of the somewhat cynical one that Ingalls carried about with him, and you have a fair idea of Thomas R. Marshall. The Vice-President's deliberate, clean-cut manner of speech is not unlike that of Ingalls, but its tone is more racy. In expressing disapproval, Marshall is quaint where Ingalls was sardonic. Ingalls went to the classics for his metaphors, while Marshall goes to the street life of the provincial town. Ingalls did not look himself outside of his black Prince Albert coat, suggestive of an animated stovepipe; Marshall looks hardly comfortable outside of his easy-fitting sack.

One difference between the two men is especially conspicuous: Ingalls had the assumed dignity of the stage, used to cover a disposition by no means unbending; Marshall has a native pride over which he must always wear his light-mindedness as a cloak. Marshall may complain of the meaningless etiquette of office, and say that he longs to put his feet upon his desk and smoke his cigar at his ease; he may crack a joke on his room at the Capitol as reminding him of a monkey's cage except that the visitors do not offer him peanuts; but were a political cataclysm to unseat him to-morrow, you would not find him hiring out to a sensational newspaper as a reporter of prize fights any more than he has been found willing to sign for a Chautauqua engagement unless the jugglers and yodlers were eliminated from the same share of the entertainment.

Marshall made himself famous as Governor of Indiana by his success in laying out a programme of legislation for his party, and holding the State lawmakers up to it till he had got what he wanted. His victory over the factional leader, Tom Taggart, was a big gain for respectable politics thereabout, and by its damage to Taggart's prestige may have contributed more than has been generally suspected to the recent municipal housecleaning by the criminal authorities of Marion County. Since coming to Washington, he has won a reputation for personal independence which his friends declare places him in the statesmen's category, but his enemies decry as mere eccentricity. Though a loyal supporter of the President for a second term, if he has anything to say about public affairs he says it without waiting to inquire what Mr. Wilson thinks. He has taken the Senate's breath away two or three times, while presiding, by his presumption: once, when the Senators made too much noise with their chat in the back part of the hall, he administered a keen-edged rebuke to their bad manners which brought them to order without more ado; on another occasion he took Speaker Reed's short-cut from idleness to business by counting a quorum after a filibustering roll call had failed to discover the presence of one.

He feels no mercy in his soul for monopoly, but disbelieves in further anti-Trust legislation by Congress, being confident that the States have in their own hands all the remedies necessary, if they would forbid any corporation to do business in them which owns or holds the capital stock of any other corporation, or whose capital stock is owned or held by any other. He insists that there is "too much science" in the educational system of to-day, and "too little God Almighty"; but while he was Governor of Indiana he encouraged Sunday ball-playing. In the midst of all the excitement over the sinking of the Lusitania, it was he who recalled the ancient legal tradition that an English ship is a bit of English soil afloat. And, finally, he declines to take part in jaunts for either business or pleasure unless Mrs. Marshall can go with him, as they have never been parted for

the whole of twenty-four hours during what he calls their "twenty-years' honeymoon."

On the whole, we have a unique character in our Vice-Presidential chair.

VIEILLARD.

MR. REDMOND'S DICTATORSHIP.

By SIR HENRY LUCY.

WESTMINSTER, June 30.

The existence of a Coalition Government is responsible for a change in the political situation, the far-reaching importance of which has been overlooked amid the clash of arms on the Continent. Twenty-three years ago Justin M'Carthy, least truculent of men, took occasion to say, "We [meaning Irish Nationalists] hold the life of the Government in the palm of our hands." At that time the Home Rulers, riven by the downfall of Parnell, mustered eighty-one members, of whom nine followed the banner of John Redmond, seventy-one being ranged under the leadership of Justin M'Carthy. These figures tell a tale of patient endeavor, unerring tact, commanding Parliamentary instinct, consummated in rare personal triumph. To-day the Irish Parliamentary section, still dissevered, though on new ground, numbers eight, under the joint leadership of Mr. William O'Brien and Mr. Healey, while Mr. Redmond captains a well-disciplined battalion of seventy-six.

With their assistance he has completed a task accomplishment of which was impossible for Isaac Butt, who first took it in hand, and for Parnell, who for ten years fiercely battled in its cause. He has carried through a reluctant, in large proportion a hostile, House of Commons a Home Rule bill, has seen it forced down the throat of the House of Lords, and added to the statute book. Of course, honest conviction had something to do with final accomplishment of this revolutionary act. More compelling was a phalanx of four-score votes, with cynical frankness put upon the market for the bidding of either British party prepared to nail to its masthead the flag of Home Rule.

Mr. Gladstone, who, among other natural gifts, had the capacity of convincing himself at a certain epoch that what he had long combated was the only right thing to do, undoubtedly became in 1885 a sincere Home Ruler. Conversion happened coincidently with a return to Westminster after a general election of a dominant body of Irish Nationalists. Even he yearned for a state of things at the polls placing at his back a majority that would free him from the yoke of the Irish Nationalist leader, whosoever he might chance to be.

On the eve of the general election of 1892 Mr. Gladstone, with that sanguine disposition that cheered him in hours of adversity, confidently counted upon such emancipation. The little group who chanced to be present will never forget the scene in the library of Dalmeny when the Liberal whip, Mr. Marjoribanks (later Lord Tweedmouth), arrived with a telegram announcing the result of the final contest. No one was ungovernably enthusiastic at the aggregate result as affecting the position of parties at Westminster. "Well," said the whip, gallantly putting the situation in most favorable light, "we shall have a majority of forty." "Too small, too small," said the coming Premier, slowly shaking his head, and speaking in that deep tragic tone reserved for occasions of greatest storm and stress. In the short-lived Parliament born of that election Mr. Gladstone carried as far as the House of Lords the second edition of the Home Rule bill. But he was painfully conscious that he was merely the instrument of the party sitting below the Gangway opposite, closely watching, alertly listening, ready to take disciplinary action if there were any lapse from the literal text of the well-learned lesson.

This painful experience has been suffered by Mr. Gladstone's successors in the Liberal Premiership. It is true Sir Henry Campbell-Bannerman, seated in office by a majority that exceeded the rosiest dreams of Mr. Gladstone, was his own master, Mr. Asquith inheriting the privilege. It is perhaps noteworthy that in such halcyon times no attempt was made from the Treasury bench to carry a Home Rule bill. That duty presented itself, and was acknowledged, when by process of attrition the Liberal majority was so far reduced as to bring Mr. Redmond into the place occupied by Justin M'Carthy in the session of 1893. To-day Mr. Redmond has abandoned the position of arbiter of the fate of the Ministry. He still has over seventy votes at his command, counting a hundred and forty on a division. Last year, had need arisen, the transference of this body to the Opposition division lobby would have turned out the Government. To-day there is no Opposition in the old sense of the familiar phrase. Its fighting force is merged in the Ministerial ranks. Its captains sit on the Treasury bench, in friendly companionship with Lloyd George, Winston Churchill, and others long regarded as arch-enemies of constitutional principles and policy. If, lapsing into native habit, Mr. Redmond were next week to "go agin the Government," he might find his battalion reinforced by the ten or a dozen Liberal statesmen below the Gangway who have during the last few weeks shown signs of revolt. But that is all. The dictatorship of the Irish leader is ended.

Correspondence.

THE "NATION."

TO THE EDITOR OF THE NATION:

SIR: I have spent an hour examining the semi-centennial number of the *Nation*, and I think I shall need a whole day or more to master the contents of it. I cannot praise it too highly. I have never seen a piece of journalistic work more satisfying.

HORACE WHITE.

New York, July 9.

TO THE EDITOR OF THE NATION:

SIR: It was with unusual interest that I read this week's issue of your paper, the semi-centennial number, for it is just fifty years ago that my father, Joseph H. Richards, as publisher of the paper, brought out its first number. He left the *Independent*, of which he had been publisher during the war, to associate himself with Mr. Godkin, and it was quite an event in his life when the first issue of the *Nation* appeared.

As you doubtless know, my father was later business manager of the *Evening Post*, but long before the two papers came together under the one general ownership.

If I remember correctly, Mr. John E. Powers, of prominent advertising fame, succeeded my father as publisher of the *Nation*, and he was in turn succeeded by Mr. St. John, referred to by one of your writers in this week's issue.

Trusting that the *Nation* will find even a larger field of usefulness during its next half-century than in the one which has just expired, I am sincerely yours,

J. A. RICHARDS.

New York, July 9.

TO THE EDITOR OF THE NATION:

SIR: I was the bookkeeper in the *Nation* office when the paper was started in 1865 and sent out all the circulars before the first issue. It was a great privilege to be in the employ of such men as E. L. Godkin and Wendell Phillips Garrison and to be associated in the office with such men as Joseph A. Richards, publisher, and Manly A. Ruland, the advertising agent. These early associations have influenced my whole life, and I consider myself very fortunate to have been thrown into the company of such a coterie of noble men. If there ever was an establishment where the Golden Rule was practiced, it was in the *Nation* office.

I hope the paper will live to celebrate its centennial and that it will always maintain the high standard that has marked it in the past.

W. H. WHITING.

Harwichport, Mass., July 12.

TO THE EDITOR OF THE NATION:

SIR: Your semi-centennial number has been received and enjoyed. It started me to reminiscencing. It recalled the efforts made to raise the funds for the *Nation's* birth. I have the honor of being one of its first stockholders, and surrendered my stock when it was deemed necessary to be done to keep Messrs. Godkin and Garrison. I remember the first idea was to establish a paper which would greatly aid in establishing the South by the aid, not of the politicians of either of the great parties, but by wise men of the North. At one time the originators considered the purchase of the Baltimore *Daily* and *Weekly Sun*, with the hope of reaching many of its subscribers South, with an entirely different literature than the people South were receiving from its dailies and weeklies. Some of the stock subscribers wished to make it a backer of the Freedman's Bureau work. Others wished to make of it what it has become, a leader in all the great questions as they arise.

I think there were only three or four stockholders of the *Nation* in Baltimore, all of whom have died excepting me, and I am here having my weekly enjoyment of its pages.

Accept my congratulations and wishes that the *Nation* may continue its usefulness for another half-century. I shall not see it, as I am in my eighty-second year, but others will enjoy it.

JNO. T. GRAHAM.

Baltimore, Md., July 12.

TO THE EDITOR OF THE NATION:

SIR: Permit the *Advance*, itself forty-eight years of age, to congratulate the *Nation* on its great half-century, and on the magnificent number in which the anniversary is celebrated. May you live another fifty years—and more.

THE ADVANCE,
By WILLIAM E. BARTON, Editor.

Chicago, Ill., July 9.

DR. CONYBEARE EXPLAINS.

To the Editor of The Nation:

Sir: If you will extend me once again the hospitality of your columns, I would like to protest against the use made by a journal called the *Vital Issue* of a letter written by me on March 5 to a friend in America. When I had dropped that letter into the nearest pillar box, it passed out of my control; but I promptly reflected that I had written very intemperately of Sir E. Grey—worst of all, I had signified to my correspondent that he might, if he chose, publish a letter which, had I kept it over for revision until the next morning, I should have expurgated of all vituperative expressions and of overhasty imputation of bad motives, and probably never have dispatched at all. No course was left open to me but to write afresh to my correspondent and enjoin on him not to publish it. This I did, and I signified as a chief reason for his suppressing it that I intended later on to publish in a journal of my own choosing a more adequate study of the matters discussed in it. He acknowledged on March 29 the receipt of this second letter and assured me he would respect my wishes. Nevertheless, it was printed three weeks later in the *Vital Issue*, and has been exploited for more than it was *prima facie* worth.

Reconsidering the documentary evidence, I now form the opinion that Sir E. Grey was rather victim, than creator, of nihilist forces which he would have restrained, had he been able, last July, as he succeeded in restraining them during the Balkan Wars. Racial rivalries, however, had in 1914 waxed too strong to be composed, and no single statesman could avert the catastrophe. But there can be no doubt that the prime guilt lies with the Power which first abandoned the defensive for the offensive, and that was Germany.

Fred. C. Conybeare.

Oxford, Eng., June 29.

[In view of the wide use for purposes of the German propaganda to which Dr. Conybeare's letter in the *Vital Issue* has been put, it would appear that an explanation of how it came to be published against the author's wishes is due either from Dr. Conybeare's correspondent or from the editor of the *Vital Issue*.—Ed. The Nation.]

To the Editor of The Nation:

Sir: At the time when Dr. von Mach printed Dr. Conybeare's extraordinary letter in the Boston *Transcript*, I wrote to the Warden of All Souls, Oxford, calling the matter to his attention. In reply he sent to me a repudiation of Dr. Conybeare signed by the seven tutors who convened the meeting in question, with the request that I would publish it in the *Transcript*, the *Nation*, and the Associated Press. Meantime the Lusitania massacre and other matters had caused the Conybeare episode to sink out of sight, and I published the letter only in the *Transcript*, writing to the Warden at the same time. I have just received a letter from the Warden enclosing a letter from Dr. Carlyle, in which they repeat the request that the repudiation should be published in the *Nation* and the Associated Press.

In the meantime I note an editorial article in your last number referring to Dr. Conybeare's own recantation of his extraordinary performance. In view of the request from England, however, it seems to me that I should ask you to publish the tutors' letter in the *Nation*.

W. K. Richardson.

Boston, July 12.

To the Editor of The Nation:

Sir: The undersigned, who convened the meetings of Oxford teachers, to which Dr. F. C. Conybeare refers in his letter printed in the Boston *Transcript* of May 5, and in which he professes to have "aired his views" about Sir Edward Grey "very freely," wish to make the following statement:

(1.) The meetings were not summoned to discuss the causes of or responsibility for the war. They were summoned in the following terms: "Meetings will be held to discuss informally *and privately* some principle of a European settlement after the war." The discussions proceeded throughout on the assumption of the justice and the final victory of the cause of the Allies.

(2.) At one of these meetings Dr. Conybeare interjected remarks akin to those in his letter, but in language much more guarded and restrained. His remarks were irrelevant, and were ignored by the meeting.

(3.) We wish absolutely and entirely to repudiate the views expressed by Dr. Conybeare, which are not shared, as far as we know, by any other scholar in Oxford.

Sidney Ball,
Fellow and Tutor of St. John's College.
Ernest Barker,
Fellow and Tutor of New College.
Vernon Bartlet,
Mansfield College.
A. J. Carlyle,
Lecturer, University College.
W. M. Geldart,
Vinerian Professor of English Law.
H. S. Holland,
Christ Church. Reg. Professor of Divinity.
Arthur L. Smith,
Fellow and Tutor of Balliol College.

[The letter referred to in the Boston *Transcript* was a reprint of Dr. Conybeare's letter which appeared in the *Vital Issue*.—Ed. The Nation.]

PRAISE FOR THE MILITANTS.

To the Editor of The Nation:

Sir: In the Foreign Correspondence of the *Nation* of June 24 appears a letter from James F. Muirhead, crediting the English suffragettes with "admirable patriotic work"; with "a businesslike organization which enabled them to throw themselves into a practical and useful work, with none of the delay that hampered other equally well-meaning groups of women"; with "high courage and supreme devotion, which . . . has been an example to us all."

For these unlooked-for virtues, as well as for their efficient recruiting campaign, he would forego the natural inclination to "upbraid them with their past."

"For this relief much thanks," but it seems not to occur to the writer that it is to "their past" that these self-sacrificing women are indebted for their present efficiency in the hour of England's need. The standards which inspired those other "equally well-meaning groups of women"—presumably not suffragettes—seem to have proved less satisfactory in practice than in theory. For are we not to judge worth, whether individual or collective, by its bearing in times of trouble?

So, instead of looking for an ulterior motive, such as the fear of being conquered by an alien race, let it be noted that these women, who have been for so long denied the rights of British subjects, and who have been so cruelly punished for their persistence in demanding them, do not pause to upbraid for past injustice the powers who were responsible for their militancy. They are too busy giving loyal support to a Government which classes them with infants, convicts, and lunatics.

M. K. Dabney.

Richmond, Va., July 3.

THE TWO CHANDLERS.

To the Editor of The Nation:

Sir: In your issue of June 10, under the caption "A Prophet of Inevitable Destiny," "Vieillard" gives Senator William E. Chandler the credit of "saving his party from wreck in the Presidential campaign of 1876," and says that he "was *Secretary* of the National Committee." Has not "Vieillard," in making the above claims for William E. Chandler, confused his record with that of Zachariah Chandler, of Michigan, Grant's Secretary of Interior, who was *Chairman* of the Republican National Committee, and is given by good authorities supreme credit for the issue of the campaign, and for foiling his able antagonist, Abram S. Hewitt, chairman of the Democratic National Committee? James Ford Rhodes describes Zachariah Chandler as "thoroughly honest and a very capable business man," and makes him especially significant in the campaign of 1876, but makes *no reference whatever to William E. Chandler* in connection therewith.

I remember a cartoon in Frank Leslie's *Weekly* representing "Zach Chandler" holding an elephant by the tail, as it was falling over a precipice, saying: "You ain't going to slip through my fingers if I can help it." I am sure the cartoons and comments of the time indicated Zachariah Chandler as the leading personality of the campaign, and I think his record and influence should be referred to in commending the work of William E. Chandler as secretary of the Republican National Committee, as otherwise there is special likelihood of confusing the service of the two men from their having the same surname.

Everett O. Fisk.

Boston, June 12.

[If Mr. Fisk will search the records, he will find that William E. Chandler was secretary of the Republican National Committee at the same time that Zachariah Chandler was chairman. "Vieillard," who was then a newspaper editor, recalls distinctly the comments of some of his exchanges under such headings as "The Chandler Twins," "Two of a Kind," etc. Two contemporary journalists with whom he afterwards talked over the incidents of the night of November 7-8, 1876, were Charles A. Dana, of the New York *Sun*—Mr. Tilden's warm friend—and John C. (better known in the profession as "Sam") Reid, of the New York *Times*, who described with particularity, and not a little satisfaction, his own share in the affair. It is so common for a command-

ing general to be credited with a victory which may have turned upon the timely work of a subaltern, that there is nothing wonderful in the widespread assumption that the chairman rather than the secretary of the Committee organized the revolutionary campaign for seating Mr. Hayes. The truth was, according to Mr. Dana and the editor of the *Times*, that Zachariah Chandler did not enter into the transaction at all till he was awakened from a sound sleep in his room in the Fifth Avenue Hotel in the wee small hours of the morning of November 8 by William E. Chandler and Mr. Reid, who laid their plans before him and asked his permission to carry them out; and that he, sitting on the side of his bed, dismissed his callers with his authority to "go on and do whatever they thought necessary."—Ed. The Nation.]

AGAIN MATTHEW ARNOLD.

To the Editor of The Nation:

Sir: May I add to Mr. Baker's quotation from Matthew Arnold in the *Nation* of June 3 this passage from the Preface to "Literature and Dogma"?

"For a man may have the facts and yet be unable to draw the right conclusions from them. . . . But perhaps the quality specially needed for drawing the right conclusion from the facts, when one has got them, is best called *perception*, justness of perception. . . . But in this sort of tact the German mind, if one may allow oneself to speak in such a general way, does seem to be even by nature somewhat wanting. In the German mind, as in the German language, there does seem to be something *splay*, something blunt-edged, unhandy and infelicitous,—some positive want of straightforward, sure perception, which tends to balance the great superiority of the Germans in special knowledge, and in the disposition to deal impartially with knowledge."

Isabella M. Talley.

Philadelphia, June 7.

A LITERARY PARALLEL.

To the Editor of The Nation:

Sir: In May and June, 1849, Karl Gutzkow wrote "Der Königsleutnant," a comedy in four acts, as a centenary monument to Goethe's birth. The nominal hero is Count Thorane, the French officer, who, with his staff, was quartered in the Goethe house in Frankfurt-am-Main. The real hero is the young Goethe. In a certain scene, the elder Goethe says that the French have taken the city. To this Frau Goethe says: "Wie das? Dürfen sie's denn?" Then Goethe's father says: "Dürfen? Was sind Tractate? Was beschriebene, beschworene Verträge? Seit vier Jahren, dass dieser unheilige Krieg wieder begonnen hat, zogen tausende von Truppen durch Frankfurt als neutrales Gebiet, und alle betraten das eine Thor und gingen ehrlich durch das andere von dannen."

Could there be a more precise and complete literary parallel to the Belgian affair of last August? M. Henri Lichtenberger said latterly that it is impossible to think and escape Nietzsche. However this may be, it is certainly impossible to think and escape German literature as a whole. A. W. P.

New York, June 19.

Literature

"FACTS"—PSYCHOLOGICAL AND OTHER.

The Peace and America. By Hugo Münsterberg. New York: D. Appleton & Co. $1 net.

This most recent of Professor Münsterberg's many books is a protest against America's exportation of munitions of war and against America's partisanship for the Allies. The war brought this country a great opportunity to stand for peace and humanity by preserving strict neutrality in both action and judgment, and America, in Professor Münsterberg's opinion, has sadly failed. The failure, however, was natural; for the country made up its mind in the first few weeks of the war when the cables were cut and the English censor determined what the American newspapers should say. As a result, American feelings of indignation, whipped up by falsifications of the facts, "overwhelmed even the traditional sense of fairness of those who under normal conditions would never have hesitated to sympathize with the weaker side when seven nations fell upon two."

Although the reader may be unable to repress a smile at the picture of Belgium "falling upon" Germany, and Servia "falling upon" Austria, and although he may fail to be convinced that American opinion has been wholly based upon a mass of British perversions, he will find in Professor Münsterberg's book a number of things for which at this time of excitement and irritation there is crying need. Its tendency on the whole is towards tolerance, sympathy, understanding, and away from extreme and sweeping judgments which would blind us to half the truth about Germany. The chapters on the Kaiser and on German *Kultur*, in particular, should have a wide reading. But while the book will have an excellent influence by reminding us in calm and good-natured fashion of the many noble qualities of the German people and of the undeniable and invaluable contributions which they have made to the spiritual life of mankind, the author's chief reliance in his attempt to make us tolerant is to be found in two arguments to which a large part of his book is devoted; one of which seeks to prove that there are no moral standards by which we are justified in judging Germany, while the other points out that there are really no facts on which such a judgment could be based.

There is no absolute moral standard, says Professor Münsterberg. All the nations have their own ideals, and among these there is no way of judging. The American ideal is the welfare of the individual; the German ideal is the service of ideals which get their value not from their relation to individuals, but from themselves. These ideals need not find expression in any concrete form nor realization in any one's actual welfare; they are just "eternal values" which have nothing to do with time. Between ideals as variant as the German and the American no one has a right to judge, for there is no common standard by which they can be compared. The only absolute moral law is the law to do your duty as you understand it; and, as a corollary, to respect every one else who is trying to do his duty as he understands it. Hence it follows that absolute neutrality of judgment is the first duty of the American people. America should have "recognized that every one of the peoples at war proceeded in obedience to its world task, every one fulfilled exactly that which it conceived as its moral duty, every one was inspired by high national ideals, every one was deeply convinced that the fullest moral right was on its side. From such a point of view, the question of moral guilt would have become meaningless. Nobody was to blame, nobody was in the wrong, because whoever fulfils what he sees as his duty sincerely, loyally, and with self-sacrifice is eternally right. There can be no higher standard."

This is not the place for an ethical discussion; but the reviewer is impelled to point out at least this fact: that if the view here promulgated be accepted, it makes meaningless that most fundamental of all moral questions: What is my duty? And the kind of neutrality here advocated would deprive every international conflict of all its moral significance.

But a judgment on the rights and wrongs of the war is entirely out of place, continues Professor Münsterberg, because nothing could be more untrustworthy than "the so-called facts" on which such a judgment must be based. These are untrustworthy for many reasons. In the first place, the reports in our American newspapers are all either wilfully distorted by the English censor and the English editor, or else unintentionally colored by the bias of the reporter. This accounts for the tales of German atrocities in Belgium and elsewhere, all of which are due solely to the imagination. It may come as a surprise to the layman that the imagination can accomplish so much; but the psychologist understands these matters. And "even if no one altered and distorted the events, and if they were not selected by the chances of personal surroundings, are the so-called facts in themselves clear? Do the actors themselves distinctly know all about the aims and motives of their minds?" They may think they do; but in several pages of psychological analysis the Professor demonstrates that there is nothing definite, nothing certain even here. And one's own prejudices in choosing and judging one's facts—psychology shows plainly that these are such as to destroy whatever value might have been left in the poor "so-called" facts when they finally reached us. Hence how futile it is to form any kind of judgment on this war. For "facts" are only "fables and fancies." "We say facts, and we mean will-o'-the-wisps."

It is one of the interesting things about Professor Münsterberg's book that, after his thorough psychological demonstration that

facts are will-o'-the-wisps, when (in the chapter on England) he comes to deal with various German contentions, the will-o'-the-wisps stiffen into irrefutable facts with no nonsense and no psychology about them. Here, for example, are some of the "facts." It was Germany's "three mighty neighbors" that "forced this ghastly war on the peace-loving German nation." The German artillery sent two shots against Rheims Cathedral only because the French had most unjustifiably made use of it as a weapon of war. (The French denial of this can be explained psychologically.) At the outbreak of hostilities England and France were on the point of invading Germany through Belgium, with the latter's consent and aid, according to an agreement of long standing. In fact, the war had been planned for many years by English statesmen, notably by Edward VII. These clever plotters foresaw danger to India, and, to avert this, planned a war in Europe which should divert the attention of Russia, France, and other countries from British possessions in Asia. Finally, England's selfish schemes were masked by Sir Edward Grey's skilful use of Belgian neutrality, which really had nothing to do with England's decision, and was only a hypocritical pretext. "To-day all these *facts* lie entirely clear to those who want to see." There seem, in short, to be two kinds of facts: "so-called facts," which are psychological and come from England and which are really will-o'-the-wisps; and real, non-psychological facts, all of which are made in Germany.

Despite the many admirable features of this book and the tone of unfailing good humor maintained throughout it, the resulting impression for most Americans will be one of disappointment. Professor Münsterberg is so exceptionally well situated to give a judgment on the war that should be at once thoroughly objective and sympathetically pro-German that we had looked to him for something better than a mere repetition of the oft-heard assertion that Germany is absolutely innocent of everything, and that whatever is said against her is a pack of lies. "Such melodrama psychology" (let us remind the Professor of his own words) "which knows only angels and liars, is too clumsy." The American people are willing to believe many noble things of Germany, but it is vain to seek to persuade them that the German Government had nothing whatever to do with beginning the war, that the invasion of Belgium was all the fault of the Belgians, and that all German soldiers have acted like Angels of Light and Red Cross nurses. If we are to be won over to neutrality of judgment, some middle position should at least have been suggested. Our "partiality" and our credulity towards the "so-called" facts have not been due to any lack of hearing the German position clearly (and repeatedly) stated. Dr. Dernburg and his friends, not to mention our own fellow-countrymen residing in Munich, have seen to our "education" with sedulous attention. If most of us are still unconverted it is not through any lack of training, but rather because we have yet to hear a statement of the extreme German position which is based on real evidence and is consistent with admitted facts and with itself. Hence, as has been said, it is somewhat disappointing to get from Professor Münsterberg only a repetition of the old excuses, the old unproved accusations, the old sacrosanct official formulæ. With an ethical philosophy that befogs all moral issues and a *streng wissenschaftliche* method that turns all unpleasant facts into will-o'-the-wisps and forgets its psychology when dealing with pleasant theories, he and his fellow-professors have been able to prove to their own satisfaction almost anything they wished. That these methods have not persuaded America is to them an unending source of painful astonishment.

CURRENT FICTION.

The White Alley. By Carolyn Wells. Philadelphia: J. B. Lippincott Co.

The Girl at Central. By Geraldine Bonner. New York: D. Appleton & Co.

Miss Wells's latest romance again introduces Fleming Stone, the master detective, but only towards the end, and, it must be admitted, after the reader has received so many nods and winks as to have made up his mind pretty conclusively for himself concerning the identity of the murderer. Thus Mr. Stone has really very little to do except to parade the nonchalance behind the veil of which his keen deductions are always formulated, and to explain the conclusion—wholly unjustified by any recorded premises—that led him to look for the species of marble called "White Alley." When we really arrive at the mysterious disappearance of wealthy Justin Arnold, in his own burglar-alarumed house on Washington Heights, the tale is moderately diverting, though the faultiness of the deductive processes would infuriate Sherlock Holmes; but before we reach the point at which the mystery begins we are asked to wade through nearly a hundred pages devoted to the flirtations of a little minx who is alluded to with tiresome reiteration as "naughty" Dorothy.

Miss Bonner's mystery and the heroine thereof are of an altogether different order. The story is told by a telephone girl in modified telephonese, a jargon which becomes at times a little trying; but the story itself is remarkably good of its kind, and uncommonly well worked out. The mystery is concealed to the very end, unless the reader is a person of exceptional astuteness, for there is just one passage in the early pages of the book that points to the solution, while there are various false clues, cunningly contrived, that will start the earnest seeker running breathlessly in the wrong direction. For the purposes of her story Miss Bonner has omitted to mobilize few of the latest resources of civilization, including an aeroplane, and at the end they are all found to fit into the general scheme with the nicety of a well-contrived puzzle. There is a minx in this book, too, but here it is the minx who gets murdered, and hence the rôle that she plays is more engaging, because more silent, than that of Miss Wells's heroine.

Thankful's Inheritance. By Joseph C. Lincoln. New York: D. Appleton & Co.

If we were asked to prescribe for Mr. Lincoln's artistic health we should recommend him to go for a while to a new atmosphere, or, better still, to essay a totally different style of fiction: to spend some months writing an historical romance or a detective story; he might even devote himself to a "war novel." The result might not be particularly successful from either the pecuniary or the artistic standpoint; and it is not to be imagined that Mr. Lincoln would enjoy himself in his new environment. But the exercise would be in the nature of a mental discipline. The cure completed, Mr. Lincoln could return again to the atmosphere where he is so much at home, immensely benefited by the change; the habit which the author would have acquired of thinking of action rather than of character or atmosphere would serve as a tonic when he turned once more to his atmospheric studies. All this is not in condemnation of Mr. Lincoln's latest book. It is a pleasant, leisurely story, in the vein with which we are familiar, of life and folk in that perennially satisfactory neighborhood, Cape Cod, and in particular of the house on the cliff that Thankful Barnes inherited from an uncle by marriage, the whole duly seasoned with a sufficient admixture of romance and mystery to make the dish palatable. But here and there the interest lags and the workmanship seems a trifle mechanical. The story lacks the fresh breeziness of "Mr. Pratt's Patients" or "Cap'n Eri," and we seem to detect signs that the author has been a little profligate of the inspiration afforded by Cape Cod.

The Record of Nicholas Freydon: An Autobiography. New York: George H. Doran Co.

The publisher rubs in the mystery of this volume by challenging the reader to tell him whether it is "romance, autobiography, or both." We do not hesitate to say that it is not autobiography, though written out of experience as plainly as the "Jacob Stahl" series of Mr. Beresford. To that narrative the present one bears a surface resemblance. Nicholas Freydon, like Jacob Stahl, came up from unpromising beginnings to some distinction among London authors, by way of Grub Street, luckless marriage, and a various experience of low life. But Freydon is of a more remote and melancholy cast. The upshot of his public career is disillusion and unrest. His "way out" is a withdrawal from the battle. He returns to Australia, where in boyhood he has shared his father's similar withdrawal, and there his life "peters out" somewhat inconsequently, from the

point of view of a robust reader. Perhaps one's impression of something a little languid and enervating in the book is to be traced to the style, which is in perfect dramatic keeping, since the narrative is supposed to be the product of a final phase of exiled invalidism. But, if the note is somewhat plaintive, we are always kept clear of mawkishness. The warrior, though in a sense defeated, has fought the good fight. The story of his middle years in London, with their ceaseless toil, and their product less highly rated by the toiler than by his public; with their human relations so intimate, and yet never penetrating the inner reserve of the man Freydon himself—it is all told with a kind of grave subtlety grateful to the middle-aged reader who finds here, for better or for worse, something of himself, a pale yet clear reflection, it may be, of his own figure journeying not too triumphantly along the way of an already dimming past. The book is not sonorous: here is a meditative flute and not a clarion. But we are not all pushing and exultant souls, the best of us. There is a defensive as well as an offensive strength: Nicholas Freydon is in his own way captain of his own soul, and therefore worth our trouble.

Come Out to Play. By M. E. F. Irwin. New York: George H. Doran Co.

This book is, on the face of it, one of those now too familiar narratives about the spineless youth with no principles and plenty of "charm," who treads the primrose way of his own random desires, to the embarrassment or undoing of all fellow-creatures with whom he comes in contact. Truffles Lemaigne is an expensive by-product of the social mill at a moment when there is no such economic method of marketing him as war affords. His father has been a well-bred waster before him; there is no sense of responsibility born in him. Life from the outset is a playground, and his fellow-beings useful as playmates or not at all. Unpleasantly, for one of his type, his pursuit of joy is not endowed adequately, and he suffers the steadily growing inconvenience of duns and even of empty pockets. He drifts into vaudeville and out again, receives a comfortable secretaryship and throws it away, borrows wherever there remains a friend to lend; through it all retains his social position in the heartless if by no means brainless London of his birth. "Sophisticated" is one of the words emphasized by our publisher's announcer in connection with the story, and in his weary and nonchalant philanderings Truffles proves his right to the epithet. Two women stand out as of greater moment: Cecilia, the country maiden whose heart he so easily wins and so lightly flings away, and Pipette of "Le Papillon Jaune," whom he presently slays with a dagger because she will not obey his whim. For one instant, between this savage assertion of the will and the ending of his own life, he has a glimpse of truth, sees what life might have held for him if he had made a real thing and not a plaything of it: "He knew now that he could love Cecilia enough to work for her, to do difficult things for her, to try and make her happy. And Pipette? he had played at love with her, and it had become real enough to kill her—and him. But he knew now that his love could be more than that, though not for her." It is too late—he jumps from his window-sill and ceases to be. A melancholy symbolism of vanishing joy, vanishing desires, haunts these pages—marionettes, yellow butterflies, the golden air-ball which is so easily broken, flowers that fade, Pierrot and Columbine. What saves the book from mawkishness is that Truffles is real, and his sister Jill, and poor Cecilia, and Pipette.

GOETHE'S PHILOSOPHY.

Goethe: With Special Consideration of His Philosophy. By Paul Carus. Chicago: The Open Court Publishing Company. $3 net.

Amid this sickening clash of arms one can not but greet in friendly spirit something, anything, which may recall the golden days when Germans were striving after genuine culture, were pondering humanely the great issues of life, and had not yet sunk themselves in articles of war and the goose-step. Thoughts of Goethe and Weimar may thrust into the background even Kaiser, Bethmann-Hollweg, and Tirpitz. Yet, with every inducement to friendliness, one can not accept the present volume unqualifiedly. What, for instance, is the utility of the first sixty-five pages? They are nothing but an expanded diary of the facts of Goethe's life, facts which should be known to every reader and which help us not a whit to master Goethe's philosophy. Nor is the following section, pp. 66-142, on Goethe's Relation to Women, of much greater value. In point of English style, the plural "Relations" would be better form. And, for the substance, why iterate for the thousandth time the hackneyed stories of Gretchen (of Frankfurt), Kätchen Schönkopf, Frederike Brion, Lotte, Lili, etc., etc.? The reader who truly seeks to know these phantoms of delight will turn to Goethe's own words. In the case of Frau von Stein, the woman who, above all others, affected Goethe's powers of *thought*, our author has failed badly. Whoever would discuss Goethe's philosophy must begin by recognizing that Frau von Stein found him crude, untrained in the ways of the world, and left him the polished, courtly satirist. If "Faust" be Goethe's great Tagebuch, the first part embodies pre-Weimarian life; the second part, with its wonderful probing of court, finance, war, would never have been conceived in its shrewder passages but for Frau von Stein's subtle indirect influence. The present reviewer makes this assertion the more confidently, in that he is not a blind devotee of the Frau. Again, in discussing Christine Vulpius, our author betrays a squeamishness amounting to prudery. The liaison was Weimar's chief scandal; why hesitate, then, to say boldly, once for all, that Christine was Goethe's mistress for years, and was not married to him until after the battle of Jena, and that she was the direct occasion of the rupture with Frau von Stein? Goethe, like Shakespeare, was not of an age, but for all time; nevertheless his attitude towards society was that of the eighteenth century. We need not put on kid gloves to handle this side of his life. With Bettina we have little patience, still less with the Ulrike von Levetzow episode. To say, as Carus says, p. 138, "the difference in their ages [seventy-four against nineteen] seemed too great an obstacle. He resigned himself," is to ignore the determined and righteous opposition of Goethe's family.

In brief, every rational treatment of Goethe's philosophy, whatever that may be, will pass over mere love-making and concentrate attention upon Goethe's study of life in general and the relations of man to society and to the forces of nature. Our author would have been wiser had he substituted for this section on Relation to Women a section on Goethe as man of affairs and statesman.

The second part of the book is better planned and fairly well executed. It will give to the ordinary reader at any rate a partial insight into Goethe's personality, religion, philosophy, literature, and criticism. The weakest section is that upon "Faust," and this errs not so much in what it gives as in what it fails to give, or rather in what it fails to apprehend. It errs in treating the poet as a unit, *ein Ganzes;* whereas it is a conglomerate, to be more precise, a piling up of strata. There is the *Urfaust*, there is the early edition of Part I, the fuller edition of 1808, and there are the successive instalments of Part II. The real student of Goethe will read this series of publications in the order of issue, for each presents a different Goethe. The great German, like the great Englishman, was—to adopt Coleridge's phrasing—"myriad-mooded," the same person, but ever shifting. To interpret the First Monologue of Part I and acts iii (Helene) and v of Part II as if they were all organic articles of one and the same poetic creed is fatal. No one need hesitate to admit that the poet was continually *outgrowing himself*. Further, our author seems blind to the satirical element in "Faust." Apart from the obvious satire of the interview between Student and Mephistopheles, Part I, acts i, ii, iv, and many passages in act iii, Part II, are satirical in thought and tone. They embody Goethe's experiences in Weimar court-life, but idealized, generalized, and made applicable to all court-life, ancient and modern. No student of ancient history will fail to appreciate the exquisite perfidy of the *Classische Walpurgisnacht;* no student of mediæval and modern, even the most recent, history can afford to overlook the three ruffians in act iv. Belgium in 1914 bears witness to Goethe's unconscious gift of foresight.

Evidences of careless proofreading and loose thinking are not absent. Thus, Bielowski (p. 94) should read Bielschowski; the

beautiful German lines (p. 227) are marred by the absence of Umlaut; "broader then" (p. 193) should be "broader than"; the date 1833 of Goethe's encounter with Franz von Schwanenfeld (p. 173) is, of course, impossible. Calling Bayard Taylor "a translator by God's grace" (p. 221) is praise which Taylor himself would scarcely have accepted. The criticism (p. 147), "We deem it regrettable that in certain circles they ["Werther," "Elective Affinities," "Wilhelm Meister"] are read more than his other works . . . his novels contain much that would better have been relegated to oblivion," has a Sunday-school ring. We, too, regret such cult of the "novels," but on other grounds; for us, Goethe is at his best in his poetry, especially in his short lyric and didactic pieces. This view is confirmed by our author himself in his concluding section, Miscellaneous Poems and Epigrams. At page 195 we find mention of "the high-minded and pious Louis Bonaparte, ex-King of Holland." How Louis Bonaparte came by his piety is to us a mystery.

The illustrations excel in quantity rather than in quality. Nearly all of them are hackneyed; only two evoke the feeling of novelty. Bury's crayon of Goethe in 1800 (p. 52) with its mien of smug *embonpoint*, suggests — to the reader's dismay — what Goethe might have become had he married Lili and settled down in opulent, easy-going Frankfurt. Diametrically opposite is the crayon by Lips (p. 265), truly the face of an idealist.

Passing over other defects and errors, we conclude with an exhortation. Any discussion of Goethe as philosopher, or rather as thinker, for Goethe never professed philosophy and scorned the systematic, is indisputably *etwas Grosses*. Accordingly, we exhort our author and his like to ponder Goethe's own utterance: *Wer Grosses will, muss sich zusammenraffen*. The fundamental postulate of all Goethe-criticism is the *sich zusammenraffen*.

MONSIGNOR BENSON.

Hugh: Memoirs of a Brother. By Arthur Christopher Benson. New York: Longmans, Green & Co. $1 net.

By no means the least interesting thing about this remarkable study is its clear though light sketching of the Bensons as a family. The archbishop is shown somewhat in the background, a rather pathetic father of the old school, devoted to his children yet somehow aloof—inaccessible, as it were, *ex-officio:* a man who "loved family life, but . . . had an almost tremulous sense of his parental responsibility"; susceptible to art, and to ritual as a form of art; a trifle pedantic; oversensitive and therefore uncertain of temper. It is the mother who is the calm, potent source of the family life; from her appears to have descended, if not the talent or the immense industry of her children, that uncommon strength of sinew which is necessary for such labors as theirs.

Several group portraits of the three brothers are here reproduced—there was, as in so many families of genius, another brother, the most brilliant of them all, who died young. Almost from the first of the series, one fancies them written clear by photography: Benson the Don, Benson the clever story-teller, Benson the priest. *Post facto* prophecies are illusory: what one really sees in these pictures of the youngest, Hugh, is a slight, fair boy, with a homely face of Scotch type, prominent of mouth and eyes—the latter small and pale. The remarkable thing is that this face carries into manhood the ingenuous, eager, totally unselfconscious air with which a small child or a puppy looks out upon his world. "The one characteristic," says the Don, "which emerges whenever I think of him is that of a beautiful charm, not without a touch of wilfulness and even petulance about it, which gave him a childlike freshness, a sparkling zest, that aerated and enlivened all that he did or said." It is this personal and intimate aspect which the present study tries to convey, and which might easily be missed in the formal and official biography to be prepared in due season by one of Monsignor Benson's own faith.

The Hugh of this book is not a saint, but a very natural and human person. As a boy he displayed no marked ability or bent of any sort; was keen and fickle about a multitude of things; had his full share of mischievousness and irresponsibility. For all his charm, he made few friends—his least human trait was a certain detachment from close individual ties. His mother had his confidence more than any other; for the rest, his family and social relationships were friendly rather than warm. He lacked the proprietary sense: "I never saw him exhibit the smallest trace of jealousy, nor did he ever desire to possess any one's entire affection," says his brother. This limitation rather than any peculiar strength seems to account for a certain immunity from sorrow: "He admired greatly, he sympathized freely; but I never saw him desolated or stricken by any bereavement."

Mr. Benson deprecates the generalization which has attributed his brother's accession to the Church of Rome as a saintly yielding-up of the will. He believes that his happiness in his calling was owing to the fact that there "he had found the exact *milieu* in which he could use his will to the best effect." There was never anything ascetic or negative about him. Submission to the spiritual authority of the Church was, to put it crudely, washing his hands of the whole spiritual bother: it left him free for all sorts of activity. And activity was the one thing necessary, as priest, writer, householder—so was it that he finally burned himself out before his time. He died just after the outbreak of the great war; already he had offered himself for service as a chaplain at the front. There is uncommon appeal in the little priestly figure, so busy, so eager about this business of human life, and yet possessed of a sort of elfin remoteness, a child-quality which the years were powerless to touch. At any age he must have "died young." Its frankness and tenderness make of this little record a singularly beautiful memorial.

THE LAST KHEDIVE.

Abbas II. By the Earl of Cromer. New York: The Macmillan Co. $1.

The emancipation of Egypt from the domination of Mehemet Ali's dynasty, and the freedom of her long-suffering fellahin from the *kurbash* of Bashi Bazuk extortioners, is, perhaps, the most engrossing story of British colonial policy in Africa. After the refusal of the French to coöperate in 1882, England faced the task alone, and the order evolved out of the Turkish chaos brought a new era for Egypt. The resuscitation of the lost provinces, the subsequent agrarian reforms, mark the triumph as one essentially pacific and administrative; once more Egypt, at once her most ancient and most modern integrant, furnishes Africa with a model in government. For our purposes the history of this original Turkish dependency dates from the founding of the Khedivate by special *firman* from the Porte in 1867, down to the recent deposal of the subject of Lord Cromer's *brochure*, and the elevation of his uncle by the British as the first Sultan of the Egyptian empire.

For an intimate story of the British work of reconstruction we must turn to Lord Cromer's authoritative "Modern Egypt." Bristling with problems, both Asiatic and European, British diplomacy, hitherto characterized as sublimely heavy-handed and unimaginative in Eastern affairs, doubtless learned a lot from the severe and valuable schooling obtained in India. Modern Egypt, endowed with a greater homogeneity than India, may soon articulate for British ears those problems concerning partial autonomy which India is now busy formulating. Egypt, in fine, under the new Sultanate, should provide for the British Eastern dependencies a crucible in which these Oriental ideals may be assayed. Whatever the final fate and status of Turkey, under the new Sultan of Egypt the old Turkish bureaucracy that hampered past Khedives, and was fruitful of misunderstanding and misrule, definitely passes from Cairo, and with it, in a large measure, the subtle and sentimental influence of a Turkish Caliphate.

But Lord Cromer's tale is of yesterday. In the course of this study of the deposed Khedive he remarks: "It is dangerous for an Oriental to base any political calculations on his own estimate of the state of party politics in England." The victim of ill-advised counsel, Abbas II was alternately Turcophobe and Anglophobe. Personally vain and hypersensitive, he never quite lost the mould of his Austrian cadetship, as shown by the Kitchener episode; and the story of his downfall may be ascribed to a persistent misconception of Lord Cromer's axiom. Moreover, the sudden wane of the

Manchester school, owing to the trying experiences of the Boer War and the blunders in the Sudan, so far as an Oriental foreign policy went, found the Liberals disavowing its pacific doctrines. And this reaction proved the disillusion of advanced progressives in Egypt and India regarding their great expectations of a Liberal régime. Among these, Abbas II was profoundly disappointed: the triumph of Liberal Imperialism shattered whatever vague ideals of autonomy he cherished: the British Proconsul in Egypt had Lord Rosebery's support and confidence.

That this idealism was not symptomatic, that its pseudo-patriotism was the echo of Pashadom and not of the ten millions of the Egyptian people, that the deposed Khedive was the puppet protagonist in the drama staged at Cairo, we must accept on Lord Cromer's unimpeachable authority. None knew better the *camera obscura* of Cairene intrigue: here we have the impartial story of Abbas II's exploitation of Moslem fanaticism in behalf of his ill-conceived cause, of his futile effort to enlist Constantinople under his Anglophobia—indeed, his mission to the Sultan has all the pathos of a forlorn hope. But infinitely more pathetic was the Khedive's failure to let his sincere friendship for Lord Cromer's successor, Sir Eldon Gorst, effect in him a change of heart and conscience. How keenly he felt his lost opportunity is shown by his visit *incognito* to England, when he heard this friend and statesman was dying. In Lord Cromer, however, Abbas II has found a competent and impartial historian; from his Austrian exile, after the war, let us hope that he will repay the distinguished compliment.

Notes

The Oxford University Press announces the publication of "Last Pages from a Journal," with other papers, by Mark Rutherford, edited by his wife.

The Macmillan Co. announces the forthcoming publication of "The Mighty and the Lowly," by Katrina Trask.

Thomas Y. Crowell Co. has arranged with A. Rosenblum to issue a "trade edition" of his "Complete Course in Isaac Pitman Phonography."

Longmans, Green & Co. have arranged to issue in their Pocket Library an edition of William Morris's "The Pilgrims of Hope."

Maxim Gorky's "My Childhood" will be published shortly by the Century Co. For publication in the autumn the Century Co. announces "Straight Down the Crooked Lane," by Bertha Runkle.

Paul Elder & Co., of San Francisco, announce for early publication "The City of Domes," by John D. Barry, and "The Lure of San Francisco," by Elizabeth Gray Potter and Mabel Thayer Gray.

On July 17 Henry Holt & Co. will publish "The Coming Newspaper," a symposium, edited by Merle Thorpe, and "The British and American Drama of To-day—Outlines for its Study," by Barrett H. Clark. The publication by the same house of G. H. Perris's "The Campaign of 1914 in France and Belgium" has been postponed until July 24. "The Bent Twig," by Dorothy Canfield, is announced for publication in the autumn.

The following volumes are included in Frederick A. Stokes Co.'s list of publications for August: "Flower Pictures," by Maude Angell; "Hero Tales and Legends of the Serbians" and "A History of Serbia," by W. M. Petrovitch; "Bird Biographies," by Oliver G. Pike. In the Romance of Reality series will be issued "The Man-of-War," by Commander E. H. Curry; "The Aeroplane," by Claude Grahame-White and Harry Harper; "Modern Inventions," by V. E. Johnson; "Engineering," by Gordon Knox, and "Electricity," by W. H. McCormick. "Hero Tales and Legends of the Rhine," by Lewis Spence, will be added to the Myth series, and "William the Silent," by Agnes M. Miall, and "Mohammed," by Edith Holland, to the Heroes of All Time series.

The Broadway House has in preparation, for its Library of Scholarship and Literature, a critical edition of "Euphues," containing both parts of Lyly's romance, edited by H. Clemons, formerly reference librarian of Princeton University, and Dr. Morris W. Croll, assistant professor of English literature in the same university. Mr. Clemons, who relinquished the task in favor of Dr. Croll, on deciding to devote his life to missionary work in China, is chiefly responsible for the text. The introduction and notes are by Dr. Croll.

When an essayist, as does T. R. Glover in his "Poets and Puritans" (London: Methuen & Co., Ltd.; 7s. 6d. net), declares in the preface "that the real business of the critic is to find out what is right with a great work of art—book, song, statue, or picture—not what is wrong," we are justified in replying: "If this is your canon of criticism, you must do something more; you must find out what is right in some new way, so that your reader will approach the book or picture with considerably enlarged powers of appreciation." Now, it is just this something more that Mr. Glover fails to impart. He writes from sufficient knowledge and generally with good taste, but it is not easy to see just how, after reading his essays on Spenser and Milton and Cowper and Crabbe and Wordsworth, our power of enjoying those poets has been enhanced; and meanwhile, by omitting all mention of their shortcomings, he has foregone the critic's function of purging our taste and correcting our imagination. In some few cases his own taste causes us to wonder. What shall we say to a critic who seems to see few or no faults in Milton's prose, yet appears to get nothing from "Samson Agonistes" and "Comus" except the fact that the drama was not Milton's proper sphere? The title of the book is of no special significance, save, perhaps, that it prepares the reader for Mr. Glover's admiration for Milton's most extravagant tirades on personal liberty in matrimony and other matters. The prose writers considered are Evelyn, Bunyan, Boswell, and Carlyle. The first three of these essays are well enough, but rather commonplace; in the last Mr. Glover has produced a really good and illuminating essay. We do not mean to say that his treatment of Carlyle is particularly original or overwhelmingly profound; but it has the merit of wise selection and instructive concentration. One feels in it the working of critical brains, and one goes from it to Carlyle himself with fresh zest and renewed assurance of what is there really to admire and what is there to learn.

Issued a few years ago as the second volume of the "Legal and Judicial History of New York," the separate publication of J. Hampden Dougherty's "Constitutional History of the State of New York" (Neale; $3) makes the book available for persons who do not wish to acquire the entire set. Mr. Dougherty has seized the occasion to revise his pages and to add an account of events that have occurred since the appearance of the first edition. The volume is a comprehensive survey of the subject, from the colonial period to the Workmen's Compensation law and the impeachment of Sulzer. Its usefulness to members of the Constitutional Convention is apparent, and it should also appeal to every citizen of New York State who desires a convenient account of its constitutional development.

Fruitlands, as readers of transcendental lore are aware, was a farm at Harvard, a township some forty miles from Boston, where the benign Alcott and certain of his friends started a "consociate" community for the purpose of "aiding entire human regeneration." It was a disastrous experiment, more disastrous by far than Brook Farm, but not without sufficient elements of high comedy to make it memorable, even if Emerson and Thoreau were distantly implicated in the midsummer madness. Fortunately, Clara Endicott Sears's neat volume entitled "Bronson Alcott's Fruitlands" (Houghton Mifflin; $1 net), though written with sympathetic intention, does not miss the humor of the situation—indeed, as it consists mainly of letters and other original documents (some of them now first printed), it could not very well be anything but funny. We see no reason to mince matters. Despite Emerson's admiration for Alcott, that supposed child of Plato was merely a colossal fraud. His daughter Louisa's little sketch of "Transcendental Wild Oats," included in the present volume, is really a terrible arraignment of these men, "who were so busy discussing and defining great duties that they forgot to perform the small ones." The only man who showed a minimum of responsibility to facts was a crank who made the wearing of a beard the first obligation of life. Another of the inspired lunatics sought salvation in nakedness, compromising, however, with his conscience to the extent of leaving his room only at night, and then in the entire respectability of a nightgown. Another member, who based his gospel on the writing of his name backwards, is thus described by one of his fellows:

> Abraham is about forty-two, a cooper by trade, but an excellent assistant here, very faithful to every work he undertakes, very serious, has had rather deep experience, having been imprisoned in a mad house by his relations because he had a little property, but still he is not a spiritual being, at least not consciously and wishfully so.

This "love colony" of wishfully spiritual creatures did not last long. Farming was not successful, when at the critical moment the gentlemen of the community would go mooning off for the purpose of "aiding entire hu-

man regeneration," while Mrs. Alcott and her children were left to gather in what they could of the crops. These gentlemen soon scattered, each to follow his own selfish whim, leaving for history a little mirth. Yet there are still those—the writer of this amusing book is one of them—who can think of Fruitlands with tender regret:

If that history was full of pathos, if the great experiment enacted beneath its roof proved a failure, the failure was only in the means of expression and not in the ideal which inspired it.

Thus we catch the last wailing echo from that degenerate side of transcendentalism which almost brought discredit on the robuster men of Concord. For how much besides the shams of Fruitlands was Plato responsible when his words, whether misunderstood or not, started the long illusion that our ideals must be a kind of beautiful madness!

In S. C. Chew's study of "The Dramas of Lord Byron" (Johns Hopkins Press) several elements are to be distinguished and variously judged. The book opens with an account of the Drama of the Romantic Period, written from full knowledge of the material, and, on the whole, with sound taste. "This phaenomenon in the world of dissipation," as one of the contemporary critics of the German influence on the English stage called it, is not a thing to be cherished by the lover of intellectual health, but it has an interest as a part of a great movement. Mr. Chew has dealt with these abortive plays so judiciously, in the main, that one is surprised later on in the book to come upon such an extraordinary statement as this: "In a world where all things are struggling through chaos into harmony, nought in which there is life is complete. In death alone is there realization of definite ends. Here is the fundamental distinction between classicism and romanticism. And Byron, in 'Manfred,' and throughout his poetry, points to an ideal truer and nobler than Goethe's, just because it is impossible of accomplishment. Such a doctrine is indeterminate, enormous; but is full of inspiration." We pass by the childishness of the judgment. If Mr. Chew thinks that Byron's philosophy is greater than Goethe's, and that enormity, in the sense of lawlessness, is synonymous with inspiration, that is his own affair; he is entitled, perhaps, to his opinion. But it is otherwise with the failure, here and elsewhere in his work, to distinguish between the classic and the pseudo or neo-classic. That is a question of fact where ignorance is merely discreditable to a man's scholarship. A teacher should complete his education on such fundamental principles before writing on them.

It is pleasanter to turn to an aspect of his theme where Mr. Chew has shown himself more competent. In dealing with Byron's use of exposition and with other technical matters of the sort, he shows considerable knowledge of dramaturgy, and writes with critical precision. And, again, his study of sources, as would be expected, is excellent; for example, he writes with nice discrimination in regard to the precise amount of influence of Chateaubriand's "René" on "Manfred." Nor is the human interest omitted. He enters into the vexed question of the relation of the subject of "Manfred" to Byron's own life, and, by comparison of the drama with the almost contemporary poem, "The Dream," leads to a conclusion which we accept as sound and valuable:

The autobiographical references in "The Dream" are indisputable in their cogency. The poem is a record of Byron's love for Mary Chaworth. Every one admits this. The conclusion drawn from the parallels noted above is therefore obvious. "Things equal to the same thing are equal to each other." Since Mary Chaworth is the Lady of "The Dream," and since Astarte's history is identical with that of the Lady, it follows that Astarte and the Lady and Mary Chaworth are one and the same.

The morbid elements of Manfred, which have been used by Mrs. Stowe, Lord Lovelace, and others to support the monstrous scandal, are adequately explained by Mr. Chew by showing the persistence of the theme of incest through all this romantic literature. On the whole, this study of Byron's dramas is a good specimen of scholastic criticism. As an exhaustive analysis and source-study, it offers a notable addition to that literature designed primarily for the specialist, which goes on building itself up in remote and haughty seclusion. Its stubborn comprehensiveness is likely to repel those true lovers of the book whose reading is a part of life, and not of the classroom.

Not only lucidity and comprehensiveness characterize James B. Morman's "The Principles of Rural Credits" (Macmillan; $1.25 net), an addition to the Rural Science series, but a clear grasp of the relation to the whole complex problem in which our Governmental agencies are likely to stand. Theory is subordinated to treatment of specific conditions and constructive plans. The first half of the volume deals with the methods of financing farmers in Europe, emphasizing the fact that mortgage-credit agencies are there always of a non-profit-seeking character, and are decentralized in organization. The second half considers the various adaptations of European plans proposed here—the gradual amortization of farm mortgages as carried by building and loan associations or by rural credit unions, the issue of mortgage bonds by State land banks, the establishment of funds by the great insurance companies for direct loans, the provision of State funds, and the institution of a Federal machinery for rural credits. Emphatic preference is given to the first expedient. The author properly holds that the field is not one for Federal agencies to enter, as no European Government has ever taken the initiative in establishing a system of rural credits, and as the States can better provide for the problem by the use of State funds for long-term loans. He emphasizes, however, his conviction that organization among farmers must be the basis of success in their credit-seeking, and that it must be accompanied by education in the use of credits. Some discussion of how our slow-growing cooperative associations can be made to develop faster would have been useful, for it is to just this point that the crux of the problem reduces itself.

Students of American colonial history will be interested in two monographic studies recently published. "Church and State in Massachusetts, 1691-1740," by Susan Martha Reed, is printed in the University of Illinois Studies; "Money and Transportation in Maryland, 1720-1765," by C. P. Gould, makes No. 1, Vol. XXXIII, of the Johns Hopkins Studies. The intellectual and religious history of the colonies in the eighteenth century is a most inviting but hitherto little worked field, and Miss Reed, by an exhaustive study of a narrowly restricted problem, has made a useful contribution to the knowledge of the general subject. Her object has been to trace the process by which the Anglicans, Baptists, and Quakers came to possess certain privileges in Massachusetts ecclesiastical law; she tells the "story of the gradual encroachment on the old Puritan system by religious dissenters." Both manuscript and printed sources have been used to good purpose, and the subject is developed systematically and clearly. Apart from the main subject, Miss Reed's study throws interesting light on other aspects of colonial history; notably upon the influence of Whig party politics in determining the attitude of the English Government towards the colonies, and upon the tendency of "irreligious persons," descendants, in the second and third generations, of the Puritan founders, to leave the older towns, "where extreme orthodoxy was the order and social prestige depended upon it," and settle in "the newer plantations of the northern and southern counties where their variations made less stir with the government at Boston."

Mr. Gould's monograph gives a detailed and well documented presentation of the various forms of money in Maryland, and of the system of transportation. The monetary problem in the colonies was a perplexing one because of the persistent scarcity of specie, and the monetary system a complicated one because of the necessity of resorting to various other mediums of exchange. This complexity, for Maryland, Mr. Gould has exhibited with considerable skill. And in particular he shows, as every careful study of the subject in almost any of the colonies is likely to show, that there was a legitimate as well as an illegitimate demand for paper currency; and that where paper was kept from serious depreciation, as was the case in Maryland (and also in New York), its use was highly beneficial both for commerce and agriculture. Studies for the other colonies, similar to that of Mr. Gould, are much to be desired; and much to be desired by the political as well as by the economic historian; for the intimate connection between the monetary system of the colonies and their commerce, particularly their commerce with the West Indies, has a direct and important bearing upon the opposition which the measures of Grenville—the Sugar act, the Stamp act, and the Currency act—gave rise to in the colonies. The relation of the problem of colonial money to the Revolution has never been adequately set forth.

In Robert P. Reeder's book entitled "The Validity of Rate Regulation, State and Federal" (Philadelphia: T. & J. W. Johnson Company), we have a serious and valuable contribution to the now rapidly increasing literature on the law of public service. Whether or not readers of this book agree with all of the author's conclusions, they will be grateful that he has not fallen into the error of presenting a mere digest of cases under the guise of a textbook, and that he gives them the benefit of a scholarly and painstaking attempt to evolve the true constitutional principles applicable to the problems in hand. He admonishes the reader that he "must at least realize that, in view of the state of the authorities, it will be necessary . . . to do more than sim-

ply compile the results of the gradual process of judicial inclusion and exclusion." Acting upon this admonition, he subjects all rate cases to a critical scrutiny. The result of his analysis, together with "an extensive examination of fundamental principles," leads him to a radical disagreement with far-reaching conclusions embodied in many of the important rate decisions of the Supreme Court of the United States in recent years. In particular, he takes issue with the Court's interpretation of the provision contained in the Fourteenth Amendment—"Nor shall any State deprive any person of life, liberty, or property without due process of law."

More than a third of the book is given up to a discussion of the bearing of this clause on rate regulation, with the conclusion that "when the due process provision was placed in the Federal Constitution, it referred simply to those deprivations which are usually made by way of punishment, and that it referred simply to the procedure which must be observed in determining whether the law has been violated." The author admits that the Supreme Court holds that the due-process provision relates not only to procedure, but also to substantive law, confirming to persons certain rights which cannot be taken from them in any manner; among these is the right not to have property taken for a public purpose without due process, from which is derived the right to a fair return for property used in the service of the public. Yet he stoutly and ably contends that these conclusions are not justified by the Constitution; that the reasoning by which they are reached is unsatisfactory and confused, and that the conclusions themselves are as confused as the reasoning by which they are supported. There are interesting chapters on the effect of the commerce clause on the rights of States to control carriers by legislation and on the right of Legislatures to delegate their powers, as well as a very good summary of methods approved by the courts for fixing rates. The footnotes throughout the book are extensive and helpful, being rich, not only in citations of and quotations from leading cases, but in references to legal treatises, articles, notes, reviews, and arguments before legislative bodies.

Our present painful interest in the historic architecture of Europe lends timeliness to a volume of "Sketches by Samuel Prout" (John Lane Co.; $3 net), containing 63 plates in monotone and one reproduction in color from the artist's "Facsimiles of Sketches Made in Flanders and Germany" and "Sketches in France, Switzerland, and Italy," which appeared, respectively, a few years before and after Queen Victoria came to the throne. They are prefaced by an appreciative but balanced essay on "The Life and Work of Samuel Prout," by Ernest G. Halton, which not only emphasizes Prout's distinctive talent for catching the quality of picturesque old buildings, but also discusses briefly most of the sketches reproduced. In addition, it points out the value of these sketches as preserving not simply structures that may suffer injury or destruction in war, but many that have already disappeared or been materially changed by restoration. The drawings need, however, no justification beyond their own appeal.

Science

LORD AVEBURY.

Life of Sir John Lubbock (Lord Avebury). By Horace G. Hutchinson. Two vols. New York: The Macmillan Co. $9 net.

In a sense, this biography closes an epoch in scientific thought. Sir John Lubbock was about the last of that group of distinguished men of science who made the Victorian period so notable. The biographies of these men are interesting not only as records of individual attainments, but, taken together, they give us the history of one of the important schools of thought.

The dominant spirit of this group of men was Charles Darwin, who, by the discovery of the law of evolution, gave us a new principle which influenced thought far beyond the confines of a strictly scientific generalization. It was at once seen that the law was an instrument of immense power, giving not only, what is so necessary to the development of science, continuity of action between the present and both past and future time; but it also became a link among the various sciences and between science and other fields of thought.

Thus, this law differed from most scientific laws because it not only needed to be proved by experimental evidence, but also, by reason of its relations to philosophy and ethics, it required a propaganda. Darwin was fortunate in arousing the deep enthusiasm and personal affection of a band of able experimentalists who were in addition keen critics and advocates. Of these, Huxley was certainly the master mind, and he is unique in science as a champion who joined experimental skill with first-rate ability as an essayist. Next to Huxley we may place Sir John Lubbock.

The life of Lubbock, as recorded by Mr. Hutchinson, arouses a feeling of envy. The close friendship and intercourse among the British men of science has only a feeble counterpart in America. They lived within easy reach of one another, and enjoyed a rare combination of scientific and social life. Ability was thus quickly recognized and enthusiastically encouraged.

After leaving Eton, at the age of fifteen, the boy was placed by his father at work in his bank. Lubbock writes in his diary this extraordinary note:

> At the same time, he [his father] did so with the less reluctance, as practically nothing but Latin and Greek, and a very little geography, was taught as a part of the regular curriculum, and as at Oxford and Cambridge the same system was adopted (with, of course, mathematics at Cambridge). Soon afterwards my father's partners both died, and he and I, with a worthy old clerk, carried on the business, so that he and I could not be away together.

Here was a boy of fifteen with the burden of a partnership in a bank on his shoulders, and his only partner was his father, who was much keener about higher mathematics than about finance. From this date began a life which has hardly its equal in activity and variety of occupation.

Several years before this time, when Lubbock was seven years of age, an event had occurred which was destined to exercise a predominant influence over his life. Charles Darwin had come to Down to live, only about a mile from High Elms, the home of the Lubbocks. At this early age, the boy gained the affection and encouragement of the master, and, both by his own ability and by Darwin's teachings, he soon became distinguished as a scientist and made the acquaintance of the leaders in science. How early he obtained recognition is shown by the fact that he was elected to membership in the Royal Society at the age of twenty-two.

As if two occupations were not more than enough for any one to undertake, he was elected to Parliament. In all three careers he worked incessantly. In finance, he instituted new methods of banking, and he is the creator of the clearing-house system; in science, he published many papers and books of a high order of originality; in Parliament, he was keenly interested in many reforms and put through many important bills, one of which, creating the bank holidays, made him famous, and for a long while these holidays were popularly called St. Lubbock's Days. In addition to all of this work, he was Rector of St. Andrew's University, member of the London County Council, an officer in innumerable societies, and he wrote many books which had an immense sale and were translated into an extraordinary number of languages and dialects. It is a mystery how he contrived to do what he did, especially as he always gave the impression of being rather a man of leisure, or at least one who always had time enough at his disposal.

Although he was distinguished in many ways, his name became almost a household word as the author of "The Hundred Best Books" and "The Pleasures of Life." He was an omnivorous taker of notes and he had the faculty of seizing on the books and quotations which would appeal to the best popular taste. As a result, he wrote these books with almost no effort, giving a list of the best reading and maxims, which had a profound effect on the reading and thought of the world. Letters of interest and approval and requests for permission of translation poured in on him from all over the world. One letter, from an Arabian, is worth quoting in part to show the strange influence this restrained Englishman could exert:

> Though only four hours of a night to write it, and, once written, again a considerable number of days of hesitation to depart with it as a "picture of me" destined to fall under the sight of Lord Avebury.
>
> Dear Sir it is a critical moment—but my beats and throbs are as regular as ever. "To be or not to be, this is the question": Whether I should stick to my present post of £10 per 1 moon's revolution, and continue to live on the figures (only ten in shape), I add and register—and die when Death knocks, . . . or bid this routine farewell. . . . Oxford is my goal; a foul or a

fail; a failer or a fool; I want to know more and become more. I may be hung; I may be stabbed; I may be smashed and ground to earth; but starvation can never be a cause to my death. . . . For work is Nature's kind tiger, and no cruel Humanity can dare mutilate its arm. . . .

Mr. Hutchinson has done his work well. The biography is full and interesting. He has given a very vivid picture of a man of intense activity and of the most diverse accomplishments. There is also the other side of the man, as one who knew every one worth knowing, genial himself, and sought after as a friend. It is undoubtedly the correct picture. At the same time the biographer is impressed with the necessity of counteracting a perhaps current opinion that Lord Avebury was merely a popularizer of science. He insists on the importance of the scientific side of the writer, and quotes many letters from Darwin and others to show that his contributions to pure science were of a high order of importance. And there is also a feeling of pathos aroused because of the absolute lack of leisure and time for meditation which must be the possession of any one who is to obtain the best out of life. Probably Lord Avebury did not attain as much reputation in any one field as he might have done, and probably as he grew older the pressure of his life may have weighed upon him, but, after all, he left behind a record of a singularly fruitful and happy life.

The fact that nearly ten thousand copies have been sold of the Apsley Cookery Book of Mrs. John J. Webster and Mrs. H. Llewellyn (Philadelphia: P. Blakiston, Son & Co.; $1.40) indicates that not a few persons are willing to take advice on the subject of food, for this book is made up of recipes for uric-acid-free diet. The new edition contains more than five hundred of them, which shows that dieting does not necessarily mean monotony at the table.

In "The Big Game Fields of America, North and South," by Daniel J. Singer (Doran; $2.25), two chapters, dealing respectively with the natural history of the jaguar and the black bear, are good summaries of the lives of these animals. The remainder of the volume deals with the author's account of shooting-trips in British Guiana, Mexico, and Alaska. The rather florid, redundant style and lack of directness and simplicity detract much from the narrative. If the chapters were condensed to one-half their present volume, they would be twice as interesting.

A. Radclyffe Dugmore's "The Romance of the Beaver" (Philadelphia: Lippincott; $2.50 net) would seem to be the final word in the literature devoted to this worthy animal, for, besides his own wide experience, the author has drawn upon the writings of all his predecessors. It is truly a history of the beaver in the Western Hemisphere. Protection is the constant plea throughout, the danger of extermination of this specialized rodent from any further persecution being very great. The habits and really remarkable engineering feats are first narrated in detail, and then the life of a beaver colony is given in the form of a supposed personal history of an imaginary pair of animals followed through a period of several years. There follow a consideration of the effects of the work of these animals as benefiting man and suggested methods for their protection. The beaver as it has influenced Canadian history is presented with graphic early illustrations, and finally the study of the animal as a species. The photographs of the beaver's haunts and works, together with flashlights of the animals themselves, are admirable. As a monograph of a single form it is worthy of comparison with Gurney's recent book on the Gannet.

Drama

NEBULOUS SYMBOLISM.

Plays. By Leonid Andreyeff. New York: Charles Scribner's Sons.

Symbolism, in the theatre, to be valuable or effective, must make its meaning clear to the spectator. So much may be stated dogmatically. In these three dramas of the well-known Russian writer, Leonid Andreyeff—"The Black Maskers," "The Life of Man," and "The Sabine Women"—which, on the surface, are romantic fantasies, the first two tragic and the third satirical, the deeper significance is so obscure that the translators, Clarence L. Meader and Fred Newton Scott, wisely deemed it expedient to preface them with an authoritative explanation. This has been furnished by V. V. Brusyanin, a critic of repute, and is both interesting and illuminative. It clarifies the intent of the author, and, incidentally, exposes some of the fallacies of the theory and methods which, as a dramatist, Andreyeff has adopted. M. Brusyanin is an intimate of the author, and evidently speaks as his acknowledged representative.

Andreyeff, he says, holds that external action, as that phrase is ordinarily understood, is not necessary to the theatre. The drama of the future, according to him, is to be "panpsyche," entirely psychological. It will deal solely with the invisible struggles of the individual soul and intellect, will be independent of incident, and, therefore, will be purely creative and true, artistic in the highest sense, and a distinct advance upon the older drama of "Shakespeare, Sardou, and Dumas." The grouping of these three names is sufficiently astonishing, and suggests obvious reflections, but is less curious than the implication that the psychological drama is something new. Are the achievements in this direction of the old Greek dramatists, and their innumerable successors, down to Goethe and Browning, of no account? Is the psychological insight of any of the moderns superior to that displayed in "Hamlet," "Macbeth," or "Faust"? Apparently, Andreyeff, or his interpreter, has confounded form with substance. It is true that the dramas in this volume are composed with entire disregard of the ordinarily accepted restrictions and traditional mechanism of the contemporary theatre. In that respect they show artistic originality. They are not "well-made" plays, according to the pattern set by Scribe or Sardou, but they are roughly fashioned, nevertheless—and inevitably—upon the same old models used by all dramatists for centuries. None of the devices employed, though some of them are variants, is new. Most of them could be traced easily to their originals. That, however, is beside the main point, which is that the plays themselves, so far as their theatrical effect is concerned, are just as dependent upon sensational incident and spectacular effect as the commonest melodrama of thrills. In imaginative intent, they are, of course, far superior to such pieces—whatever may be thought of their dreary, cynical, and fatalistic pessimism—but of what avail in the theatre is a mystical significance imperceptible to the ordinary unenlightened intelligence?

In "The Life of Man," indeed, the symbolism of the Gray Figure, with his slowly wasting candle, is as clear as it is trite, but that is but a small part of the allegory which, in terms of melodrama, is supposed to, but does not actually, illustrate the psychological study. It is in "The Black Maskers," a striking work in many ways, that the futility of excessive symbolism is most clearly demonstrated. Here the gorgeous castle is supposed—quite arbitrarily, for there is no direct reference to it in the text—to represent the soul of man and the guests, real and visionary, the intellectual and moral elements which make up the dual personality of the host. There can be no question of the imagination displayed in the pursuance of the conceit, when the clue to the meaning of it has been given, but, on the surface, all the paraphernalia—the maskers, the revel, the invading hosts, the quenching of the lights, the growing terror, the fire, the duel, the funeral scene, with the surviving half of the Duke contemplating and apostrophizing his dead double—are more or less familiar theatrical expedients, constituting the details of a romantic tragedy, which is not more impressive on account of its mystical interludes, in palpable, but somewhat feeble, imitation of Maeterlinck. In the final act the Duke might easily be regarded, by the uninitiated, as a madman bent upon the immolation of himself, his family, and his vassals, under the delusion that he is the Almighty. There is nothing to indicate that the seeming tragedy marks the final victory of a misguided and aspiring soul over its delusions and temptations It would be difficult to imagine a more striking instance of a symbolism extinguished in its own overelaboration.

"The Sabine Women" is a satirical comedy dealing with Russian politics. No one unacquainted with it would by this play obtain the slightest glimmering of its real meaning. In this case the censorship, doubtless, was the cause of a calculated obscurity, and it would be scarcely fair to take the piece as an example. The other two may be judged squarely upon their merits. Imitative and crude as they are, they bear the impress of natural genius. They show descriptive rather than inventive dramatic power, but it is easy to credit the

reports of the enthusiasm with which they have been received by Russian audiences. The mystical element in them, combined with the purely theatrical, would explain that. To a more sophisticated Western audience their symbolism, even if it were grasped, would offer nothing fresh. The "Panpsyche" theatre will be only a dream structure if it have no surer foundation than the symbolical personalization of passions and ideas. The old theatre, without the least symbolic intent, has been doing little else for ages, for the simple reason that every word and action is necessarily full of a potential symbolism. This is a truth which the professed symbolists should lay to heart. To hold the mirror up to nature is still the one safe guide for the dramatist, and in his fantastic creative art Andreyeff gets very far from the truth which he professes to reveal. But his plays contain abundant evidence of the literary skill and the keen social observation that have made him famous in the fields of fiction and political essay. J. Ranken Towse.

Art

WAR IN ART.

London, June 25.

There have been many shows in London for the benefit of the various war relief funds and a few devoted to subjects connected with the present war. But the Guildhall is the first gallery to get together a large collection, more or less representative, of "Naval and Military Works"—representative, that is, of the period that begins with Napoleon and ends with to-day. The first impression it gives is that war-time is not the most appropriate or agreeable in which to show war pictures. We have horrors enough to endure without so realistic a reminder. Already, in two theatres, plays that had these horrors for motive have been withdrawn after a short run, though they might have been thought the plays of all others to attract the public, and I would question whether the exhibition of the Guildhall could remain long open were it not for the almost phenomenal success Guildhall shows have hitherto enjoyed.

The second impression given by the exhibition is that war as a motive does not often inspire the masterpiece. Indeed, it is extraordinary how few through the ages the great paintings of war have been. To look back is to think at once of Uccello's wonderful battle picture in the London National Gallery and of Velasquez's Lances in the Prado, but really of not very many besides, and where the old masters have rarely excelled, I suppose it is inevitable that the modern painter should usually fail. The collection includes the works of British, Belgian, Russian, and French artists. If there is nothing by Italians, it is probably because the exhibition must have been organized before Italy had ranked herself with the Allies. Under the circumstances, it is not surprising that but little has come from Belgium and Russia. The French, with the amazing energy they have displayed throughout the war, have got together a characteristic series from the Louvre, the Luxembourg, and Versailles. From the British it was simple to collect all the examples that were wanted. And so, if the exhibition is virtually, save for its name, French and British, in these two sections it is so comprehensive that the impression one gets from it is by no means superficial.

The contrast between the two sections is suggestive. The British painter treats his subject in his accustomed British way, in this special instance approaching it from much the same point of view as the picturesque journalist who, for the last eleven months, has been telling "the deathless tale" of British exploits in the British press. He runs to anecdote, overloads his canvas with sentiment, shows us soldiers who keep beautifully clean and neat in the thick of the fight, dispenses with observation, and as long as his story is told and is chockful of heroism, does not bother about such trivial details as color, design, pictorial effect. In these respects the works of contemporary painters are so alike that it would be useless to describe them, and it is curious to see how much better the same sort of picture was painted by one of those early Victorians it is now the fashion to despise, as fortunately can be seen in two long, narrow panels by Daniel Maclise: The Meeting of Wellington and Blücher After the Battle of Waterloo, and Trafalgar: The Death of Nelson, the latter the finished study for the decoration in the Houses of Parliament. In both anecdote prevails, as one expects it to prevail in British art; also, there is the indispensable sentiment in the different figures, the excess of emotion in the meeting of the generals in front of the riddled cottage of La Belle Alliance, and in the farewell of the dying hero, the equal excess of pathos in the faces of the wounded and the cares of the ministering angels, while most of the brave warriors look as if they had come out of a bathtub instead of a battle. Not by any stretch of imagination could either painting be called a great work of art. But in both there is a sense of arrangement; the principal figures in the drama keep the principal place in the composition naturally and without sacrifice of pictorial balance; the groups on either side, tediously overcrowded as they are, fill the space with decorative no less than anecdotal value, and the endless detail is well subordinated to the design; and hard and dry and disagreeable as the color is, it is well considered and distributed. The eye, wearied of haphazard and sensational and violent appeal to the sympathies, finds in the two panels the repose there always must be in the well-ordered canvas.

The portraits are no more inspiriting. A sketch of King Albert, for which the painter—Harold Speed—has recently been to the front, shows less the King who has been fighting in the trenches for months than the King of a fashion-plate. Lord Kitchener by Herkomer, Sir John French by St. Helier Lander, Lord Charles Beresford by Furse are soldiers and sailors not of the battlefield and the battleship, but of the drawing-room. Lavery has painted on a large canvas Mr. Churchill with his body disappearing in unaccountable shadow and melodramatic limelight shining on his head, and Laszlo, on a canvas as large, shows so lackadaisical a Balfour that the lay outsider may well ask what in the world he is doing at the Admiralty. There are only two exceptions, and neither is British, though they are hung in the British section. One is a small half-length of Wellington by Goya, to which it is a relief to come, for Goya painted a real man on his canvas with some feeling for his character. The other is Sargent's Sir Ian Hamilton, which does not lose now on being seen again after so many years, for Sargent in it made no concession to the drawing-room, but strove to express character in his modelling of the spare, well-knit figure inside the red coat and of the curiously shaped head, and the result in his case, too, is a man, a soldier, not a military dummy.

Nothing could be more different from the British collection than the French, both in the attitude of the painters and the quality of their work. Here there is no anecdote but a fearless statement of fact, no sentiment but plenty of observation, no neat stage properties but the downright realization of war and its attendant disorders and brutalities. The French, in these paintings, may not have achieved masterpieces, but they have made records. It is interesting to see the careful studies of the French soldier and his uniform by Charlet and Raffet, the two artists who, in their marvellous little lithographs, created the Napoleonic legend for which they deserve all the credit the French have lavished upon them. And the story of the French army and French art is brought down to yesterday and to-day in the studies of De Neuville, Detaille, Régamey, and Jeanniot. Events have their chroniclers, from Horace Vernet in his painting of the Fight at the Clichy Gate in the Defence of Paris, 1814, and Bellangé's Review of 1800 under the Empire in the Place du Carrousel, to canvases almost fresh from the Salon. The best-known is probably Meissonier's Guide, the peasant showing the way through a forest of Alsace to a regiment of dragoons. It is larger than the usual tiny and more typical Meissonier, but it has many of the same faults. It is photographic in treatment, in the tight rendering of the faces, in the elaboration of the soldiers' uniforms and the peasant's costume, in the minute carrying out of the bare wintry branches of the trees. But it succeeds just where the British painting is so apt to fail. The subject is well placed on the canvas, the waistcoat of the peasant is more than a fact, for it gives the right touch of red in the right place, the long winding cavalcade riding down the narrow way has its artistic as well as pictorial value, and if there is no atmosphere, the whole picture is held together by the well-thought-out arrangement of color and line. The

painting would fade into insignificance by the side of Uccello or Velasquez, but in the midst of the modern work at the Guildhall, it has an air of distinction.

Gérôme's Execution of Marshal Ney also strikes one at once as the work of a man who knows his business. It is rather empty as a composition—Ney's figure prostrate in the foreground, a high wall stretching across the background, the executioners vaguely seen in the distance—but it has all the unity that a well-carried-out scheme of grays can give it, it is direct in its statement of incident, and technically accomplished. And, again, the technical certainty, the vigor, in Roll's huge Stop There, with the tremendous struggle between the French and German dragoons, makes it seem in London a fine performance, though the chances are that when first exhibited in Paris it did not appear as anything much finer than the usual sound, workmanlike Salon machine. The portraits are few in number. Of the few the most distinguished is the memorable Bonaparte at Arcole, by Gros, from Versailles, the portrait ordered by Josephine, an interesting document in both the history of France and the history of romanticism in French art. As a painting, it is full of the life, the vivacity, the dignity which the British portrait-painter seldom achieves. Altogether, the French work explains so clearly the thoroughness of French training and the technical soundness of French methods that, by comparison, the British battle-scenes and the British anecdotes and the British portraits seem like the naïve experiments of the sentimental amateur. If the grim realism of the French could go further and help to impress upon the world the virtue and advantage of peace, the exhibition, if not a great artistic event, would have had its uses.

Finance

MID-YEAR.

The middle of the year is a time when financial markets habitually look both backward and forward, reviewing the economic movement as a whole during the six months just completed, and endeavoring to forecast the movement in the second half-year. Retrospect and prospect of this sort are particularly interesting now, because the past six months constitute, in an unusual degree, a chapter of economic events with a character of its own. In the economic history since the war began, there have thus far been three entirely distinct periods.

The first was the period of world-wide panic, which may be said to have stretched from the third week of July until past the middle of August. In the second period, which lasted from August practically up to the end of December, the Bank of England's gold reserve was more than doubled, half of the $170,000,000 increase being gold sent from New York to the Bank's reserve at Ottawa. During the greater part of that period, New York exchange on London stood at such unprecedented heights as to measure our market's extremely unfavorable international position. Our outward balance of trade fell to alarmingly small dimensions. "Bank pools" were organized to provide against default on New York city's maturing foreign obligations, to regulate the outflow of gold, and to save from ruin the cotton-growing industry, whose exports fell off nearly 60 per cent. from the previous year.

Signs of a very sweeping change were visible before the end of December; but nobody would have ventured to predict what actually followed. Whereas a British commission had been visiting this country at the opening of December, planning expedients to help our markets out of their critical condition, Lombard Street itself was openly admitting, in the middle of January, that the office of the world's money centre had already passed from London to New York.

The wholly unprecedented demand for our grain and flour by Europe, and the unexpected increase in cotton exports (which for the past six months have been 60 per cent. greater than in 1914), raised our export trade and our excess of exports to absolutely unheard-of figures. Exchange on London, which in the autumn had been quoted 10 cents in the pound above the normal maximum, fell to a discount of 8 cents under the normal minimum. New York got back from the Bank of England's Ottawa reserve virtually all of the $100,000,000 gold which we had sent there in the five closing months of 1914. Despite very heavy selling of our securities by Europe, Wall Street witnessed an excited "bull movement" on the Stock Exchange in April.

What have we to look for in the next six months? Just as the situation began to change in the week or two before last year was ended, so there has been a slow but perceptible change in the last few weeks before this present mid-year period. The Lusitania episode and the clash with Germany account for part of this. Proof that the springtime hopes of an early end to the European war were wrong gives some further explanation. The stock market, at least, has lapsed into inactivity, with frequent weakness. Wheat has fallen rapidly in price. The decline in foreign exchange has halted, temporarily or otherwise. This has happened without any of the money stringency which often marks the "mid-year settlements."

In so far as this has been merely reaction from the extravagant enthusiasm of two or three months ago, it is not in the least astonishing. The strong points in our economic situation continue. In our export trade of merchandise there will hardly be a decrease; it should increase, even as compared with the past six months, when the war munitions begin to move out in quantity. Surplus reserves of the New York banks, despite a decrease at the end of June, are $46,000,000 above where they stood at the opening of January, and the resources of the Federal Reserve system have not been touched. Thus far the wheat crop promises as large a yield in 1915 as in 1914, and Europe will have to provide a market for it.

From the economic point of view, the situation remains to an extraordinary degree in this country's favor. The two influences whose possible bearing on the next six months cannot to-day be calculated are the relations of the United States with Germany and the continuance or non-continuance of liquidation in quantity of our securities by Europe. To these considerations must be added the general question as to the recoil on our own markets, if the economic strain on Europe should become much more severe.

No forecast of the immediate future can dismiss these factors. Yet, on the other hand, they were all potentially present six months ago, and are therefore hardly new. Throughout the first half of 1915, the markets took the ground that war with Germany was most unlikely, and could not be a direct conflict at arms if it were to happen; that our new financial resources enabled us to look with equanimity on Europe's re-sale of our securities; and that, in all other respects, we were necessarily removed from the directly unfavorable influence of Europe's financial difficulties. It remains to be seen whether the cheerful views of that part of the year were right, or wrong.

Rietz, Crathorne and Taylor's
SCHOOL ALGEBRA
First Course

By H. L. Rietz, Professor, and A. R. Crathorne, Associate in the University of Illinois, and E. H. Taylor, Professor in the Eastern Illinois State Normal School. *(American Mathematical Series.)* xiii+271 pp. 12mo. $1.00.

The first volume of this two-book course contains ample material for work through a school year. The study of algebra is taken up as an extension of arithmetic, and the pupil is made to feel that new symbols are introduced not arbitrarily, but because of real advantages in representing numbers. Applications to a great variety of concrete problems are given. The work closes with a simple treatment of quadratic equations.

10 CENTS
"Assumes that the Average Reader is a good deal above the average — which he is."
—F.P.A. in the N.Y. Tribune

"I'VE been waiting for you ever since I began to think for myself." The man who wrote us that read a New Republic notice one day just as you are doing now. It said, "Please become a reader for yourself." The man decided he would. Afterward, it wasn't a matter of what we said The New Republic was, but of what he found it—a journal of free and responsible discussion beyond anything realized in America. The man was cautious, though. He tried us first for three months. Out of every thousand who did the same thing, 560 decided to subscribe for a full year. The proof of the paper is in the reading. Have *you* ever waited for something ever since you began to think for yourself? Perhaps you, too, will find it in The New Republic.

SELECTIONS FROM THE SYMBOLIC POEMS OF WILLIAM BLAKE

By FREDERICK E. PIERCE, Ph.D.

The story—indeed, the tragedy—of the life of William Blake is now familiar to many who may have had the impulse without the opportunity to read the great prophetic poems associated with his name. In the present volume the editor has culled the best sections from the very uneven mass of verse and has arranged them as nearly as possible in narrative sequence. As a whole, the book represents what is most poetical in the work of that "rich blossom of romantic practice."

Trust Estates

The ideal estate for one's family must have these characteristics:

Safety
Regularity of income
Freedom from charges and taxes

THE TRAVELERS INSURANCE COMPANY of HARTFORD, CONN., is 50 years old and has life insurance in force of $100,000,000. It leads all other companies in volume of insurance trust estates. It now offers a Monthly Income Bond as follows:

At the death of the insured, a check is sent each month to his wife or other beneficiary *as long as she lives.* No contested will, no litigation, no taxes, no possible loss or diminution. But these incomes *must* continue for *at least* 240 months. If the beneficiary dies within that time, remainders go to the insured's estate or hers.

The insured himself is also protected. If he becomes totally disabled by accident or illness, before age 60, he is treated as a dead man, is relieved of further cost, and receives the incomes *himself.*

ENCYCLOPÆDIA BRITANNICA FOR SALE, eleventh edition, Sheepskin binding, India paper, with oak stand. Price 130 dollars. Like new. F. G. Bulgin, Fairdale, Penna.

This week's issue of THE NATION comprises 11,194 copies: of this 8,092 go to paid subscribers and 1,018 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first six months of the year 1915 were 876; June average, 794 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

Canyon-Like— Awe-Inspiring— Nature at Her Best

THERE'S an unusual charm about Canadian scenery.

Particularly beautiful are Canada's rivers. The Niagara-to-the-Sea route taken by the splendid steamers of the Canada Steamship Lines is mainly over rivers—first the island-dotted St. Lawrence, then the glorious Saguenay, with its Cliffs and the famous Capes "Trinity" and "Eternity." Neither words nor pictures can give any conception of their majestic beauty. You'll get some slight idea of them by reading "Niagara to the Sea." New edition of this book, beautifully illustrated, just off the press. Send for it, with 6 cents in stamps to cover the cost of mailing.

To Saguenay River and return..... $34.55

The Nation

NEW YORK, THURSDAY, JULY 22, 1915.

Summary of the News

The President returned from Cornish, N. H., to Washington on Monday and held a conference with Secretary Lansing on the subject of the note to Germany. On Tuesday it is understood that a draft of the note was presented to the Cabinet for consideration. No official intimation has, as we write, been given as to the date of the dispatch of the note to Germany, but it is generally supposed that it will not in any event be delayed for many days.

Diplomatic communications and statements have been more numerous perhaps during the past week than in any similar period of time since the end of July, last year, when Germany was scattering ultimatums through Europe. The most welcome of these, so far as the United States is concerned, was that received on July 15, when Ambassador Gerard formally transmitted to the State Department an admission on the part of Germany of liability and an expression of regret for the attack on the American steamship Nebraskan on May 25. The German note absolves the commander of the submarine from blame on the ground that, when attacked, the vessel carried no flag and no neutral markings on her freeboard, and that in the twilight her name was not visible.

On the same day that the note on the subject of the Nebraskan was received it became known that, on June 29, the Austro-Hungarian Minister of Foreign Affairs had presented to the American Ambassador at Vienna a note on the question of the export of munitions from this country to the Allies, in which it was politely suggested that, if only the United States realized that this proceeding was "not in consonance with the definition of neutrality," the traffic would be stopped. The Austrian Government, therefore, considerately points out that the American Government "is undoubtedly entitled to prohibit the export of war material." No reply has as yet been sent to this note, and it is thought that none will be prepared until the full text of the communication has been received by mail, when the expressions of good-will towards the United States contained in the note will doubtless be cordially reciprocated.

The long-expected note to England on the general subject of interference with American commerce on the high seas has not yet gone forward, but preliminary communications have been sent. On July 14, Ambassador Page was instructed to make representations to the British Government on behalf of the packers in the matter of the detention of their meat products, and at the same time formal notice was given to Great Britain, through the American Ambassador, that the United States holds that the rights of Americans, who have cases before British Prize Courts, rest upon international law and not upon British municipal law or Orders in Council. The official summary of Secretary Lansing's communication to this effect was published in Sunday's papers. Dispatches from Washington surmise that the forthcoming note to the British Government on the general question of the operation of the Order in Council will draw attention to the fact that the blockade maintained is discriminatory, in that it cuts off American trade with Norway, Sweden, Denmark, and Holland, while at the same time Baltic ports of Germany are open for trade with the Scandinavian countries.

Three reports bearing on various aspects of the war have been published during the past week by, respectively, Austria, Germany, and Great Britain. A summary of the Austrian Red Book, bearing the title "Collection of Evidence," was printed in the papers of July 16. In it, all of the Allies are accused of numerous atrocities, varying in kind, though hardly in degree, which, it is alleged, have been perpetrated against Austrian troops or civilians. Sunday's papers contained a summary of the German Government's reply to the findings of Lord Bryce's Commission on German atrocities in Belgium. Elsewhere we comment briefly on this document, the essence of which is a repetition of the defence that the Belgians brought all their woes upon themselves by unorganized resistance to German arms. The findings of the Court of Inquiry into the loss of the Lusitania, under the presidency of Lord Mersey, were published in dispatches of July 17. The court exonerated the captain and the Cunard Line of all blame and placed the entire responsibility on the German submarine. It also found that the ship was unarmed, that her cargo was a general one, and that the ammunition on board consisted only of 5,000 cases of cartridges, from which there was no explosion.

The most notable incident of the German submarine blockade during the past few days was the report brought in by the Cunard liner Orduna, when she docked in New York on Saturday, that, on July 9, when westward bound, she was attacked without warning by a submarine. According to the official statement of the captain, the first intimation received of the attack was when the lookout men saw a torpedo pass some feet from the stern. Subsequently the submarine rose to the surface and shelled the liner, without effect. The incident has been brought to the official attention of Washington by some of the American passengers on the Orduna.

Apart from the exploit noted above, the only activity of submarines recorded since we wrote last week has been the sinking of a Norwegian vessel and a Russian collier, and the holding up and jettisoning of the cargo of a second Norwegian ship. The moderation displayed in the last instance, when the ship was allowed to proceed on her way after the cargo had been thrown overboard, we may hope is further indication that a change of tactics in the use of submarines is contemplated in practice, though not as yet officially admitted. We have to correct the report which we recorded last week that a German submarine had compelled the American bark Normandy to act as a screen while the submarine made ready to attack another vessel. A denial of the report has been cabled to the State Department by the American Consul at Liverpool. The German report on the results of its submarine operations during the month of June was given out in a dispatch by the Overseas News Agency, under date of July 14. That submarine enterprise is not confined to one nation was indicated by dispatches in Saturday's papers, which stated that Russian submarines have been exceptionally busy in the Black Sea, having sunk recently a number of Turkish vessels.

The most serious strike that has occurred in Britain since the war began has taken place among the miners of South Wales. The men refused to accept a compromise recommended by the leaders of their union after consultation with the Board of Trade, and decided to strike. Their determination was unaffected by the announcement that the provisions of the Munitions of War act would be applied to their case. As, however, nearly 200,000 miners are affected, it is obvious that the difficulty of enforcing these provisions would be considerable. Dispatches on Tuesday stated that the strike had been settled through the mediation of Mr. Lloyd George and that work would probably be resumed to-day.

A bad strike was also started last week in the plant of the Remington Arms Company, at Bridgeport, Conn. The origins and occasion of the strike appear somewhat mysterious, but it has been attributed, both by the manager of the company and by Samuel Gompers, president of the American Federation of Labor, to foreign intrigue, having as its motive the stoppage of supplies of munitions to the Allies. As we write, prospects of a settlement of the strike are not hopeful, and it is feared that it may be extended throughout the works of New England which are engaged in the manufacture of munitions. The British Ambassador on Monday called the attention of the State Department to a number of instances in which it was alleged that German sympathizers in the United States were employing unlawful means to strike at Great Britain and her Allies. The complaints will be investigated by the Department of Justice.

At a meeting of 186 members of the Greek Chamber of Deputies on Monday, M. Venizelos accepted anew the leadership of the Liberal party. The reopening of the Greek Parliament has been postponed until August 16.

The importance of the position of Rumania has been further emphasized by various reports during the past few days. Austrian offers of territory, which we recorded last week, it was stated in dispatches on Saturday, have been rejected, and it is reported that the Teutonic allies are about to bring strong pressure to bear on Rumania to induce her to facilitate the passage through her territory of munitions for Turkey.

Harry K. Thaw, who killed Stanford White in 1906 and was acquitted of murder on the ground of insanity, was declared sane by Supreme Court Justice Hendrick, of New York, on July 16. In forming his decision Justice Hendrick was assisted by a jury.

The Week

The reception that Herr von Jagow's last note on the Lusitania question has met with in America has, according to all reports from Berlin, put the German mind into a condition of plaintive surprise. It seems impossible, says one Berlin newspaper after another, that Germany's great liberality and friendliness should not be welcomed with appreciation and pleasure. "The *Tageszeitung* declares," says a cablegram to the *Times*, "that American politicians must appreciate that the German propositions are practical and that Germany on her own initiative has made extraordinary concessions." What America wants, however, is not "extraordinary concessions" made by Germany on her own initiative, but ordinary concessions made in pursuance of *our* initiative. This idea does not seem to occur to the German mind at all —the idea that when we ask for the exercise of an unquestionable right we are not content to take something else, which they assure us is just as good. That sort of thing may be extremely "practical" in ordinary dickerings involving no question of principle; but in this case the principle is everything. Indeed, the initiative of the German Government has been so extraordinary, and its schemes for giving licenses to American ships so ingenious, that it is hard to see why they did not go a step further, and offer to pay Americans who desired to cross the ocean a reasonable compensation for staying at home. Doubtless a perfectly "practical" method might have been devised for assessing the rates of payment.

The apology by the German Government for the torpedoing of the Nebraskan, with promise of full reparation for the damage done, satisfactorily disposes of that incident. There is, to be sure, no concession by Germany of the principle involved. She still seems to think it lawful to sink an enemy passenger ship without warning or inquiry. This the United States Government has denied. But so far as the Nebraskan itself was concerned, Germany has done all that could have been asked. She apologizes and will pay. She did the same, early in June, in the case of the Gulflight. This illustrates a neat point in German diplomatic tactics. A general note is written, unyielding and unsatisfactory, but it is followed up in a few days with a specific note, dealing with an individual case, which is as gracious as could be imagined. That was done after the first German reply in the matter of the Lusitania, and it is now done after the second. It all has an odd look, as if Wilhelmstrasse were surprised to learn that its answers displeased America, and hastily sent along something else which it was sure would please us mightily. A truer explanation would doubtless be the desire not to offend German public opinion on the main issue between the two countries. Either way, the German Government has made an end of the myth, long dear to so many, that it was deliberately seeking to get into a war with the United States.

"The American grievance against Germany for its treatment of Belgium," says Dr. Meyer-Gerhard to his countrymen, "the average German can scarcely understand, for he knows that Belgium long ago had surrendered her neutrality by an agreement with Germany's enemies." But the average American has every bit as much opportunity as the average German to "know" the truth about Belgian neutrality, and no subject has engaged more earnest or more prolonged attention among those Americans who are the leaders of opinion in this country. And with an almost complete unanimity they reject as worthless—and worse than worthless—the pitiful bits of so-called evidence that Germany has put forward to sustain her accusation of perfidy against that country upon which the German Chancellor himself, at the beginning of the war, publicly confessed that Germany was about to perpetrate a crime justified only by the doctrine of military necessity. Nothing in the German attitude has been more offensive than the constant complacent assertion of the notion that what Americans think about the war is sure to be due to ignorance when it does not agree with what Germans "know" about it.

"Right on the heels of the outbreak of the present war," says the opening sentence of the German reply to the Bryce report, "a turbulent insurrection broke forth in Belgium against the German troops. This was in flagrant violation of international law, and brought the heaviest penalties on the Belgian land and people." Coming from the German Government, so totally guiltless itself of any violation of international law, this accusation against the Belgian people will carry crushing weight. Of course, if the Belgians had risen against an arrogant and lawless invader, who had trampled under foot his own solemn treaty promises—who, after guaranteeing the safety of Belgium from such invasion, had himself shamelessly, upon two days' notice, sent his numberless legions into the country—if that had been so, there might have been some excuse for "a turbulent insurrection" even if it were more or less in "violation of international law." But resistance to German aggression—aggression which could not have been in violation of international law, because Germany's rights are well known to be exempt from the obligations of the law—what words can do justice to this inhuman wickedness of the Belgians?

With the German campaign against the Russian armies again displaying enormous power, it is important to bear in mind its real objective. This is not the capture of Riga or even of Warsaw. Both of those cities might fall to German arms, and the Russians be driven far back, without the attaining by the German General Staff of the end for which it is striving, and which alone would pay an adequate price for the great exertion and the enormous losses entailed. The enveloping movement which Hindenburg and Mackensen are now apparently pressing has the military design of catching the Russian armies between the German wings, and of breaking them up by a series of heavy defeats and the taking of vast numbers of prisoners, so that their offensive power will be broken for a long time to come. That is the true military objective. Short of it an impressive advance may, it is true, be scored and moral victories won; the fall of Warsaw, for example, would be a great blow to the hopes of Russia and the Allies. But if the Russian troops retreated as intact as they did from Przemysl and Lemberg, and were able to maintain their morale, the great purpose of the campaign would have been frustrated.

Austria has undoubtedly been a splendid ally for Germany. She has done things for her that she would not have done for herself. In the matter of the concessions offered to Italy, for example, the German Chancellor explained that they had been made uncommonly generous by Austria at Germany's request. And now Vienna comes forward again to do Berlin a favor. It is in the form of a note by the Austrian Government to our Department of State, objecting to the sale of American munitions of war to the Allies. The reasons why Germany preferred to "let Austria do it" are plain. In the first place, the German Government, on December 15, informed the American Secretary of State that "under the general prin-

ciples of international law, no exception can be taken to neutral states letting war material go to Germany's enemies." It would be a bit awkward to repudiate that now. Furthermore, when Ambassador Bernstorff undertook last April, on his own initiative, to protest against the "enormous new industry of war materials" in this country, and to make the impudent suggestion that "the American people" should "find means to stop the exclusive exportation of arms to one side," he got his quietus from the President. Mr. Wilson informed him that the sale of munitions was perfectly legal, and that this Government held that "any change in its own laws of neutrality, during the progress of a war, which would affect unequally the relations of the United States with the nations at war, would be an unjustifiable departure from the principle of strict neutrality." The President added that "an embargo on the trade in arms at the present time" would be "a direct violation of the neutrality of the United States." No wonder that Germany, after having the door thus shut in her face, should request Austria to be the one to knock at it next. After Austria has got the same answer, it is reported that German diplomacy will get Turkey to try it on! What are allies for except to get slapped in the face?

No one believes that the Progressives any longer form a party of definitely independent aims and organization; but it is something to have Colonel Roosevelt's clear-cut admission that they are again a branch of Republicanism, certain to revolt sharply if reactionary voices prevail in the old party, certain to lose their individuality if a spirit akin to their own is dominant. Under a man like Hughes, he told an Oregon audience on Monday, "our progressive idea" would be safe. But if a reactionary were nominated, "the Progressive Party would be an imperative need to the country." Considering the Colonel's violent lashing-out against men who are trying to talk for him in politics, this has a considerable resemblance to William Allen White's recent statement as to the future of Progressivism. It is only more moderate, more friendly to the much-denounced party of 1912! It is becoming clear that the Colonel would a great deal rather have a forward-looking Republican nominated, and party unity restored, than be put to the necessity of sulking outside the camp or of carrying on a heated rival campaign. A day before entering the political domain of the ultra-ambitious Gov. Johnson he dares hint at the absorption of the party. And it is to be noted that he predicts nothing as to the Progressives' course if the Republicans do choose a "reactionary." Mr. White left it to be understood that two million voters would then seriously contemplate voting with the Democrats. Is it not possible that, in the Colonel's phrase, many would thus think they were "exerting an influence to be counted on for the best good of the country"?

Announcement that five yards on the Delaware River are now building forty-six ocean-going vessels, with reports of a like activity in New England yards, indicates that one of the strongest reasons for a modification of the La Follette act is fast growing stronger. The producing capacity of American shipbuilders is increasing with every month of the war. Marine journals state that whereas the average cost of making a vessel in Great Britain was $40 a ton, it is now $60, and that the output of British yards is curtailed by the necessity of doing forced work for the navy. Difficulties of exportation, at the same time, have checked the old tendency of our steel-plate manufacturers to sell more cheaply abroad than at home. The American industry is, of course, building for the future as well as the present, for the demand for ships after the restoration of peace will be acute. Operators can now sail their vessels on the Atlantic at a profit even under the oppressive Seamen's law; when the war is over and the freight-rates drop, they can sell them to advantage. But it will be the grossest national mismanagement if we fail to conserve the enlarged and economical shipbuilding capacity developed by our yards, with every means in our power. The one certain guarantee of its maintenance is a prosperous American marine. England before the war was evidence of the fact that shipbuilders may do business for many foreign countries; but the mainstay of our yards will have to be our own mercantile navy.

The memorandum presented by the Civil Service Reform Association to the delegates to the Constitutional Convention of New York puts in remarkably compact and effective form the story of the establishment of the merit system in this State, the proof furnished by experience of the benefit of the Constitutional safeguard now existing for its continued integrity, the considerations relating to certain questions as to its extension and improvement, and the objections to any weakening of its principle by the creation of preferred classes, other than that consisting of veterans of the Civil War. The exemption of those veterans from the requirement of competitive standing is itself, as the Association says, "not in accordance with the true principles of civil service reform"; but it was made in recognition of a most extraordinary claim on the nation's gratitude, and furthermore was a recognition of a preference actually enjoyed before the introduction of the merit system, so that the provision for it under that system might be regarded as simply continuing an existing privilege. To institute such a privilege now for veterans of the Spanish War or other minor wars, or for the militia or volunteer firemen, would be to introduce a dangerous weakness in what ought to be a system built upon the clear principle of securing for every post the best man that can be obtained to fill it. To any fitting reward of men who have served the State or the country in posts of danger, there can be no objection; but, as the Association puts it, "it cannot be called a fitting reward of patriotic service to grant to those who have rendered military service the privilege of impairing the civil service."

The proposal to abolish the "emergency message," brought up in the New York Constitutional Convention, suggests interesting reflections. The emergency message is designed to cure the evils arising from those restrictions upon the power of the Legislature which are established in order to cure the evils arising from rushing legislation through without due consideration. Mr. Austin's amendment is designed to cure the evils arising from the cure of the cure. "I know of no emergency," he says, "that has justified its use [the use of the emergency message] since it received Constitutional sanction twenty years ago." Others will not admit the correctness of Mr. Austin's observation; indeed, we do not believe it would be difficult to point to a number of important instances in which resort to the emergency message has been distinctly called for in the public interest. On the other hand, it has unquestionably been employed in cases in which its application could not possibly be justified upon any general principle—in other words, the power has been abused by being placed at the service of "politics" and not of the real needs of the State. What is wanted is such reform in the methods of legislation as would avoid the evils of congested calendars, and rushes at the end of a session, and snap votes; but whether that reform can be ob-

tained by any Constitutional rule, and if so, how—that is the question. The other way would be to have better Legislatures, and better Governors, than we are usually fortunate enough to get—and how to do that is quite as hard a question.

The Wisconsin Senate has amended the bill to give the Governor complete control of the State University. The bill provided for a Central Board of fifteen, appointed by the Governor, and committed to their hands the entire charge of the educational system of the State. The amendment leaves the Central Board, but allows it financial jurisdiction only, and also provides that but one of its members, who are reduced to five, shall be appointed by the Governor, the rest being chosen by the Boards of Regents of the Normal Schools and the University, the Secretary of State, and the Superintendent of Public Instruction. The Governor has said that he will veto such a bill. The basis for the measure was found in the Wisconsin Survey, conducted by Dr. William H. Allen, which charged inefficiency in both the teaching and the business management of the institution. Although the Governor is a Republican, progressive Republican Senators are responsible for the fatal amendment, their position being that any financial slackness would be corrected by the bill as amended, while the educational independence of the University would remain unimpaired.

In a sense larger than the merely legal, the lynching of the guilty is as reprehensible as the lynching of the innocent; but the latter crime naturally stirs even people who look with tolerance upon the other. The two negroes, father and son, who were killed in Georgia the other day by a mob that was too eager to revenge a murder to make sure of getting the real murderers, are still speaking in the editorial columns of Georgia newspapers, as well as in those of surrounding States. The Augusta *Chronicle* calls for "rewards large enough to bring every member of this murderous mob to justice; and then enough of the State's money to employ the best legal talent to convict." It does not make this demand merely upon the ground of the innocence of the dead, but upon the ground that lynching is insurrection, "a deliberate, armed assault on the authority of the State." No one could ask for more vigorous language than the *Chronicle* uses in its denunciation of the crime, and in its appeal to the Governor and the people to put down "this growing spirit of mob domination."

Some simple figures published by the Bureau of Education prompt the reflection that, if only culture were measured by statistics, we might begin to bear our heads very proudly. In 1908, there were 2,298 libraries of over 5,000 volumes each in this country, and in 1913, 2,850; while all the public libraries of America in 1913 housed 75,112,935 volumes, as against but 55,350,000 in 1908. In five years, in other words, we gained nearly one-third in the number of volumes available to student and reader. The disproportion between the increase in the number of libraries of more than 5,000 books, and the total increase in library holdings, goes to show that most of the gain must be accounted for by the activities of collections already large. More than half of the three million volumes acquired each year, moreover, are acquired in the North Atlantic States, the seats of well-established libraries. Nevertheless, there is much circumstantial evidence to show that these larger stores of books exert an increasing public influence. More and more activity in the way of extension characterizes the public library; in the cities it is developing its branches, and organizing new ones in the farthest suburbs; in the country the county library is sending its travelling cases into the remotest hamlets.

One contribution of the war to surgery has already been thought by the Paris Académie des Sciences to justify the award of the Lecomte triennial prize of $10,000 to Sir Almroth Wright. It is in the same field of wound-dressing in which progress was begun by the French surgeon who first left off cauterizing the injured parts. Sir Almroth Wright's work as author of the system of anti-typhoid inoculation, the system of therapeutic inoculations for bacterial infections, and of methods for measuring the protective substances in blood, gave him a basis for his researches in the General Hospital at Boulogne, and made possible rapid results. The difficulty of cleansing wounds under military conditions seems to have led doctors to discard aseptic treatment in favor of the free use of antiseptics. Sir Almroth Wright has shown that free drainage of wounds is desirable, the lymph exuding thus being kept pure; that if Listerism is overdone, the wound is shut, the lymph becomes decomposed, and germs develop. Infinitely more important are further investigations in vaccine-therapy, by which it is hoped that previous inoculation may make soldiers proof against infection by wounds. The award should give a more general reputation in this country to a man who deserves to be widely known on grounds other than his "Case Against Woman Suffrage."

Mr. Arthur G. Sedgwick was not perhaps widely known, but he was distinctively known. His friends—and they were many and warm—perceived in him an original personality. His wit had turns of its own, his outlook on life was unconventional, his knowledge and judgment were all the while manifesting themselves piquantly. Mr. Sedgwick's writings were varied and distinguished, but to those intimate with him they seemed perhaps to fall short of giving an adequate measure of his powers. Especially in his later years might it have been said of him, as of the poet Gray, that he did not "speak out" what was in him. Almost beyond doubt the last work of his pen was his contribution, two weeks ago, to the semi-centennial number of the *Nation*, to which, though laboring under the handicap of ill health, he devoted, with characteristic disregard of self, unflagging care and effort. It was the irony of fate that, at the very moment the news of his death was received, the editor of the *Nation* was engaged in writing him a letter of thanks for his article. Mr. Sedgwick's long connection with the *Nation* and the *Evening Post* was such as to leave of him in this office a unique tradition.

St. Clair McKelway was a man of such varied activities and genial gifts that his distinct work as editor was sometimes in danger of being overlooked. Finding time, as he did, to make himself felt in public education and in many civic and political causes, it was yet his long connection with the Brooklyn *Eagle* that meant most for him and his fame, and it was into his writing in its columns that he delighted to pour his best energies. As that paper itself became a sort of public institution in its own city, so did Dr. McKelway. His position, so fixed and interesting in all the flux of daily journalism, made him a unique figure. He is now spoken of as an old-fashioned editor. If by that is meant that he gave first place, not to sensationalism, but to knowledge, integrity, and a sense of public duty, it is the highest form of compliment. But the qualities which he displayed cannot go out of fashion in the newspaper world without leaving it poorer and less respected.

THE VALUE OF WISE AND FIRM AMERICAN DIPLOMACY.

With the imminence of another American note to Germany, there has been a renewal of the talk about the futility of the process which our Government has been following. We are getting nowhere, some say. Time is merely wasted, and the strain on patience grows intolerable.

The record, however, on examination appears not so barren as these too quick despairers allege. A great deal has been accomplished by the steady representations of this Government to Germany. One position after another the German Government has abandoned or modified, under pressure from the United States. We have attained recognition of the rights of a neutral flag even in Germany's war zone. These were at first denied, but now they are fully admitted.

It is worth while to cast the eye back over the official documents. On February 4, in the original "war-zone" proclamation, "neutral ships" were warned to keep away, as "attacks intended for hostile ships may also hit neutral ships." Our Government, on February 10, sharply challenged Germany's position in this matter, asserting our rights and announcing that it would hold the German Government strictly accountable for any violation of them. The first response was as gruff as von Tirpitz himself, the German Government, on February 18, informing our State Department that if, despite the warning, neutral ships were to be so rash as to enter "these closed waters," "Germany disclaims all responsibility" for such "unfortunate accidents" as might occur to them. But this *non possumus* has since been given up completely. We have had the full admission of responsibility in the cases of the Gulflight and the Nebraskan. Moreover, the German Government has climbed down on the general principle. In its note of May 31 it declared that "the German Government has no intention of submitting neutral ships in the war zone . . . to attacks by a submarine. On the contrary, the German forces have repeatedly been instructed most specifically to avoid attacks on such ships." And in the latest German note we had assurances that "American ships will not be hindered in the prosecution of legitimate shipping, and the lives of American citizens in neutral vessels shall not be placed in jeopardy." It is a decided retreat which American diplomacy has forced upon the German Government. Neutral flags are to be respected even by the terrorists in the war zone.

The larger question, admittedly, remains deadlocked. For the safety of American citizens on passenger ships under a belligerent flag, Germany has, as yet, refused to give guarantees. Nor has she conceded that the sinking of such unresisting vessels, without warning, is both a clear breach of international law and a crime against humanity. Here is the main and great argument, to the height of which the President must again rise. But it will not do to say that his task is hopeless. Having wrung such substantial concessions from Germany, he may yet secure larger ones. Light on American sentiment, and its significance, has dawned slowly in Berlin, but it has been increasing. And it will not do, judging by the past, to be so sure in advance that further protests and demands by President Wilson will avail naught.

In any event, however, is it right to assert that our protests will have been proved in vain? By no means. The American Government has had, of course, in its notes to Germany certain immediate objects. It has sought redress for injuries. It has asked assurances that they will not be repeated. But over and above all this, the President has been the champion of general rights, and has stood as the defender of neutrals and of the recognized rules of civilized warfare. And who will say that this is of trifling importance, solely because Germany has not so far yielded to our specific demands? Irrespective of that, American diplomacy has made a contribution of the first consequence to the whole idea of international law and its sanctity. This is why a sober newspaper like the *Westminster Gazette* could say of President Wilson's first note on the Lusitania that it was the greatest single event of the war. It was, in the first place, the voice of reason and of law making itself heard amid the clash of arms. And, secondly, it was a voice speaking to the future. The war will be over, some day. And then will come the task of redefining and strengthening certain parts of international law. In that great work the United States will have aided enormously by its repeated and consistent assertion of the law of nations. Our diplomatic notes will be cited as leading cases. The position which our Government has taken with so much wisdom and firmness will be of immense influence in any Peace Congress or Congress of the Nations that may be held. What our policy has sought has been not merely the securing of American rights and the upholding of American dignities, but the safeguarding and the fresh sanctioning of the reign of law throughout the entire world.

THE $3,000,000,000 BRITISH LOAN.

The announcement that the offer of the new 4½ per cent. British war loan has attracted subscriptions of no less than $3,000,000,000, is in many ways a matter of interest. We are living in a financial era of large figures. Until this war broke out, the largest single loan ever floated by a European Government was, we believe, the $400,000,000 French loan of 1871, issued to pay the first instalment of the Prussian indemnity. England had never floated a single loan in any sum greater than the $300,000,000 issue of 1901 during the Boer War. Perhaps the largest nominal issue was our own Government's 6 per cent. loan of 1862, which aggregated $515,000,000; but many months were required to get the total sum, and it was placed by an army of canvassers who hunted the whole United States, like book-agents, for customers.

Since the European war began England has placed two loans of $1,750,000,000 and $3,000,000,000, respectively; Germany has floated two of $1,250,000,000 and $2,250,000,000; France has raised upwards of $1,000,000,000 on her loans, and there remain the new obligations of Austria, Russia, and Italy. The present English war loan far overtops all others in the sum involved. But the whole series, in England and on the Continent, has been progressive in this regard. Not only the prodigious magnitude of this single borrowing, but the rapid increase in the amount which it has been necessary to raise on each successive recourse to the market, directs attention forcibly to the question what is to be the outcome of this extraordinary chapter in finance.

In order to understand all the aspects of that problem, it is necessary to examine again the circumstances under which this present loan was placed. There were numerous and very unusual inducements for the enormous subscription. Its rate of interest of 4½ per cent. gave a larger return to the investor than any public loan issued by England since the Napoleonic wars. Further than this, the Government pledged itself that, in case of future loan issues at an even higher rate of interest, holders of the 4½ per cents should be allowed to exchange their bonds on equal terms for the new issues. That pledge was not made in

tbc case of the 3½ per cent. war loan of last November, and it did not of coursc apply to the British Government bonds outstanding before the war. But the Government, in announcing the present loan, offered to holders of those earlier issues the privilege of converting their holdings, on a basis regulated by existing market prices, into the new 4½ per cents—on this condition, however, that they subscribe in cash for a further equivalent amount of the new loan.

Here was a very powerful inducement for cash subscriptions, even by investors who may not previously have intended to participate. To what extent the $3,000,000,000 applications were called forth by it, the cabled summaries of the subscription have not yet pointed out. If every holder of the old consols or the first war loan had responded, the total cash subscription for that purpose would itself have exceeded $4,000,000,000. But it is probable that by far the greater part of them could not spare the money for the requisite cash subscription.

Until the returns are classified, however, it will be impossible to say how great a part this special inducement played. Nor has it yet been announced how much has been raised tbrough the recourse, novel to British Government finance, of subscriptions to bonds in very small denominations. That the expedient was productive is plain enough, however, from the Exchequer's announcement that, up to the present date, 547,000 separate subscriptions, made through the post offices for such small allotments, have footed up $75,000,000—an average application of $137. This part of the subscription list is still left open.

Tbe larger question, as to tbe influence upon the general market of this enormous borrowing at so considerable an advance in tbe rate of interest, remains exceedingly obscure. In its immediate consequences, the subscription to tbe loan has caused a fall of 2 to 5 per cent. in nearly all other high-grade investment bonds dealt in on London's Stock Exchange. This was clearly due to realizing on these holdings, to raise the funds for subscribing to the 4½ per cents. The operation has also dislodged substantial amounts of English holdings of American stocks and bonds, of which $75,000,000 to $100,000,000 are believed to have been sold on tbe New York market since the new British loan was announced. It is not clear to what extent this movement will be continuous. Subscriptions made with a view to converting consols and the older war loan must be paid in full in cash, and these payments may have been largely made at tbe earliest date assigned—July 20—because a discount of 4½ per cent. per annum on the price is allowed for payment in full. But the regular payments of instalments occur at fortnightly intervals until near the end of October.

Each of these huge European war loans raises again the question how long and under what conditions this unprecedented absorption of capital in war can be continued. Since the process is not drawing on an inexhaustible stock of available capital, the difficulties in the way of future loans, and the necessity for fresh inducements of some special sort, are likely to be persistent. Yet the problem, though differing in degree from all previous experience in the finance of war, does not differ in kind.

In 1797 Great Britain's public credit and financial resources seemed to be at the lowest ebb; yet in the seventeen subsequent years of the Napoleonic wars, the Government raised not far from $2,000,000,000. Our own Government's experience in the Civil War is a case very much in point. Last week one speaker in the House of Lords warned England that, even if peace were to be restored by the end of March, 1916, the national debt would have reached such a total that taxation on the present basis would fail by $70,000,000 to meet the annual interest on it. In our own Civil War, however, the Government's total ordinary revenue, in 1862, was $52,000,000, and tbe charge for interest on the public debt in 1866 was $133,000,000. But between 1862 and 1866 additional taxation had increased the annual revenue to no less than $520,000,000. Tbis is what England also will undoubtedly have to do.

WARFARE VERSUS TERRORISM.

It would hardly be possible for an international issue to be more sharply defined than tbat between the American and the German Governments. Two recent developments tended in some degree to soften the character of tbc immediate situation—the statement concerning tbc attempted minimizing of destruction of life in recent submarine attacks on merchant ships, and the apology for the torpedoing of the Nebraskan. But tbe issue of principle remained precisely what it was. And tbat issuc has now been brought home to us once more, as acutely as ever, through tbc attack on the Orduna. It seems plain that, but for good navigation and good fortune, the slaughter of American citizens on the Lusitania would here have been repeated, on a smaller scale, but without even the possibility of the pretexts resorted to in the Lusitania case, since the Orduna was westward bound, and had no war supplies on board.

Our Government stands for rights of neutrals in time of war which, till now, no nation and no writer upon the law of nations so much as thought of questioning. And tbese rights are not a matter of degree, a question of more or less, an affair connected with complexities of geographical situation or of the relative position of the combatants in the course of a war's progress. The right of neutrals to travel upon the high seas in merchant ships, whether of neutral or of belligerent nationality, without having their lives put in danger by any wilful act of war, is but part of the immunity attaching to all non-combatants on board such ships. Tbe officers and crew, though of enemy nationality, are held safe from attack so far as their lives are concerned; the risk involved in tbeir enterprise is a risk of property only. When Americans speak of the killing of a hundred of their fellow-citizens on the Lusitania as murder tbey do so because it was not an incident of legitimate war, but an act from beginning to end in clear violation of one of the fundamental rules of warfare.

Tbe position taken by President Wilson rests squarely on this foundation. Consider what would be the logical and inevitable effect of abandoning this principle of international law. That effect can be put almost in a word. Tbe difference between the accepted rules and those which the German Government asks us to agree to is the difference between warfare and terrorism. Commerce is lawfully subjected in war to such hindrances and losses as it may be within the power of the naval forces of the enemy to inflict; the purpose of tbe new plan proposed by Germany, and actually put into practice by von Tirpitz, is to paralyze all commerce with the enemy nation through tho operation of terror.

It happens that during the past week or two an interesting sidelight has been tbrown upon this matter. A considerable number of cases have been discovered of the placing of bombs upon merchant ships sailing from New York. Tbc bombs did not work the misebief intended. But, as has been pointed out by one of the shipping men, "the failure of the bombs to explode cannot be considered complete failure for the bomb-planter, for, in our opinion, their scheme is de-

signed as much to terrify seamen of merchant ships as to destroy cargo. Could they prevent the ships' departure from this country, their success would be as complete as though they destroyed the vessels at sea." In like manner, the actual destruction wrought by the German submarines by no means measures the value placed upon their activities by the heads of the German Government. What they really hope to accomplish—or at least what they did hope when they instituted the policy, and what they designed in such acts as the Lusitania massacre—is to paralyze all commerce with Great Britain by force of sheer terrorism.

What the American Government stands for is nothing less than a refusal to sanction this kind of reign of terror. And at bottom there is even in the German mind only one real reason for asserting the right to make this tremendous innovation in the methods of war. That reason is put forward almost parenthetically in the last German note. "In addition," it says, "it may be pointed out that if the Lusitania had been spared, thousands of cases of munitions would have been sent to Germany's enemies and thereby thousands of German mothers and children robbed of bread-winners." This is the real thing—everything else is mere pretext. The essence of Germany's position, in the case of the Lusitania as in the case of Belgium, is not that what she did was lawful, but that, whether lawful or unlawful, it was justified because to have done otherwise would have been to her own injury. But if we are not to protest at the murder of American citizens, because had they not been murdered the cause of the Allies would have been helped "and thereby thousands of German mothers and children robbed of bread-winners," there is no point at which we can draw the line. If the German Government were deliberately to procure the destruction of every ammunition-factory in the United States, or the assassination of their owners, that would likewise tend to protect thousands of German mothers and children from being robbed of their bread-winners; and American property and American lives could easily escape that fate by acceding to the German desire that their business cease. But we fancy that no American, not even any German-American, would have much difficulty in seeing that the beautiful motive assigned would not exempt the German Government from the consequences of its acts.

The issue between America and Germany is the issue between law and lawlessness. That would be the case even though the law which we have undertaken to vindicate were simply the established law of nations—simply the embodiment of unchallenged rights of American citizens—even though that law rested on no principle that carried with it far-reaching and profound consequences. To assert the supremacy of law when flagrantly and arrogantly defied would itself be a national duty of the highest order. But when it is realized how vital is the thing actually at stake, and how profound is the issue between the respective nations, the duty is seen to have a character of peculiar solemnity—just that solemnity which marked both of the notes addressed to Germany on the destruction of the Lusitania.

THE LAW AND THE SLEEPING CAR.

When the Supreme Court, a few weeks ago, gave its decision on the Wisconsin statute prohibiting the making up of an upper berth in a sleeping car until the berth is engaged, it seemed that in the majority and minority opinions on the case there was likely to be highly instructive material bearing on legal theory. The standpoint of the majority, which pronounced the statute invalid, it was easy enough to conjecture; but it was not quite so easy to guess just what were the grounds of dissent on the part of Judges Holmes and McKenna. The majority opinion is now before us; but it appears that the minority judges filed no written opinion, so that the chief part of our curiosity has to remain unsatisfied. But for this there is compensation in the interesting nature of the points brought out in the majority opinion, points which relate not only to the law but also to the facts.

Of course, the gist of the whole matter lies in the circumstance that the Wisconsin statute seeks to compel the company to furnish to the man who has paid for a lower berth, unless the upper berth happens also to have been engaged, all that accommodation to which he would have been entitled if he paid for the whole section. This constitutes on its face a taking of private property without compensation; and the burden of proof naturally rests upon the upholders of the statute to overthrow this presumption by showing that the regulation serves a public purpose, coming either within the general police power of the State or within those special powers which it may exercise in the regulation of common carriers. If we may hazard a guess as to the grounds upon which the dissenting judges based their action, we should say that they are probably to be found in connection rather with the second than with the first of these classes of powers. For, without any sharp difference of theory, it might be perfectly possible to hold divergent views as to the status of a sleeping car in a system of transportation. "A sleeping car," says the majority opinion, "may not be an 'inn on wheels,' but the operating company does engage to furnish its patrons with a place in which they can rest without intrusion upon their privacy. Holding out these inducements and seeking this patronage, the company is entitled to the privilege of managing its own business in its own way, so long as it does not injuriously affect the health, comfort, safety, and convenience of the public." But there is a limit beyond which this kind of consideration can not be carried. If, as a matter of fact, the given regulation were of some slight disadvantage to the company, while it increased very greatly the satisfaction of the travelling public, it might be quite possible for a judge, however scrupulous in protecting property against confiscation, to hold that "the rule of reason" permitted the State to establish such a regulation.

The story of the statute itself, as told in the majority opinion, is decidedly interesting. It appears that an earlier act, passed in 1907, instead of prohibiting the letting down of the upper berth, left the matter to the choice of the occupant of the lower. This was pronounced unconstitutional by the Wisconsin Supreme Court on the ground that it was an obvious attempt "to appropriate the property of one for the benefit of another, in violation of several constitutional safeguards." By making the prohibition general, it was sought to obviate this objection. The lowering of the upper berth, when made mandatory, was commanded in the interest of the public, and not of an individual. "But," says the Supreme Court, "the statute does not purport to be a health measure, and cannot be sustained as such. For if lowering the upper berth injuriously interfered with the ventilation of the car and the health of the passengers, it would follow that upper berths should not be lowered, and if it was harmful to let down the uppers, it would be even more harmful to permit additional passengers to come into the car and occupy them." It seems difficult to escape from this reasoning; and, though it relates to so comparatively trivial a matter as the question of the upper berth, its bearing is extremely wide. There is no telling in what cases of critical public importance it may be appealed to in the future.

The mental satisfaction with which one may follow the reasoning as to principles of law is unalloyed; one can hardly say the same as regards some of the matters of fact referred to in the introductory summary. "There was evidence," we are told, "that an ordinary sleeping car was better ventilated than an ordinary passenger coach, said to be due to the fact that the coach not only carried more passengers, but did not have the ventilating appliances in use on sleeping cars." It is fortunate that the authority of the Supreme Court is in no way involved in the correctness of this assertion. We do not know what scientific experts may have given the evidence in question; and we are prepared to believe that there was nothing wrong about their physics or their mathematics. But if the air in a sleeping car is a specimen of better ventilation, give us worse ventilation every time. Persons addicted to the "exact sciences"—and persons entirely innocent of all science—are prone to look upon the law as an unscientific jumble; but the fact is that, within its more or less inevitable limitations, the law can stand critical examination at least as well as any system of thought that has to do with the ordinary interests of men. This particular decision, for example, while touching on many delicate and difficult matters, squares very well with common-sense at all points having to do with the operation of the law; the only place where we are confronted with something that flies in the face of every man's familiar experience is where the simple subject of the quality, quantity, and circulation of air is dealt with. No amount of expert testimony can induce us to believe that we are in the enjoyment of fine ventilation when every organ of our body cries out that we are on the verge of suffocation or nausea.

THE AMERICAN TRUTH SOCIETY, LIMITED.

Jesting Pilate, who asked, "What is truth?" and then turned away, ought at least to have gone, first, to 1133 Broadway, New York city. For there is domiciled the American Truth Society. The headquarters are not extensive, but if truth can be found at the bottom of a well, why not in a single office? Infinite riches in a little room! The riches, in the case of the Truth Society, consist mainly of a series of flying leaves telling us how to secure fair play for Germany, how to stop the war, and, in the latest pamphlet, how to head off the "Peril of American Finance," owing to the "British Raid upon Our Resources." In this last publication, particularly, we find not only riches but richness.

For so obviously powerful an organization, the American Truth Society is very much of a sensitive plant in the matter of personal identification. Truth is mighty and will, of course, prevail without any name being attached to it; but the printed appeals of the Truth Society are singularly barren of signs of authorship or responsibility. The Society was organized, so it tells us, at a meeting held in New York, on January 18, but who was there, it forgets to inform the reader. However, its objects are clearly set forth in its charter. Among these is the determined purpose "to propagate the history of the United States amongst the people of the United States, and to oppose all attempts to garble, falsify, misrepresent, or suppress the history of the United States." This naturally provokes the inquiry which Mrs. Gilbert used to put with such delightful inflection in Jerome's play—"Of Irish extraction, I presume?" The suspicion is confirmed by the name to be found on the letterhead of the American Truth Society—the only place where we have been able to discover any names of members of the Society at all—namely, President, Jeremiah A. O'Leary. There is, or was, a German-named Secretary and a German-named Treasurer, but we shall insist upon claiming for the Celtic spirit the logic and the unconscious humor that is contained in "The Gold Protest Against War."

The argument proceeds by first laying a foundation of facts. It is built with such corner-stones as this: "Do you know that Eastern financiers have already loaned to the Allies from their proprietary banks $200,000,000, and are arranging to borrow $300,000,000 more of your money solely for Great Britain?" Such words to the wise ought to be sufficient. American banks are being raided by the British, and the only way to prevent a panic is for Americans to join in the raid. At any rate, they are to make sure that all the gold is drawn from the banks, so that they will have no basis for the issue of notes, and therefore will be unable to lend any more to the enemies of Germany. Hence a few simple rules for patriots, delivered with more than Polonius-like gravity:

(1.) Carry a twenty-dollar gold piece in your pocket or at home as a protest against the financing of our arms and our munition exporters.

Form an endless "gold chain" by writing your friends and interviewing your neighbors, urging these suggestions.

(2.) If an employer, pay your employees in gold coin and thus put gold in circulation.

(3.) In withdrawing your accounts from banks demand gold specie, or gold certificates, Federal Reserve notes, or United States Treasury notes. This money is the legal tender of our country (United States Revised Statutes, Sections 3,584 to 3,590 inclusive).

(4.) Investigate your bank, and if you believe your bank is an unworthy depository of your money, you have the legal right to demand your account in gold specie, gold certificates, Federal Reserve notes, or United States Treasury notes. Your money in a safe deposit vault cannot be diverted to finance the killing of men.

Now, the Germans are capable of many wonderful triumphs, but we don't believe they were equal to this. Such gallant disregard of human nature, such loving application of whim and prejudice to financial transactions, never came, we'll be bound, from a Teutonic mind. They savor too plainly of the characteristics which Irish writers, from Tom Moore down, have shown us in their countrymen, always blarneying or fighting, forever inconsequent in reasoning, but unfailing in picturesqueness. The solemn advice given above, to head off the nefarious schemes of the Saxon, could only have come from one who would burn the notes of a bank in order to be revenged upon it, or would endorse the note of a neighbor, knowing that he would not pay it when due, and chuckling with joy as he thought how that would embarrass its greedy holder. If such a name as O'Leary had not been given as president of the American Truth Society, it really would have had to be invented.

The whole thing is predominantly comic, but it has its serious side. The American Truth Society is but one of many similar organizations. They are run by nobody knows who—and usually nobody knows where. Yet they pose as great organs of public opinion. They appear as promoters of mass-meetings. They issue imposing addresses. Yes, and they spend a good deal of money. Where does it come from? There has never been any concealment of the fact that the Germans have had a considerable fund for their propaganda in this country. That is their right. Much of it they have expended to some advantage. But any amount of it which they may have put into queer organizations, masquerading as spontaneous American societies of protest, is, we beg to assure them, absolutely wasted. Whatever they may decide to do with their twenty-dollar gold pieces, they ought not to put them in the pockets of men in buckram.

Foreign Correspondence

THE CALL FOR ECONOMY—THE REGISTRATION AND MUNITIONS BILLS—THE CASE OF THE ARMENIAN.

By JAMES F. MUIRHEAD.

LONDON, July 2.

The motto of the day in England is "Waste not, want not"; and no wonder, seeing that the annual national expenditure has increased by a billion of pounds sterling. We talk of nothing but thrift and saving. And the object of our thrift is to buy coupons and bonds of the Government war loan, to be used in the purchase of ammunition for killing as many men as possible in the shortest possible time. And nevertheless we believe this saving, with this object, to be a high and holy duty.

Prime ministers and bishops, bankers and generals, professors and prominent women are all appealing to us to live the simple life, to reduce our allowance of meat, to abstain from luxuries, to leave most of the smoking (like all of the swearing) to our troops in Flanders, and to see, so far as lies in our power, that our exports in goods and cash shall represent nothing except payment for articles directly useful in the prosecution of the war. The answer to this appeal, so far as subscriptions to the war loan can give it, promises to be satisfactory. The vouchers for small amounts, in particular, are being taken up in enormous quantities. In the two German war loans, the purchasers of stock in quantities of less than £100 accounted for a sum of £120,000,000, equivalent to about 17 per cent. of the whole. It is expected that our small investors will do at least as well. The value of small savings may be illustrated by the fact that a saving of 2s. 6d. a head per week would yield nearly £300,000,000 a year. A point of interest to American investors is that a measure seems not unlikely to exempt from income tax the interest paid to persons resident outside the United Kingdom. This is important, because, with our present income tax (very likely, alas, to increase), the actual yield of the loan would be £3 18s. 9d. per cent., instead of £4 10s. I understand that the American income-tax law of last year makes a concession of this kind to foreign investors on American securities.

Before leaving the question of waste, it may be noted that a considerable body of opinion considers that the British Government must in this matter pay some heed to the admonition, "Physician, heal thyself." This applies not only to the waste of food in military camps and the expenses, due to red tape, in some of our offices, but also to the fact that many mature and skilled artisans, who would be very useful at home, are serving at the front, while many unmarried youngsters of no particular skill are still among the slackers at home. But this brings us to the thorny question of universal compulsory service!

Mr. Lloyd George's Supply of Munitions bill turned out to be substantially of the character I outlined in my letter of June 18. Its passage through the House of Commons was attended with considerable criticism (for the most part in the nature of friendly amendment), but with virtually no real opposition. Sir John Simon explained that its object was not so much to secure compulsory power as to take advantage of the voluntary spirit and organize it efficiently. Most of the Labor groups concerned have accepted the conditions of the bill without demur; but it would not be England if there were not some dissentients. Thus the miners object to compulsory arbitration, but have given Mr. Lloyd George satisfactory assurances that they will "deliver the goods," and avoid strikes. The cotton operatives make the same objection and will (it is expected) give similar guarantees. It is, indeed, quite possible that there will be no need to declare any establishment "controlled," as the power to do may in practice make the deed done. Masters and men alike seem to recognize that no risk must be run in the matter of production of munitions; and thus the restriction of profits and the abrogation of trade-union regulations will be cheerfully accepted.

Whatever else it has effected, there is no doubt that this agitation over munitions has done much to impress the gravity of the situation on those who have hitherto been a little impervious. The psychologic and moral tension has been stretched to greater resonance, and has awakened echoes in new quarters. It has made us feel the need of united action, and it has tended to focus our attention on the more dynamic strain of leaders, like Mr. Lloyd George. It has brought home to us that we, too, manifestly possess the defects of our qualities, and is making us recognize more and more keenly that what are mere foibles in time of peace may become sins or even crimes in time of war. We are still determined to resist the Prussianization of our tactics and to carry on the struggle in a manner consistent with our own traditions; but we see that our inherited methods must be purged of all dross and applied in their most perfect form. We still believe that Britannism is better than Germanism; but we are learning that our advantage is not enough to allow any slackness in its use and that we must turn on the full head of our supply. To use Lord Haldane's phrase, we are becoming, to some extent at least, a people of reflection as well as of energy and resource.

The National Registration bill is not likely to enjoy quite so peaceful a progress as the Supply of Munitions bill. It provides for the registration of all persons (male and female) between the ages of fifteen and sixty-five, with a view to ascertaining their potential capacity for national service. The root of the opposition will be the very natural desire to continue to adhere for as long as possible to our traditional voluntary system, and the suspicion that this compulsory registration is only the first step to compulsory service all round, whether military or industrial. Some of the opponents are men of high standing and unimpeachable patriotism, whose attitude must be considered as free of any factitious element. After all, it will be more of a triumph if we can win without exchanging British methods for German. The *questionnaire* of the bill does not seem as clear as it might be, but I understand that Government will be quite open to amendments on certain points. The inclusion of women in the registration has also caused some discussion, and has even been ascribed to somewhat unworthy motives; but I am unable to see in it anything but plain common-sense and fair play.

It should be noted, however, that many of our wisest thinkers do not consider the National Registration bill as an abandonment of the principle of voluntary service. It is rather in the nature of a system of channels into which our copious streams of voluntary help may be easily guided and through which they may be properly distributed. It is an effort to remove all barriers and obstacles, so that the course of the most diffident, scatter-brained, and casual of well-wishers may be made obvious and attractive—a scheme to make it impossible for ignorance or inattention to be pleaded as an excuse for inactivity. For there is undoubtedly a huge reservoir of somewhat sluggish and inert good-will waiting to be tapped, as well as many ready volunteers waiting only for a clear lead.

The Germans have just torpedoed another vessel, the Armenian, with American citizens on board. As, no doubt, it will be alleged that the Armenian brought her fate upon herself by refusing to stop after a shot had been fired across her bows, I wish to call attention to a point made by the *Daily Chronicle* of this date. Under the conditions of naval warfare hitherto subsisting, the Armenian would certainly have been bound to stop or take the consequences, if a German cruiser had fired a warning shot. But in the case of submarine warfare, as practiced by the Germans in this war, the captain of the Armenian knew that his vessel would be sunk in any case. As a brave and patriotic man, he was bound to take the one chance, slight as it was, of saving his ship. Hence he is in no sense responsible for the deaths of the American members of his crew, who were sacrificed solely to the needs of Germany's illegal method of submarine attack.

A WAR BOOK OF ANATOLE FRANCE.

By STODDARD DEWEY.

PARIS, July 3.

Anatole France at seventy offered himself for the military service of his country in her hour of need. He now takes the lead in a series of five patriotic books sold for the *mutilés de la guerre*—the maimed and mangled of this horrible war.

The other volumes are by Maurice Barrès, Remy de Gourmont, Gabriele d'Annunzio, and Charles Maurras. These are great names of the passing generation, but it is the first time they are found together. It is an instance among many of the *Union sacrée* which is one of the clearest results of war in the French people. The publisher serves in the French army and, like the writers, has no personal interest in the sale of these books. They are published "to the memory of Jean Pierre Barbier, dead on the field of honor the 26th December, 1914, by his friends." He too was a writer, but of the generation who are coming.

Anatole France's contribution is a miscellany around the fixed idea of these harsh times. It has a dedication, in facsimile of the author's handwriting, to "Albert the King":

King, in you Republicans hail a hero and a just man.

It would be hard if there were not intellectual eating and drinking in any collection of writings by Anatole France. Not the least savory here are words which have come to him from disciples at the front. They surely write to him as *cher Maître*. In a Christmas

appeal, he had summoned as a witness to French courage and devotedness a military doctor, dead as he supposed at his post of duty:

"In bombarded Ypres, he was caring for fifty-four of the German wounded, and, being urged to quit his hospital, refused, jealous to give enemies the example of humanity—and he was killed at the bedside of a German soldier by a German shell."

Except for the killing, this first report was authentic. The doctor wrote back in person, illuminating victims really dead:

"I did not die, . . . but I escaped death only by an extraordinary chance.

"I was making out my report at the exact spot where the shell fell. I left my work-table some seconds before its fall. It was an enormous *marmite* (pot) that tore down a whole wing of the hospital and made mince-meat of Léonie and her old dog. A poor little black woollen shawl with a few bloody fragments hanging to it was all that was left of the cook of Ypres hospital. At the sight of it, Charles Staniforth (the English interpreter who had already given out the report of the doctor's death with the rest) was weeping. And I said to him—'See! there beside Léonie I was writing to General Vidal.'

"He looked at me strangely. Perhaps I struck him as a ghost might. . . . Good Léonie! a simple soul, with a heart of the people, a sacrificial heart! Against fear and for protection, she had set up between two slim candles an image of Notre Dame de Thuynes, the patroness of Ypres who, in other days, saved the city. Every day the image changed place, now on the sideboard, now on a chair, even on the floor, always flanked by its two candles. . . .

"The same shell buried M. Gaymant under the ruins of his pharmacy and cut in pieces an English provision convoy. . . . Of all these victims only M. Gaymant survived. He was for weeks in the Poperinghe hospital. While we were dressing his many wounds and wiping off with oxygenated water the dust from bricks that encrusted them, he smiled and said: 'Now, doctor, I run no more risk—I am like a fortress, I am built of lime and sand.'

"Belgian humor is unspoilable."

The doctor explains his own escape as of one "predestined to bring back to you, in the beautiful light of love, the veritable meaning of the State!"

Anatole France gives ear otherwise to voices uniting the French people in their country's extremity:

"Stones speak to those who know how to listen.

"The little town says to Frenchmen looking down from the hilltop:

"'See, I am old, but I am beautiful. My children's piety has embroidered me a robe of towers and spires and dented gables and belfries. I am a good mother; I teach labor and all the arts of peace, I exhort citizens to that scorn of danger which makes them invincible. I nurse my children in my arms. And, when their task is done, they come, one after another, to sleep at my feet under the grass where sheep are feeding. They pass; but I remain, to keep memory of them. I am their memory. This is why they owe all to me, for man is man only because he remembers. My cloak is torn and my bosom pierced in wars. I receive wounds which they say are mortal. But I live because I hope. Learn of me—it is holy hope that saves our country.'"

More in Anatole France's peace manner is the dialogue "after Herodotus" between Xerxes and Demaratus, that exiled King of Sparta who took refuge at the Persian Court.

"All my task—and I have found it very pleasant—was to gather into a single dialogue maxims and conversations scattered through the old historian. . . .

"Certainly I have not tried to make Greeks resemble ourselves. . . . It is no very philosophic amusement to dress up the ancients so as to recognize ourselves in them. But to descry in all times and countries Man, changeless Man, and discover in distant ages features seemingly peculiar to our own and really holding to human depths that change never, and to get a sudden glimpse that our species, varying so slowly, has not varied at all in epochs whose memory we keep—this it is that moves and interests and speaks strongly to imagination.

"If I mistake not, such human depths, such characters peculiar to our species, appear strikingly in these extracts from good Herodotus. This is why I think my fellow-countrymen, reading them, will more than once call back their thoughts from the 75th Olympiad to the present hour so grave, so full for us of glories and sorrows and big with a future in which we put high, vast hopes.

. . . . . .

"*Xerxes.* Demaratus, I wish to ask about something which I am desirous to know. You are aware that the Greeks are gathered to defend this pass (Thermopylæ) under the command of Leonidas, King of Sparta. A spy I sent out has been observing those who hold this side of the wall which they have raised to close the pass. They are Spartans. Putting their arms down by the wall, they went naked to their athletic sports or combed carefully their hair. I cannot believe that is the way they prepare themselves to die fighting. They seem to me, on the contrary, to be acting very ridiculously, and I predict that, within four days, they will retreat. What do you think?

"*Demaratus.* O King, fear not feigned words from me. I have told thee already what men the Greeks are. They nourish no vast desires and are content with what they possess. They fear the divine Nemesis which lowers those who lift themselves up too high, and they keep measure in all things. . . . These men have come to defend the pass against thee and they are making ready to do so. Now this is their custom—before making their sacrifice of life, they crown their heads with filiets and wreaths.

"*Xerxes.* What you say, Demaratus, is scarcely believable. How can these Spartans, so few in number, fight my numberless army?

. . . . . .

"*Xerxes.* Man for man, a Persian is worth more than a Greek, as I shall make you see. For Persians, commanded by one alone, exceed their natural valiance by all the greatness of that which is imposed on them and which leads them to deeds that of themselves they would never dream of doing. For those who are least brave, obedience takes the place of courage and the fear of the master is stronger in them than fear of the enemy. Scourged onward, they throw themselves against lances and javelins. Such are Persian soldiers. Yours, being equal and free and obeying not one only chief, do in battle only their own pleasure and are inspired only by their heart which oftenest is but middling—for, in all countries, great hearts are rare.

"*Demaratus.* Greeks are free, O King; but they are not free every way. . . . As to Sparta, there not dying but flying is death. O King, such is the truth.

"*Xerxes.* I will disclose to you another advantage of the Persians over the Greeks. It is this—the Persians are closely united under my authority, and the Greeks are for ever quarrelling with one another. . . .

"*Demaratus.* Their dissensions ceased at thy approach, O King. . . .

"*Xerxes.* No matter, Heaven is on my side. Alone among men, Persians know the true gods. . . My design is not only to conquer Greece, but all Europe. Europe is beautiful, her heavens kind and her earth fruitful. . . . Of all mortals, I alone am worthy to possess her.

"*Demaratus.* Son of Darius, if thou believest thyself a god, if thou thinkest to command an army of immortals, thou hast not to listen to my opinion. But if thou dost acknowledge thyself to be a man commanding men, think how fortune is like a wheel ever turning and overturning those it has uplifted.

. . . . . .

"After these words Xerxes dismissed Demaratus, without anger. He was not irritated against him because he believed him to be out of his senses."

These scattered extracts show Anatole France at his best—in the present need. What his present faith is he proclaims in three final letters. To the *Clarion* of London:

"The Allies owe to all Europe and owe to themselves to pursue this war of liberation until the complete stifling of the Pan-German aspirations which have troubled Europe forty years long.

"They must, at the price of the most cruel sacrifices, destroy to the very root the military power of Germany and German Austria. —No peace, no truce, till the enemy of human kind is brought to earth!"

To the Russian *Novosti*, April 26:

"Friends, this war which we did not wish we shall wage to the end; we shall pursue our terrible, bountiful work to its entire accomplishment, to the total destruction of the military power of Germany."

To W. English Walling, New York:

"The idea they are sowing in America at this hour, to hasten the end of the war by prohibiting the exportation of arms and ammunition, proceeds not, I swear to you, from any French inspiration. No more does it proceed from any really human inspiration. For neither France and her Allies, nor the whole world, would profit aught by a peace that would leave still subsisting that perpetual cause of war—German Militarism."

Quite apart from the thought enshrined in such pages and the deserving object of the sale, the book has been given a form worthy of booklovers. ("Sur la voie glorieuse," par Anatole France. Paris: Champion; 3.50 francs).

The end, sudden and somewhat surprising, is an "Invocation" in lapidary style that Dr. Johnson might have approved, in spite of his aversion to Americans:

American Union
born gloriously in storm
nursed from infancy
by Liberty
on the milk of the strong,
Thou who hast consecrated thy robust youth
to superhuman toils
People just and magnanimous
Hail

The Personality of the State

By HAROLD LASKI.

What is the "Germany" that is to-day a thing so sinister in its import? What is the "England" for the destruction of which that "Germany" makes angry appeal? Are these states persons? Are they, in some mystic sense, capable of transcending their constituent members? Is it true that there exists a Brother Jonathan who is all Americans, and yet more than they? We are back here at what William James called the most fundamental of problems—that of the One and the Many. Is the state at bottom pluralist or monist? From our answer there flow consequences of the deepest significance. The state, Professor Kuno Francke declares, "is a spiritual collective personality leading a life of its own, beyond and above the life of individuals . . . it embraces all the higher activities of man." And so we are to combine in its service, to lavish upon it our deepest affections, because, in the end, all for which we have reverence is in some sort its part.

That is an important standpoint. The result of it is the intense unity of modern Germany, a unity philosophically justified by Hegel and politically exalted by Treitzschke. Is it true that the state is thus transcendent? Have we, in fact, humbly to subjugate ourselves to it because it "embraces all the higher activities of man"? At the outset we may note that we tend, in our political thinking, to adopt a sort of mystic monism as the true avenue of thought. We represent a state as a vast series of concentric circles, each one enveloping the other, as we move from individual to family, from family to village, from village to city, thence to the all-embracing state. We do talk of England, Greece, America, as single, personal forces, transcending the men and women who have made them; we personalize, that is to say, the collective body. "Rome," writes Lord Bryce, "sacrificed her domestic freedom that she might become the mistress of others." Here is a Rome beyond her citizens, a woman terrible in the asceticism of her supreme sacrifice. The habit is common to other things. Lloyds is something to us very different from the individual underwriters composing it. The Bank of England is not merely its governor and company; it has become—the phrase is significant—the "little old lady of Threadneedle Street," but no one would write of seven distinguished merchants as a little old lady. A man belongs to a labour-union; undeniably he thinks of it as essentially distinct from its members or officials. Nor, on a lesser plane, is this untrue of club or school. The National Arts Club has "its" rooms and "its" pictures. Eton is not five hundred boys nor a collection of ancient buildings. Clearly when we take any group of people to whom some kindred idea or common purpose may be ascribed, we seem to evolve from it a thing, a personality, that, in a somewhat complex sense, is beyond the personalities of its elements. That personality is real for us; for when we assume its truth, the assumption leads to concrete differences in life.

If this be true, there are within the state enough of these monistic entities, club, trade-union, church, society, town, county, each with a group-life, a group-idea, each, in Gierke's phrase, a *gesammt*-person, a group-person, to enrich the imagination. Yet, he tells us, the state itself, the society of which they form part, is mysteriously One above them. "All Manyness has its origin in Oneness, and to Oneness it returns." So we are to obey that One, to think of the Manyness as superficial, as appearance. The state is to enjoy perpetual benediction, is to be one and indivisible. Trade-unionists and capitalists alike must surrender the interests of their smaller and antithetic group-persons to the larger demands of the One, the state. You are first part of the One, America; only in secondary fashion do you belong to church or class or club. In the One differences become harmonized, disappear; there are no rich or poor, Protestant or Catholic, Republican or Democrat, but only Americans. The greatest of persons takes all others to itself. "All Manyness has its origin in Oneness and to Oneness it returns."

In some such way may be described the monistic theory of the state. It is a theory of which the importance may not be minimized at a time when the "exclusive state" has made war to assert its exclusiveness. We must, so we are told, admit that of necessity all parts of the state are woven together to make a harmonious whole. The state is to political science what the Absolute is to metaphysics. The unity is logically necessary, for, were there independence even in a single group, that group could never act upon another. Independence, as Lotze argued, must mean impenetrability; yet nothing is so obvious as the supreme fact of mutual influence. Pluralism in an ultimate political sense is, therefore, impossible, for it would make unintelligible any rational interpretation of society.

Certain implications of this doctrine are worth while noting before we attempt any criticism of it. Clearly, just as in metaphysics we can condemn the world as a whole, or praise it as a whole, so must the state be bad or good as a totality. It cannot be good and bad in its parts. Pessimistic or optimistic you may be in regard to it, but melioristic you have no right to feel so far as the state is concerned. For that which distinguishes your state must be implied also in its parts, however various; and an evil part is evil, whether it be capitalist or agitator, only if the state as a totality is evil. We bridge over, in fact, the distinction between good and bad, between right and wrong. It is due only to the limitation of our finite political intelligence. It is not, so to speak, in the "state-in-itself." It is only the appearance below which we must penetrate if we would grasp political reality. That is why Mr. Bradley can regard his absolute—for us the state—as the richer for every disharmony; for that seeming pain is in truth but a minister to joy.

Such an attitude seems of but remote utility in practical politics. In fact, we have to deem acts right and wrong. We do point to groups within the state and urge that they are really harmful and really beneficent. We have to take what may be appearance as actually constituting reality, and judge accordingly. We credit, in short, human knowledge. We say that there is something in experience. If we cannot credit it, assuredly there is nothing in which credence is at all possible. Even Treitzschke and Hegel put their personal trust in State and Absolute. And if this human experience is at all worthy of trust, let us freely admit that it is finite. We cannot know all things. We have to be content with a certain specialism, leaving universality to the Absolute.

Applying this line of reasoning to politics, I mean that we do not proceed from the state to the parts of the state, from the One to the Many, on the ground that the state is more unified than its parts; on the contrary, I contend that the parts are as real and as self-sufficing as the whole. Independence precedes Confederation. I do not know the United States before I know, say, New York and Albany; it is from Albany and New York that I come to know the United States. Of course, the knowledge of them will lead to a knowledge of the Republic simply because there is logical relation between them. But, in James's phrase, "everything you can think of, however vast or inclusive, has, on the pluralistic view, a genuinely 'external' environment, of some sort or amount . . . the pluralistic world is thus more like a federal republic than like an empire or a kingdom. However much may be collected, however much may report itself as present at any effective centre of consciousness or action, something else is self-governed and absent and unreduced to unity."

I am urging that in the state, because a group or an individual is related to some other group or individual, he is not thereby forced to enter into relations with every other part of the body politic. When a trade-union ejects one of its members for refusing to pay a political levy, it is not thereby bungling itself into relation with the Anglican church. A trade-union as such has no connection with the Anglican church; it stands self-sufficient, on its own legs. It is, it may be, in relations with the state, a part of it; but it is not one with it. It may work with the state, but of necessity it need not do so. The state, in James's terms, is distributive and not collective; there are no essential connections among its parts.

I am not taking up the position that the state has no relations with its parts. We are simply denying that the parts must be judged by the state, the individual German, let us say, by the conduct of Germany. We have not to judge of all things in their state-context. Such a relation is a forced

relation. It is charging to the account or credit of A things which are really accountable or creditable to B. We judge, that is to say, the success or failure of trade-unionism by reference to itself, and not by reference to the state of which it is part. In the monistic theory of the state trade-unionism derives its meaning from its relations; in the pluralistic theory, while the relations may be of the deepest importance, they are not its whole meaning. So in the pluralist view of the state there are, as James pointed out, real losses and real losers in the clashing of its parts; nor do they add mysteriously to the splendor of the whole.

The value of this attitude lies simply in this, that it does fit the facts. It renders unnecessary the tediously elaborate gymnastic of working out the respective spheres of state and individual. For the pluralist, there is no meaning in that antithesis. The state is not opposed to the individual simply because, in the essential context, the individual is part of the state. The state is one of the groups to which he belongs. There is no more significance in Herbert Spencer's "Man Versus the State" than there would be if a distinguished physiologist wrote a treatise on the body versus the liver. All thought, moreover, of the state as an organism must, on this view, be surrendered. That the state is an organization to which each of its members belongs is, of course, evident without further argument; but the characteristics of an organism cannot, as has been pointed out almost to surfeit by a host of writers, be predicated of an organization in which the will of the parts is real and independent, and where there may be passive resistance to the decree of the "social sensorium" as in the case of the English Nonconformists, and active resistance as in the case of the Ulster Unionists. We must, too, admit that the members of the state are bound to it in varying degrees at different times; there is within and without it, that is to say, a conflict of demands. In the event of a great war, for example, you may, as a member of the state, be called upon to fight; as a member of another group, the Quakers, you may be called upon to refuse the demand. It seems clear that little or nothing is gained by talk of "overriding demands," of saying, for instance, that the demands of the state are all-important. The history of societies so fatally contradicts that view as to make it of little use. Everything will depend on the intensity of the belief with which the demand of the state comes into conflict. To those who argue that such antagonism endangers the life of the state —as when Germany regards the Ulster problem as putting Great Britain out of court— I can only reply that in all probability such marginal cases will be rare; but there is no guarantee, so far as I can conceive, that they will not occur.

Where in such a theory, it will be asked, is sovereignty? Everything here depends upon what is meant by that ill-fated term. In the Austinian sense, it is clear that no such thing as sovereignty exists at all. No instrument exists in the state with the absolute assurance that any rule of conduct will be enforced, for that rule of conduct will depend for its enforcement on the members of the state, and in the event of a sufficiently powerful minority refusing to obey, the rule is simply worthless as a command. If, for example, Parliament now chose to disband the trade-unions, it would certainly fail to carry the statute into effect. We have, therefore, to define sovereignty in a sense that is very different from the Austinian conception. We seem to find its essence not in the coercion that will follow from a failure to obey its command, but from the inconvenience that will result from opposition to it. The members of the state agree to obey the decrees of government simply because those decrees are infused with good will and because, without such agreed submission, the state, like any other group, becomes impotent and impossible. The minority agrees to accept the verdict of a majority not because the majority has the power to enforce it, but simply because the "idea" of a group cannot be realized if every dissension means a secession. Sovereignty at bottom is not legal at all, but a practical convenience of which the underlying fictional nature is quite likely, on occasion, to be demonstrated.

There is nothing in all this, I believe, at all incompatible with the view of modern constitutional authority. "The principle of Parliamentary authority," writes Professor Dicey, "means neither more nor less than this, namely, that Parliament . . . has, under the English Constitution, the right to make or unmake any law whatever; and, further, that no person or body is recognized by the law of England as having the right to override or set aside the legislation of Parliament." But the law of England is no more than a body of rules agreed to as of practical convenience. It is a sovereignty situate in Parliament by consent, and that consent is, as I have pointed out, liable to suspension. Groups or individuals will admit it only to the point where admission does not conflict with their moral sense. Legal sovereignty, in short, represents, politically, an obstruction of the facts.

What guarantee, then, have we in the pluralist view, that the will of the state shall in fact prevail? It may seem that this view gives a handle to anarchy. Well, I cannot help that. It does not, I believe, give any greater handle to anarchy than it already possesses. If we become inductive-minded, and look at the facts of social life, it is, I think, tolerably evident that when we talk of wills, we mean wills not to do just as much as wills to do. The guarantee that the will of the state is going to prevail depends largely on the persons who interpret that will. The monarchs of the *ancien régime* were legally the sovereign power in France, but their will was not the will of the state. It did not prevail simply because of the supreme unwisdom of the manner in which they chose to identify its good with their own. They confused what Rousseau would have called their "private good" with the "common good," and Louis XVI paid the penalty on the scaffold. The will of the state obtains preëminence over the wills of other groups exactly to the point at which it is interpreted with sufficient wisdom to obtain general assent, and no further. It is a will largely competing with other wills, and, Darwin-wise, surviving only by its ability to cope with its environment. Should it venture into dangerous places, it pays the penalty of its audacity. It finds its sovereignty by consent transformed into impotence by disagreement.

But, it may be objected, in such a view sovereignty means no more than the ability to secure assent. I can only reply to the objection by admitting it. There is no sanction for law other than the consent of the human mind. It is sheer illusion to imagine that the authority of the state has any other safeguard than the wills of its members. For the state, as I have tried to show, is simply what Mr. Graham Wallas calls a Will-Organization, and its essential feature is its ultimate dependence upon the constituent wills from which the group-will is made. To argue—as doubtless German theorists would argue—that the state is degraded by such a reduction in nowise alters the fact that here lies the essence of its nature. We have only to look at the realities of social existence to see that the state does not enjoy any necessary preëminence for its commands. Again and again my allegiance may be divided between the different groups to which I belong. The state has to fight hard to maintain my allegiance.

A view of this kind, I would urge, gives us a positive theory of its meaning and function. The state is an organized group actuated by a particular idea, and men belong to it because they believe in the goodness of that idea. There is not, as I conceive, any fundamental difference, except in degree, between the nature of a state and the nature of a baseball club. What are the fundamental attributes of a baseball club? Primarily, of course, it exists to play baseball matches; but the organization of it is entrusted to directors whose function is regard for its well-being. The secondary object of the club is to win the baseball matches that it plays. To that end the directors engage the best players they can find; they do all things which, in their judgment, will tend to secure the club's success. For what they do they are responsible to the shareholders of the club who pass judgment on the success or failure of their efforts.

I think that in the case of the state something differing only in degree from what happens in the case of a baseball club will be found to occur. The club is the state; the directors are the government. The object of government is a positive object; it is to attain the end—whatever it be—of the state. For that end it must adopt, just as the baseball directors adopt, the means most likely to lead to success. The members of the state will, in democratic countries at least, periodically pass judgment upon its

policy. It will be a judgment based on the degree to which that policy has attained its end. The members will conceive the state as entitled to ask from them the means to attain their endeavor. Further than this they will not go, and, throughout, they must, as a rule, be in sympathy with that endeavor. There are things a state will not demand, because it cannot. And when the members of the state find the proceedings of its directors uninteresting they turn aside from the study of or participation in such pursuits. They become interested in other things—we say that "politics is dead." A "united Germany" only means that the vivid interest of that group's proceedings transcends for the time being the interest of all other groups.

A view of this kind runs directly counter to the German theories of the state—at any rate, to the dominant theories of that country. It is, I believe, the natural consequence of Gierke's realism, the recognition that personality is the result of collective action and the denial that such personality is the fictional derivative of the state. It gives no peculiar merit to that group, does not, for example, admit that its thirst for power is a moral aim superior to that of other groups. That question has a peculiar interest at the present time. The assertion that power is good involves the question, Good for what? I assume that the reply is that power is good, first, for personal security, and, secondly, to spread a cultural superiority. But to the first there is the question of extent: What power is needed for security? A state may, as Machiavelli said, "go to work against charity and faith and humanity and religion." How long, in that event, will it retain the affection of its citizens? And, as to the spread of its culture, it would have to prove that its dominance can only be maintained by force of arms. It would have to be shown that, in fact, the means adopted are likely to secure the end proposed. It would have to obtain and retain the faith of its members in that superiority. And, what is perhaps not the least important consideration, it would have to win.

The state, then, is a democratic federation. Its personality consists in the "idea" underlying its existence, its value in the good that "idea" can achieve. Men will cling to it so long as it strives honestly for their well-being, so long as it asks them for the sake of their fellows to serve freely and fully in gladness. Assuredly no observer who has any care for truth will deny that in a state where such opportunity is most largely given the attainment will be big and rich and splendid. Only in such wise can the life of the state be full. Its activities will be stimulated by the work of other groups co-extensive with or complementary to itself. It will issue no challenge, as it will claim no preëminence. What it is and what affection it secures it will be and obtain by virtue of its achievement. So only can it hope to hand on undimmed the torch of its conscious life.

Book Notes and Byways

THE "CROWNING" OF STATIUS.

By EDMUND KEMPER BROADUS.

The recent appearance of a compilation of lives of the poets-laureate* contributes another instance of the curious misconception which has prevailed time out of mind in regard to the "crowning" or laureation of the Roman poet, Statius. Says Mr. Gray (p. 2): "In ancient Greece the laurel was sacred to Apollo, and those who had courted the Muses most successfully were crowned with a wreath made from its leaves. Besides perpetuating this practice, the Romans invested the ceremony of laureation with more pomp and splendour. Domitian, for example, when he attended the Alban contests, himself placed a chaplet on the heads of those competitors who had won distinction in music or poetry. One of the last acts of this Emperor was to present the bays to his court poet Statius, as the prize of a 'music and gymnastic' contest."

It is, perhaps, a minor matter that the chaplets given as prizes in the late Roman poetical contests were not of laurel (as Mr. Gray implies), but of oak, ivy, or olive leaves; but the statement that "one of the last acts" of Domitian was "to present the bays to his court poet, Statius, as the prize of a 'music and gymnastic' contest," is a blunder of some importance, and one which could have been avoided by the most cursory investigation. The phrase "'music and gymnastic' contest," which the writer borrows from Suetonius, identifies the contest as that of the Capitoline Games†; the phrase, "one of the last acts of this Emperor" points to the third *Agon Capitolinus* (the only one in which Statius took part), which occurred only a short time before the nearly concurrent deaths of the Emperor and his court poet.

So far, so good. But this third *Agon* is of historical interest, not because Domitian presented the bays to Statius, but precisely because Domitian grievously disappointed his court poet by conferring the coveted chaplet of oak leaves upon another competitor. In his youth Statius had won prizes (olive wreaths and golden crowns) in the Alban contests, and, now that he had finished his "Thebaid," had every expectation of winning the more notable reward upon the Capitoline. Embittered at his disappointment, he declares ("Silvæ," III, 5) his intention of leaving Rome forever, and of living henceforth in his birthplace, Naples. The poem takes the form of an address, half querulous, half pathetic, to his wife, Claudia, whom he seeks to comfort for her prospective exile from the metropolis.

"When my brow," he says, "was bright with the Alban wreath and Cæsar's golden chaplet was on my head, it was you who clasped me to your heart, and showered breathless kisses on my laurels. It was you, when the Capitol disdained my lays, you who shared my defeat and fretted with me at the ingratitude and cruelty of love. You with wakeful ears snatch the first essays of my melodies and those nights of whispering; you who alone share the secret of my long, long toil, and with the years of your love my Thebaid has grown to full stature" ("The Silvæ of Statius," trans. D. A. Slater; Oxford, 1908).

It would hardly be worth while to point out an error of this sort in a perfunctory compilation such as Mr. Gray's "Poets Laureate of England," were it not that the blunder which he repeats has had a rather interesting history. The early biographers of the laureates (Austin and Ralph, London, 1853, and Walter Hamilton, London, 1879), from whom Gray borrows extensively in his chapter on the laureate tradition, both fall into the same error; and such careful scholars as Prof. James Harvey Robinson and Prof. Henry Winchester Rolfe, in their "Petrarch" (New York, 1898, p. 104), make the double mistake of assuming that Statius was "crowned" upon the Capitoline, and that he was "the first to gain that honour."

But these are only by the way. The mistake made by Robinson and Rolfe points the way to the *locus classicus* of the error—Petrarch's double blunder in supposing that Statius was one of a long succession of poets to be thus crowned upon the Capitoline, and that he was the last poet before Petrarch himself to be thus honored ("Recolo . . . in hoc ipso capitolio romano ubi nunc insistimus tot tantosque vates ad culmen preclari magisterii provectos emeritam lauream reportasse . . . post statium pampineum illustrem poetam qui domitiani temporibus floruit nullum legimus tali honore decoratum." Hortis, "Scritti Inediti," p. 316).

The Capitoline Games were established in 86 A. D. We learn from Martial that a certain Collinus was the first to win the coveted chaplet: "O Collinus, to whom it has been granted to obtain the crown of oak in the Capitol, and to surround thy deserving locks with its foliage first of all thy race, make the most, if thou art wise, of every day, and always imagine that thy last has come" ("Epigrams," IV, liv, Bohn Clas. Lib.). Statius, as we have seen, did not compete at this or at the second contest, and was an unsuccessful competitor at the third. The Capitoline Games were continued for a considerable period after Domitian's death, a twelve-year-old boy, for example, being "coronatus" in the year 106.

The explicit information concerning Statius's early successes and late disappointment, which may be derived from the "Silvæ," was, of course, inaccessible to Petrarch, the manuscript of that collection of occasional poems not having been discovered by Poggio until some time after Petrarch's death; and, in any event, vagueness as to the biographical side of pagan history was typical of the period. Dante, for example, through a confusion of identity, gives Statius's birthplace as Toulouse.

The importance which Petrarch attached to the precedent (as he supposed) of Statius's "coronation" was by no means accidental. The "Thebaid" is one of the few purely literary products of pagan Rome interest in which seems to have persisted throughout the Middle Ages. And this, apparently, not because of its literary merit, but because of the curious tradition that Statius was, in fact, a Christian poet. How explicit that tradition was is attested by Dante, who in the twenty-

*"The Poets Laureate of England," by W. Forbes Gray. New York: E. P. Dutton & Co. $2.50 net.

†"He (Domitian) likewise instituted in honour of Jupiter Capitolinus a solemn contest in music . . . and gymnastic exercises. . . . There was also a public performance in elocution, both Greek and Latin." (Suetonius, "Lives of the Cæsars," Domitian. Trans., Bohn Clas. Lib.)

second canto of the "Purgatorio" even essays to fix the time of Statius's baptism; and, thanks to that ceremony, releases Statius from Purgatory, while Virgil himself and the

Greeks who of old their brows with laurel decked

are condemned to remain in Limbo. Dante believed that Statius had been decorated at Rome with the poet's crown, although the chaplet accorded to him is not of laurel, but of the lesser myrtle. Doubtless Dante conceived of this "concealed Christian"* as the first baptized follower of the new faith to win the ancient pagan honor, and Dante's own aspiration to win the laurel wreath, curiously blended as it is of Christian piety and reverence for pagan usage, seems to associate itself in a measure with Statius's example. "For its sake" (*i. e.*, for the sake of Dante's service to the faith), St. Peter had thrice crowned the poet; and the closing lines of the twenty-fourth canto of the "Paradiso" and the opening lines of the twenty-fifth, after describing that celestial ceremony, set forth Dante's longing for the terrestrial crown. But the earthly wreath must be a recognition of his services both to heaven and to the muses. The ceremony must be in his native city, that "fair sheep-fold" whence he had been expelled, but it must not be in court or public square. "If it ever happen that the sacred poem to which heaven and earth have so set hand, that it has made me lean for many years, should overcome the cruelty which bars me out of the fair sheep-fold, where a lamb I slept, foe to the wolves that give it war; then with other voice, with other fleece, a Poet will I return, and on the font of my baptism will I take the crown; because there I entered into the Faith which makes the souls known to God; and afterward Peter, for its sake, thus encircled my brow" ("Paradiso," Can. XXV, 1-12, trans. Norton).

Dante was not destined to receive the earthly honor which he craved; but when Petrarch achieved that goal of his high ambition (not, however, without scheming for it with true Italian diplomacy), he had, like Dante, the precedent of Statius in the very forefront of his consciousness. Petrarch, it is true, was too thoroughly imbued with the new spirit to emphasize, or perhaps even to think of, the Christianity of the ancient poet who had, as Petrarch supposed, won the chaplet upon the Capitoline; but, thanks to Dante, Statius had become a peculiarly significant figure, and it is Statius and no other whom Petrarch names as the illustrious precedent. And possibly Petrarch's own mistake as to Statius's "coronation" was due to a wrong inference from Dante's phrase in introducing that poet: "So sweet was the spirit of my voice," Dante makes Statius say, "that me of Toulouse† Rome drew to herself, where I earned the right to adorn my temples with myrtle" ("Purgatorio," XXI, 88-90, trans. Norton).

The point is, after all, perhaps, but a minor one. No doubt the Italian of the Renaissance, with his minute interest, not only in the literature, but also in the customs of ancient Rome, his academies "for promoting the adoption of antique customs into modern life,"* and his feeling that in so doing he was renewing the golden age, would have appropriated this fine old pagan custom without the intervention of the Statian tradition. We know, in fact, that there were instances of laureation well before Dante's day; for St. Bonaventura (*Legenda S. Francisci, Opera,* VII, 280) tells us that one of the earliest converts which St. Francis made to his order was a certain inventor of secular songs (sæcularium cantionum curiosus inventor) who had been crowned by the Emperor (Frederic II, in his court at Naples), and was known as the King of Verse; but such instances were rare and spasmodic. The peculiar and factitious importance which Statius had to the mediæval reader, the new lease of life which Dante's emphasis in the "Divina Commedia" gave to him, and the explicit reference made by Petrarch on the occasion of his own "coronation," all contribute to make of Statius a sort of connecting link between the pagan custom and the efflorescence of laureation at the time of the Renaissance.

John Addington Symonds has written that "the ancient and the modern eras met together at the Capitol at Petrarch's coronation," and in no respect is this more curiously illustrated than in the part played by this traditionally Christian author of pagan epics in furnishing a precedent (albeit a mistaken one) for the renewal of the pagan ceremony of laureation.

*See the elaborate and ingenious, if not altogether convincing, study of Dante's conception of Statius's religious belief in A. W. Verrall's "To Follow the Fisherman" and "Dante and the Baptism of Statius." ("Essays," Cambridge, 1913, pp. 152 ff.)

†Chaucer, in "The Hous of Fame," retains this error as to the birthplace of Statius:

"The Tholosan that highte Stace."

*Symonds, "Revival of Learning," p. 361.

Correspondence.

THE "NATION."

To the Editor of The Nation:

Sir: As a reader of the *Nation* for more than thirty years, I congratulate you most heartily on the fine jubilee number. It is in every way worthy of the splendid traditions of the paper.

To-day, as in the days of Godkin, the *Nation's* editorials must rouse the civic consciousness of the college youth of America and stimulate them to independent thought and action in their relation to the pressing problems of these times.

May it continue for many generations to inspire and to guide those from whose ranks some of the future leaders of the country will surely come. Julian W. Mack.

Chicago, July 10.

To the Editor of The Nation:

Sir: I wish to extend hearty congratulations concerning your semi-centennial number recently received.

I became a subscriber to the *Nation* in 1865, when I was seventeen years of age, and have been a continuous reader and subscriber from the first number to the present time. I treasure very much the complete file which I possess of this paper. It has taught me valuable lessons, and its reading has indeed been an education.

The cogent "King's English" of Mr. Godkin has never been surpassed in strength, virility, and beauty by any American journalist. To me he was an inspiration, especially for the cause of civil-service reform. My interest in this cause (witnessed by an active membership in the Executive Committee of the Civil Service Reform Association of Pennsylvania for over thirty years past) was largely due to the stirring appeals and vigorous battle waged by Mr. Godkin against the spoils system.

A fine photograph of this leader of men looks down upon me from my office wall, and is a constant reminder of a great spirit supremely dedicated to the cause of civic righteousness and administrative reform. And then, too, Mr. Garrison's thorough (in the fullest sense of that full word) conduct and management of the literary work and book reviews of the paper in my judgment has never been surpassed, and it is indeed very doubtful whether it ever will be. His work as shown in the files of the paper is his greatest monument.

I need not say that I read your semi-centennial number with absorbing, almost fascinated, interest. It certainly reminded me of the old days of the *Nation* to read the contributions from some of the first pillars of its early building.

May it long continue to be (as it always has been) a great force and influence in its chosen field. James G. Francis.

Philadelphia, July 12.

To the Editor of The Nation:

Sir: I offer my felicitations to the *Nation* on its jubilee, and on its jubilee number.

These are bleak days for any kind of rejoicing; but the one thing left to cheer us is the tone of our best American newspapers and periodicals. Such an editorial as that on "German-American 'Misunderstandings,'" in the jubilee number of the *Nation,* should be enough to persuade the world that we are not the facile dupes that Germany pleases to think us. Agnes Repplier.

Salem, Mass., July 13.

To the Editor of The Nation:

Sir: I thank you for my perusal of your impressive semi-centennial number.

It is hard to express one's sense of the peculiar human valuation of that fifty years' record of public service which hides its still ruddy virility, with a certain reticence, behind that staid black-and-white of the long-established format. Nothing of the futuristic here, yet much of the cherishable future in the justly cherished past—a future and a past which, to one who loves the destiny and history of his country, give to the present a kind of majestic assurance of the vitality and authenticity of American idealism.

There are, and will be, numerous tenets of faith, political, literary, artistic, upon which I, as an individual, differ with the *Nation.* What individual may not do so? The iris-hues of futurism which flaunt their bloom from many a more colorful journal have for me, on occasions, their fascinating shades and values. Yet, passing from occasional choices to a sense of continuity with that great living tradition of America, which has thrilled not once but again and again to the call of "Emancipation," the vast current of those fifty years, whose stormy sky and landscapes lie so quietly mirrored in the *Nation,* bears me on, I confess, with a kind of exultance in being a bubble on so cosmic a stream.

In several articles of your anniversary number, it is pertinently observed that the character of the *Nation* has been moulded by the characters of its successive editors. Its success has been that these characters have

themselves been plastic (with whatever individual limitations) to the mysterious creative forces of their time, mightier than themselves.

The Garrison-Godkin editorial tradition has stamped its historic pages, but history itself has stamped its editors. If I may make a comparison from the traditions of my own profession, the editorial sway of the *Nation* over its public has likeness to the sway of certain eminent producers of the theatre over *their* public. The total reportory influence of Henry Irving and Ellen Terry, though stamped with the genius of Terry and Irving, lives on by virtue of a genius larger than theirs—the genius of their audiences, the begetters of a new age. So, too, the house of Wallack flourished by a coöperation, in which that worthy American producer was a distinctive yet only a partial influence.

It is, then, a pleasant privilege, sir, to be able to felicitate you on your fifty years' celebration without being too personal; for, in wishing you joy of your golden wedding, I beg also to felicitate your loyal (if not always accountable) copartner—the American public.

PERCY MACKAYE.

Cornish, N. H., July 8.

PROFESSOR USHER'S "PAN-AMERICANISM."

TO THE EDITOR OF THE NATION:

SIR: Will you allow me sufficient space to point out an erroneous use of words in your recent review of my "Pan-Americanism"? The review is headed "The Vaticinations of Professor Usher." The reviewer declares that "the volume is expressly announced as a prediction"; says that "neither the author on his title page nor the publishers in their advertisements have left anything undone to produce the impression that the prophecy is both definite and sensational"—the reference is to the sub-title, A Forecast of the Inevitable Clash Between the United States and Europe's Victor—that the inevitable clash refers to "our future war with Europe."

It is, however, an error to suppose that the word forecast is synonymous with the words vaticination, prophecy, foretelling, or that the word clash connotes the same meaning as conflict or war. There seems, indeed, to be but one usage sanctioned by authority. "Prophecy connotes inspired or mysterious knowledge or great assurance of prediction." It will hardly be denied that the reviewer's and editor's intention was to say that I had claimed on the title page such knowledge and assurance. The mention of the tripod places this beyond doubt, and the content of the review as a whole confirms it. The authority just quoted distinguishes forecast from prophecy as "conjecture rather than inference," while others define it as discernment beforehand, foresight of consequences, estimate of future happenings. Indeed, the word was chosen in order to disown any intention of predicting or foretelling, and in the hope of avoiding the inference that any certainty was claimed for any future happenings or that one probability discussed was more likely than another.

That the book itself produces this impression, your reviewer states with clearness; indeed, he cannot conceal his surprise that a book announced as a prophecy from the tripod should not contain definite prognostications. Mr. Usher, he says, "permits his book to be advertised in the most sensational manner as containing explicit and startling predictions; he himself incorporates such predictions in his title and chapter headings; yet, in fact, he for the most part avoids choosing between alternative possibilities, and for nearly every event that he prognosticates, prognosticates also its opposite." I attempted to make clear my intentions in the preface: "to analyze, to discuss, and to examine . . . to treat so vital and controversial a subject objectively and with detachment . . . this has been my object." This I still believe to be not at variance with the accepted usage of the word forecast, and to differ widely from the common usage of prophecy and vaticination.

Did not the reviewer's difficulty lie in his original assumption that the book was meant to be a prophecy? Do not the majority of his remarks proceed directly from this assumption and depend upon its correctness for their validity?

A similar failure to apprehend the meaning of the word clash led to equally serious results. The assumption that it connoted armed conflict caused the reviewer to misunderstand many important phrases and passages, raised up hobgoblins and spectres, which were both absurd and ridiculous, and so colored the statements in the book as to render many nonsensical and improbable. Clash is defined as an interference, a disagreement, an "opposition as between differing or conflicting interests, views, purposes, etc." It was employed precisely because no reputable authority seemed to sanction its usage in the sense of armed conflict or the use of force. The book was intended to lead the reader to the conclusion that the use of force by us or against us seemed to me improbable, though possible, but that an opposition of interests and views with the victor seemed inevitable and would raise many and difficult issues, including those of armament and disarmament.

As the *Nation* in its review of my "Pan-Germanism" scouted the existence of Pan-Germanism itself as one of the wildest of imaginative speculations, a difference of opinion between the *Nation* and myself on issues of present international politics seems literally inevitable, but I should prefer that it should be due to deeper causes than the usage of words.

ROLAND G. USHER.

Washington University, St. Louis, July 14.

[We regret that we were betrayed into attributing to Professor Usher a greater degree of inspiration than was his due.—ED. THE NATION.]

A QUESTION OF CONTEXT.

TO THE EDITOR OF THE NATION:

SIR: *Quousque tandem!* Another exhibition of that curious mentality with which we in this country have become tolerably familiar since early in August last and with which we are destined to become more and more conversant, no doubt, as long as Germany's defenders persist in flooding us with the bright but unbearable light of their boundless and superior knowledge. The latest torch-bearer to appear in the *Nation* (July 1) is Mr. Jacques Mayer, of Munich. The science of misquotation, the art of irrational deduction, combined with the practice of inconsequential logic, misinterpretation of attested facts, and misconstruction of the plainest texts, have seldom if ever been carried to a higher degree of perfection than they have been since the appearance of that precious brochure "The Truth About Germany." Mr. Mayer is simply following in the wake of the great and near great of his own land, when he cites Cramb in such an unfortunate but to him eminently satisfactory manner. One ought not to be surprised then, when on turning to Cramb's work to verify the quotation, one finds the first part of Mr. Mayer's citation on page 49 (E. P. Dutton's edition, 1914), and the second part, "So long, etc.," on page 16. Whatever be the true explanation of this inversion, it is a small matter, whether intentional or inadvertent. What is much more serious is the error into which apparently Mr. Mayer permitted himself to be led by his earnestness and strong convictions. He appears to believe, or intends that his readers shall believe, that he is quoting what was Professor Cramb's own personal opinion of England and of what she really is. In his all-consuming zeal Mr. Mayer seems to have given only a cursory attention to the context of both his quotations. Or is he deliberately misstating? At any rate, from a moderately careful perusal of Cramb's text the reader cannot but become aware that Cramb, far from giving to his fellow-countrymen in these words his own personal opinion or that of any other Englishman or Englishmen, was really giving what he conceived to be the opinion in regard to England prevalent at that moment in German circles.

W. A. MCLAUGHLIN.

Ann Arbor, Mich., July 3.

DR. CONYBEARE.

TO THE EDITOR OF THE NATION:

SIR: In your issue for July 15, Dr. Conybeare writes from Oxford on June 29 explaining that he had been "over-hasty" in charging Sir Edward Grey with responsibility for the war. But on the front page of the same number there is an advertisement of the *Open Court* for July, in which an extract is given from an article by Dr. Conybeare, still making his charges against Sir Edward Grey. The advertisement (for which, of course, Dr. Conybeare is not responsible) is headed: "How one man's personal grudge has cost one million lives." It is also said that the article was originally sent to an English publishing agency and declined.

Which is the true view of Dr. Conybeare? It is natural to assume that this is to be found in his letter from Oxford, dated June 29. If so, we may rightly ask Dr. Paul Carus not to allow his pro-German partiality to prevent him from making the necessary correction in the August number of his magazine.

W. H. GRIFFITH THOMAS.

Toronto, July 15.

[Dr. Conybeare's letter naturally expresses his revised judgment. Had the advertisement been brought to the attention of the editors, it would not have appeared.—ED. THE NATION.]

"THE BREAKDOWN OF INTERNATIONALISM."

TO THE EDITOR OF THE NATION:

SIR: The possibility, or otherwise, of Internationalism seems to me to depend on a question of personality.

Euclid tells us that the whole is equal to the sum of its parts, but it is equally true that the whole is often quite different from the sum of its parts. We ourselves, for in-

stance, are made up of many millions of cells, each living its own life and quite unconscious of the whole of which it forms a part, yet depending largely for its welfare on the actions of that whole, over which it has, however, little or no control.

Now, if the analogy holds, and we are each of us, while living our own lives, parts of a higher individuality—a nation, the real superman—Internationalism is an impossible dream, for we cannot really influence that higher personality; still less can we destroy it. But if the analogy does not hold, if a nation is an Idea, if its character is a kind of resultant of the character of its component individualities, Internationalism is possible, for one idea can be replaced by another.

In spite of the fact that the character of the German nation seems, unhappily, very different from that of the Germans I know —they do not, however, belong to the ruling classes of that country—I believe that nations are ideal existences and that Internationalism has a future. We have simply got to think in terms of humanity rather than in terms of nationality, and the latter idea will gradually fade away. But if such a change be desirable, patriotism is not a virtue, but a vice.

RICHARD KAY.

Hartland, N. Devon, July 1.

Notes from Two Capitals

WINSTON CHURCHILL.

By SIR HENRY LUCY.

The ex-First Lord of the Admiralty is not the first of his name to break up a powerful Ministry because he could not have his own way at a particular turn of affairs. Lord Randolph Churchill's son is, like his father, as headstrong as he is capable. He found his match in "Jack" Fisher. Suave in manner, modest in estimation of his own qualities, the late First Sea Lord, once driven into an attitude of resentment, is an exceedingly tough person to deal with. Naturally gratified when amid national plaudits "the dropped pilot" was, when war broke out, picked up again, he gave himself up heart and soul to administering the affairs of the navy he had created. All went well for some months, the success of the navy in casual encounters with the enemy and in the great task of keeping sea-room open for itself and its Allies testifying to the unity of capable direction at headquarters. Unfortunately, hereditary instinct asserting itself with his chief, Lord Fisher, believing his appointed domain was being systematically encroached upon, cut the painter. The Admiralty barge got hopelessly adrift, and before he quite knew where he was the Prime Minister found added to overwhelming duties and responsibilities the task of re-forming his Ministry.

Winston Churchill entered the House of Commons handicapped by the circumstance common to several members of the present Parliament, fatal to most of them, of being the son of a father illustrious in Parliamentary record. The younger and the older Pitt form a rare, perhaps unique, example where such accidental connection proved no obstacle to the triumphant progress of the son. Winston would be the last man to claim equality with his father, who died too early to justify expectation raised by supreme, statesmanlike qualities occasionally obscured by brilliant guerrilla tactics. We get only one Randolph Churchill in a century. To old friends the son in many ways recalls the presence of the father. He does not resemble him in facial appearance, but has many mannerisms startlingly reminiscent. Designedly or unconsciously, he addresses the House of Commons in the same attitude Lord Randolph assumed when, with open hands resting on hips, feet set well apart, and head bent forward, he worried Stafford Northcote, or with the confidence that shone on the countenance of David when he went forth to fight Goliath, he girded at Gladstone.

More important resemblances between father and son are their capacity for work, their intuitive grasp of a question, their lucidity and force of speech. While he was still a private member it was noted that when Winston rose to speak on whatsoever subject, whether it was Fiscal Reform, War Office Administration, or the Aliens Bill, he had mastered all the bearings of the case, carefully thought out their ramifications. His set speeches were even at this early time admirable contributions to debate. Even better, more immediately effective, were his remarks in the give-and-take discussion of Committee, or his interjected questions addressed to the Minister in charge of the business before the House.

Inheriting the rich gift of memory with which Lord Randolph was endowed, he is accustomed to write out his set speeches, learn them off by heart, and declaim them to a listening Senate. This habit on one occasion led to disastrous consequence. Nearing the end of a luminous address, recited with an ease and fluency that obscured the secret of the manuscript, he, towards the conclusion, lost his cue. He could not remember how the ultimate sentence of his speech was framed. After struggling for some moments he gave up the attempt, abruptly resuming his seat, his speech unfinished.

That was an accident inseparable from the method. A rarer and more precious gift in House of Commons debate enables a member to express in two or three pointed sentences a weak or a strong point observed as in a flash of lightning. Winston Churchill possesses that gift and improves it with daily practice.

It was characteristic of the statesman who, by a flash of grim humor, has upon the reconstruction of the Ministry been relegated to the obscure sinecure of Chancellor of the Duchy of Lancaster, that he should first present himself in the House of Commons as critic of an important measure introduced by the Government under whose flag he had won election at Oldham. The war in South Africa being in full blast, Mr. Brodrick, called upon to save the State, formulated a scheme of army reform warranted to avert repetition of catastrophe at the moment threatening the existence of the army and the stability of the Empire. The young member for Oldham, who had the advantage over the Secretary of State for War of having smelt powder and heard bullets whizz on more than one stricken field, sharply criticised it. He did more. One of a small minority, he went into the division lobby to record his vote against it. Two years later, further consideration of the Brodrick scheme resulting in general condemnation, organized attack was made upon it. As many as nineteen Ministerialists backed their hostile opinion by a vote in the Opposition lobby. With the young member for Oldham, fresh to the Parliamentary arena, lay the double credit of shrewd insight into the real value of the portentous plan when first introduced with the blare of trumpets and the rattle of drums, and of courage in testifying to conviction by his vote.

This was an ominous launching of a promising bark. A steady stream of circumstance finally drifted it into the sea of Liberalism. Winston's constitutional independence, his blunt honesty, unfitted him for companionship with the well-drilled Parliamentary ranks of Conservatism. Nevertheless, had Mr. Balfour thought it worth while to have given his mind to the task, he might have captured and retained one who later became the lion cub of a Liberal Cabinet. From the first he openly resented the indiscipline of the son of his early comrade of Fourth Party days. The more he was snubbed, the more intractable Winston became.

Early in the session of 1904, when the long predominant Unionist Government was staggering to a fall, a motion for the adjournment was made from the Opposition side with intent to give them a helping knock on the head. It was Lloyd George who led the irregular attack. By coincidence—strange, in view of the close relationship established between the two young Cabinet Ministers under the Premiership of Mr. Asquith—Winston Churchill, still seated on the Ministerial side, rose to second the motion. Immediately, at a concerted signal, the shocked Ministerialists jumped up and with one accord left the House. They were prepared with more or less unconcern to sit out an attack on the Government opened from the enemy's camp. It is the business of the Opposition to oppose. When the assault was joined in by one from their own ranks, they marked their resentment of what they regarded as treachery by shaking the dust of the matted floor from off their feet.

That was the beginning of an inevitable end. Two months and a day later, Winston Churchill, sauntering in from below the Bar, paused a moment, looked round the House, and, turning to the right, seated himself in the Liberal camp.

Since the removal from the scene of the commanding figure of Joseph Chamberlain, the front bench of the Unionist party in the Commons has not been so fully endowed with strength and capacity that it could afford to drive out of the camp so promising a recruit. To its subsequent exceeding sorrow it succeeded in doing so.

CHARLES JOSEPH BONAPARTE.

We must show our teeth to Germany, says Mr. Bonaparte, of Baltimore, unless we are willing to be kicked around like Champ Clark's houn'-dawg. This is in line with the advice of Col. Roosevelt. The two men have usually been in accord since the time when Mr. Bonaparte, having pretty well made up his mind that the Republican party was on the road to ruin, singled out the Colonel as the good man in it to whom the people could afford to pin their faith.

The metaphor used, including its illustrative draft upon recent history, has a unique flavor, coming from an ex-Attorney-General of the United States; but then, Charles Joseph Bonaparte has a unique personality. It might be too much to say that he would be recognized at sight as a member of the former

imperial family of France; yet, in a company of a thousand men, if it were known that a Bonaparte was present, there would be no mistaking any other for him. The general mould of his features, the shape of his head, and the way it is set on his shoulders, would settle that, for the suggestion of the Corsican conqueror is there, beyond a question. What does puzzle one in this man is his speech and manner. The inflections of his voice are so soft, and run such a gamut of gentle undulations, as to be almost wheedling; the fastidiousness of his enunciation is made more effective by an inimitable drawl, and everything he says is sweetly put, even while he is inserting the spit of his sarcasm between the ribs of the victim whom he intends in a moment to roast alive. No matter how severe the treatment he is about to administer, the smile never fades from his lips, and, at the close of every remark which admits of a brief pause after it, one hears issuing from them a faint sound which might be either a suppressed sigh or a guttural chuckle, and which comports quaintly with the bird-like tilt of his head as he utters it.

There is no man in the United States who stands more solidly on his own two feet and asks fewer odds of the world than Mr. Bonaparte. Fond of politics as both a duty and a pastime, and mixing for years with the active movers in political affairs, he courts the favor of no bosses, and lets no one shape his conduct or his opinions against his will. It goes hard, indeed, with the fellow who tries to, for he brooks no trifling with his dignity. His hatred of shams is intense, and he lets everybody know it; still, even his chosen associates sometimes differ with him in judgment as to what is a sham and what is not. Though calling himself a Republican, he insists on maintaining his own standards, and in local campaigns may be found working with one of the other parties when he considers that his party needs a dose of punishment for its soul's good. He never was a candidate himself for any public position except the purely honorary and unsalaried one of Presidential Elector. That was in 1904, and he was the only Republican Elector who pulled through in Maryland—a result which dumfounded some of the critics who had sneered that his refusal to run for office and his general partisan independence were due to his consciousness of weakness in any appeal to the people for their votes.

As a compendium of human contradictions, Mr. Bonaparte is the despair of biographers who are wedded to the conventional in their work. Though by no means indifferent to the distinction of his name, he has steadfastly declined all opportunities which have come his way to remove to France and receive the honors due to one of his blood. He denounced mercilessly the policy of annexation which saddled us with the Philippines; but when the native revolt broke out, and the Anti-Imperialists went to the length of encouraging it, he cut loose and reproved them, declaring that, whatever individual opinions a citizen might proclaim and promote in time of peace, the outbreak of war was his summons to unequivocal support of his Government; and that, the treaty of Paris having become the law of the land, it was as much the duty of the President to crush a rebellion in the annexed provinces as it had been for Lincoln to crush the Southern Confederacy. Albeit President McKinley, during his first term, repeatedly drew upon himself the censure of Bonaparte, the latter supported him for a second term; this, however, did not prevent Bonaparte from standing out against his colleagues on the board of governors of Harvard University when they voted to make McKinley an LL.D., or from publicly asserting that the President was not worthy of the degree.

On one question his worst enemy has never accused Bonaparte of inconsistency: his loyalty to the Catholic communion in which he grew up. In recognition of his fidelity and services to it, he has been decorated with the Lætare medal. Surely, all Bonapartes in this country have reason to feel kindly towards a church that could not be bullied or blandished into abetting the outrage which Napoleon I tried to put upon their first American ancestress.

VIEILLARD.

Literature

PROFESSOR KITTREDGE ON CHAUCER.

Chaucer and His Poetry: Lectures delivered in 1914 on the Percy Turnbull Memorial Foundation in the Johns Hopkins University. By George Lyman Kittredge. Cambridge: Harvard University Press. $1.25 net.

The lectures that make up this volume are six in number. The first is entitled "The Man and His Times"; the remaining lectures deal successively with "The Book of the Duchess," "The House of Fame," "Troilus," and (two) with the "Canterbury Tales." It should be said at once that the treatment of the subject is fresh and readable and that the book complements in a worthy manner the very large output of special monographs, and articles relating to the poet, which for many years past has made the English department at Harvard under Professor Kittredge's direction the most active centre of Chaucer investigation in the world.

It is only in regard to certain matters in the first lecture that we feel disposed to take issue seriously with Professor Kittredge. This lecture contains much that is suggestive—for example, the proposal that we should abandon the tripartite division of Chaucer's literary career and adopt a period of transition between the French and the Italian periods. The new division is really necessary, if we are to comprehend clearly the development of Chaucer's genius. During this period of transition his production was slight, but he was reading enormously in Italian and Latin, in history, philosophy, and romance, and when, emancipated by his wider outlook from the French models of his earlier years, he turns again with renewed energy to composition, he shows himself a new man. On the other hand, an outstanding feature of this first lecture is the endeavor to refute some of the current ideas concerning Chaucer and his age, *e. g.*, that mediæval writers are prone to digress, that Chaucer satirized the Church—above all, that the fourteenth and twentieth centuries are separated by a great disparity of conditions. We do not think that Professor Kittredge has been very successful in these contentions. For example, as regards Chaucer's attitude towards the Church, one may acknowledge the beauty of his portrait of the country parson, but then we have in the same Prologue the inimitable satirical pictures of the monk, the friar, the summoner, and the pardoner. As for the tales themselves, what a modest rôle the priest plays on the journey, as compared with his more worldly fellow-ecclesiastics! After all, when everybody was attacking the Church as it was then constituted—and justly enough—it would have been strange if a clear-headed humorist and man of the world like Chaucer had not joined in. Moreover, to say nothing of his contemporaries, we cannot acquit of a proneness to digression the writer who inserted a summary of the "Æneid" in his description of the temple in the "House of Fame," and who spun out beyond the requirements of humor the learned discourse of the cock in the Nun's Priest's Tale. Does it not also betray a wide difference between our own age and Chaucer's when we find him penning with equal sincerity the Miller's Tale and a translation of Pope Innocent's treatise on the "Wretched Condition of Mankind"? Professor Kittredge has, of course, reflected on these familiar instances before advancing the views which we have cited, but it is hard to understand how, having done so, he should have reached such conclusions. There is something of the same paradoxical spirit in his denial of the quality of naïveté to Chaucer. One may say, perhaps, with some truth, that this was a quality of the age, but, if so, in this, as in other things, the poet was the child of his time. The Prioress's Tale, the Clerk's Tale, the digressions cited above, all illustrate this quality, to say nothing of many a line where the artless addition of a phrase to gain a rhyme or to fill out the requisite number of feet excites a smile in the reader of a more sophisticated generation. Take, for example, such lines as "Swiche as men callen daysyes in our toun." The flowers were so called, of course, in every man's "town," but a rhyme was needed here for "affecciouN" in the next line. Similarly, Troilus bids Pandarus preserve his ashes "In a vessel that men clepeth an urne," and Palamon and Emily are united by the bond "that highte matrimoigne or mariage." We have never felt convinced that the line, "Right as our firste lettre is now an A" ("Troilus," I, 170), which Professor Lowes interprets as implying a compliment to Anne of Bohemia, was not merely another instance of this naïveté of expression.

The lecture on the "Book of the Duchess" constitutes the most elaborate criticism of this poem that we have. Professor Kittredge has shown very well how the elegy is a tissue of conventions borrowed from contemporary French poets, and yet how these conventions have been vitalized. He has aimed especially at bringing into relief its dream character, to which it owes the haunting charm that "eludes analysis, but subdues our mood to a gentle and vaguely troubled

pensiveness." It is not Chaucer who converses in the forest with the mourning husband, but a dreamer whom his dramatic imagination has created to accord with the sense of the transitoriness of life, love, and happiness which the fate of the mourner awakens.

Just as the "Book of the Duchess" is the love-vision of the French poets adapted to the purposes of personal elegy, so, according to Professor Kittredge, the "House of Fame" is an adaptation of the same conception to a "wonder-journey of intense ironical significance." He rightly rejects ten Brink's effort to read an allegory of Chaucer's own life into the First Book. "The temple and the desert are simply devices to transport the poet into the fantastic regions of dreamland where the eagle can swoop down on him conveniently." The author's discussion of the "House of Fame" appears to us thoroughly sound, and the same thing is true of his lecture on "Troilus." We note here particularly the pages on the relation of the love-story to the mediæval code of courtly love and the analysis of the characters of Troilus, Pandarus, and Cressida. The last-named he takes to be neither a victim nor a scheming adventuress. She is not insincere in her love for Troilus, and she does not encourage him out of any selfish regard to her personal interests. When she seems to be turning her mind to such considerations, "she is merely seeking to justify to her reason the interest she is beginning to feel in her gallant lover." She is the same to the end as at the beginning, "amorous, gentle, affectionate and charming altogether, but fatally impressionable and yielding. Her strength of will is no match for her inconstant heart."

The two concluding lectures on the "Canterbury Tales" call for less comment. Only the dramatic quality of the Tales, which is striking enough, to be sure, is overemphasized. "From this point of view (*i. e.*, of structure), which surely accords with Chaucer's intention," says Professor Kittredge, "the Pilgrims do not exist for the sake of the stories, but vice versa." A mere comparison of the number of lines given to the tales and the connecting links, respectively, shows, however, that the "Canterbury Tales" is primarily a collection of stories. Moreover, the stories do not in every instance fit inevitably with the characters to whom they are assigned. So with the Merchant's Tale, for which nothing in the description of this character in the Prologue prepares us. And, *pace* Professor Kittredge, the same thing obviously holds good of the rollicking envoy of the Clerk's Tale, if, as he assumes, this outrageous piece of anti-feminist fun is to be regarded as the utterance of the Clerk. As a matter of fact, it is headed "Lenvoy de Chaucer." The lectures on Chaucer's masterpiece, however, like the rest of the book, are written with lively sympathy and, as it is hardly necessary to add, with a full grasp of the material, and they make agreeable reading, both for the scholar and the general reader.

CURRENT FICTION.

A Bride of the Plains. By Baroness Orczy. New York: George H. Doran Co.

It is no disparagement of Baroness Orczy's tales of romance and adventure like "The Scarlet Pimpernel" and "The Laughing Cavalier" to say that we welcome cordially her departure in manner in the present volume. Indeed, almost an ideal way for the gifted author to spend the rest of her career would be in writing alternately these two styles of fiction. "A Bride of the Plains" has a timeliness—can we help judging everything now by the norm of slaughter?—which is emphasized in the touching dedication to Louis Kossuth: "What would you have said now—O patriot and selfless hero—had you lived to see the country which you loved so well . . . tied to Austria's chariot wheel, the cat's-paw and the tool of that Teutonic race which you abhorred?" The Baroness but voices the sentiment universally felt by those of her adopted country towards one—and that one perhaps the bravest—of the peoples with whom they are at war. Save for the preface, there is nothing of war in Baroness Orczy's new novel, although the first chapter opens with a vivid picture of the departure of the lads of a Hungarian village for their three years of military service. For the rest, while by no means devoid of interest in incident and plot, the book is principally valuable for its detailed and sympathetic description of life in a Hungarian village, among some of the simplest, merriest, and most charming people of Europe. Even those whose sympathies are most strongly on the side of the Allies in the war, if they read this book, cannot but find some consolation for the enforced retirement of the Russians from their positions in the Carpathians in the thought that these smiling plains of which Baroness Orczy gives so picturesque a description, have been spared, for a time at least, the desolation which follows in the wake of marching armies.

The Red Geranium. By William Carleton. Boston: Small, Maynard & Co.

Romance in workingmen's budgets and pictorial possibilities in agricultural bulletins—these are Mr. Carleton's own peculiar discoveries. We do not know of any one more likely to promote an active belief in scientific farming among rural readers, nor any one who more temptingly sets forth the substantial advantages which modern farm life has to offer the city dweller, nor of any public service better worth rendering than these. Certainly, American audiences for whom making a living is ever the dominant theme are little likely to find fault with him as a story-teller. His imagination frankly balks when it is a question of the terrors besetting a resourceless mother of three in the city without a heart, but once past this uncongenial situation there is no gainsaying his persuasive pen, as he has shrewdly hastened to disavow all the more widely suspected fallacies as to fortunes in poultry and other too, too hopeful illusions of the amateur countryman. He can figure out a heroine's livelihood in red geraniums, and a fair margin of profit for a hero who supplies tenement babies with certified milk below market prices—and that with a reasonableness in which there is a touch of positive genius. His calculations, at once inspiriting and plausible, will afford the disinterested a thrill of satisfaction akin to that which Stevenson professed to derive from the inventory of Crusoe's salvage.

The Seven Darlings. By Gouverneur Morris. New York: Charles Scribner's Sons.

The author of this comedy has made sure his place as an interpreter for those who chew gum of what they call the Four Hundred. That the sextet of heroines here provided have the souls of gum-chewers beneath the surface of their amazing beauty and social security will doubtless give them the last supreme endearment for their predestined clientèle. Mr. Morris has done all that is necessary in the direction of making them otherwise human, and Mr. H. C. Christy, who, with Mr. C. D. Gibson, has also settled down to the manufacture of chewing-gum, charmingly decorates the package with his well-known "types." The thing is all about a brother and six sisters who are left with nothing but an expensive "camp" in the Adirondacks, turn it into an inn, and promptly pair off with the first guests who arrive. That is putting it baldly, of course. There are various episodes sufficiently "piquant" to arrest momentarily and thrillingly the busiest youthful jaw.

Waiting. By Gerald O'Donovan. New York: Mitchell Kennerley.

The theme of this story has now become almost hackneyed, and the present writer has failed to give it special freshness of interpretation. Like Mr. O'Donovan's "Father Ralph," this is an uncompromising picture of a priest-ridden Ireland. As before, a sharp distinction is drawn between the few and for the most part powerless priests of spiritual and intellectual force, and the ruck of ignorant and self-seeking oppressors of the people. Father Ralph's solution was to leave the church and to leave Ireland. The Maurice of the present tale is not a priest, but a schoolmaster with the makings of a statesman. His independence early makes an enemy of Father Mahon, the priestly bully of the tale, who has officially the whip-hand as "manager" of Maurice's school. This school is by law secular and undenominational, but is really under the control of the church, and when Maurice outrages Father Mahon by asking for a dispensation to marry a Protestant (a dispensation which he is in no position to buy), he is dismissed from his post. Maurice marries his Protestant at a registry office, and becomes a not unsuccessful journalist. When, however, he follows his inclination and capacity into active politics, a churchly issue is made against him on the grounds of his marriage, all the

authority of the priesthood is marshalled to defeat him, and he is easily beaten at the polls by a rich and scoundrelly publican. Mahon's culminating act is a refusal of absolution to Maurice's old and dying friend, because he has supported Maurice in his marriage, and now harbors his wife and child under his roof. "You'll get no sacrament, no absolution, no communion, no anointing from me, a priest of God, till you repent of your sin, and make reparation to me and God by turning out these people from under your roof." But old Driscoll will not buy salvation at that rate: "God won't ask me to do what I haven't the heart to do myself—His own Mother, they say, was once turned out in the snow, and He within her." In his spirit Maurice determines to stand by Ireland, in the hope of a better day: "Truth and freedom must come of faith and love—we'll stay here, working, enduring, waiting." Which interprets, at last, the title of the story.

AN ESSAY ON ESSAYISTS.

The English Essay and Essayists. By Hugh Walker. New York: E. P. Dutton & Co. $1.50 net.

Like most of its predecessors in the series, The Channels of English Literature, this work is thoroughly readable. As a piece of literary history, however, it still leaves something to be desired. We had no extended systematic account of the essay, and Professor Walker has not altogether supplied the deficiency. For the general reader, he has provided an agreeable introduction. For the student, he has rather revived pleasant impressions than pointed out fresh prospects. He raises the really difficult question of defining his subject, but he dismisses it unanswered. Though he hints at a distinction between "essays of the centre," like Lamb's, and essays of the periphery, like Fuller's, he admits or excludes almost any piece of expository prose without reference to any clearly stated or maintained principle.

Let us illustrate his somewhat casual procedure. He has a chapter on the "character-writers"; and, of course, he admits the imaginary portraits of the De Coverley papers; but he has not a word on the imaginary portraits of Pater, whom, with a brief condemnation of his philosophy, he relegates to the domain of literary criticism. He admits the "Biographical Studies" of Bagehot; but he does not mention Walton's "Lives." He touches on White of Selborne and gives a page and a half to the hectic revery and word-painting of Richard Jefferies; but he says nothing of Walton's "Complete Angler," which is for the most part in the perfect vein of the essay-according-to-Montaigne. He discusses the letters of Junius and the pamphlets of Paine; but he ignores the indubitable essays of Jeremy Collier, Shenstone, and Edward Young. He includes Fuller's "Holy State," Browne's "Religio Medici," and Coleridge's "Aids to Reflection"; but he leaves quite unnoticed the "Meditations and Contemplations" of Hervey and Traherne's "Centuries of Meditation." He yields, though grudgingly, a place to Ruskin's lectures on art; but passes in silence the admirable "Discourses" of Sir Joshua Reynolds. He declares that lecturing and laying down the law are "utterly foreign to the spirit of the essay"; yet in the previous chapter on the "historian-essayists" he has treated such lecturers and absolute law-givers as Carlyle, Macaulay, Froude, and Freeman. In the end, one is rather more than less in the dark than before as to the nature of the genus "essay" and its "species."

Professor Walker is apparently satisfied with the time-honored notion that Bacon was the father and Montaigne the grandfather of English essayists—which is as much as to say that he is comparatively incurious about literary origins, relationships, and influences. The true relationship between these two worthies, who are from nearly every point of view so conspicuously dissimilar, awaits the elucidation of an investigator who will compare them both not only with their contemporaries, but also with the "essayists" of classical antiquity—Plutarch, Tacitus, Seneca, Cicero, Plato, and Aristotle—to whom they are both so deeply indebted, and to whom many of their successors made independent returns. An extended discussion of the essay in England might reasonably be expected to make some acknowledgment that the essay was not "invented" in England nor in France. It might be expected to call attention to a certain analogy between the Epicurean self-examination of Montaigne and the religious self-examination of monastic writers, and to trace to mediæval and other sources the mystic elation of religious essayists of the seventeenth century. It might be expected to show how fresh foreign models, such as La Bruyère, as well as social forces and periodical publication, operated in the eighteenth century to give to the essay a social, objective, and satirical character. It might be expected in discussing such a writer as Hazlitt to bring out not merely his flashing intelligence, but also his romantic sensibility; to relate him not merely to the Restoration wits, whom he loved, but also to Rousseau, whom he adored. To write an account of the English essay without mentioning the author of the "Confessions" and the "Rêveries"—and Professor Walker does not mention him—is to ignore its second Montaigne; is to be just a bit "insular."

The virtue of the book is in its wholesome æsthetic treatment of individual authors, rather than in any notable additions to literary cartography. It presents fairly adequate appreciations of many admired writers from Bacon to John Synge. It says in general just about what one should expect it to say; but its prevailing orthodoxy is occasionally relieved by an attempt to touch up a neglected reputation or to make a new point for an established celebrity. There is a well-merited flash of enthusiasm for the mellifluous gravity of Drummond's "Cypress Grove"; an approving nod for Clarendon; an interesting exaltation of Goldsmith at Addison's expense, with a special plea for the recognition of the "inspired idiot's" philosophical and political wisdom; a strong accent upon the "wisdom" of Lamb, which few will resent; a good word for the obsolescent Alexander Smith; a place for Gissing just below Stevenson; and friendly salutes for the recently departed shades of Leslie Stephen, Richard Middleton, Andrew Lang, and Francis Thompson. An honest, substantial volume; one is among old acquaintances; their quips and aphorisms bear repetition; and one is soon enough at the last page—in excellent humor. As an extended essay on the essayists, one is ready to give it a cordial welcome.

A FORECAST OF THE WAR.

The Anglo-German Problem. By Charles Sarolea. New York: G. P. Putnam's Sons. $1 net.

"Europe is drifting slowly but steadily towards an awful catastrophe which, if it does happen, will throw back civilization for the coming generation, as the war of 1870 threw back civilization for the generation which followed and which inherited its dire legacy of evil." This is the opening sentence of a most interesting book, published in 1912, the fulfilment of whose prophetic insight we are witnessing to-day. So remarkably, in fact, have the author's predictions been fulfilled, and so well have his assertions been justified by events, that one can easily pardon the rather complacent "Foreword" to the edition of 1915, much of which is an elaboration upon the theme, "I told you so!"

Mr. Sarolea is "a Fleming by birth and a Dutchman by origin," who has spent years in close study of German history, literature, and ideals, and who in 1912 felt moved to write out the conclusions to which his studies had forced him concerning the relations between England and Germany, conceiving that a recognition of the truth by both countries was the only thing that could avert an armed conflict. His work covers a wide field, but its leading theses may be reduced to two: first, that Germany's grievances against England are, for the most part, imaginary; and, secondly, that the causes of conflict between the two nations are by no means imaginary, but are to be found in essentially incompatible ideals. In the preface of 1912 he writes:

> The present conflict between England and Germany is the old conflict between liberalism and militarism, between progress and reaction, between the masses and the classes. The conflict between England and Germany is a conflict, on the one hand, between a nation which believes in political liberty and national autonomy, where the press is free, and where the rulers are responsible to public opinion, and, on the other hand, a nation where public opinion is still muzzled or powerless, and where the masses are still under the heel of an absolute government, a reactionary party, a military Junkertum, and a despotic bureaucracy.

Assertions of this latter sort about Germany

are, of course, common enough to-day, and, in fact, they were common even in 1912; but nowhere else, so far as the reviewer is aware, is there to be found so logical and convincing and unprejudiced a massing of facts in support of the assertion. With fine mastery over his material and a keen insight into the nature of the issue, the author analyzes such matters as the almost universal distrust of Germany in 1912; the contrast between Prussia and Southern Germany, and the mastery of the former over the latter; the tendencies towards reaction in Germany; its sham democracy; the Prussian idealization of the state; the stupid oppression meted out by the Government to its Polish subjects; the unsteady policy of the Kaiser, whose influence, in spite of his real desire for peace, has tended almost entirely towards militarism and the war spirit; and the futility of German Socialism, which, with all its talk of peace and progress, is really the mainstay of reaction and militarism, since the Government constantly uses it as a bugbear to frighten the Liberals into the arms of the Junkers.

Mr. Sarolea brings equal ability and learning to the analysis of the German grievances against Great Britain. These are chiefly two: namely, that England has prevented the expansion of German commerce and colonization, keeping her from a place in the sun; and that, under the guidance of Edward VII, that arch-plotter, she has stirred up Europe against Germany, encircled and isolated her, and "that in the Concert of Europe she has wrested the conductor's bâton from the hands of the Kaiser." The first of these grievances is disposed of rather easily by showing that Great Britain, with her free trade and her many colonies, has been Germany's best customer and best friend, and that Germany's lack of colonies is due, first, to her late arrival in the game of colonial expansion; secondly, to Bismarck's throwing away of what opportunities she had; and, thirdly, to the fact that Germans lack the qualities of adventure and the training in self-government that make successful colonists. For the second grievance there seems at first to be some ground. Certainly, if we compare the position of Germany at the Berlin Conference in 1878 and her position at Algeciras in 1905, her loss of prestige is sufficiently striking. But to lay all this to Edward VII is, in the author's opinion, a very amateurish way of reading history. In Germany's own conduct is to be found a quite sufficient reason for the falling off of each of her old supporters. The cordial friendship of England she certainly might have retained had she not, by brooding over imaginary grievances, and by enthusiasm for England's enemies, nursed among her people a jealousy of British colonial expansion and an unreasoned dislike for their island neighbor; and by the upbuilding of her fleet, the talk of her Kaiser, and the direction of her policies forced England to search for other allies.

As this review will indicate, Mr. Sarolea's book is frankly partisan in its critique of Germany and its defence of England. But this does not mean necessarily that its author is prejudiced. Certainly he has had every opportunity to form an impartial judgment. And, however one may feel about his conclusions, the facts which he presents and his method of handling them are such that few will read his book without gaining new insight into the great political problem of the day.

THE RUSSIAN SOCIAL-DEMOCRATS.

Modern Russia. By Gregor Alexinsky. New York: Charles Scribner's Sons. $1.50 net.

The author was a Deputy in the short-lived Second Duma, a member of the so-called Majority Social-Democratic faction, one of its leaders and its best speaker. He was elected to the Duma from the workingman curia of Petrograd, and had been in charge of lectures in courses organized for workingmen. He had also engaged in the work of local provincial councils, had been one of the so-called "third element," which, of all classes, has come into actual, close contact with the peasantry. He is therefore able to give us an interesting point of view on many aspects of Russian history and politics; and, as he explains, he is giving in this book a "small encyclopædia of Russian life." It is important, as well as interesting, that the views of the Russian Social-Democrat should become more widely known to the English-reading public.

The writer takes the usual attitude of the urban Socialist towards the peasant; for him the peasant is a potential, if not an actual, bourgeois—a word which appears, in italics, throughout the text. The writer speaks of the "romantic hopes" of that branch of Russian Socialists who devoted their attention to the peasantry. Similarly, he tells us that "the Russian novel of the nineteenth century, with such masters as Gontcharov, Turgenieff, and Tolstoy, was largely the fruit of 'aristo-serf' culture." Tolstoy was educated in a pre-capitalist environment, which left its mark on him. The writer quotes at length from the work of a young scholar, Pavlov-Silvansky, a Social-Democrat, who writes particularly on the question of feudalism in Russia; but, as the author states, the views of this scholar represent the opinion of a minority among Russian historians.

At many points we find the orthodox economic interpretation of Russian history. In speaking of the reforms of the law courts of 1864 the author says: "The new justice was evoked by new economic necessity; the development of the capitalistic production and exchange calls for the protection of the person and material property of every Russian, a protection which the old judicial system could no longer extend." He accepts the usual and much-exploited idea of an inevitable antagonism between Russia and England in their respective imperialisms; he sees no basis for common economic interests between the two countries. Treating of the subject of other than economic antagonisms, he declares: "We have a right to assert that the revolutionary movement of the popular masses, the working class, the peasants, and the army and the navy is the best and principal guarantee of a pacific attitude on the part of the Russian monarchy." Recent facts tend to invalidate his conclusions made a year ago.

It is always the Russian Social-Democrat that we recognize clearly in the author's interpretations of Russian politics and life. The present Duma is even less than useless. The Second Duma failed because the Liberals were too cowardly. It will be recalled that the Second Duma was dissolved because the Social-Democratic members had interpreted their mandate from the people as obliging them to keep in touch with soldiers as well. They had received petitions from soldiers in active service, "in which the soldiers expressed the cause of their discontent." The writer is, however, always careful to state that he represents only one section of the Russian public, for by no means all the Russian "intellectuals" are Socialists: "The disciples of Socialism form the most democratic sphere of the intellectual classes, and the highest sphere (professors, advocates, engineers, etc.) is in sympathy with the *bourgeois* Liberals and Radicals."

It is important that we should learn the views and programmes of all political parties in Russia, and Mr. Alexinsky is well qualified, particularly by reason of his broad, practical experience in public life, to give those of the Russian Social-Democrat.

CITIZENS FROM SCANDINAVIA.

The Scandinavian Element in the United States. By Kendric Charles Babcock. Urbana, Ill.: University of Illinois Social Studies, Vol. III, No. 3. $1.15.

This careful study of the immigration from Sweden, Norway, and Denmark, in its relations to the progress of the West, is presented as a part of the story which has supplanted the views of the New England school of historians, but it has not altogether renounced their methods. It offers a detailed account of whatever religious motives have influenced the course of Scandinavian immigration—though the author finds that the most notable experiment in this kind, the Swedish settlement in Illinois in 1846, was founded on economic or philanthropic rather than religious motives. The failure of this communistic society did not indicate that Scandinavians were unfit for industrial coöperation; and a discussion of the indebtedness of the Middle West to later immigrants for the development of co-operative dairying would have added to the value of this work. It is shown that the stream of immigration from the Scandinavian countries was largely directed to Minnesota and the adjacent States by an organized appeal to the economic motive by State governments and railway companies; and the agricultural progress due to this

movement is graphically described. But it is not pointed out that these immigrants, the Norwegians especially, are almost as apt to be seamen or fishermen as farmers. The notable advance of the Scandinavian element on the Pacific Coast, where it constitutes more than a fourth of the foreign population of cities like Seattle and Tacoma, is largely due to opportunity for maritime pursuits. The Scandinavians are more capable of founding homes without giving up going to sea than other mariners.

As might have been expected from Dr. Babcock's previous works, the question of education is competently handled. While the Scandinavians are credited with loyalty to the public school system, it appears that there has been some misdirected effort in keeping up parochial schools and in multiplying poorly equipped seminaries and colleges to which it is difficult to attract pupils. The Grundtvigian "high schools" are mentioned as keeping alive the traditions of Denmark; but we are not told whether they have done anything in America to promote the organization of rural communities in the Danish fashion. The redemption of agriculture in Denmark during the last generation has been associated with the educational ideas of Bishop Grundtvig—who surely deserves a place in the index of this volume. The campaign in Wisconsin in 1889 against compulsory education in English is narrated, though the results are rather vaguely stated, and the Minnesota statute of 1883, which provided for a "professorship of the Scandinavian language and literature in the State University" is denounced for the looseness of its terms. Had the nouns been plural, the clause might pass without censure.

The considerable political activity of the Scandinavian immigrants is discussed with candor and moderation. It is curious to find them voting steadily against saloons and the liquor traffic, in view of the European standard in such matters; but it may be that the occasional indulgence in raw alcohol, which has been noted in the case of many of the Swedes, has caused mischief enough, especially in promoting insanity, to account for the feeling in favor of restriction. On the whole, Dr. Babcock is fortunate in dealing with a body of immigrants whose moral and political progress towards complete Americanization presents so few problems. The history of previous assimilation in Great Britain is of favorable augury, which is borne out by the records of some millions of our fellow-citizens of Scandinavian stock. Though the services of such men in the armies of the Civil War are acknowledged, something might be said of the value of the same element in the navy, where scores of Scandinavian seamen have become warrant officers.

The author sees danger in the demands for "recognition" in the distribution of offices on the part of "Swedish-Americans or other hyphenated Americans"—he was writing before last September; but he sums up by assigning "a mighty, silent, steadying influence" for peace and righteousness to the Scandinavian immigrants. The book closes with a valuable critical essay on materials and authorities and a series of tables derived from the reports of the census. The index is rather scanty, though it offers topics as well as proper names.

Notes

The Macmillan Co. announces the forthcoming publication of "The Pentecost of Calamity," by Owen Wister.

"Marie Tarnowska," by Anne Vivanti Chartres, and "Habits that Handicap," by Charles B. Towns, will be published shortly by the Century Co.

The following volumes are announced for publication on August 28 by Henry Holt & Co.: "American Diplomacy," by Carl Russell Fish; "Some Musicians of Former Days," by Romain Rolland; "Jane Clegg," by St. John Ervine.

The Writers' Publishing Co. announces the forthcoming publication of "Dennis Hathnaught," by James Philip MacCarthy, and "The Serio-Comic Profession," by L. J. de Bekker.

The announcement a year ago that a civil government was to be established in the Canal Zone naturally gave the impression that some other form of government had existed previously, and the further step of naming an army officer as Governor seemed to mean military instead of civil rule. It was the purpose of George W. Goethals, Governor of the Canal Zone, in the Stafford Little lectures at Princeton this year, to remove this impression by showing that essentially the Government of the Canal Zone is now what it has been since April 1, 1905—"a Government by executive order." The only real difference is that the system formerly prevailing rested upon the Executive orders of President Roosevelt, the last one of which, vesting all authority in the chairman of the Isthmian Canal Commission, "while not in exact accord with the law, secured the end desired," while "the new conditions are founded on law." Gov. Goethals's lectures, now put in book form ("Government of the Canal Zone"; Princeton University Press; $1 net), trace the administration of the territory from the treaty with the new republic of Panama in 1903 to date.

The first two volumes of "A History of England and the British Empire," by Arthur D. Innes, as noted in an earlier number of the *Nation* (March 26, 1914), reached to the year 1689. The third and fourth volumes, now before us (Macmillan; $1.60 each), extend respectively to 1802 and to the outbreak of the present war. As the British Empire expanded enormously during these two centuries and a quarter, the author's task of giving adequate attention to the growth of its component parts and yet of avoiding a mere patchwork of disjointed details, became more difficult. But he has met his task with good skill and success. The material is blocked out clearly and simply. Paragraph headings, maps, and a good index in each volume will be welcomed by students. As in the earlier volumes, the author sums up effectively at intervals the most significant constitutional, economic, and literary movements of a period. He is never tempted into fine writing, nor does he have a distinct style, as did Green and Froude and Macaulay; but his short, vigorous sentences are clear and well suited to his purpose. His history ought to find favor with those who want a consistent and up-to-date account of the growth of the British Empire, which will be fuller than the school textbooks and less heavy than the many-volumed coöperative histories of England.

Among pro-German advocates, Prof. Kuno Francke has the exceptional merit of dignity and moderation—based naturally on respect for the opinion he is fain to attack. These qualities are prominent in the little book, "A German-American's Confession of Faith" (B. W. Huebsch; 50 cents net). We have a selection of the author's letters to the press, and magazine articles of recent months. With the origins of the war he does not deal explicitly, though he plainly shares the notion of *Einkreisung*. He dwells rather upon the positive political merits of the German system, upon the ability and representative character of the Kaiser, upon the intense patriotism of the race. When, however, he represents Germany as struggling for the freedom of the seas, and deserving of international support in the endeavor, his sense of humor, to say the least, is at fault. In a century the most serious impairment of the freedom of the seas has been the submarine warfare. Professor Francke, in seeing straight the issue of exporting arms and the duty of German-Americans at this crisis, has shown admirable poise and great courage. Declining to associate himself with separatist movements, he admits that to permit the traffic in munitions, however morally reprehensible, has become a part of our duty as a neutral. We have no right to change conditions during hostilities in a manner favorable or unfavorable to any of the combatants. Professor Francke's cool sense in this disputed case contrasts very favorably with the sophistical distinctions recently advanced by the expert in international law, Professor Burgess. Poems, in German, scattered through Professor Francke's text attest the depth of his German feeling. We wish his book a wide reading, both here and abroad. He is the spokesman of that silent majority of German-Americans who, with their new loyalty to America intact, still sympathize with the Fatherland in its ordeal. It is well their voice should be heard. They have been sorely misrepresented by self-appointed agitators. Professor Francke's loyal, calm, yet deeply felt utterances do much to restore the true balance of things.

Those who have puzzled themselves over the rather confusing data presented in the "Compendium of Philosophy," translated a few years ago by Mrs. C. A. F. Rhys Davids, will welcome the concise yet clear exposition of Buddhist Psychology given by the same competent scholar in the little manual of the Quest Series, entitled "Buddhist Psychology. An Inquiry into the Analysis and Theory of Mind in Pali Literature" (Macmillan; $1 net). In it an attempt is made not only to elucidate the psychology of the Buddhists, but also to determine its historical growth, as revealed in turn by the Nikāya and Abhidhamma. Whether Buddhistic psychology will

ever be regarded as adding anything to our real knowledge cannot fairly be determined till we are in possession of all the literature on the subject. Possibly the works of Buddhadatta, which Mrs. Rhys Davids assures us will soon be accessible to English readers, may instruct as well as interest historically the western investigator; but it is more probable that the value of all these works will remain what it is now, and consist not in fresh discoveries, but in the demonstration that there is a certain similarity between views attained long ago in the East, and those advanced by modern European scholars. Yet from the scientific point of view, Buddhist psychology repels at the outset, since we find ourselves nonplussed by the analysis of mind on which the whole system is based. As the author herself vividly expresses it, "Our logic kicks against" a coördination of consciousness and phases of consciousness as being ultimates. Nor can we learn anything psychologically from an analysis of consciousness as moral and immoral. Yet whether we learn anything or not we cannot but be attracted by the struggles of the Buddhists to express for the first time the relation among mental factors. Thus the recognition of "neutral feeling," which "is comparable with ignorance," is perhaps illogical, but the confusion of feeling and knowledge is a phenomenon worth noting. To the Occidental, however, there remains a hopeless confusion in the fundamental distinction between *saññā*, defined as conscious state, sense-perception, and recognition, and *viññāna*, defined as a consciousness of tastes, each being an "awareness" of difference in sensations, yet making a distinct "aggregate," the latter term also representing "any awareness of mind." Mrs. Rhys-Davids is hopeful that some day we shall find a wise man of the East who will explain the logical anomaly and "do justice to the subject." More important is the treatment of Ideation, with its explanation of the Jhānas, or states of ecstatic musing, induced by auto-suggestion; in which the subject remains master of himself, not so much "possessed," as ecstatically self-possessed and able to enter into or emerge from the trance deliberately. The final chapters of this excellent book take up the "Questions of Milinda" and mediæval developments, the substitution of four for the five "aggregates" by Buddhadatta, etc. It is the clearest exposition of the project we know.

"America and Her Problems," by Baron d'Estournelles de Constant (Macmillan; $2 net), is based on recollections of various lecture trips which the author made in the interest of peace and of amity between France and America. The tour covered the country broadly, and brought the acquaintance of many academic audiences, and of our more progressive spirits generally. From such an inception, the book assumes a curious literary form. It is an interweaving of travel sketches with what are virtually short editorials on manifold issues of American policy. This journalistic impression is enhanced by running headlines, sometimes two or three to a page. It cannot be said that the literary results are engaging. The latter part of the book deals in more extended discussion and is more valuable. We have not seen a better or more impressive statement of the moral *impasse* reached in the negro question. What is said about inland waterways is timely and excellent. Entirely sympathetic and just is all the comment on our educational system, though the author is too amiable to express the real danger of intellectual plebification. What is written about German policy, evoked by Milwaukee, reads like prophecy. It was written a year or so before the war. The author was in California during the suffrage campaign, and became a willing convert to the cause. With entire consistency he is the enthusiastic champion of co-education. Very interesting is the hint of our universities as centres of antimonarchical revolution, and perhaps justified by the results in China. In a passage which rises to real eloquence, he describes the appeasing and disciplinary effect upon the workman of the new machine tools. Yet it was the housesmiths' union which made a specialty of dynamiting. There is much that is weighty and interesting in the book, but it is evident that the author dealt too exclusively with a certain type of idealist, and not unnaturally got, in the main, courteous echoes of his own pacificist views. His earnest protest against the fortifying of the Panama Canal will find many dissenters. The idea that the Suez Canal is secured by an intangible world consensus will to common-sense readers seem fairly mystical. It too plainly is secured by the British fleet. It will seem to many a doubtful service to assure Americans that the two oceans are her all sufficient guard against invasion, especially when this dictum is accompanied by a protest against our very moderate naval programme. Nor is it in accordance with our previous military experience to laud our militia as an adequate first line of defence. Again the fear that Washington is becoming imperialistic, and hence un-American, seems at least exaggerated. These appear to us the more contestible positions in a generally just and stimulating book. Such lapses are perhaps the inevitable penalty of an idealism so generous as is the author's.

A book on "The Salon and English Letters" was yet to be added to the innumerable volumes, most of them poor things, indeed, that have been made recently out of the gossip of the eighteenth century; and such a book (Macmillan; $2.25 net) has been put together by Prof. C. B. Tinker—with laudable success. The material has been well sifted, and the results have been presented with the needed lightness of touch, yet with no affectation of wit. The style has the right professional ring. Professor Tinker, for the origin of the Salon, goes back to the Italian courts of the Renaissance, of which the ideal model is portrayed in Castiglione's "Cortegiano," and from its origin and its history deduces the characteristics of the institution in Paris and London. Of the tone of the conversation he has this to say:

> It would be a simple explanation of all this respect for the Salon and its discussions to observe that England was now enjoying an age of free speech. It is even simpler to point out that there was much discussion because there was much to discuss. There were problems confronting the public which were no less important than novel. This is all true, but somewhat lacking in subtlety. The peculiar adaptability of these problems to conversation was due to the fact that they were, in general, still problems of a remote and idealistic kind. They did not yet demand instant solution, for better or for worse. Exception must, of course, be made of questions purely political, but the rest of them—the theory of equality and the republican form of government, the development of machinery, the education of the masses, humanitarianism, the problem of the dormant, self-satisfied Church, romanticism, and the whole swarm of theories popularized by Rousseau—had been stated and widely discussed, but they had not yet shaken society to its foundations. They were still largely theoretical. Men's thoughts were engaged, and their tongues were busy, but their hearts were not yet failing them for fear.

The writer of that paragraph knows the eighteenth century. And he knows its men and women. The names that first come to one's mind when the English salon is mentioned are probably Walpole, Mrs. Montagu, and Dr. Johnson, and in all three cases Professor Tinker has said the right thing. He knows how to praise Johnson; he can estimate the degree of seriousness in Walpole's mind, and can like the man while not forgetting his foibles; and he has the grace to laugh philanthropically at the prodigious Mrs. Montagu, while still seeing what she accomplished for English letters. Those are three difficult things to do, and, being done, they make a good book.

The sundial was a picturesque and sufficiently accurate method of measuring the hours, from the time when Isaiah declared that he would cause the shadow of the dial of Ahaz to move backward ten steps, down to the introduction of watches and clocks in the eighteenth century. Its simplest form was the "noon-mark" of old New England houses—a line cut across the window-sill to mark the shadow on the frame at twelve o'clock. The sundial at the present time is principally used as an ornament to "old" gardens, unconsulted, save as a curiosity, or by romantic persons like Dolly and Mr. Carter, of the well-known "Dialogues." The latter, it will be remembered, translated the motto "Horas non numero nisi serenas—" as "A woman counts all hours lost which she does not spend in the society of her husband." To make more than six hundred apposite rhymed mottoes for the dial, each with its temporal or mortal sting, would seem to be no mean task; yet it has been done by Geoffroy W. Henslow in "Ye Sundial Booke" (Longmans; $3.50 net). Here are about four hundred pen and ink illustrations of the sundials of many places and periods, each with a motto by the author. There is an overflow of a dozen pages of additional verses, generally rhymed couplets, at the end of this well-made volume. One specimen taken at random will give a taste of the quality of this ambitious Father Tabb of the sundial.

> Injure not this dial,
> Damage not your friend,
> But let me teach awhile
> Life's hours to better spend.

Needless to say, the illustrations are better made than the verses.

A more comprehensive and convenient history of our State constitutions than that given in the scattered chapters devoted to the subject in Francis N. Thorpe's "Constitutional History of the American People" has been long needed. It is furnished in a tripartite work by James Q. Dealey, entitled "The Growth of American State Constitutions" (Ginn: $1.40 net), and carrying the subject from 1776 to the present year. The first two divisions are mere labors of analysis and synthesis, one treating the development of the constitutions of the various States through conventions and amendments, the other examining contemporary instruments to determine their provisions with regard to the sev-

eral departments, the regulation of important interests by commission, the suffrage, and so on. No attempt is made to deplct the background for the various constitutional movements, as, for example, the growth of the upland farm districts which early led in the seaboard States of the South to the enlargement of the suffrage, or the agrarian discontent and other causes leading to the present radicalism in many Western States. The least formal of the three divisions, therefore, is the last, which offers certain constructive suggestions as to the probable trend of constitutional change in the next few years. These are conservative enough, for it requires no special prescience to foretell that we are certain to see a greater concentration of power In the State Executive, that the reorganization of our Legislatures will decrease the use of the initiative and referendum, and that the States are bound to follow the cities In the employment of experts and in Insistence upon civil-service rules. The volume should be equally useful as a reference book and a text.

A thoughtful attempt to estimate the mission and character of Jesus, popular in form and intended to quicken the courage and faith of the Christian reader, has recently been made by Prof. F. L. Anderson in his "Man of Nazareth" (Macmillan; $1 net). The main source employed Is the Synoptic tradition; it is not, however, rigidly adhered to, as is evident both from repeated references to the Fourth Gospel and from the remark that the kingdom of God, "looked at from the divine side, is a new birth" (p. 121). Indeed, the attentive reader may properly inquire whether, without the Johannine conception of life, the conclusion could have been reached that "the kingdom of God is first of all a spiritual kingdom within men" (p. 123). The fact that the book Is "not an Investigation but a statement of results" and that it purposely omits a detailed treatment of the evidence on which the conclusions are based explains much to which otherwise exception might be taken. It explains, for example, the Inadequate discussion of such crucial passages as Mark x, 45, and xiv, 24; it explains the failure to mention that the summing up of the Torah in love to God and love to neighbor which is one of "the elements of originality" in Jesus and is "the profoundest and most valuable contribution to ethics ever made," is assigned by Luke to a Scribe of that very Pharisaism which "so filled the whole horizon with the thought of the law, that the idea of God and immediate relation to Him was shoved (*sic*) into the background" (p. 102); and it explains the sketch of the character of Jesus in which there are singled out for mention certainty, courage, joy, love, wisdom, power, and goodness, attributes apposite in a large measure to a prophet like Jeremiah. It Is to be hoped that the author will take seriously his readiness "to defend his position In the scholarly arena"; for his openmindedness, his willingness to observe what he calls "the rules of the critical game," and his obviously wide acquaintance with the relevant literature encourage us to expect from him a solid contribution to learning.

Although the rigorous censorship of the present European war has left little opportunity for the war correspondent, the adventurous experiences of correspondents in former wars are not likely soon to lose their fascination for readers young and old. To readers who have not time for the extended biographies and other works of these earlier military reporters, F. Lauriston Bullard's "Famous War Correspondents" (Little, Brown; $2 net) may be commended. In addition to accounts of a dozen famous correspondents, from Sir W. H. Russell and Archibald Forbes to Winston Spencer Churchill and James Creelman, Mr. Bullard gives us comprehensive sketches of reporters and their work during the Civil War and the Spanish-American War, and a well worked out chapter on the rise of the war correspondent and his problematical future. The style is extremely readable, and the whole book well worth attention.

Bernier's "Travels in the Mogul Empire" has been reprinted and translated too often to need reviewing, but all scholars will welcome the new version of Constable's (1891) "Travels" as revised by the indefatigable historian of India, Vincent A. Smith (Oxford University Press; 6s. net). The references to Catrou In Constable have here been converted into references to the original "Storia do Mogor" of Manucci, recently made accessible, emendations of earlier slips and actual errors (as, for example, the origin of Hanscrit for Sanscrit) have been introduced wherever necessary (silently or through a special note), and the whole work has been thoroughly gone over by a master hand and published In one handy little volume. A book which reveals so much of India in the seventeenth century and served Dryden as the basis for his "Aureng-Zebe" will always remain valuable, and it is satisfactory to have it in what should be its definitive English dress.

"The Rise of the Dutch Kingdom, 1795-1813," by Hendrik Willem Van Loon (Doubleday; $2.50 net), embraces a period of Dutch history which has been altogether overshadowed by the infinitely greater world events which were taking place over the border in France. It is a period also of which Dutchmen have no great reason to be proud. It began with the ignoble flight of the Orange Stadholder, William V; and it was filled with a succession of subservient concessions to the increasingly insulting demands of the French. Ichabod! Ichabod! might those well exclaim who remembered the glorious days of William the Silent and William the Third. But out of this humiliation, after Napoleon's defeat at Leipzig, came the restoration of the Orange family in the person of William I as King with wide powers, and the beginning of better days, though it was not until about the year 1870, says the author (p. 259), that there was really "a more hopeful attitude in the point of view of the Dutch nation. Then, at last, it recovered from the blows of the first twelve years of the century. Then it regained the courage of its own individual convictions, and once more was ready to take up the burden of nationality." The author Is evidently well acquainted with the facts of his country's history. He has reproduced a number of interesting old prints. He conveys some information and a point of view to one who, like the reviewer, has retained sufficient patience to read the short book through from cover to cover. But his style is offensive, not because he may not be using his mother-tongue, but because of his cheap wit, inappropriate flippancy, and self-conscious attempts at cleverness.

Edward Hutton's "Naples and Southern Italy" (Macmillan; $2 net) shows the familiar characteristics of an accomplished cicerone —an agreeable style, well-proportioned information, a strong Catholic bias. Primarily it is a guide to the antiquities. Here it may be compared with Edward Lear's travels of sixty years ago. The painter had little eye but for the people and scenery. Mr. Hutton affords just about the historical background that an intelligent tourist in these seldom-visited regions will need. It is interesting to learn how the motor omnibus is opening up formerly almost inaccessible routes in Calabria. There are a number of color plates after Frank Crisp's water colors and a few photographic cuts. We note a few slips. Augustus, not Tiberius, built the Capri palaces. Giotto did not paint in the Castel dell' Ovo.

Two interesting books on the machinery of war, which largely supplement each other, are Henry Smith Williams and Edward Huntington Williams's "Modern Warfare" (Hearst's International Library Co.; $2 net), and Hrolf von Dewitz's "War's New Weapons" (Dodd, Mead; $1.50 net). The former of these is a history of the development of the principal tools of war, from the invention of gunpowder up to the present time, with special emphasis upon the weapons that are being used in the great war of our day. The two authors are experienced compilers, one of them being editor-in-chief of the Historians' History of the World, the other an associate editor of the Britannica; and while they make no pretensions here to original research, they have used their various secondary sources with skill. Their aim has been to collect and arrange a number of facts most of which are well known to military men and historians, and to answer the many questions that most laymen want to ask when they read in the newspapers of howitzers and *mitrailleuses*, and when they wonder how a submarine manages to go down and a Zeppelin to go up.

If Dr. Williams deals in facts, Baron von Dewitz gives us facts, fiction, and philosophy. The facts form the bulk of the volume; the fiction is injected in poetical descriptions of imaginary battles used as introductions to the various chapters; and the philosophy is intermingled with the facts and the fiction, and added in unadulterated form in a Preface and an Epilogue. Unlike "Modern Warfare," "War's New Weapons" deals only with the present world conflict, and, being written by a man who (as Mr. Hudson Maxim says in his Preface) "has a masterful knowledge of military tactics and the philosophy of warfare," it presents the reader with a good deal of interesting and useful information. The tone of the book, however, is decidedly different from that of Dr. Williams's handy encyclopædia. For the Baron is not an editor of a History of the World or of the Britannica, but a military man and a philosopher, and he seldom tries to hide his patronizing contempt for the ignorant civilian—and particularly the American civilian—for whose instruction his book is written. Nor is the Baron satisfied with a mere presentation of the facts about war's new weapons. He has, be it remembered, "a masterful knowledge of the philosophy of warfare"; and the moral of the importance of preparedness is ever to the front. Moreover, though the Baron is a subject of Denmark, one of

his principal aims is to set the American public right on the question of Germany's innocence and especially of her all-round superiority. England, to be sure, has a larger navy, but the German submarine has nearly made up for the English Dreadnoughts, and the secret big naval guns and the super-Zeppelins which Germany probably has up her sleeve may yet more than counterbalance the initial advantage of the Allies upon the sea; while in nearly every other kind of war tool, including super-commissariat and super-strategy (and apparently also supermen), Germany is far better supplied than her foes. One exception, however, should be made—namely, the fountain-pen, which as a war weapon in the hands of English and American correspondents has done great deeds for the Allies and has completely misled the American public on many important questions. The book is prefaced by a short sermon by Hudson Maxim, who, taking the whole work as his text, draws the moral in the shape of a terrible picture of this country invaded by an up-to-date army of any number you please, from 100,000 up, equipped with war's new weapons, to which America is able to offer absolutely no effective resistance. Such a picture presents, in Mr. Maxim's view, not a remote possibility, but a very real probability in the near future, unless we rouse ourselves from the valor of ignorance and arm to the teeth at once. For it is his opinion, deliberately expressed, that "whichever side wins [in the present war], the United States will likely have to fight the winner within a short time after the war is over."

Arthur G. Sedgwick, who killed himself in a hotel in Pittsfield, Mass., on July 14, was a New York lawyer and a distinguished critic and had served for several years on the editorial staffs of the *Nation*, the *Evening Post*, and the *American Law Review*. He was the son of Theodore Sedgwick, of New York, and great grandson of Judge Theodore Sedgwick, Speaker of the House of Representatives, 1799-1801. Mr. Sedgwick contributed much to the literature of his profession, editing several editions of Theodore Sedgwick's "Treatise on the Measure of Damages" and collaborating with Frederick S. Wait in a "Treatise on the Trial of Title to Land." In 1908 he was asked to deliver the Godkin lectures at Harvard, which were started in 1903 in memory of Edwin Lawrence Godkin, for many years editor of the *Evening Post* and the *Nation*. Mr. Sedgwick was born in New York on October 6, 1844. He graduated from Harvard in 1864, and from the Law School in 1866. In 1870 his university gave him the honorary degree of Master of Arts. He served in the Civil War. Mr. Sedgwick's connection with the *Nation* began, as he wrote in his contribution to the semi-centennial number only two weeks ago, in 1868, when he contributed weekly letters, while editing the *American Law Review* with Justice Oliver Wendell Holmes. In 1872 he came to New York to take up the position of assistant editor of the *Nation*. Nine years later he became an editor of the *Evening Post*. In 1886 Mr. Sedgwick was sent by Secretary Bayard to Paso del Norte and Chihuahua, Mexico, to examine the papers in the Cutting case. During the previous winter he delivered at Lowell Institute a course of lectures on "Lawyers." Mr. Sedgwick was a member of the New York Bar Association and of the Century Association.

Drama

Under the title of "Chief Contemporary Dramatists" (Houghton Mifflin; $2.75 net), Prof. Thomas H. Dickinson has published twenty plays, as representative of the best product of the modern movement in the theatre, by English, Irish, American, German, French, Belgian, Norwegian, Swedish, and Russian writers. In a modest preface he sets forth the somewhat elastic principles which governed his selection and the obvious difficulties attending a task of which the ultimate value and utility must be somewhat doubtful. The modern movement, as he sees it, may be defined roughly as that which is commonly, but not always accurately, ascribed to Ibsen and his disciples. Mr. Dickinson disarms captious criticism by his frank acknowledgment that many students will decline to accept his selection as complete and authoritative. He hints, moreover, that in some cases he has been compelled to subordinate his own opinion to that of the authors concerned. Manifestly he has attempted the impossible. The mass of matter is too great to be sampled fairly within the prescribed limits. It may be readily conceded, however, that he has compiled an interesting and instructive volume for the casual reader, and, in most instances, has exhibited sound judgment. Mr. Dickinson expresses regret, without assigning any reason, for his inability to include any play by Shaw or Barrie, and explains the absence of Ibsen by the fact—which applies, of course, equally to many others—that he could not be fairly represented by a single piece. This last remark would not be valid in the case of St. John Hankin or John Masefield, either of whom could fill profitably the pages alloted to Strindberg. But Mr. Dickinson furnishes a liberal allowance of good reading.

In the preface to his "Theatre of Ideas" (Doran; $1), Henry Arthur Jones, referring to his own experience, seems inclined to adopt the ancient heresy—beloved of most modern managers—that the public and the critics are incapable of appreciating really good plays, and that, therefore, to write or produce them generally results in waste of labor and money. He cannot seriously believe it. The ample success of his own best works is a sufficient refutation. Moreover, the acknowledged masterpieces of drama, adequately interpreted, have always been supported by the masses. Plays of great merit sometimes fail, undoubtedly, but it by no means follows that their failure must be attributed to their virtues. It might be hinted that authors are not always the least fallible judges of the absolute values of their own inventions. Mr. Jones, who is nothing if not self-reliant, would not subscribe to that notion. But on most theatrical subjects he speaks with great authority, and he is a fluent and entertaining writer. Skeptical as he is on some points, and radical on others, he is at heart an essential conservative. His contempt for faddists of all sorts, in and out of the theatre, is infinitely wholesome and refreshing. It is as an apostle of common-sense that he laments the disappearance of true burlesque from the stage. He professes an ambition to revive that form of pungent satire in order to assail the varieties of current humbug, impervious to the lighter shafts of comedy, with the savage strokes of the humorous bludgeon. He is, perhaps, somewhat too fond of that homely weapon. Some of his best work is at times marred by over-emphasis. His burlesque sketch, "The Theatre of Ideas," which he has cast in narrative instead of dramatic form, contains much robust and well-aimed satire, with some humorous illustrations not unworthy of their model; but it would be more effective if it were a little less extravagant. It could be greatly improved by judicious pruning and editing. His plea for the one-act play is timely, and it is to be hoped that he may be encouraged to continue his efforts in this direction. His "The Goal," printed in this volume, was one of the most notable one-act pieces produced in the Princess Theatre, and is in many ways a striking and excellent bit of workmanship. "Her Tongue," described as comedy, but really more akin to farce, tells how a silly woman frightened off a desirable wooer by foolish chatter. Two-thirds of it is admirable, but in the end the designed effect is weakened, if not destroyed, by the undue prolongation and elaboration of a capital comic situation. In his little Cornish tragedy, "Grace Mary," he ventures upon the dangerous expedient, in a modern play, of a speaking apparition. In itself, it is a moving and vigorously written tale. A Puritanical old fisherman exacts from his daughter—to whom he is devoted—an oath that she will neither see nor listen to her drunken, ne'er-do-well lover. The latter, knowing her to be within hearing, vows to devote himself to eternal perdition if she will not come to him. Distracted by conflicting emotions, she dies of a broken heart, but her wraith appears to the frenzied lover and pledges him to reform, promising to rejoin him in the beyond. The piece exhibits literary and technical skill, and is theatrically and emotionally strong.

There is cleverness of an uncommon kind in the half a dozen one-act plays which Percival Wilde has published under the title of "Dawn" (Holt; $1). They are well written and exhibit genuine dramatic instinct, as well as a keen sense of theatrical situation. Moreover, they indicate an excellent inventive faculty, all the plots being ingenious and, in their way, effective. Most of them take unexpected turns, the dramatist evidently having great faith in the efficacy of surprise, which is always a dangerous expedient. The ordinary audience is apt to resent a trick which upsets its calculations. But a device of this sort is not only legitimate, but entirely appropriate, in a purely comic episode like "The Noble Lord," in which one is employed with capital result. In "Playing with Fire," however—a delightful little episode, in itself, in which a young girl tests the sincerity of her lover—the whole apparent meaning and significance of the piece are nullified by a development wholly capricious. In much the same way the title-piece, "Dawn," a thrilling little bit of melodrama of the realistic kind, is weakened at the very last moment by an unexpected and amateurish recourse to the preternatural, which is entirely subversive of the intended effect. The most ambitious play in the book, "The Finger of God," also combines the mystical with the melodramatic, but in more artistic fashion. "The Traitor" is a military and "A House of Cards" a social melodrama. In both the audience is deliberately put upon the wrong track—a sure sign of inexperience—but without serious injury to the climactic situations. As a whole, the plays evince clear and original dramatic capacity.

Finance

THE WAR AND THE WORLD'S RESERVE OF CAPITAL.

One of the anomalies of the present economic situation was witnessed last week in the American stock and bond markets. After almost uninterrupted weakness during the period between the announcement of the new British war loan and the closing of the subscription lists, prices suddenly recovered simultaneously with the news that the huge sum of $3,000,000,000 had been subscribed by English investors, and would presently be taken from the reserve of investment capital. Yet if the world's resources, available for investment in securities of old or new enterprises, are to be suddenly reduced by so prodigious a sum, it might be supposed that investment markets in general would somehow be affected.

Since the war began, England has raised $4,750,000,000 through Government loans, and Germany $3,500,000,000; Austria $1,200,000,000; France $1,500,000,000; Russia something over $750,000,000. This is a total of $11,750,000,000, irrespective of loans raised by Turkey and Italy in preparation for the war, or of loans issued by neutral governments. Every one knows that the belligerent nations, including England, have shut down firmly on nearly all issues of new securities in their home markets, except in connection with the war. At London, for example, where there were floated, during the first half of 1914, $470,000,000 stocks and bonds outside of Governmental issues, $65,000,000 made up the total for such purposes in the first half of 1915.

But this has not gone far towards protecting the accumulated supplies of capital. The largest amount of new securities ever subscribed in a single year on the English market was the $1,335,000,000 of 1910. The largest ever subscribed in Germany, by the *Frankfurter Zeitung's* figures, was the $800,000,000 of 1909; though the Imperial Secretary of the Interior insisted on a total of $1,035,000,000 for the same year. Clearly, these high records would not go far towards matching the requisitions of the past twelve months. Eight years ago, the French economist, Leroy-Beaulieu, figured out that "the civilized world provides $2,400,000,000 in available capital annually for investment in securities." To the fact that the bankers of the world attempted in 1907 to absorb $3,250,000,000 of such capital—an amount which "the world has not got, and therefore cannot provide"—he largely ascribed the derangement in the money markets of that year.

One is inclined to wonder what the financial expert of 1907 would have said, if somebody had suggested that in place of his estimated available maximum of $2,400,000,000 per annum, five European nations would between them, less than a decade later, ask for nearly $12,000,000,000 in a single year. But a further question naturally brought up is this: If the very much smaller requisitions of 1907 were nevertheless so large as to break down the credit situation, force up money rates to 8 and 10 per cent. in almost every great market, and drive half a dozen countries into a disastrous panic, why is the present vastly larger over-absorption of capital proceeding with so little apparent disturbance?

One answer to the question is, that Leroy-Beaulieu was talking of the world's annual increment of capital, whereas the belligerent Powers to-day are already undoubtedly drawing on the reserves, invested or uninvested, of previous years. Now, the outbreak of war last summer, with all the financial consequences involved in it, came at a moment when, financially speaking, the world was better prepared for it than in very many years. Market values of investment securities had been steadily lowered; the depreciation of the half-dozen years before the war had reduced immensely the requisitions on capital. Ultra-conservatism and cautious husbanding of financial resources had been the absolute rule in Europe, at least since the middle of 1911.

The financial and business community of the United States had thoroughly readjusted itself in the years after 1907, and had continued a policy of only the most cautious expansion, at times when the country's economic situation would ordinarily have warranted an enthusiastic "boom." In further explanation, it will be recognized that every one of the belligerent states had instantly constructed a machinery of emergency credit which still exists, and which utilizes all imaginable facilities of credit, as they are utilized to stop an actual panic at its crisis. How much of a positive influence has been exerted by the increase of more than $3,000,000,000 in the paper circulation of the belligerents, is another doubtful question. To a certain extent, this immense expansion of credit issues by Europe's state banks, in the form of currency, is bound to have the same effect as the issue of Government notes directly from the public treasury. The French Government, for example, has already borrowed something like $1,000,000,000 from the Bank of France, the Bank giving out the proceeds in the form of new circulation.

All things considered, the economic experience of the war to date strongly suggests the extent to which the character of the resultant phenomena in a period of the sort may depend on the circumstances of the time in which the war broke out. Let people who remember 1906 try to imagine what would have been the course of events, if the present war had begun in that year. Or, as concerns our own position, it is interesting to imagine its having begun in a year like 1911, of American harvest failure.

The country's position in the field of international finance could not very well then have been exactly what it is; and it is not easy to conceive of our taking the economic leadership of the world if the war had come nine years ago, with New York enormously involved in a floating debt to Europe, and with all American markets on a top level of speculative inflation. But even these considerations do not answer the question, how long even the conservative hoarding of capital resources, in the past half-dozen years, will serve to meet the requisition of the war, or what sort of process will be involved in the post-bellum reconstruction, if the fighting states should meantime have used up the great part of their reserves of invested capital.

Recreations of a Physician

by **A. Stuart M. Chisholm, M.D.**

8vo. 335 *pages.* $2.00 *net.*

The soundness of the advice Dr. A. Stuart M. Chisholm gives specialists in his book entitled "Recreations of a Physician," that they select avocations for the employment of their leisure hours, is well attested in his own case. Early in his professional life, convinced of the tendency of specialization toward narrowness and mental impoverishment, Dr. Chisholm began to make use of his spare moments in a literary way, and some of the fruit of his avocational work appears in the collection of scholarly and entertaining essays his book contains.—*New York Times.*

The essays serve to show how useful a professional man may be entirely aside from his regular work. They are wholesome, stimulating, amusing, and suggestive.—*Brooklyn Eagle.*

Among others are essays on Specialization, Physicians as Men of Letters, Royal Authors, On Some Translations of Horace, Medicine in the 17th Century, The Picaro in Fiction, etc.

New York G. P. Putnam's Sons London

"It was a powerful battering ram of law, logic, and fact, and it compromised nowhere; but when he had finished, Haywood's invalid wife, seated in her wheel chair, shook his hand and thanked him for his fairness."

That is C. P. Connolly's description of Senator Borah's argument to the jury in the prosecution of William D. Haywood for murder.

"One can take that illustration for a gauge, and everything Borah has done in public life will fit it to the last notch."

"Borah," the first of a series of "Presidential Possibilities" by C. P. Connolly, appears in the July 31st issue of

THE NATIONAL WEEKLY
416 West 13th Street, New York City

The "Nation's" Jubilee

BOSTON HERALD.

No periodical in the history of American journalism has exerted a stronger or more beneficent influence upon the thought of its time than has the *Nation*, none has been able to command the services of an abler corps of contributors, none has been served better by its editors.

NEW YORK TIMES.

That esteemed periodical, the *Nation*, fitly celebrates the completion of the first half century of its useful existence by the publication of a special number of extraordinary interest to its readers. . . . We have rarely found a special number quite so readable as the *Nation's* half-century souvenir. . . . Its continued prosperity is a matter for general congratulation.

NEW YORK GLOBE.

The *Nation* celebrates its fiftieth anniversary with a gratifying exhibition of vigor and ability in its latest issue. During its entire existence the *Nation* has been a conspicuous power for good in American politics and literature. Its chief goal has always been influence in the direction of high thinking and vigorous action; and in these respects under the inspiration of Godkin, Garrison, and their worthy successors it has been signally successful. In its own particular field its premiership will be unchallenged, and as a potent factor in American literature no publication has a better record. Readers of the *Nation* will undoubtedly offer their sincere good wishes, in the hope that it will indefinitely continue to labor for sane politics and progress.

LOWELL COURIER-CITIZEN.

One of the significant issues of the past week was the semi-centennial number of the *Nation* (New York). This admirable weekly, founded in 1865, made a name and position for itself at once for thoughtful and censorious journalism which has never been lost. . . . Whether one reads the *Nation* with a compliant and consenting mind, or whether one reads it in a spirit of honest antagonism, a desirable object is attained—either of being stirred to a righteous opposing indignation, or to a saner conception of what is going on in the world, with a corresponding benefit to one's own readers. Long life, then, to the *Nation*, and continued success to its editors and producers! The country could not well do without it; and if it has the defects of its qualities, it is like all the rest of us—only a thousand times better.

BOSTON GLOBE.

Fifty years ago came an event in American journalism: a national weekly designed to exercise independent criticism of the nation's effort in statecraft, literature, art, and affairs. Rightly, it was named the *Nation*. . . . For the rest, it is not only a *Nation;* it is a super-*Nation*, 77 pages of compact expression. Half a century of constructive criticism lies behind this journal; an honorable record of independent thinking, courageously uttered. It has been a pioneer of its kind. The achievement of a semi-centennial is happy; the anniversary is notable.

WILMINGTON MORNING NEWS.

The *Nation* was not long in taking its place as the foremost publication of the kind in this country, and it soon ranked with the best of the reviews of the world. The *Nation* for many years has occupied a field peculiarly its own, making a special appeal to the intellectual classes and producing in its columns the higher thought.

SAVANNAH MORNING NEWS.

The jubilee issue marking the semi-centennial anniversary of the *Nation's* existence needs no words of commendation. Like the fifty years' record of the *Nation* it speaks for itself far more eloquently than any one else can. The *Nation* has been a potent force in American journalism during the past half century and the personnel of the men who are at its editorial helm is the best guarantee that its admirable record will be maintained and new laurels added to those already won. That it may exert as great an influence on the intellectual life of America during the next fifty years as it has during the first fifty years of its life is the hope, and also the belief, of its friends, whose name is legion.

KEOKUK CONSTITUTION-DEMOCRAT.

The *Nation*, published at New York city for half a century, has in all these years maintained a type of national journalism unequalled by any weekly periodical designed to voice high ideals in letters and political and social life. The July 8th number of the *Nation*, designed as an anniversary memorial, is a splendid review of service to the people; and the issue, enlarged in size to meet the occasion, will remain as a monument to its founders and present publishers and editors.

KANSAS CITY TIMES.

The semi-centennial issue of the *Nation*, published last week, invites attention to one of the world's great weekly journals. When it was founded fifty years ago by the brilliant Godkin it instantly took a position in the very front rank. The half century that has followed has been one of distinguished success. The appearance in the anniversary number of such contributors as Lord Bryce, Henry James, W. C. Brownell, and A. V. Dicey simply emphasizes the quality and distinction of the men whose coöperation the *Nation* has been able to enlist in its fifty years of existence.

As a consequence it always has maintained a literary style of rare quality, combined with scholarship, abundance of information, and independence of thought. In particular its book reviews have proved almost indispensable for persons who wish to keep in touch with the latest developments of scientific and philosophical thought. In Mr. Oswald Garrison Villard the *Nation* is fortunate in having a head who is deeply interested in maintaining its best traditions. Such a periodical is a national asset.

NEW YORK COMMERCIAL.

Articles commemorating the completion of its half-century of publication which make this anniversary issue a real gem among periodicals. . . . Messrs. Godkin, Garrison, Lamont, More, Fuller, and the two Messrs. Villard have upbuilded a weekly journal in the *Nation* of which the nation is proud.

NEW REPUBLIC.

The New York *Nation* has celebrated during the past week the fiftieth anniversary of its foundation. Its owners and editors have good reason to look back with satisfaction upon its record of achievement. . . . At a time when American public opinion was possessed by catchwords and dominated by special political and business interests, the *Nation* made a fine and successful fight for intellectual candor and independence, and for the subordination of private to public interests.

EDITOR & PUBLISHER.

Its editors have always been men of courage and commanding ability. It holds a place in American journalism that is unique and it has no competitors.

ESTABLISHED 1889

"A periodical that stands steadfastly for good literature."—The Dial

$1.00 a Copy **Poet Lore** *$5.00 a Year*

TWENTY-FIVE YEARS OF POET LORE

In January 1915 Poet Lore began its *second* quarter century.

Here are some of the big things that POET LORE has done. This list, without further comment, shows why POET LORE is the only magazine in America that is indispensable to all those readers who are on the lookout for *new* genius the moment it appears, instead of waiting to fall into line after this genius has been discovered by others. Read this list carefully.

In 1889 POET LORE pointed out the supreme importance of Ibsen's dramas. It spoke of Ibsen then as "below no one but Shakespeare" to a nation that then only had heard enough of him to jeer. In the same year it gave its readers a review of Shakespeare's influence on Japanese literature. That was eighteen years before anybody else in this country even knew that there was such a thing as a great literature in "barbarous" Japan.

In 1890 POET LORE discovered and introduced to this country the lyric poet Mistral, whom other periodicals did not begin to notice until *fourteen years later,* when he shared with Echegaray the Nobel prize for literature in 1904.

In 1891 POET LORE made its readers acquainted with the work of Strindberg, who has but lately become generally known to the literary public of America.

In 1892 POET LORE brought to America some masterpieces of Bohemian literature, and it published Björnson's play, "A Glove," in the original Norwegian version of *En Hanske,* authorized by Björnson himself. It differs strikingly from the version made later for Germany.

In 1893 POET LORE published Maeterlinck's "The Blind," *which was the first publication of any of Maeterlinck's works in English.* In the same year it printed a *critique* whose very title is sufficiently significant of its priority: "Mauriee Maeterlinck, Dramatist of a New Method."

In 1894 POET LORE published Maeterlinck's "The Seven Princesses" and "Pélléas and Mélisande."

In 1895 there appeared in POET LORE Maeterlinck's "Alladine and Palomides"; and an appreciation of the genius of Robert Bridges was printed.

In 1897 POET LORE brought to America another of the now world-famous dramatists, Sudermann, giving to English readers their first glimpse of him in that little masterpiece, "Teja," from his "Morituri."

In 1898 POET LORE published "The Sunken Bell." *This was the first English translation of any of Hauptmann's plays.*

As early as in 1899 POET LORE contained a story of Selma Lagerlöf, whose name even now, after she has won the Nobel prize, is unfamiliar to all except pioneer readers.

In 1900, Echegaray, the great Spanish dramatist, who in 1904 won the Nobel prize, was already well known to the readers of POET LORE.

In 1903 the readers of POET LORE were made acquainted with the unusual genius of Brieux, whom the general educated public in this country did not learn to know till about a year ago.

In 1904 POET LORE began the publication of Gorky's plays, and also introduced its readers to the hidden treasures of Icelandic literature.

In 1905 POET LORE was as usual first among the pioneers in recognizing the real significance of the new Irish literary drama by the publication of plays by Synge and Hyde.

In 1906 POET LORE presented the dramatic work of Schnitzler in English for the first time.

In 1907 Andreyev was first made known to America by POET LORE, and in giving, then, "To the Stars," and his later masterpiece, "King Hunger," when that was written, POET LORE has introduced his finest dramas. In the same year, D'Annunzio's noblest play, "The Daughter of Jorio," and the first English translation of any of Bracco's plays, "The Hidden Spring," appeared in authorized version. Bracco's "Phantasms" followed. Frank Wedekind's work was also made known this year to POET LORE readers.

POET LORE has introduced to this country no less than fifty-four European dramatists and eighty-six dramas. Of these dramatists, all of whom were unknown previous to the time of the publication of their work in POET LORE, practically every one has subsequently become world famous.

POET LORE has gathered the artistic gems *of every civilized country under the sun,* at their first gleam, and offered them to the American public in advance of any other publication in this country. And continuing the same policy up to the present time, POET LORE is introducing to its readers *to-day* the unknown geniuses who are to become world famous *to-morrow.*

WRAXALL'S ABRIDGMENT OF THE NEW YORK INDIAN RECORDS

1678-1751

Edited by Charles Howard McIlwain, Ph.D., Assistant Professor of History in Harvard University. Harvard Historical Studies, Vol. XXI. 8vo. Cloth. 488 pages. $2.00 net.

Since the burning of the New York State Library at Albany, Professor McIlwain's transcription of the Indian Records of New York State has been the only one in existence. It has now been edited, with introduction and notes.

The Nation

NEW YORK, THURSDAY, JULY 29, 1915.

Summary of the News

The American note to Germany, in reply to the German communication of July 8, was delivered at the Foreign Office in Berlin on Friday of last week, and the full text was published in the American papers of the following morning. The note, which bears date of July 21, is noticeably stronger in tone, as it is briefer in phraseology, than either of its two predecessors on the same subject. The last German note is characterized as "very unsatisfactory, because it fails to meet the real differences between the two Governments"; the attitude of the United States in regard to the rights of neutrals is reasserted; the German suggestion for the licensing of ships is brushed aside with curt comment; it is pointed out that specific instances during the past few weeks have shown that action by submarines may be kept within the limits of international law, and the note concludes with the significant statement that a repetition by German naval commanders of the acts complained of will be regarded as "deliberately unfriendly." The note also, while declaring that the United States "must regard the conduct of other belligerent Governments as irrelevant to any discussion with the Imperial German Government," takes up the question of "the freedom of the seas," for which, it is stated, the United States will continue to contend, "from whatever quarter violated, without compromise and at any cost."

Publication of the note in the Berlin papers was withheld until Sunday. It is obvious from comments by the German press that the firm tone of Mr. Lansing's communication came as a painful surprise, not only apparently to the public, but also to official Germany. With the general attitude and some of the misconceptions of the German press we deal elsewhere. By the press and public of the United States, in the West as in the East, the note has been received with enthusiastic and virtually unanimous approval. In England also President Wilson's attitude has met with cordial welcome, although the reference to the British Order in Council implied in the phrase, quoted above, "from whatever quarter violated," is frankly recognized. In this connection it is appropriate to record the receipt, announced by Secretary of State Lansing on Monday, of Great Britain's long-delayed reply to the American note of March 30 protesting against the British Order in Council. The text of the note was to have been published yesterday, but on Tuesday Mr. Lansing was advised by Sir Edward Grey that the British Government desired to send a supplementary note and therefore requested that publication should be delayed. It is expected that the supplementary note will reach Washington next week.

After the dispatch of the note to Germany President Wilson returned to Cornish, N. H., where, it is stated in dispatches from Washington, he intends to give his consideration to questions of the national defence. Apart from any exigencies of the present situation, it is said that the President has been studying this question for some time, and it was officially announced from the White House last Saturday that on his return from Cornish he would confer with Secretaries Garrison and Daniels "to formulate a sane, reasonable, and practical programme of national defence."

A ghastly disaster occurred in Chicago last Saturday when the excursion steamship Eastland, loaded with between two and three thousand passengers, keeled over at her pier in the river. The loss of life is estimated to have been over 1,500. The cause of the disaster has yet to be determined, and both local and Federal inquiries have been initiated. We comment more fully on the incident in our editorial columns.

The strike at the Remington works at Bridgeport, Conn., was settled last week with the grant to the workers of an eight-hour day. After a conference of labor officials on July 23 it was stated that similar demands would be made in munition works throughout New England. Serious riots, in which lives have been lost, have occurred at the works of the Standard Oil Company at Bayonne, N. J., which finally shut down on July 20, after various demands of the employees had been refused.

A report on an investigation conducted by Collector of Customs Dudley F. Malone, of New York, into the recent attack by a submarine on the liner Orduna, which we recorded last week, was presented to the State Department on July 23. Dispatches from Washington state that Secretary Lansing will direct Ambassador Gerard to make inquiries at Berlin for the information of the Department.

Only time will show whether the recent unusually prolonged period of relative inactivity on the part of German submarines has been in the normal order of procedure, according to which periods of activity are succeeded by periods of rest, or whether some more efficient means have been discovered by the British Admiralty for combating subaqueous attacks. At any rate, during the week which ended July 22 not a single British merchant ship or fishing craft was sunk, the only two victims being Russian vessels. Since then, however, up to the time of writing, eight vessels (apart from trawlers) have been sunk by torpedoes—two British, one French, one Russian, two Norwegian, one Danish, and one American.

The American ship was the freighter Leclanaw, bound from Archangel to Belfast with a cargo of flax, and sunk off the Orkney Islands on July 25. According to accounts available as we write, the crew was ordered to take to the boats and the vessel was then sent to the bottom. In that case the incident will probably be regarded as analogous to that of the William P. Frye, which is still a matter of dispute between the Governments of Germany and of the United States, but will not be regarded as coming under the category of acts "deliberately unfriendly." The locality of recent activity by submarines suggests the theory that they may have changed for the time being their principal field of action and be devoting their attention not so much to the rather hopeless task of driving British commerce from the high seas as to cutting off supplies from reaching Russia by way of Archangel.

The British Parliament adjourned yesterday and will probably reassemble, unless in case of emergency it should be called together earlier by an Order in Council, on September 14.

Dispatches from Christiania on July 23 announced that the British Government had expressed regret to the Norwegian Government for the violation by British warships of Norwegian territorial waters, especially by the seizure of a German steamer within the three-mile limit.

Sir James Murray, the editor-in-chief of the "New English Dictionary," died on Monday at Oxford, England.

Cablegrams received by the State Department from Peking last week stated that from 80,000 to 100,000 lives had been lost in the recent floods near Canton, China.

The text of a somewhat remarkable document, signed by the committee of the German Humanity League and addressed to its associates and to friends in Europe and America, was cabled from London under date of July 20. The manifesto consists of a bitter arraignment of Prussian militarism and aggression.

The situation in the Balkan states has been the subject of much speculation during the past week. On Monday was published a report, apparently well authenticated, but not, as we write, officially confirmed, that Turkey had ceded to Bulgaria the Turkish part of the Dedeaghatch Railway. The dispatch from Sofia declared that "the agreement implies no engagement of a political character," but it is generally considered unlikely that Turkey would make so considerable a concession unless she were to obtain in return some tangible advantage, at the least a neutrality that would be "friendly" to the extent of permitting the passage of contraband to Turkey. On the other hand, speaking in the House of Commons on July 21, on a motion for an additional war credit of $750,000,000, Mr. Asquith made the significant statement that "advances to our allies might also grow as adhesions to our cause of those states which did not take part in the war in its early stages came forward." The reference to the Balkan states is unmistakable, and would hardly have been made unless the Prime Minister had strong grounds for believing that the active adherence of one or more of them to the cause of the Allies was to be expected in the near future.

News was received from Hayti on Tuesday that the revolutionary movement against President Guillaume, which broke out under the leadership of Dr. Rosalvo Babo last March, had assumed more serious proportions. There was severe fighting at Port-au-Prince on Tuesday.

The Week

One insinuation, or complaint, of the German press, in commenting on the American note, is familiar. The United States, it again asserts, is playing England's game. The "British shadow" rests upon the White House. This has been said so often before that we suppose the German editors couldn't help repeating it. But they can scarcely believe it. For unless they have failed to read President Wilson's notes with due attention, they must have discovered two things: the clearest differentiation of the American case, and the plain indication that we do not propose to overlook any just grievances which Great Britain may have given us in the war. If this is not obvious in Germany it certainly is in England. The English press is not so blind as not to perceive in the note to Germany a distinct implication that, as the *Manchester Guardian* puts it, "in President Wilson's opinion this country is an offender against the principle of the freedom of the seas." It adds that the note "may well occasion some very serious reflections" in England. Yet we fancy that the German newspapers will go on with their silly talk about American subservience to Great Britain! The truth is that our Government has limited itself to insisting upon the rights of neutrals, and particularly those of Americans.

Several German newspapers protest against the idea that an "academic professor" in Washington can lay down international law for Germany. This is dangerous trifling. And still more dangerous is the assumption that German arms may do whatever "military necessity" is thought to dictate. Even in an ordinarily sober paper, the *Vossische Zeitung*, we read: "Victory over the enemy is the supreme law for every belligerent." This is the doctrine of stark outlawry. If it were once to be admitted, there would be an end, not merely of the rules of war, but of civilization and humanity. Nobody would be safe, for no right would be respected. If a ship may be sunk without warning because it carries munitions of war, despite the fact that hundreds of noncombatants are killed, then a ship may be sunk similarly because it is going back to get a cargo of ammunition, or because it is carrying food or clothes that may help keep alive the civilian population of an enemy country. There is simply no limit to the theory of "military necessity," once it is set up and made operative. And any nation which, in the madness of war, has got such an insane notion into its head ought to make haste to get it out again. For the civilized world will never consent thus to be placed at the mercy of barbarism.

A vivid reminder of the insecure and perilous footing of our relations with Germany has been given by the news of the sinking of another American ship by a German submarine. It is appalling to think that the two countries might be plunged into hostilities through the rash act of a naval commander, yet that possibility has all along existed. In the case of the Leelanaw warning was given, and all pains were apparently taken to secure the safety of the crew. The affair then appears to be very like the sinking of the Frye by the Eitel Friedrich. That was admitted by the German Government to be in violation of our treaty rights. A similar admission may be made now by Germany, with a like offer to pay damages. Our Government may be depended upon to take the proper steps. But there is no denying the gravity of the occurrence, both in itself and as an indication of what may happen any day to take the whole question out of the realm of peaceful negotiations.

Prof. Theodore S. Woolsey had an article in *Leslie's Weekly* last week on "The Case for the Munitions Trade." It is a statement admirable in its compact completeness. The chief questions of law, policy, and morals involved are touched with a sure and firm hand, and the conclusion reached is that "every belligerent has bought, every neutral has allowed its citizens to sell, munitions since modern war began." One might not have thought this true after reading Austria's protest to our Government against the present shipment of arms from the United States. Yet it will be easy for our State Department to show that the protest by Austria overlooks not only the well-settled provisions of international law and the Hague Conventions, but her own practice in the past. In our Civil War, for example, Austria freely supplied the Confederate army with rifles, cannon, shells, and other material of war. The proof is ample. In Jefferson Davis's "Rise and Fall of the Confederate Government," he mentioned the early sending of an officer to Europe "to buy and to make contracts for arms and munitions." This was Major Caleb Huse, a graduate of West Point. Davis quoted a letter from him, written from London, December 30, 1861, in which he spoke of the "immense" stores of rifles, powder, etc., on the docks ready for shipment. And this same Major Huse afterwards published a little work on "The Supplies for the Confederate Army," on pages 26 and 27 of which we find an interesting account of his experience in buying arms in Austria.

Col. Roosevelt had a "bully" time last week at San Francisco, and he made the most of it. But can he be sure that the American people are not getting just a bit tired of hearing him prove, for the hundredth time, that he is the only President who never made a mistake, and that everybody is entirely wrong who does not agree with him in every respect? The Athenians banished Aristides because they were wearied of hearing him called the just. Would they have waited so long as they did if Aristides had gone up and down vociferating that he was the only just man in Greece? And Americans, just at this time, have special reasons for irritation at a public man who shouts about the fearful mismanagement of affairs at Washington. We are facing a crisis in our foreign relations. The rest of us are trying to keep still, and by restraint and patience to help the President discharge his delicate and difficult task. Nobody can take it out of his hands by railing at him; and the country as a whole, mindful of this fact, shows a strong desire to uphold President Wilson. And this is the juncture which the Colonel, a master of flouts and jeers, seizes to endeavor to kick up a rumpus.

With Republican Presidential candidates as thick as blackberries, we see no reason why Mayor Thompson of Chicago should not put himself forward. He announces his willingness to make the sacrifice, provided "the younger element of the Republican party wills it." We should say that it must be a very young element that would take Mayor Thompson at his own valuation. He is ready with a "tentative platform." It will contain planks against the income tax, unless the Government provides an income to be taxed, and another against "a war tax when our country is not at war." Then, too, the Mayor is to make everybody prosperous by a high tariff. But why does he speak of all this as especially appealing to the younger element? His body of doctrine is hoary with age. It is at least as old as Absalom, who was one of the earliest politicians to ask for votes on the ground that if only *he* were king, everybody would be fat and flourishing. And a high-tariff youth-

ful! It was long tottering, senile and decrepit, on the edge of the grave into which it finally fell two years ago.

To those responsible for the choice of American diplomats, Senator Phelan's report on the career of Minister Sullivan offers a clear definition, in certain respects, of what such officials should not be. They should not be men of illiberal general education, uninformed on the ordinary legal, political, and economic questions that are their routine work. They should not lack all the finer graces of manner, trying to atone for tactlessness and boorishness by a certain back-slapping amiability. They should not be so devoid of judgment as to permit themselves to be drawn into compromising situations with business interests affected by their authority, as to write slanderous letters about the character of the people among whom they represent our Government, and as to play a part in the partisan quarrels of that people. They should not, in brief, interpret the office of Minister from one nation to another as something like the office of a careless commercial "drummer" between two firms. "Tested by ordinary standards," says Senator Phelan, "there could scarcely have been any general expectation that the training, education, and experience of James M. Sullivan would have resulted in his acquiring those attainments needed." This the Department of State should have seen. His task was one of peculiar delicacy and responsibility. He succeeded only in earning the distrust of the Dominican people, and the contempt of the representatives of other countries stationed in Santo Domingo.

What shall we think one day of the fact that among the matters investigated and placed on record by the research department of an educational institution was the number of lynchings committed in the country, the supposed crimes for which they constituted the punishment, and other circumstances about them? This is the grim task at Tuskegee. The showing for the first half of the present year is an increase of 60 per cent. in this form of lawlessness. Of the victims, twenty-four were negroes and ten were white. Eight of the whole number of lynchings occurred in Georgia. The striking feature of this group of crimes is the ground of them. Only seven were due to accusations of attacks upon women. Some were brought about by accusations of stealing, cotton, hogs, and cows being the objects missing. Here, then, we must have a new justification for resort to this out-of-court method of punishing offenders. According to the law, the stealing of even the objects named does not constitute a capital crime. In these cases, therefore, lynching becomes necessary, not because the criminal may not be convicted, but because he cannot be punished as severely as the plaintiff desires.

Mr. Gompers is quoted as saying that he is prepared to make good his statement that a German emissary had attempted to bribe labor men to bring about strikes in American ammunition factories. Until evidence of this nature is produced, the public will naturally be governed in its view of the probabilities of the matter by the course of events. There has been an epidemic of strikes and disturbances, in all manner of industries connected with the production and shipping of war supplies. Some of these appear to have been quickly settled, but on the other hand the indications are that there are plenty more to come. It may be possible to judge from the circumstances whether they are ordinary bona-fide labor movements or the result of alien instigation in the interest of a belligerent Power. But the matter is too serious to be left entirely to that kind of judgment. Without undertaking to pass upon the truth of the assertions of foreign machination or conspiracy, we feel that the question is one that should engage the earnest attention of the Federal authorities. Doubtless agents of the Government have already been at work quietly investigating the matter. Whether such inquiry will have the effect of quieting suspicion or of confirming it, the result in either case would be valuable. And in the latter event, it would become the duty of the Government to take measures to protect American producers against alien interference with their lawful business.

"That the Government is wofully and pitiably lacking in ordnance, in field-guns, in all the equipment that modern warfare has made essential to successful operations, is known to every military man and every military authority within this country." Thus Mayor Mitchel of New York pays his respects to the able and industrious men who constitute the Ordnance Corps of the army. Presumably he has not read the testimony given before the House Committee on Appropriations by the Chief of Ordnance, Gen. Crozier, Secretary Garrison, Gen. Weaver, Chief of Coast Artillery, and others. Gen. Crozier testified (February 9 last) that, given certain alterations to make possible a greater elevation of our seacoast guns, which can be quickly done at a slight cost, our fortifications "will be of such power that naval officers would not put their ships against them in a fight." These alterations, he said, would give our guns a range of 17,000 yards, which could even be increased to 19,500 by the use of a lighter projectile, thus practically equalling the range of the newest British super-Dreadnought. He did not hesitate to stake his professional opinion upon our defences being "adequate for maintaining a successful combat with vessels of war armed with any gun which is now under construction anywhere in the world to my knowledge." Secretary Garrison, too, declared his faith in our fortifications, while Gen. Weaver, in charge of our coast defences, said: "I know of no fortifications in the world, as far as my reading, observation, and knowledge go, that compare favorably in efficiency with ours."

The mode in which problems in industrial invention may be attacked by organized endeavor is well indicated by some of Britain's proposals for her War Board. The London *Nation* remarks that both the submarine and torpedo suggest only a series of physical problems. They have speed, momentum, and move in a physical medium. The difficulties they raise may be investigated as in a college laboratory. Indeed, the article proceeds, there are various lines of research which might be taken up in connection with the mere deflection of a torpedo. "To direct a torpedo, the submarine officer must have taken the bearings of the ship, and must steer his torpedo by these bearings. Is there no means of putting his compass out of order?" Other proposals are for the development of submarine signalling, the repulsion of air-attacks by blinding searchlights, and the setting off of explosives at a distance. The war has imparted impetus to organized invention in Germany and England simply because it has given unusual prominence to certain necessities, and has brought home the need of concentrating upon them. Were there a peaceful field in which the general demand for meeting an emergency should be as great, the public interest in organized invention there would be as strong. Just so far as it is appreciated that progress depends upon that comprehensive activity which—in engineering phrase—ascertains "the state of the art" by reviewing all related knowledge, and brings every useful scientific fact into connection with every

plausible hypothesis, so far will organization be demanded.

It is time that our own agencies of defence took a few lessons in enterprise from our great manufactories. But a greater good would be served if the country as a whole could be made to take the same interest in the labor of industrial invention that the world is now taking in organizing military invention. The informed few have never lacked such interest. "Every thoughtful man of science," Sir Michael Foster, of Cambridge, once remarked, "who looks round on what others besides himself are doing will tell you that nothing weighs more heavily upon his mind than this: the multitude of questions crying aloud to be answered, the fewness of those who have at once the ability, the means, and the opportunity of attempting to find the answers." The various scientific War Boards should constitute a powerful if indirect plea for the greater encouragement of scientific research and of invention in all fields.

Caught as the express companies have been between the two fires of the parcel post and the reduction of rates effective in February, 1914, there will be general approval of the decision of the Interstate Commerce Commission granting a scale of charges from one to four per cent. higher. It has been well known that, with the exception of those of the Southern and Wells Fargo Companies, express dividends have steadily decreased. The Commission's figures show how marked was the loss in revenue caused by the rate decision which became operative last year. For the full year of 1913 preceding the cut in rates, the decline in the gross income of all the companies amounted to about $2,500,000. For the year following there was a decrease, according to the press reports, of more than $13,500,000. "As a whole," the Commission admits of the companies, "they are operating at a loss." The new rates do not approach those of 1913, but they will afford substantial relief. Above all, they may be interpreted as another guarantee of the desire of the Commission to treat business liberally, and to correct hasty or mistaken decisions.

There is unusual fitness in setting up a tablet to commemorate Stevenson's residence at Saranac Lake. The same sculptor—Gutzon Borglum—has already erected one at Stevenson's Californian home. Other authors, as Kipling in Vermont, are commonly unaffected by brief foreign sojournings. To Stevenson the setting was as often as not the inspiration of his stories, and the wintry stillness of Saranac was one of the impressions that cried aloud for an appropriate narrative. The best portions of "Baliantrae" are by no means those detailing the journey of the land-steward and his master through the uncleared forests of America, but the romanticism of the book may be claimed as the romanticism of the place where it was written. His American marriage, his American collaboration, his publications in an American magazine, give us no such reason for special remembrance of Stevenson as this response to American scenes. But we show little consistency in the erection of a tablet of this kind while the haunts and the residences of so many American writers are unmarked, and places so well known as the House of the Seven Gables are virtually uncared for.

Only by a relief map can the natural obstacles met by the Italians in their push across the Isonzo be appreciated. The Isonzo, rising at Caporetto and flowing one hundred miles to the sea, has been in itself a serious barrier, especially as its rapid current has been swollen by rains; and in the valley of Gorizia it is from 900 to 1,500 feet in width. On the upper Isonzo, from its source to Tolmino, the river is faced on the Austrian side by a branch of the Julian range, a wall reaching heights of from 6,000 to 7,200 feet; while on the Italian side are peaks approaching 5,000 feet. Below this range and stretching south to Gorizia, the natural bastion is on the left of the river, in the shape of the plateaus of Laschek and Tarnova, covered with forests and admirably adapted to defence. South of Gorizia, to the sea, the Vipacco hills separate the plateau of Tarnova from that of Corso, only three hundred feet in height, on which the Italians have now a secure footing. They have lost much time from unfavorable weather.

If Sir James Murray did not live to finish the enormous work upon which he had been engaged for a generation, he came much closer to doing so than almost any one had expected. For years there has been a kind of rivalry between him and his great undertaking, the "New English Dictionary," as to which of them would be the slower to take its place in the catalogue of completed things. He lived to see the tenth and final volume well on its way, and so has missed by but a year or two the attainment of a goal which his friends rather hoped than believed he could reach. But he might have missed it by a much wider margin without impairing the uniqueness of his labor. For an adequate comparison to the immense project which never daunted him one must go outside the field of writing. His activities were rather like those of a man for whom no English word seems so suitable as the French *entrepreneur*. He was an organizer of scholarship, calling for recruits, as Sir Walter Raleigh called for them in the days of his dreams of a flourishing Virginia, and leading them into half-explored or virgin territory, there to spy out the land as a preliminary to setting down what they found, with such accuracy and fulness that no one else should need to go over the ground again, except to supply a detail here and there or to cross an occasional t or dot an occasional i.

But the greatness of his task lay less in its mere magnitude than in its infinity of detail. "Ten, twenty, or thirty letters," the editor remarked in the preface to Volume I, containing the words under A and B, "have sometimes been written to persons who, it was thought, might possibly know, or succeed in finding out, something definite on the subject; and often weeks have passed, and 'copy' advanced into the state of 'proof,' 'proof' into 'revise,' and 'revise' even into 'final' before any results could be obtained. It is incredible what labor has had to be expended, sometimes, to find out the facts for an article which occupies not more than five or six lines; or even to be able to write the words 'Derivation unknown,' as the outcome of hours of research and of testing the statements put forth without hesitation in other works." It is partly its unique comprehensiveness, even more its unrelenting testing of "statements put forth without hesitation in other works," that makes Murray's Dictionary a veritable Authorized Version of the English language. Yet not its least interest must always be the man who made it. When the project was first planned, he was assistant master of Hawick Grammar School, in the neighborhood of his birthplace. When he revived the idea, he was an assistant examiner in English at the University of London, and president of the London Philological Society. But his learning did not make him less a man. His prime qualification for his life's task was the adventurous spirit that never failed him in toiling at the work, "which," as he once wrote, quoting from Dr. Johnson's preface to his less ambitious Dictionary, "would in time be ended, though not completed."

THE SUM OF THE WHOLE MATTER

There is a difference between an ultimatum and a last word. It is not an ultimatum which the Government of the United States has sent to that of Germany, but it is a last word. That is to say, the note delivered at Berlin on July 23 is intended to put an end to the controversy which has existed between the two countries since May 7. The evident purpose of President Wilson is to make it impossible for the German Government longer to evade the issue, or to offer any more shifts or suggestions which are aside from the plain and simple merits of the case.

These are again stated by the note to Germany with entire explicitness and with a clearness and firmness that are wholly admirable. There can be no further excuse for "misunderstandings" in Berlin. If in that capital there lingered any illusions created by the Bryan-Dumba conversation, the last of them must be dissipated now. The note is obviously most serious; taken seriously in Washington; to be taken seriously in Berlin. If the German Foreign Office has been misinformed, or has suffered itself to be misled, as to the real state of American sentiment, or the solemn earnestness of the American Government, its eyes must now be fully opened to the truth. Not Dr. Dernburg, not Herr Gerhard—not any German agent or purveyor of reports from the United States—can longer blink the facts. In this sense, at least, the President has made an end of controversy. None can hereafter be blind to exactly what he means and what he will do. In addition to renewing his demands for satisfaction on the score of past outrages, he serves explicit notice that any repetition of them will be regarded as "deliberately unfriendly." That, of course, is the diplomatic phrase for act of war.

This latest note of our Government is to be read in connection with the two that have preceded it. The three make a whole. They are one in body of doctrine; they have a common logic; they breathe the same spirit of indignation at rights violated and humanity trampled upon; and they are eloquent of the same demand for law and justice. Some may wonder that the latest note does not make more of the case of the Lusitania. But there was no reason for going over it again. And, besides, the essence of it lies in the quiet assertion of the belief of our Government "that the Imperial Government will no longer refrain from disavowing the wanton act of the naval commander in sinking the Lusitania, or from offering reparation for the American lives lost, so far as reparation can be made for a needless destruction of human life by an illegal act." There could not well be anything more explicit than that. It catches up all that our Government has said before on the same subject, and gives it a sharper edge.

As a mere piece of writing the note calls for high praise. Its argumentative skill is of the deftest kind. The reasoning of the German Government is turned against itself in a deadly way; and the makeshift proposals of Minister von Jagow are brushed aside as really aggravating the original offence. And in direct statement the note has a power all the greater for the way in which it keeps passion latent. The language vibrates with deep feeling, but there is no rough hectoring. Nor is it merely that the President desired to make use of the terms of conventional diplomatic politeness. There is truth as well as courtesy in his reminder to Germany that she and the United States have stood together for the freedom of the seas. This is no aimless flattery. It undoubtedly refers to the fact that on the proposals made at The Hague for the immunity of private property at sea, Germany voted with the United States—for the historic contention of the United States—and against Great Britain. This frank admission, besides being a guarantee of this Government's impartiality and entire neutrality, is used by the President with great effect in calling upon Germany here and now to make good her professions of the past.

One misunderstanding, or misrepresentation of the note in Germany, appears in the article of the naval expert, Capt. Persius, in the *Berliner Tageblatt*. He declares that the note "expresses a determination to rob us of the weapon to which we pin the greatest hopes in the war on England." But when has the Government of the United States objected to submarine warfare, so long as it was conducted in accordance with the rules of international law and the elementary dictates of humanity? In the latest note itself mention is made of the fact that the German submarines have latterly shown a disposition to submit to the established laws of war. If they do that, we have nothing more to say. They may sink every ship of war that they can catch; they may freely exercise the right of visit and search; if they overhaul a merchantman under a belligerent flag, they may destroy her, after providing for the safety of the non-combatants on board; they may stop neutral ships, to find out if they have contraband in the cargo. In other words, the submarines may do exactly what any other war vessel may do; but what the others are forbidden to do, they are forbidden to do. They may not attack neutral ships. They must not imperil or take the lives of Americans on the high seas. But in legitimate warfare the submarines are not in danger of being hampered by anything the United States has said or may do. The nonsense on this subject which has been printed in the German press—and the German-American press also—is patent, and ought not to be repeated.

Amid the mass of newspaper comment upon the note, it is interesting to observe the utterances of this same German-American press. They are not all in a similar tone. A few complain that the President is seeking to force a war upon Germany. But other German-American editors believe that the President has yielded something, as the German Government has also done, and that the difficulty can be solved by further concessions. All will hope so. But it is plain that the concessions on the main principle will have to come from Germany. On that, our Government is committed irrevocably. There it stands. It can do no other. What the result is to be, it is for the German Government to decide. Its answer will be awaited by Americans hopefully, but with a steadfast determination to stand by the right, as God gives them to see the right.

THE CHIEF LESSON OF THE EASTLAND CALAMITY.

To the horror of the Eastland disaster, no touch of poignant anguish is wanting. Not only does it surpass almost all records in the sacrifice of human lives, heightened in its sadness by contrast with the joyful spirit of the thousands of holiday-makers a moment before the disaster, but in this awful event, more than in any other that we can recall, there is driven home to us the sense of its utter needlessness. A fire, an explosion, a collision—one feels that all the precaution in the world may not suffice to prevent the occurrence, some time or other, of a disaster brought about by causes such as these. But for a great ship to turn over on its side while still moored to its dock, and that so suddenly as to cause the death of the greater part of its two or three thousand passengers—this, one is entitled to say without hesitation or reserve, should be ab-

solutely impossible, and is absolutely inexcusable.

How it did come to happen will be made the subject of the most searching examination, by both the local and the Federal authorities. We shall not attempt to forestall the result of these inquiries. But there can be no doubt of the nature of at least one of the elements that have gone to the bringing about of the terrible result. And to dwell upon that element in the matter is the prime duty of any one who, at this stage of the case, wishes to aid in drawing from the disaster a lesson of real usefulness. Whatever specific faults on the part of inspectors, or acts of carelessness on the part of captain or crew, may prove to have been committed, there is one general fault which we know prevails in a lamentable degree in our country and which unquestionably had a vital share in making the calamity to the Eastland possible.

The fault to which we have reference is the unwillingness to enforce strictly and unbendingly any general rule or principle, when such enforcement inflicts immediate pain or loss which it is disagreeable to contemplate, while the consequences of non-enforcement are remote and indefinite, and may seem in the particular instance to be improbable. This disposition is characteristic of our people, and is manifest in every direction. It was this unwillingness to cause pain or suffering to particular individuals that led a perfectly well-meaning professor to fail to do his duty as a citizen when he recognized in Holt the wife-murderer Muenter. It is this short-sighted good nature which causes the processes of criminal justice in this country to be so long-drawn-out and so uncertain as to result in a record that no less sober a man than ex-President Taft has declared to be a disgrace to American civilization. It is this weakness which causes the sufferings of a broken swindler or bank-wrecker to soften the hearts of judges and juries and executives, who, mitigating the punishment of the individual directly appealing to their senses, in that very act virtually decree that thousands of innocent persons not present to their eyes shall be driven to ruin, and not a few to suicide, through the operations of future Siegels or Morses.

Does any one think that the association of the Eastland case with our tender-heartedness towards criminals is far-fetched? If so, let him consider the kind of thing that is said about the Eastland, not by those who are making accusations, but by those who are putting the best face possible on the case. A fair sample is this, from Capt. Eames, a former master of the steamer:

> The ship itself was thoroughly seaworthy. I would have sailed her around the world. She wasn't top-heavy. I have had her loaded to Government capacity, and have run into the stiffest kind of northeast gales, and never had the slightest trouble. But she was cranky, like all lean hull vessels, and required constant watching.

Why was a ship which, though "thoroughly seaworthy," was "cranky" and "required constant watching" permitted to do an excursion business, carrying unusual numbers of people and naturally subject to conditions in which the danger of any failure to keep the "constant watching" up to mark was exceptionally grave? In view of the whole story of the Eastland's past, is it not certain that the thought of danger was present again and again to the inspectors that allowed her to continue in that line of business? Why did they dismiss that thought? Inquiry may show that there was gross incompetence or recklessness; but we are not asserting anything of that kind. What we do assert is that if the officials who passed upon the subject had taken their stand sternly upon the principle that the lives of passengers must not be exposed to danger—that the margin of safety must be far greater than that afforded by the supposition of no lapse ever occurring in the care with which the ship was managed—the disaster never could have happened. And the reason that this was not sternly insisted on was that to do so would mean a heavy loss to certain particular persons who had invested their money in the ship, and who were doubtless quite well-meaning persons, while to take a more easy-going view only meant a more or less remote possibility of the drowning of thousands of men, women, and children that nobody could name, and the desolation of hundreds of homes which nobody could point out, at a time that nobody could predict.

And indeed there is a closer point of contact. "Inquire strictly and fearlessly," so runs Secretary Redfield's telegram, "whether any official neglect or incompetence. None is now assumed, but none can be pardoned." "I intend," declares the Chicago Coroner, "to use every effort within my power to punish every person directly or indirectly responsible for this disaster. None shall escape." That is the way we all feel at the moment. But how long will the feeling last? What happened in the case of the Slocum, as regards the persons responsible for the atrocious conditions which were the real cause of the calamity? Nobody wants vengeance; nobody wants to prejudge either captain or inspectors. It is possible that no person was guilty of criminal negligence. But if they were, is it likely that the courts will try them promptly, that juries will convict them, that an endless process of appeals will not be resorted to, that punishment will be inflicted with such solemnity, such severity, and such expedition as to make the example salutary and effective? If so, the experience will be one by no means in keeping with those good-natured ways which usually characterize our dealings with these matters, both before and after the event.

THE QUESTION OF THE SINGLE TERM.

The Committee on Governor and Other State Officers of New York voted last week to report favorably to the Constitutional Convention a proposal making the Governor's term four years instead of two, and making him ineligible for reëlection. The first of these proposals is eminently desirable; concerning the second there is much room for doubt. Two years is obviously too short a time to permit of the deliberate and undisturbed carrying out of large policies of governmental improvement. If it be objected that the election of a bad Governor for a term of four years would be a serious public misfortune, the sufficient answer is that this fact would naturally be so appreciated by the public that both the nomination and the election of an unfit person would be rendered far more improbable than it is at present. With voters called upon to make the choice only at the long interval of four years, and with the knowledge that the consequences of a bad choice would be so serious, the standard of qualification demanded in a contest for the Governorship would be sure to be considerably higher than it is at present. Let us base the Governorship on the idea of giving a good Governor a chance to show what he can do, and not on the idea of getting rid of a bad one in short order.

The ground assigned for making the Governor ineligible for reëlection is that this would make him "free from the temptation of building political fences, a labor that not infrequently in the past has diverted the attention of Governors from the work the people elected them to do." But the validity of this argument is very questionable. If the Governor is really intent upon political aspirations, he may be looking to the Presidency or to a Senatorship quite

as probably as to a reëlection to the Governorship; and the temptation of building political fences would in that case by no means be removed. On the other hand, the man who wished to make such a record in the Governorship as would commend his administration to the approval of the people of the State without distinction of party might, through the prohibition of a reëlection, be deprived of a natural and wholesome stimulus. And the mere fact that it was certain that he could have no further power in the State Government after the expiration of his term would tend, in the nature of things, to diminish his effective power during a considerable portion of his term. Take it all in all, we believe that the prohibition of reëlection would do more harm than good.

Between the question of the ineligibility for reëlection of a Governor and that of the President of the United States there are important points of difference. Both the reasons in favor of and the reasons against the proposition are of greater force in the case of the Presidency than in that of the Governorship; but the net result of weighing the two classes of considerations is far more emphatically against the proposal in the case of the national than of the State office. The prime reason urged for confining the President to a single term is based on the tremendous powers of his great office; to make his administration of it free from all thought of personal advancement is regarded, by advocates of the single-term plan, as a safeguard against dangerous abuse or misuse of so mighty a trust, perhaps the greatest resting upon any single individual in the modern world. But if there is much to be guarded against, so also is there much to be lost by the adoption of the precaution. And while the precaution would at best serve only to mitigate in some degree a vague evil—an evil, too, which in our present state of political development seems to have little reality—it would operate as an absolute bar to freedom of national action when such freedom might be of the most vital moment to the nation. For the sake of a hypothetical and by no means certain improvement in the administration of a President unworthy of his great trust, the country would cut itself off from the possibility of retaining at the helm the one man, tried and found true and strong, whose wisdom, patriotism, and hold upon the confidence of the people, might, in a time of stress, constitute a priceless possession of the nation—the best assurance of its safety, honor, and prosperity.

Nor can we admit that, even from the standpoint of its influence upon the conduct of a given incumbent of the Presidency, ineligibility to reëlection would be calculated to cause more good than harm. On the contrary, the feeling that his administration is being watched by his countrymen, with a view to passing judgment upon it at the close of his term, cannot but serve as a powerful incentive to the highest effort. It is by no means only in the manœuvrings of politics that the aspiration for a second term is embodied. Even the most mediocre of men, when honored by the nation with its highest trust and its most splendid distinction, must be impressed with a sense of the elevation to which he has been carried, and must instinctively desire to show, so far as he can, that he has proved equal to his trust. With reëlection out of the question from the beginning, with no public career to look forward to at the close of his term, the President would be in large measure cut off from that inspiration which a just ambition and a wholesome desire for public approval naturally supply. Moreover, he would from the beginning, and in a progressive degree as his term approached its close, be deprived of much of the prestige and influence which—quite apart from any idea of office-mongering—is a natural and necessary part of the power of the executive head of the nation. It might be said that these arguments would equally apply to a third term, or a fourth; but the mere fact of a single reëlection would remove nearly all of the drawbacks we have been putting forward. And furthermore there is a vital difference between an unwritten law, which may, in time of urgent national need, be waived, and a constitutional prohibition the setting aside of which would be an act of revolution.

DEMOCRACY, MEDIOCRITY, AND THE COLLEGES.

There seems to have been a lull, of late, in the activities of the critics of our colleges. Whether this is owing to the absorption of all interest in the great war, or whether the time had come, in the ordinary course of nature, for an ebbing of the tide of fault-finding, the fact is that we have recently been hearing comparatively little of the woful ignorance of college graduates and the inability of sophomores to spell correctly or to write passable English. But within the colleges themselves the searching of hearts goes on continuously. No professor who takes himself seriously seems ever to be at ease in his Zion. Is his work doing all the good it ought to be doing? Are the aims of the college as a whole what they ought to be? Above all, is the college playing the part that such an institution ought to play in a democracy, in a vast, new, conglomerate democracy like that of the great American Republic?

Upon one phase of this question Prof. Henry Seidel Canby, of Yale, writes with much vigor and point in the August number of *Harper's*. "The Colleges and Mediocrity" is the theme of his paper, and it discusses in many aspects the age-old question of the professor's duty towards the average or inferior student on the one hand and the youth of exceptional ability on the other. An age-old question we have called it; but between the question as it might have figured in a magazine article of a few decades ago and as it is almost sure to figure in such a discussion to-day, there is, unless we are much mistaken, a marked difference. In an earlier generation, the question would have presented itself as one whose human appeal was at once narrower and broader than that which is apt to be the centre of a consideration of it to-day, and which is constantly manifest in Professor Canby's article. The professor's concern would have been primarily with the intrinsic value of what might be achieved, as seen in the individual himself, and secondarily with its value from the broad standpoint of human culture and progress. What Professor Canby appears to have in mind above all else—or perhaps what, in obedience to a dominant tendency of thought and feeling in our time, he thinks he has in mind above all else—is neither the fruit of intellectual expansion or accomplishment as seen in and felt by the individual, nor the value of it as part of the long and splendid story of man's aspirations and achievements. The professor's duty to do what he can for the mediocre many and his duty to stimulate all the possibilities of the gifted few are alike predicated on the specific needs of a democracy, and especially of just such a democracy as ours.

The main point of Professor Canby's thesis is that for the successful working of a democracy like ours it is equally essential to care for the intellectual sustenance of the common run of youth and to stimulate the highest possibilities of young men of talent. "America," he says, "just now provides the greatest exhibition the world has ever seen of successful mediocrity"—a mediocrity that is stamped all over our life in

every direction. And he holds that our colleges, and their professors, have fallen in with this; the "desire to do something for every one has made us neglect the exceptional man and actually favor the mediocre." But he ascribes this defect not, as is often done, to the mere desire for big numbers, but to a motive far more creditable. "It is the American passion for democracy," he says, "that makes us lavish our energies upon the multitude of the mediocre. For a belief that the right to an education is as universal as freedom is ingrained in the American mind." Nor does Professor Canby find any fault with this idea; what he contends for is that democracy needs signal ability in its leaders quite as much as it needs a satisfactory level of mediocre culture spread throughout the community. And when this shall have become thoroughly recognized, he feels that the problem will solve itself; for the resources of our great institutions of learning are now abundantly sufficient to compass both of the ends, once the vital need of both is truly realized.

With this view we have no disposition to quarrel. But we cannot help feeling that it does not, after all, get down to the heart of the matter. It is not through any calculated estimate of specific results that the cultivation of high intellectual objects can be made truly to flourish. Not from devotion to democracy, but from devotion to learning, joy in the triumphs of mind, delight in the beauties of literature, spring those enthusiasms and passions out of which high intellectual achievements grow, and which give rise to that distinction and individuality whose rarity in our country Professor Canby so deplores. So long as we have not the courage to assert the prerogative of intellect, to prize for its own sake the exercise of high powers in the pursuits of science and literature, mediocrity will continue to fill the stage, leaving to high gifts and rare individualities scant recognition and encouragement. The doctrine that no exertion of personal effort and no expenditure of public resources is really worthy unless it points directly to what is called "service" is fatal to that generous ardor which is the inspiration of the intellectual worker, and to that uncalculating admiration which is so large a part of his reward. Democracy will be well served by the promotion of talent and the cherishing of genius; but it will be infinitely better served if it is willing to take chances on any by-product of "service" which they may happen to yield than it can be through a strident insistence on its own claims.

A SURVEY OF THE WAR.

"To the question 'Have we won?' there is only one possible answer: So far, the Germans have won rather than the Allies." Such is the frank statement of an English writer on the war in the July *Fortnightly*. And the press in England is equally plain-spoken. It admits that things have gone badly on land for the Allies. Their hopes have been dashed on the Russian frontier and in Flanders and along the French front. The expectation that by this time the Germans would be driven far back from their conquests in Belgium and the North of France has been frustrated. But little has been accomplished there, and that at an appalling cost in life. Moreover, it is now conceded in England that the campaign in the Dardanelles was wretchedly mismanaged.

A survey of the strictly military situation to-day cannot fill the Allies with either pride or hope. Germany's soil is virtually uninvaded. Except for a small portion of Alsace, she has lost no territory, while both East and West her troops are occupying lands belonging to her enemies. And her latest campaign against the Russians is proceeding with great strength and precision. At last we are seeing the historic tactics of the German General Staff in successful operation—the plan, that is, of hurling converging armies upon the enemy. As to the actual result of the movement on Warsaw, there is still doubt, but to make the outlook for the Allies as dark as the most optimistic German sees it, let us assume that Warsaw will fall, and the Russians be driven out of nearly all of Poland.

On this basis, what are the reasons why the Allies should lose no jot of heart or hope? One reason may be seen in the attitude of the German Government itself. It is unquestionably ready for peace. And it would accept a peace which, from the German point of view, would be on very reasonable terms. These, of course, have nowhere been formulated. Yet the intimations of their general nature have been too thick and too authoritative to admit of much doubt that if, for example, Germany could end the war to-morrow by going back to the *status quo ante*, she would jump at the chance. Now, what does this signify in a military sense? The inference is unavoidable that the Germans no longer think themselves able to impose their will upon Europe. Great and wonderful as has been their display of fighting power, they are not deceived by it into thinking that they can change the map of Europe at their pleasure. They know what a terrible price they have already paid. Moreover, the greater their exertion of military strength, the clearer the evidence of its real failure. This is not meant as a paradox. The whole German theory of the war was that it was to be short. By a series of swift and bloody strokes, Germany was quickly to garner the advantages of her long years of preparation. Paris was surely to be taken last September. By January, Germany was to be in a position to dictate peace. But here we are at the end of July, with the prospect of the war going over another winter. Germany may be invincible, but her plans of last year have broken down, and her rulers and her people know it.

And if, from the fluctuating battle-lines, west, north, and south, we look to the large and steady elements of strength on the part of the Allies, we may well understand how they believe that time is fighting on their side, and that all they have to do is to set their teeth and see the thing through. First of all comes the great fact of their having absolute control of the sea. From it German commerce has been swept clean. The German navy for offensive purposes—excepting the submarines, and even they have been able barely to gnaw at the real sea-power of England—is as if it did not exist. And this hampering of Germany, heightened by the spectacle of her colonies falling one after another, is likely to be even more severe and telling as the months go by. A nation whose whole industrial life has been for years shaped for over-seas commerce cannot be cut off from the ocean indefinitely without receiving vital injuries. And the Dardanelles campaign is not to be thought of as an isolated venture. It is, in the first place, one evidence more of what sea-power means, and it is also a far-sighted movement which, if pushed to success, may prove far more important than any battle fought in Galicia or in France. With Constantinople captured, Russia free to come and go in the Black Sea and the Mediterranean, and all the Balkan states wheeling into line with the Allies, the German cause would have suffered a fatal blow. In that case, the Allies too, would have their giant pincers, closing from the North Sea and from the Bosporus.

Thus we think that a cool estimate of the actual forces pitted against each other is not so discouraging for the Allies as the present superficial military situation might seem. The ultimate resources are theirs; and if determination is not lacking—as there is not the slightest evidence that it is—they will be the lords of their fate.

Foreign Correspondence

THE GERMAN NOTE — JOURNALISTIC REPUTATIONS—J. L. GARVIN.

By JAMES F. MUIRHEAD.

LONDON, July 13.

The general British feeling in regard to Germany's reply to President Wilson's note of June 11 may be concisely summed up in six words addressed by Cicero to Catiline: "Quousque tandem abutere patientia nostra?" The German explanation of why the submarine had to sink the Lusitania drives me again into a foreign tongue: "Cet animal est très méchant; quand on l'attaque, il se défend."

As in all times of great national stress, reputations are now being made and unmade daily in England. Especially is this true in the sphere of journalism. Certain daily and weekly organs, from which we hoped for better things, have shown clearly that with them the pure "journalistic" instinct has been the predominant influence—the desire to create sensation, to demonstrate their power, to split the ears of the groundlings, to increase their circulation. Fortunately for our self-respect, there has been at least a saving remnant of newspapers to which this description does not apply. Without prejudice to others that might be named, it is fair to say that the *Observer* and the *Pall Mall Gazette* are conspicuous in this latter group. These two journals, the one appearing on Sunday, the other on each week-day afternoon, are edited by Mr. J. L. Garvin; and it may unhesitatingly be affirmed that this gifted Irishman is one of the men whose reputations have been distinctly enhanced by their attitude and activity during the war.

As Mr. Garvin and his papers belong to a political party with whose councils I have generally been little in sympathy, and as I used to look with considerable misgivings on some, at least, of his ante-bellum editorial articles, I may assert that this judgment is made without prejudice and is based solely on observation of the accomplished fact. Though it be at the expense of my own power of intelligent anticipation, I have to confess that it has been one of the many surprises of this great struggle that I find myself able to extend my admiration of Mr. Garvin's brilliant literary gifts to include also his political judgment and his ethical standpoint. He seems to me to have shed, for the time being at least, all those attributes that belonged to him merely as the clever journalist, the "able editor," the vigorous supporter of partisan views that drove inevitable wedges into the body politic. He now appears in the rôle of the judicial thinker, the single-minded patriot, the national conciliator. He has shown that he is no mere "journalist," but that his aim is to make a practical application of philosophic temper and principle to politics —a problem never to be perfectly solved but never to be given up as hopeless. He has most unmistakably, since the war began, subordinated his party leanings and party loyalty to the service of the state. No party hack has upheld the Liberal Government, as a war government, more cordially and persistently. He has deprecated all personalities, and especially the efforts to make scapegoats of particular Ministers. To use the words applied the other day by Mr. Balfour to Joseph Chamberlain, he recognizes "that there are moments when criticism is not only useless but absolutely mischievous." Though he has long desired a Coalition Government as the right government for an emergency like this, and has, consequently, good reason to congratulate himself on the present Ministry, he is yet broad-minded and courageous enough to deplore openly the loss of services like those of Lord Haldane, and this in spite of the fact that he cannot be suspected of any sympathy with that statesman's military policy. He refrains scrupulously from reviving old scores; he ignores as far as possible the mistakes and faults of the past; he even compasses an almost heroic avoidance of the "I-told-you-so" attitude. Thus, though he is now as ever an advocate, in principle, of compulsory military service, he realizes that we entered this war with the voluntary system in existence, and that we must therefore work it to the best advantage until it is proved to have broken down. He sees that the only tolerable position for every sane patriot is to assume (in the absence of overwhelming evidence to the contrary) that the Government is doing its best, and to resolve to strengthen its hands in every way. He has always, so far as my memory goes, refrained from exploiting mere journalistic sensations as such (in spite of what must often have been strong temptation), and this feature is very obvious, just now, in his handling of such topics as ministerial differences or technical inconsistencies. And, while he is by no means a full-blown optimist, his long weekly articles in the *Observer* have been eminently calculated to strengthen the feeble knees and to direct our attention to the real points in our favor.

His treatment of America's relation to the war has been marked by singular understanding, moderation, and restraint. When journals, even of avowed Americophil tendencies, were publishing articles that undoubtedly gave great umbrage in the United States, the *Observer* and the *Pall Mall Gazette* wrote steadily of President Wilson's attitude with as much consideration, patience, and insight as any of his own party journals. Thus, after the sinking of the Lusitania, the *Observer* wrote: "We shall certainly not rank ourselves among those who urge the United States to abandon their neutrality" [already quoted in the *Nation* for June 3]. If Mr. Garvin has now any desire to have the United States join forces with the Allies, it is based on the belief that America's intervention, if sufficiently inspired by conviction on the big moral issue, would raise the United States to greater moral stature, completing the work of Washington and Lincoln, and insuring the reign of peace, freedom, and democracy under a supreme court of nations. For he is convinced not only of the inherent justice of the cause of the Allies, but also that their success is necessary for the good of civilization. And it is interesting to notice that he holds this view with great tenacity, in spite of the fact that he has always been profoundly interested in German thought, and is deeply versed in German history and literature. To use words of his own, Germany became a second home for him "in a manner that immensely deepened the historical sense, the geographical sense, the economic sense, and gave a practical idealism to life and an invigorated direction of effort. For this I cannot ever be too grateful, though well aware that the German tendency to over-egg every possible pudding is a thing to beware of." He has long cherished the ambition to write a "Life of Bismarck," and to attempt to write it in the way absolutely essential to show through what a swaying of ideals and realities the age of Frederick and the French Revolution passed at last into the present greater age of Armageddon.

The new Military Hospital in Endell Street is the first of its kind to be entirely staffed and run by women. It accommodates several hundred patients, and is under the management of "Major" Garrett Anderson. I understand that some of the first wounded men to arrive were a little dismayed to find that they had been handed over bodily to the tender mercies of the gentler sex; but my cross-examination of as many patients as I could reach proved that this had been a very temporary phase, and that the prevailing feeling now is that they would not for the world be anywhere else. Certainly, in all the superficial features that come under the eye of the casual visitor, this hospital can hold its own with any other military hospital in London; and nowhere have I seen a more cheerful set of patients. Given equal skill and attention, it must be æsthetically pleasanter to be looked after by these red-collared doctors and blue-collared orderlies—to say nothing of the nurses—than by the ordinary male attendants. And assuredly a man from the front must have had his fill of association limited to his own sex. Besides all the usual equipment of a hospital, there are a recreation room with a good stage and almost daily performances, and a library presided over by the well-known novelist Miss Beatrice Harraden.

CONSTITUTIONALITY AND WAR—DEMOCRACY, LIBERTY, NEUTRALITY.

By STODDARD DEWEY.

PARIS, July 10.

Burning constitutional questions have been set aflame by this incendiary war in all the countries of Europe. The answers which have been elicited may bring out of the shadow certain constitutional principles of our own.

In a financial debate of the French Chamber of Deputies (June 29), Prime Minister Viviani found it necessary to go back to first principles in defining the necessary relations of the Legislative body with the Executive. He spoke "from the point of view of *contrôle*."

Now we Americans have considerable experience of the fact that the French word has not the full meaning of our English "control." In virtue of the difference we possess the Philippines, as every one who followed the negotiations of the Treaty of Paris knows. It would be a mistake, however, to suppose that the French meaning implies nothing more than a gentlemanly supervision. What Parliament claims of Government in France is an efficient check of its measures. This M. Viviani admits as a self-evident condition of any really democratic government: "Parliament has the control, Government has the execution. That is the essential principle of all democracy. . . . And parliamentary control must involve permanent session."

This would condemn our Congress to sit and countercheck President Wilson all through the dog days. Now the French Prime Minister's idea of what is "essential to all democracy" is that of the founders of the Third Republic. Gambetta not only adopted the formula "parliamentary omnipotence," but also, at the turning point of the young Republic, insisted violently that government of the people by the people has for its essential condition this predominance of Parliament. That is, the representatives of the people in Parliament hold proxies in blank for their constituents; and the Executive, being the result of the choice of Parliament, does not represent the people directly as the President of the United States is supposed to do.

This question of the French Parliament's powers "over" Government or of Congress over our President is not the same as that which arises from the United States, unlike France, being constituted under a "limited representative government." The American system "of the Fathers" left whole regions of human activity without state control of any kind. Besides this differing general theory of the rights of the community or state over the individual, the object-lesson of France is worth consulting.

The question of "control" is involved in the additional powers now exercised by the great parliamentary commissions and the new creation of under-secretaryships in the War Office. The latter has very commonly been considered an expedient to avoid attacks on Government itself by those who have so long held the reins of power in France and now, under pressure of war, see party grooves wearing dangerously smooth. The fact that one of the new under-secretaries has been chosen from the Republican Centre, next door to the Moderates, should dispose of rumors that Radicals and Socialists have been trying to upset the Government. The French have a proverb of their own—"Don't change your shirt in a draught of air"—which serves their common-sense as well as Abraham Lincoln's "Don't swap horses in crossing a stream."

The unanimous votes of both Chamber and Senate bear decisive witness to Parliament's deliberate confidence in the present Government and military command. However much the political underside exists, the talking about it is quite as dubious as that about secrets of diplomacy. And the exercise of parliamentary control in close commissions is far preferable to debate and open wrangling in public sessions of Parliament. Gambetta's principle was based on what he considered a self-evident fact, that only the people's voting for members of Parliament is to be recognized as "the decision of the master of us all—universal suffrage." Even so, the French people are just now in no mood to accept Parliament as a permanent Committee of Public Safety.

In Switzerland, too, these times which try men's souls have brought out low-lying differences in the understanding of the first principles of free government. In the Federal Council (reported by the *Gazette de Lausanne* of June 17) M. Hoffman, chief of the political department, thought it necessary to say:

"From the beginning of the war we have had to struggle against a false conception of neutrality, which tends to represent the state as neutral politically, but the citizen as free to express his opinions, even if they are in contradiction with such neutrality. The state is made up of the community of citizens, and the duties of the state are those of each citizen. We have therefore the right to require each one to repress his sympathies in so far as it matters to the state, for the state cannot suffer citizens to endanger its policy of neutrality."

This identification of citizens with the state, with all its dangers for the liberty of the individual, was used to defend varying measures taken by various authorities, civil and military, in restriction of liberty of speech and of the press—liberties guaranteed by the Swiss Federal Constitution.

Thus M. Fuglister, a Swiss engineer long settled in Louvain, was not allowed in Berne to give an account, even before a privately invited audience, of what he had seen during the destruction of that city. In Lausanne, numbers of the French *Illustration* were excluded from sale at the stands and shops and from the cafés, although the highly offensive German *Simplicissimus* was tolerated. A book by Walter Vogt (a son of Carl Vogt, one of the founders of biology) and the preface of another book on Belgium were placed on this Index Prohibitorius of the Government of free Switzerland. Serious newspapers like the *Journal de Genève* and the *Gazette de Lausanne* were publicly reprimanded and threatened.

This seems all the more one-sided in that most of the examples had been made in French Switzerland at the demand of the representative of Germany at Berne. It is also felt that, while the sympathies of the German-speaking cantons of Switzerland have been all along with Germany, their preponderance in both the central government and in the army seems to be exercised—in spite of a certain painful neutrality—at the expense of the French cantons. A final vote of the Federal Council showed this sharp division of race and sympathies—twenty-one German-speaking Deputies against eight of French or Italian cantons.

Now the very elementary and scant Constitution of Swiss cantons into one Federation was intended to restrict any use of central powers beyond absolute necessity. Edouard Secrétan (a Deputy and director of the *Gazette de Lausanne*) remarked at once that the "system of full powers" which, by a common vote at the beginning of the war, had been confided to the Federal Council and by this to military jurisdiction "has no constitutional basis." The Socialist Deputy Graber, of Neuchâtel, illustrated by an example: "In the Italian Parliament, M. Salandra, Prime Minister of a monarchical state, has been able to assert that measures of rigor which may be taken for Italy will still be far behind those applied since the beginning of the war in Switzerland."

M. Ador, of Geneva, protested solemnly in the name of liberty: "With profound regret I have listened to M. Hoffmann's declaration. In what he has said there is the Germanic notion of the absolute subordination of the individual to the state—a notion that will never find entrance in a Latin head. Such a theory is utterly opposed to our way of thinking."

In France, Senator Clemenceau, without interfering in Swiss constitutionality, took the concrete instances of neutrality and summed them up after his usual manner in a word: "M. Hoffmann's justice *Germanizes*."

This debate in the Federal Council and the publicity given it have produced some result. Proceedings are no longer to be taken directly on denunciation by a foreign government, but must first pass under the judgment of an organ of the Federal Council itself, which also will not leave everything to the military jurisdiction. The ways and means of not exercising freedom in governmental measures are so manifold that we must wait and see what will be the outcome. The whole thing is an instance of the recklessness with which Germany has risked her previous undisputed peaceful penetration of surrounding countries. It may be remembered that an inordinate number of professors in the Swiss universities are Germans by birth, breeding, and nationality.

It should be added, to the credit of the Federal Council, that its position has been of utmost difficulty in matters of vital concern to the Swiss people. This may help to explain its somewhat rigid interpretation of neutrality. M. Hoffmann said:

"The situation in which our country finds herself is much more serious than is generally believed. By the force of things, a deep chasm has been opened between what our situation rightfully ought to be and what it really is. In the fierce economic and commercial war which the belligerent states are waging with each other, each strives to cut off the other from traffic and communication with the rest of the world and, in particular, to make it impossible to provide through neutrals all it may need to keep up the war and assure its own living."

Notes from the Capital

THE RAPIER-LIKE MR. MACVEAGH.

The ex-Attorneys-General of the United States seem to be ranging up very definitely on the side of the Allies, notwithstanding the President's plea for the preservation of a neutral attitude by our citizens at large. Mr. Bonaparte's oratorical utterances are not more pungent than Wayne MacVeagh's published survey of the situation of the world-war. Indeed, nobody can excel MacVeagh at pungency when he has something sharp to say, and this regardless of what cause he has espoused. He was just as cutting in his retorts upon the persecutors of his saintly client, Oberlin Carter, as he is now in exposing the duplicity and general viciousness of the Kaiser's Government.

His controversial vocabulary is unmatched in America. Sometimes he draws on it for thunder, sometimes for a lightning-shaft; and, once he is resolved upon its use, it appears to make no difference whether the object of his attack is a former friend or a lifelong foe, an utter stranger or a kinsman. Simon Cameron, his father-in-law, and J. Donald Cameron, his brother-in-law, have been special targets for his missiles in reformatory campaigns, and the sincerity of the domestic feud was well attested by the spirit in which the Camerons turned upon him once and tried to defeat confirmation when he was nominated for an important office. Grant made him Minister to Turkey, but that did not prevent his working, in the Republican National Convention of 1876, for ex-Secretary Bristow, who represented everything inimical to Grant, or from publicly re-

buking Bristow, four years later, for supporting the candidacy of Arthur. Having always been accounted a Republican, in Harrison's campaign for reëlection he went over to Cleveland, and became to that extent a Democrat; yet in 1900, although a leading anti-Imperialist, he supported McKinley as a protest against Bryanism.

Among the liveliest partisan battles he has had were those with William E. Chandler and Benjamin F. Butler, in the later seventies. Notwithstanding that it was Chandler who largely planned the eleventh-hour movement which seated Hayes, and that MacVeagh headed the commission which went to launch the new President's policy in Louisiana, a violent antagonism sprang up between the two men; and when Garfield named Chandler for Solicitor-General, MacVeagh, then Attorney-General, was probably, more than any other one man, instrumental in defeating confirmation. Chandler did not forget this, and tried to reciprocate a dozen years later, when President Cleveland nominated MacVeagh for Minister to Italy; but the attempt failed.

Butler's grievance grew out of MacVeagh's work in Louisiana, where the General seemed to regard himself as possessing a monopoly of everything of interest. Their duels in print served only to illustrate the disadvantage a combatant armed with a meat-axe suffers when faced by an adversary with a rapier and long training in its use. The worst that Butler could do was to taunt the reformer MacVeagh with having married into the unreformed Cameron family. This, MacVeagh professed to fear, was such a symptom of failing powers that it "would go far to destroy that reputation for effective scurrility" which Butler had "so sedulously fostered for years." His chief purpose in continuing the controversy was, he explained to Butler, "to exhibit you as a warning to younger men, by showing them that, in spite of great ability and energy, you had become the leper of our politics, by reason of the general conviction that you habitually disregard the eighth and ninth commandments." And he added that he should not take the trouble to notice any more of Butler's attacks, "for those who know me will not believe anything you say against me, and those who know you of course will not believe anything you say against anybody."

My metaphor of the rapier was suggested by MacVeagh's personal appearance, for physically he more resembles a sword-blade than any other familiar object. Sharp-featured, keen-eyed, painfully lean of frame, you could guess, almost at a glance, the sort of phrases he would employ in a dispute. Like these expressions, he seems a marvel of condensation, for he is a small man with a commanding head, and his manner and gait mark him as a closely wrapped bundle of nerves. This does not mean that he is of so tense a temperament that he cannot let himself go on occasion. Once, when he was presiding at a charitable entertainment where "Bill" Nye spoke, he enjoyed the fun so much that he quite forgot where he was, and wriggled and rolled about in his big chair till the lecturer halted, turned towards him, and remarked in mournful tones: "While profoundly appreciating the honor done me by the distinguished gentleman in presiding here, I must say that, unless the audience pays less attention to the chairman and more to me, I shall have to retire."

Sometimes, too, he makes people hold their breath by some bit of humorous effrontery. He dislikes to pass a night away from home; and, one afternoon while he was living in Philadelphia, he had to argue a case before the Supreme Court of the United States in Washington, and discovered in the midst of his speech that he would have just time to get home if he stopped then. "May it please your Honors," said he, pausing in his argument, "I move that the court do now adjourn. I wish to catch the four o'clock train for home." Any ordinary attorney, guilty of such assurance, would have received a sharp rebuke; but this man is an exception to all rules, as was shown when the Chief Justice calmly made the order without another word.

VIEILLARD.

The Philosophy of the Beautiful

A SIGNIFICANT MODERN TREATMENT OF THE METAPHYSIC OF ÆSTHETICS.

By HENRY RUTGERS MARSHALL.

It is some twenty-three years since Dr. Bosanquet published his valuable "History of Æsthetic," in which he gave fairly clear indications of his own views, but only to one who took the trouble to read between the lines. The student, therefore, must welcome the publication of the volume of lectures* delivered last year by the author at the University of London. The book is much more important than might be suggested by its brevity; for in it our author gives us an epitome, almost completely stripped of historical and illustrative material, of the positions he maintains, and adds certain acute and just critical estimates of the views of two significant theorists, Lipps and Croce, whose work has gained prominence in the philosophical world since his "History" appeared.

One is prepared to find the lectures, coming from such a source, frankly addressed to that small group of thinkers who are thoroughly versed in the technique of modern "idealistic" metaphysics; but the author is commendably clear in his exposition, although in his fondness for paradoxes, and in his general mode of treatment, he plainly shows the influence of Hegel, the movement of whose thought is fraught with difficulties which the average reader finds impossible to overcome. This influence is especially marked in his treatment (p. 98 ff.) of the Æsthetically Excellent, or real beauty, as inclusive of both the ugly and what we usually call the beautiful. The book is replete with examples of keen insight and appreciation of Art, especially interesting being the author's discussion of diverse grades of beauty in Lecture 3.

Dr. Bosanquet's whole mode of approach is influenced by his failure to distinguish the radical difference between the attitude of the creator of a work of beauty, and that of the uncritical or critical observer. He tells us (p. 35) that "the spectator's attitude" is "merely a faint analogue of the creative rapture of the artist"; and (p. 111) that "the whole world of beauty . . . is the individual operation of a single impulse, the same in spectator and creative artist." To this one may object that the attitude of the artist is that of the creator; he is led by impulse, and in his creative moments is careless of the "world of beauty," or of any aim other than the expression in his medium of the conception he has in mind. In this his attitude is that of the inventor, of the scientific discoverer, and he gains, as all inventors and discoverers do, the joy which creativeness always carried with it. In his creative moments, however, he is, as just noted, not appreciative of the "world of beauty" in which his work is to take its place. When he does gain this appreciation, as he must from time to time in intervals between these creative moments, he at once takes the position of the observer, and his whole attitude changes. He is not then creative, but perceptive. He is not concerned with the joy of accomplishment, but with the complex impression that yields beauty. It is without doubt true that the studious connoisseur finds in this complex impression some elements of sympathetic comprehension of the artist's attitude, some "faint analogue of" his "creative rapture"; but it is clear that "the world of beauty" of the great body of those who are thrilled by artistic products cannot be appreciably involved with this sympathy, and it is especially difficult to see how one can maintain that the beauty discovered in nature may be expressed in terms of this "creative rapture of the artist." This failure to distinguish between the attitudes of the observer and of the creative artist must be borne in mind when we consider our author's emphasis of expression; when, for instance, we read (p. 36) that the æsthetic attitude may fairly be described as "feeling expressed for expression's sake."

The term expression may have two distinct references in this connection which really involve two distinct meanings. It may refer to the object that yields the impression of beauty; which object is thus supposed to bring out, or express, some hidden significance that is not given in the mere appearance. Thus Dr. Bosanquet tells us (p. 55) that "Nature has in it a life and divinity which it is attempting to reveal." Taken thus, expression can only appeal to one who assumes the attitude of the observer. Or the term may refer to the creative effort of the artist who attempts to interpret or "express" some conception that is hidden from the insight of the spectator to whom his artistic product appeals. To have in mind the definition of the æsthetic attitude as "feeling expressed for expression's sake" (p. 37) is thus likely to lead to obscurity of thought on the part of one who fails to discriminate between these two attitudes. Dr. Bosanquet gives us an alternative definition of this æsthetic attitude, "so far as enjoyable," as "the pleasant embodiment in an appearance presented to imagination or imaginative

*Three Lectures on Æsthetic. By Bernard Bosanquet. New York: The Macmillan Co. $1.25 net.

perception" (p. 36). Here he evidently has in mind the attitude of the observer who finds some special meaning expressed in the observed object. But he makes it clear that he does not limit his conception to this expression in the object, as, for instance, where he tells us (p. 34) that "imaginative expression creates the feeling in creating its embodiment," in which case the expression must inhere in the creative activity of the one who produces the embodiment.

To this position he is doubtless led by his sympathy with Hegel's conception of the significance of the correlation of contradictories under higher syntheses; and although he gives us no clear view of the synthesis here supposed to be involved, he is evidently inclined to look for it in the attitude of the critic (p. 35), although not without considerable hesitancy (p. 36).

In giving a definition of the æsthetic attitude like that referred to above—"feeling expressed for expression's sake"—it is, of course, important to comprehend the meaning to be attached to "feeling." The word is used so loosely in common speech, and in every-day writing, that careful analysts nowadays hesitate to employ it at all, while Croce, the eminent Italian æsthetician, whose general views on æsthetic are allied with those of Dr. Bosanquet, and not a few other authorities have held it to be altogether unintelligible. Acknowledging this difficulty, Dr. Bosanquet therefore attempts to define the term (p. v), telling us that he means by it "the concernment of the whole 'body-and-mind'"; and adds (p. 7): "In it mind is all body, and body is all mind." Here there is surely a lamentable lack of clarity where clarity is most important.

But assuming the meaning to be grasped we cannot but ask whether "feeling expressed for expression's sake" is always æsthetic, as it must be if Dr. Bosanquet's definition is to prove satisfactory. It certainly is not always æsthetic, if æsthetic is to be identified with the appreciation of what our author calls "the world of beauty"; for, on the one hand, this formula applies, not only to the product of the great artist which arouses our enthusiasm, but also to that of the tyro who fails altogether in his effort; and, on the other hand, it does not seem possible to make it applicable to the beauty of nature without altogether changing the reference of the term expression. We are bound, therefore, to agree that our author and those who approach his mode of thought are not dealing with æsthetic as the study of what is ordinarily called the beautiful, but rather with a special concept for which no more can be asserted than that it finds its most interesting exemplification in the quality which attracts the lover of nature and of fine art, and which is known to the average man as beauty. That Dr. Bosanquet is dealing with a concept of this kind is indeed very evident to one who follows the course of thought of the modern idealists, from Baumgarten and Kant, through Schelling and Hegel and the modern descendants of these great thinkers, to our author himself. Yet this quality of beauty was surely referred to in the treatment of æsthetic by Baumgarten, who invented the term, and by Kant, who established its common use, and by Kant's immediate followers in the metaphysical field; and, in fact, we must hold it to be this quality to which Dr. Bosanquet himself refers by the term æsthetic, if we judge him by the language of the descriptive and illustrative passages of his "History" rather than by his theoretical dicta.

At all events, it is clear that it is this quality of beauty to which the average cultivated man refers when he uses the word æsthetic, and he is fully justified in asking how far the later development of metaphysic has aided the spectator in the appreciation of beauty, the critic in the guidance of his judgments as to the relative value of works of art, the artist in his effort to attain his goal. Dr. Bosanquet would probably be the first to acknowledge that this metaphysic cannot be said to aid the artist, whose work is distinctly creative; and he would consider quite natural such disdainful rejection of its tenets as we find among artists who mistakenly think this aid is offered. That it has broadened the appreciation of beauty so far as it has led to the introspective studies of men like Schiller and Goethe cannot be questioned; but it must be looked upon as having been the stimulus to introspective studies of this kind rather than as their effective basis. That it has brought into prominence certain valuable principles of criticism must also be granted; but this is because it has involved the concentration of thought upon the quality of beauty as given in experience rather than because of the appreciation of any necessary implications of the tenets presented for consideration.

The student of æsthetics thus finds his thought turned from metaphysic to the psychological study of the experience involved in the appreciation of beauty, feeling sure that here alone he may hope to gain the fundamental grounds for a just appreciation of beauty in all its fulness, a well-balanced critical judgment, and a helpful view of the relation of the artist to his work. He acknowledges that he owes a great debt to the metaphysical studies of Plato and Aristotle, and even to Plotinus, and perhaps as great a debt to those of the modern idealistic philosophers and to the talented writers influenced by them, for they have given him data which are of inestimable value in his work of investigation. But he is convinced also that the metaphysical problems raised by this study can never be solved until the philosopher bases his thought upon firm psychological grounds. This position was fully recognized by Aristotle, although psychology, being in his day still in its infancy, could give him relatively little aid. It has been almost entirely overlooked by the modern metaphysician to whom modern psychology should have been an open book. It must be recognized, and taken account of, by the philosopher of our day if the metaphysic of the beautiful is to be developed coördinately with the metaphysic of the good and of the true.

The Silk-Hat Soldier. By Richard Le Gallienne. New York: John Lane Co. 50 cents net.

The Winnowing Fan. By Laurence Binyon. Boston: Houghton Mifflin Co. 50 cents net.

I have not read all the lyrics that occupy more than 600 of the 1,283 pages in the present substantial and handsome edition of Mr. Rice's collected plays and poems. The excuse furnished by their bulk may be supplemented by the observation that they exhibit in a remarkable degree similarity in kind and equality in merit. Mr. Rice is versifier rather than melodist, and even his verse has its unmistakable opacities. The movement, however, is good, and the ricochet of certain rhymes at places remote from the primary point of incidence gives surprise and pleasure to the ear. For the rest, the charm of these poems resides in an alertness, an aplomb, the buoyancy and confident "So-ho" of the post-horn in setting forth, which hides for the moment the comparative fruitlessness of the journey.

What the lyrics fundamentally and fatally lack is real experience beneath and behind them, and the excursions into Europe and Asia which they copiously reflect may be viewed as rather the confession than the confutation of this lack. Greece, Japan, India, China, the South Seas, have flicked the author's spirit airily, leaving no enduring or memorable mark. Not that Mr. Rice is consciously or willingly superficial; on the contrary, his evident purpose to plumb the deeps, to rifle or ransack experience, is one obstacle, I should say, to his success. The following is a highly favorable specimen of his power:

> Day for the mind,
> But night for the soul.
> Sun for delight,
> But moon to console.
> Song for the glad,
> But silence for rest.
> God for the world—
> But you for my breast!

Mr. Rice's one-act plays, "A Night in Avignon," "Giorgione," "The Immortal Lure," "O-Ume's Gods," and "Arduin," are brief and sudden inroads into those rich old-time civilizations—the Renaissance and modern India, for instance—in which decay redoubles vitality. Like the lyrics, they are less remarkable for the booty they bear off than for the swiftness and impetuosity of the foray.

In "Charles Di Tocca," a picture of the Renaissance, the situation is, so to speak, a "carbon copy" of the embroilment more

trenchantly presented in Schiller's "Don Carlos," in Byron's "Parisina," and in D'Annunzio's "Daughter of Jorio"—the rivalry of father and son for the same woman. The girl is neither wife nor mistress to either suitor, and the situation, after long delays, acquires tension by losing probability when the father orders the execution of the son for offences that are merely psychological. A real, and somewhat notable, efflorescence of phrasal force and beauty in this play cannot offset the failure to impart anything like life or interest to the forcible-feeble protagonist, Charles Di Tocca.

The Renaissance overtakes Mr. Rice even when he retreats from its fumes into Palestine and the pre-Christian centuries. In "David," its chief embodiments are two daughters of Saul, one diabolical, one virtuous after her fashion, but both amorous of David and both equally destitute of intelligence and charm. Neither David, in whom, if legend be true, the youth of the world found an immortal embodiment, nor Saul, in whose obscure and morbid psychology its old age seems so strikingly foreshadowed, discloses any sympathetic or salient quality in the perfunctory handling of Mr. Rice.

In "Yolanda of Cyprus," a play assigned to the sixteenth century and dedicated to Ida M. Tarbell, the old but still fertile situation of the innocent young girl who shoulders the guilt of the compromised wife is revived with moderate effect in act i. There follow two lingering and harassing acts, in which the mainsprings are hairsprings, dynamically adequate perhaps, but elusive of the eye; and in act iv the "sceptred pall" of tragedy is not unpicturesquely draped round a catafalque of spectacular solemnity.

In all these plays Mr. Rice had done little more than fail handsomely—fail, that is, in the gallant and adventurous fashion which is sometimes the prognostic of success. In "Porzia" (Naples, about 1570) that prognostic is all but verified. The excellent main situation is not the less penetrating and, very possibly, not the less spontaneous for reproducing in essentials one of the most moving inventions of the post-Elizabethan theatre—the plot of Otway's "Orphan." The thunderbolt of act i has an intensified repercussion in act ii, and the afterclap in the conclusion is of reduced but still satisfying vividness. An ingenuous, almost Saxon, tenderness qualifies the poignancy of the Neapolitan theme, and the tragic atmosphere is touched with a blitheness which, like the azure of the sky of Naples, envelops the very lips of the crater.

Viewing Mr. Rice's plays as a whole, I should say his prime virtue is fecundity or affluence, the power to conceive and combine events resourcefully, and an abundance of pointed phrases which recalls and half restores the tradition of the great Elizabethans. His aptitude for structure is great, too great, indeed, for the chastened contours of poetic drama; he tends to structural ingenuities and virtuosities, which make the third act of "Charles Di Tocca" exotic and the corresponding act in "David" even puerile. His blank verse seems tentative and inchoate; crude indeed, but livingly crude, showing both the rudeness and the tingle that accompany experiment. There is as yet no real success in characterization; "Porzia" succeeds not by increasing the supply of that desideratum, but by silencing the demand. But for "Porzia," indeed, I should have said that Mr. Rice's work exhibits only a blithe play of sprightly talents, over a surface whose gleam covers neither reality nor depth. But I cannot and will not say this after "Porzia." It remains for Mr. Rice to show whether that play is to be classed with fortunate exceptions or with happy auguries.

The mysticism expressed or exhaled in the poems of A. E. is ultra-Christian; it has no part either in the joyous vigil of Bethlehem or in the heart-breaking one of Calvary. Celtic by origin, Oriental by culture, A. E. is the meeting-place of two ancient and divided traditions, and Brahma and the Irish Dana, with their co-responsive vowels, "answer each other in the mist" like the bells of a younger tradition. That embrace of God and man which is the passionate core of Christian mysticism from Thomas à Kempis to Alice Meynell is hardly perceptible in A. E.; it is distance, not intimacy, that impresses his spirit. His God is the Ancient of Days or the Mighty Mother; transmigration appeals to him less for its expiatory or disciplinary virtues than for the temporal immensities to which it is the key; he makes even the lips of his beloved the starting-point for a plunge into infinity.

This poetry is naturally "caviare to the general." Mysticism has a primordial right to be vague; its success as literature depends largely on the possession of fervor enough to counterpoise its vagueness. But A. E. can scarcely solve the complaining school janitor's problem of "warming all outdoors." I have a sense, moreover, in these lyrics of a vast, muffled, loose envelopment, as if even the effect of space itself were blurred by a yeastiness in the atmosphere. A. E. has an intense predilection for twilight; he loves dusky splendors and iridescent glooms. In its brilliancy, its unexpectedness, and the absence of any incisive or demonstrable likeness in the comparisons, his imagery is markedly Oriental.

In spite of all these encumbrances, to which a total defect of contour and a measure of Celtic waywardness and inconsequence must be superadded, the presence of true inspiration and of haunting beauty in these poems is incontestable. Dim and unrelated, homeless and orphaned, as it were, at the outset, they draw nearer both to reality and to excellence as the volume proceeds; the human element which had pined among the infinities, like a child hushed on the knees of a venerable graybeard, asserts its vitalizing presence towards the end. The beauty when it appears takes, as I have hinted, the form of a dim richness, a sumptuous gloom, an august mystery. I cite the poem called "Blindness":

Our true hearts are forever lonely:
A wistfulness is in our thought:
Our lights are like the dawns which only
Seem bright to us and yet are not.

Something you see in me I wis not:
Another heart in you, I guess:
A stranger's lips—but thine I kiss not,
Erring in all my tenderness.

I sometimes think a mighty lover
Takes every burning kiss we give:
His lights are those which round us hover:
For him alone our lives we live.

Ah, sigh for us whose hearts unseeing
Point all these passionate love in vain,
And, blinded in the joy of being,
Meet only when pain touches pain.

A single line of "The Flower of Peace," "'Tis warm in God's lit nurseries," typifies the infolded tenderness, the cradled innocence, the poetic and perfumed languor, of Miss Tynan's devotional verse. I quote one delightful but not markedly characteristic stanza:

O praise Him, all ye orchards now,
And all ye gardens deep in green,
Ripe apples on the yellowing bough,
And golden plum and nectarine,
And peaches ruddier than the rose,
And pears against the southern wall;
But most the little wind that blows,
The blessed wind at evenfall.

"The Silk-Hat Soldier," which dedicates its contents to the Belgian King and its profits to the succor of his people, discloses the skilful, if slightly tired, hand of the accomplished craftsman, and a patriotism in which English vigor is allied with Gallic sensibility. The best poem is "Christmas in War-Time (Boer War)":

Be happy softly, children, for a woe
Is on us, a great woe for little fame—
Ah! in the old woods leave the mistletoe,
And leave the holly for another year,
Its berries are too red.

I could wish that Mr. Le Gallienne had chosen for the refrain of his title-poem a line less obscurely musical or less obviously unmusical than "For he loves England well enough for England to die." The music of refrains should not be coy, but bountiful.

Mr. Binyon's war-time verses are of manly and generous fibre; and if they endear the man more than they exalt the artist, this does not mean that the art is undiscoverable or is unworthy of its high companionships. There are phrases of the moving directness, the plain energy, of Scott or Wordsworth, poets with whom, in an hour less intensely English, Mr. Binyon would hardly expect—would perhaps hardly welcome—affiliation. I quote two or three examples:

We give, we dare, and we believe

O wronged, untamable, unshaken
Soul of divinely suffering man.

But there are heavens serene
That answer strength with strength; they stand secure;
They arm us from within, and we endure.

O. W. Firkins.

Book Notes and Byways

THE JEFFERSON-LEMEN COMPACT.

By HORACE WHITE.

Among the transactions of the Illinois State Historical Society of the year 1908 was a narrative of a movement initiated by Thomas Jefferson in 1784 to prevent the introduction of slavery in the Northwestern Territory. The narrative was presented in a paper read by Mr. Joseph B. Lemen, of O'Fallon, St. Clair County, Ill., and was included in the published volume of that year. Jefferson had failed by one vote in the Congress of 1784 to pass an ordinance excluding slavery from all of the unoccupied territory of the United States, both north and south of the Ohio River. He was bitterly disappointed by this failure, and he turned his thoughts to other means for accomplishing his purpose in the Northwestern country. To this end he induced a young friend, Mr. James Lemen, a Revolutionary soldier, residing near Harper's Ferry, to migrate with his family to the Illinois country and make it his principal business to prevent the introduction of slavery there. This was described by Mr. Joseph B. Lemen, a grandson of James Lemen, as "a secret anti-slavery pact or agreement" concluded at Annapolis, Md., on May 2, 1784. Jefferson offered to pay the expenses of the journey, but Lemen declined to accept anything for himself. He did subsequently accept $100 from Jefferson's agent to be used for charitable objects in his own discretion in the new country. Jefferson soon afterwards sailed as envoy to France and was absent in 1787, when the ordinance reported by Nathan Dane, of Massachusetts, which prohibited slavery in the new territory north and west of the Ohio River, was enacted. In 1786 Mr. Lemen navigated his own flat boat down the Ohio River and up the Mississippi to St. Clair (now Monroe) County, Illinois, with wife, children, and goods.

It was stated in Mr. Joseph B. Lemen's paper that when William H. Harrison, the Governor of Indiana Territory, forwarded petitions to Congress requesting that the anti-slavery clause of the ordinance of 1787 be temporarily suspended, Jefferson wrote to Lemen urging him to get petitions signed in opposition to those of Harrison and to send them to Congress, which Lemen did.

The attempts of Harrison and his legislative council to get the ordinance suspended were very persistent, being renewed at each Congress from 1802 to 1807. Jefferson himself was President at that critical period, and he managed, without showing his hand, to defeat the aims of the petitioners. On the last occasion opposing petitions were sent in from inhabitants of the territory, and these led a committee of Congress to report emphatically against the Harrison scheme, which was never heard from again. Probably these petitions were the work of James Lemen under the prompting of Jefferson.

After the publication of Joseph Lemen's paper in 1908 a question was raised as to its authenticity, since it was not supported by any original documents, although the author said that there were such documents still in existence. Another element of doubt was found in the fact that Mr. James Lemen had signed one of the Harrison petitions for the temporary suspension of the anti-slavery clause of the ordinance of 1787.

Mr. MacNaul's paper,* the subject of this notice, was read before the Chicago Historical Society on February 16, 1915. The author takes up the subject not as a party to a controversy, but as a collector of materials for a history of the Baptist Church in Illinois. Mr. James Lemen had been reared as a Presbyterian, but later he connected himself with the Baptist denomination and eventually became a licensed preacher and a great light of that faith. An entry in his diary, dated New Design, Ill., February 26, 1794, says:

"My wife and I were baptized with several others to-day in Fountain Creek by Rev. Josiah Dodge. The ice had to be cut and removed first."

Mr. MacNaul's collection embraces extracts from the diary of the Rev. James Lemen, sr., running from Yorktown, Va., September 26, 1781, to New Design, Ill., January 4, 1821, from copies certified by his son, the Rev. James Lemen, jr. Also a history of the confidential relations existing between Thomas Jefferson and James Lemen, sr., written in 1851 by the Rev. John M. Peck, the leading Baptist minister in Illinois, during the attempt to make it a slave-holding State in 1824. The Rev. Mr. Peck was one of the great lights of the anti-slavery cause in that struggle. His testimony few persons will question who know the history of that time. Concerning the secrecy of the Jefferson-Lemen compact, Mr. Peck says:

"The original agreement between Jefferson and Mr. Lemen was strictly confidential on the part of Jefferson, because, had it been known, his opponents would have said he sent paid emissaries to Illinois and Indiana to shape matters to his own interests, and the extreme South might have opposed his future preferment if it were known that he had made an anti-slavery pact with his territorial agents, and it was secret on the part of Mr. Lemen, because he never wished Jefferson to give him any help, and his singularly independent nature made him feel that he would enjoy a greater liberty of action, or feeling, at least, if it were never known that his plans and purposes to some extent were dictated and controlled by another, not even by his great and good friend Jefferson; so the agreement between them was strictly private."

The remainder of the brochure consists of letters from Abraham Lincoln, Stephen A. Douglas, and other public men, showing that they believed in the "Jefferson-Lemen anti-slavery pact" as an undoubted fact. The letters of Lincoln and Douglas both bear the date of March, 1857. They are not in the collected writings of Lincoln or in any biography of Douglas, but they were printed in the Belleville (Ill.) *Advocate* in April, 1908.

Perusal of the testimony brought together by Mr. MacNaul leaves no room to doubt that the paper of Mr. Joseph B. Lemen published in 1908 is authentic history. The signature of Mr. Lemen, sr., to one of the Harrison petitions for a temporary suspension of the ordinance of 1787 is not explained, but is nothing remarkable. There were many men working sincerely against slavery in those days who were themselves slave-holders.

**The Relations of Thomas Jefferson and James Lemen in the Exclusion of Slavery from Illinois and the Northwest Territory, with Related Documents, 1781-1818.* By Willard C. MacNaul. Chicago: The University of Chicago Press, 1915.

Correspondence.

A PERSIAN PROHIBITIONIST.

To the Editor of The Nation:

Sir: In reading, the other day, those delightful letters of the Italian Della Valle, I was interested to find that Russia is not the only country which has gone dry by royal decree. As far back as 1620, a prince greater than Nicholas the Second, by a stroke of his pen, prohibited the drinking of wine throughout his kingdom. The prince was Shah Abbas the Great, of Persia, and Della Valle, who was in Ispahan at the time, describes in detail the working of the decree.

No one knew the exact reason for the prohibition. The Shah had recently been ill, and it may be that indulgence in wine had aggravated his malady; or perhaps, during his sickness, the notorious drunkenness of his subjects had weighed upon his conscience. Della Valle believed, however, that military necessity was the deciding cause—a curious parallel to the situation in Russia three hundred years later. Shah Abbas was obliged to maintain a very large army for his continual wars against Turks and Tartars; but prohibition was not with him, as with Czar Nicholas, a question of military efficiency. It was rather a method of economy: by forbidding wine to his soldiers, he was able to cut off from their pay the amount (by no means inconsiderable) which they had formerly spent on drink!

The Shiite Mohammedans of Persia have never included abstinence from wine as one of the tenets of their creed. Their poets have sung the joys of wine with only less fervor than the joys of love. When, therefore, the cup was forbidden to all Mohammedans in Persia (the edict did not apply to Christians), the people felt the new law very keenly. The decree was strictly obeyed, says Della Valle; and by way of explanation of the readiness of the Persians to abide by it, he adds that drinkers were punished by having molten lead poured down their throats, and that wine-sellers were disembowelled.

Above all, the courtesans of Ispahan were affected by the edict. They made every effort to bring about its repeal, and collected a large sum of money wherewith to bribe two of the Shah's favorites to use their influence with him. For, said they, since wine had been forbidden, they had no following and were dying of hunger: *Sine Cerere et Baccho friget Venus.*

The Mohammedans felt it especially hard that they should be forbidden the wine which their Christian neighbors continued to enjoy. And we may believe that these latter—Georgians and Armenians to whom privileges of any kind were seldom accorded—did not hesitate to display their rare advantage. "How I have laughed," says Della Valle, "to see with what passion, with what gesticulations, these poor Mohammedans stand about, watching the Christians who drink in public; with what sighs, with what words of envy they bewail themselves! . . . And I have laughed more at certain persons who now call on me much more frequently than formerly, to enjoy the privilege of my house; where, as a guest of the King, I may not only drink freely myself, but may serve wine to the Mohammedans who come to visit me; provided that it be done with discretion and that my guests do not allow themselves to be seen drunk on the street. Thus it often happens that, in the

case of certain persons of consequence, I am obliged, after having regaled them with long *symposia*, to give them a place to sleep to digest their wine, that they may free themselves from the madness of Bacchus before they issue into the square in the sight of men."

Alas for the efforts of the royal prohibitionist! His subjects failed to profit by his paternal regulations for their welfare. Forbidden the joys of wine, they sought consolation in opium. So rapidly did this drug grow in popularity, especially in the army, that the Shah was forced to recognize it as a more serious enemy than the liquor which he had banned. Within eight months of the promulgation of his first decree, he published another, this one a prohibition of opium. And since it was pointed out to him by his advisers (the same favorites, perhaps, who had received money from the daughters of joy!) that men accustomed to opium would not be able to tear themselves suddenly from all stimulants, he gave universal permission that his people might drink wine as before. "In short," concludes Della Valle, "Bacchus will reign in Persia more than ever; not the king himself, with all his power, and with all the diligence he has shown, has been able to expel [the god]."

It is a judgment which any visitor to Persia will confirm. In that country of poverty and pestilence, of burning sun and biting cold, the grape and poppy alike bring forgetfulness of present misery; and Shah Abbas, were he to reign again, would hesitate which first to place under his ban.

Will Czar Nicholas succeed where Shah Abbas failed? It is difficult to believe that the habits of a whole nation can be reformed in the twinkling of an eye. But—*qui vivra verra!*

C. C. Edwards.

Douglaston, L. I., July 10.

A JAPANESE SCHOLAR ON WESTERN CIVILIZATION.

To the Editor of The Nation:

Sir: After I had stayed for some little while in Paris, where the life (what an elderly, urbane French life!) well conserves itself and laughs at itself, and its unnaturalness, when it is unnatural, is that of a civilization turning through fatigue or whim into ornament or criticism, I soon found myself in Germany, the land of one Kaiser or a hundred kaisers. There Nietzsche, whether he be a philosophical "blond beast" or a scholarly Europeanized *Samurai*, with his iron teaching, exclaimed, "Lo, I teach you the Superman!" When the train crossed the German frontier, the view of nature, with the trees intense in color, with such large open fields of corn or wheat, reminded me at once of the Western country of America, not from the point of magnanimous wealth, but from its extravagance. I duly arrived in Berlin, and exclaimed: "This is a Chicago, the town of madness and wild appetite of life. Oh this is the European Chicago." I confess that she impressed and even startled me, but never attracted me; again, like that American city, common and businesslike, in sack-coat, with the inartistic regularity of her buildings and the equally inartistic statues of soldierly rigidity at nook or corner, even the pictures of Böcklin, I declared, looked to be spinning the dark, weird refrain of Poe's Nevermore. The Germans are, in more than one aspect, the Americans in Europe, in their abnormal activity under the artificial glare of a strongly emphatic light invented by their egotism. I felt that it would be difficult, even impossible, to find here the spirit of sympathy without whose endorsement physical phenomena, however great and enormous, could never become a living force to enrich and strengthen my own soul. I thought that I had nothing to do with Germany or the Germans or German civilization. Individually in the Germans I felt their incommunicable crudeness and uncouth self-expression. And, as in the individual, the German civilization is a civilization without gentlemanly culture, whose eye is set on life's strife and contest; it has no personality.

It is from this reason, more than from any other reason, that the German civilization fundamentally lacks in reflective elements. By saying that it is a civilization without sympathy, I mean that it is a bewildering problem, because it can never harmonize, by the communication of soul, with the other civilizations of the world. Indeed, to have one civilization, if it were really good and true, should mean to possess all the other civilizations; but the German civilization, from lack of reflection, thinks of itself too proudly, and shuts itself into its own egotistic castle. As a result of its defying the other civilizations, it has to fall back on itself for its maintenance; then from the passion of impatience or madness it may tear itself to pieces. And this is exactly the case with present Germany. It would not be surprising if the present war should be done with the tearing of the so-called German civilization to shreds. It seemed that there was nothing more necessary for Germany than the very lesson of spiritual perspective or inner reflection, because she has been for some time on the terrible verge of being threatened by the greatness of physical dissatisfaction, and in danger of acting foolhardily in spite of herself, just as a savage boy challenges the other boys to fight for no other reason than his having too much vigor. And Eucken failed to save the country from the danger with his philosophy of spiritual life. When he prostitutes his philosophy (what a pity!) in the defence of his country's war and civilization, it proves, alas! that his philosophy was not founded on irresistible faith. It is the saddest sight to see a scholar finally deny his own philosophy and rub it out.

Some time ago I read somewhere, in a Japanese translation, an open letter, signed by many German professors, with their usual false argument of the matter, which was more stupid than anything else. The letter said in part that they were sure in their belief that the American people would intelligently understand Goethe and Kant and regard them as the foundation of the highest civilization in the world. There may possibly have been a time even in Germany when she made much of the artistic civilization, perhaps with Goethe and Kant as its foundation, as the many learned professors wished the Americans to believe, or of the ethical civilization builded on the overflowing, rhythmic love of community and friendship; but it was the time of many years ago, when the German mind was not spurred by the modern understanding of civilization in which the creative instincts are everything. The modern German ideal of civilization is creation itself, in all the phases of life and the world in their best development; and such a civilization was supposed to be only created by the Superman, to use Nietzsche's words, "who longs to feel in his own soul the whole range of values and aims that have prevailed on this earth till this day, and to sail around all the coasts of this ideal 'Mediterranean Sea'; who, from the adventures of his own innermost experience, would fain know how it feels to be a conqueror and discoverer of the ideal." And Nietzsche says: "Such a man requires one thing above all for his purpose, and that is great healthiness—such healthiness as he not only possesses, but also constantly acquires, and must acquire, because he is continually sacrificing it again, and is compelled to sacrifice it!" The present Germans, with that great healthiness of Nietzsche—indeed, the dangerously healthy healthiness—with such eagerness, frantic in their curiosity and lust of possession, could not content themselves to stay in their own places; and from the pitiful lack of reflective deliberation or sudden falling into mental disease, they rose up from their horizon with swords and cried for the exuberant and most tragic ghost of Superman. It is, of course, natural and just that Germany shall lose her war. As the reward of her lost game, she will receive a lesson of civilization with a personality and a morality.

I have often heard the Englishmen singing Henley's lines:

> Out of the night that covers me,
> Black as the pit from pole to pole,
> I thank whatever gods may be
> For my unconquerable soul.
>
> It matters not how strait the gate,
> How charged with punishments the scroll,
> I am the master of my fate;
> I am the captain of my soul.

The civilization of the English people (the English people with the solidity of Henley's verse) is not accidental. Its development deliberately follows, step after step, the movement of true freedom, born in the very bosom of conservatism. It is free; therefore it is clean, like a pure water cleaning our hearts. It is ethical; therefore it is kind, like an earth gladdening our minds. The most prominent quality of the English civilization is sympathy, wisely regulated by their own sense of practicability; the real consciousness in the English mind rarely lets them miss their perspectives, spiritual or otherwise. As they always search for unity or harmony with the outside heterogeneous complexity by their inner wisdom, they are blessed by repose or peace. The English people do not hurry, nor do they stop. They are like a slow but hastening stream in the quest of eternity. I heard so often the word "character-building" while I was in England, and I was highly pleased to know that even the squalid, shamefaced gutter-snipes of East London would never violate the unwritten law of "fair-play." Indeed, in England everybody is endowed with a possibility of becoming a gentleman. The great strength of the English civilization is in its power of organization for the perfection of a social life in which people, from their confidence of being men-in-the-kingdom, and not merely men, keep a clear vision of life's fulfilment. As some German philosopher declared, the English civilization is nothing but a practical civilization. Emerson remarked, speaking of the English people: "Their practical vision is spacious, and they can hold many threads without entangling them. All the steps they orderly take, but with the high logic of never

confounding the minor and major proposition; keeping their eye on their aim, in all the complexity and delay incident to the several series of means they employ. There is room in their minds for this and that—a science of degrees." This ability for practicableness, or, to use a common phrase, the well-disciplined common-sense, has a weakness in dulling and discouraging individualism or individual self-expression. A sad monotony or colorless harmony will soon control the English mental horizon.

If the present war can be called the war of England and Germany, it can be called with justification the war between morality and energy, or the war between common-sense and dream. If England needs some force to deliver her from life's stagnancy, or to rejuvenate her, she is, I believe, not fighting with Germany fruitlessly. Whether she wins or loses, it is sure that she is learning a great lesson of the importance of creative instinct in life and country. And it is not too much to say that the present European war is more than a question of one country's fall or another country's rise.

YONE NOGUCHI.

Keio University, Tokio, June 10.

THE LATE A. G. SEDGWICK.

TO THE EDITOR OF THE NATION:

SIR: An outline of the facts of Arthur Sedgwick's life gives but an imperfect idea of an exceptional personality which his many friends will remember as long as they remember anything, and the vivid memory of which arouses a wish to make the record a little less incomplete. But, though a fuller portrait of him would be of unquestioned interest to those who never knew him at all, it would be difficult to make effective because of the delicacy at once and the simplicity of its traits. It would call for a hand like his own, so capable of firm and straightforward, and yet reserved and decorous, delineation. One may, however, be pardoned for yielding to the impulse to set down more or less at haphazard a few of those impressions of his life and character which his sudden death brings into greater definition, though even it can hardly have deepened them.

The first of these is perhaps that of his loyalty in the friendships he formed. So aristocratic a spirit would naturally not form such relationships loosely, but he was exclusive mainly in the presence of the commonplace, and some kind of distinction in mind or nature or breeding was a prerequisite to the awakening of an interest which, nevertheless, within the suggested limitation, was conspicuously tolerant, and his friends were of as many kinds as the marked individualities they were apt to possess naturally implied. Yet it was always *you* and not your capacities or acquisitions or achievements that interested him. An intimacy, once formed, he always treated as a positive source of enjoyment, and he cultivated it in this sense. It is quite impossible to associate the idea of sentimentality with him. Effusion was a stranger to his native reserve, and his expressions of all kinds were eminently self-contained. But his friends learned that in trouble of any sort, from ordinary difficulties, from the depreciation of others, for example, to such sorrows as those of bitter bereavement, his effort to render help was instinctive, sustained, and successful. He was himself a veteran in such experiences with which the warfare of human life is so thickly strewn, and mere contact with his fortitude was, automatically, consolation.

All of which implies that his social side was uppermost. No one was ever more companionable, because precisely of this fundamental friendly quality so thoroughly *felt* as to be independent of specific expression, and constituting thus the ideal basis for the interchange of real views, sentiments, and ideas on all sorts of subjects, without danger of misconception. Conversation on these terms he especially delighted in, probably stimulated by the consciousness, which he must have had, that he gave at least as much as he got out of it. It needed no excuse of occasion, no buttress of incident or other topic; only, the moment it ceased to be sincere and serious, in an intellectual sense, he lost interest in it, and his contribution promptly ceased. Naturally, thus, he was not one who "shone" in those excesses of what is called general conversation that really resolve a company into an orator and auditors. His antipathy to the commonplace made him a little restless, perhaps, with all varieties of bores. And in this category, also, the facetious man—a type that has become extremely prevalent with us of late years, doubtless through a distorted view of what constitutes humor—eminently belonged. Facetiousness had to have an edge on it, a joke had to be a good joke, a story have a real point, to pass muster with him. The flat was, in his eyes, not so much an aggravation of the low as a variety of it. His own wit was conspicuous, and was conspicuously wit, rather than humor. Partly this was because of a constitutional indisposition to effusion, to expansiveness, and partly because, as a corollary of this, he was impatient of surplusage. Embroidery left him rather cold; since it contributed to neither clearness nor energy, its essential inappositeness was what struck him most.

For artistic expression of all kinds he cared less than for the truth of statements and their value, though he had the cultivated man's appreciation of the imaginative field, and his acute sense and judicial soundness were reliable guides here, as elsewhere, and promptly detected the meretricious on the one hand, and appreciated the excellent on the other. He was a lawyer—congenitally, one may say; and where it was applicable he took the lawyer's point of view. Of course, he was all his life a writer, too, but his legal training and proclivities were apparent in his handling of whatever subject he treated. He was a great reader, and his talk about letters was personal and penetrating. The classics of his own tongue were familiar friends to him, and what he read of the current product was its substantial part. His taste was sure, and based on the standards, but it was catholic and uninterested in heated and superfine discriminations. In fiction, for example, he admired both Poe and Trollope—especially Trollope—and did not admire Bourget. He would have smiled at the notion of "outgrowing" Macaulay or Tennyson. His own style—and it was very much his own—was the exact envelope of his way of thinking. It sought no external graces and eschewed the figures of speech, though it had great personal savor and a truly idiosyncratic energy, combined with economy. The last sentence of his recent contribution to the *Nation's* jubilee number, referring to the criticisms of Mr. Godkin by his opponents, "The Athenians had not been told that Socrates was more wicked," is a characteristic example, and, as style, perfect. It was the acme of well-bred simplicity, argumentative cogency, and as clear as a bell, because he simply never experienced mental confusion. If he reached that point, he stopped thinking and resorted to more knowledge.

Knowledge, in fact, was an element he was inveterately prone to insist on in every expression of mental activity. He deprecated, for example, the discussion by American lawyers of the virtues of the "code" system on the ground that nobody here knew anything about them. And he was much struck at one time by the discovery that the South generally at the time of the war was always talking about the view of the makers of the Constitution, and yet had never read the *Federalist*. He was one of our few journalistic writers entitled to be called publicists. His book, "The Democratic Mistake," is the work of an accomplished publicist. Public questions of a fundamental and legal character, notably those relating to government, interested him greatly, but less in a speculative than in an analytic way. Good government for him was what secured justice through order. Beyond that he was too much of a skeptic to be a partisan. Good citizenship was, however, as definite an ideal with him and as rigorously and self-sacrificingly followed as his social ideals, which were eminently those of the "gentleman," accented now and then with a slight edge of punctilio. Altogether, one always noted, a mind and nature impatient of the superficial and the crude, distrustful of ill-regulated enthusiasms, living habitually on a high plane, rather pointedly neglectful of those who did not, and a convinced devotee of simplification in both thought and life. If a thing couldn't be simplified, he became incurious about it, and distrustful of the quality of its attractions for others. With al a great admirer of Kant, and sufficiently schooled in philosophy, as well as in all fields of general culture, and an accomplished linguist, but temperamentally an Aristotelian, not a Platonist, and morally a stoic *pur sang*. The inner spirit, that fused these traits and talents into a particularly idiosyncratic individuality, it is impossible to characterize. The charm this had for his friends is, however, faintly, at least, suggested by his whimsical and smiling query to one of them during a hopeful interval of what may truly be called his final illness: "You are not going to be offended because I am going to get well?" Evidently, Emerson's remark about "the neighbors" in such circumstances was in his mind.

New York, July 18.

THE HARVARD ENGLISH PLAN.

TO THE EDITOR OF THE NATION:

SIR: In your issue of July 1 (p. 14) J. M. H. comments on your editorial on the Harvard English plan, printed in your issue of Apr 1 22 (p. 431). As a teacher of English in a technical institution, I find the views of J. M. H. interesting, but not altogether convincing.

The solution of the English problem is one in which all teachers of English are, of course, deeply concerned; and it is an auspicious sign of the times that faculties of other departments are becoming interested, and are joining with us in the task of teaching students to write clearly and idiomatically. It is this fact, no doubt, that has helped bring about the

adoption of the new plan at Harvard, and the same plan, or a modification of it, at other institutions.

I am not so sanguine as to believe that the system will make a finished writer of every student, but I do think that a plan of this kind will go far towards bettering a condition among our students that is little short of disgraceful—a condition that was characteristically shown by a freshman at the close of his last English class of the year: "Now," he said, as he flung his notebook into the hedge, "I've got a pass in that stuff; I can write for the rest of my life as I please!"

And so he could. Probably he did go—like thousands of other students—from that day on through his college course, disregarding every principle of good writing, turning in papers and reports that were "technical mush." But suppose that, on the day that he finished his freshman theme course, he had known that at any time in the next three years any instructor in any subject might call him to account for his poor work in English and refer him to the English department for review and drill in his weak points, would he have cast his books away with his flippant remark? When a student knows that at any time he may be sent back to repeat his freshman English, or any part of it, he will exert himself to get the principles of writing and constantly to apply them.

I quite agree with J. M. H. when he says that "good writing is the business of every teacher"; but I do not think that it should be left to each department to "sweep its own doorstep." Teaching his own subject is a serious business for an instructor, and his time is quite taken up with it. Often, too, he is not qualified to show students how to correct their poor English. It is no reflection upon the teacher of technical subjects, or even upon the teacher of such a subject as history, to say that, although he is able to see the faults in the English of a student, he is not always able to show him how to correct them. As the teachers of English are, let us hope, specialists in their subject, it is only logical and right that other departments send their students to the English department for their English training.

Finally, as to the injustice to the English faculty. We all know that the English teacher has enough to do, is indeed overworked; but that fact scarcely justifies us in throwing off some of our work upon other departments. If the new system increases our burden, all we can do is to accept it, feeling that compensation for our additional labor lies in more efficient instruction. HARRY F. FORE.

Lafayette, Ind., July 8.

A FLESHLY POET.

To the Editor of The Nation:

SIR: May I request, through your columns, some information as to the authorship, circumstances, etc., of a curious book that I bought some twenty years ago in a second-hand book-shop? I paid little attention to it at the time, but have been recently reading it with interest and amusement. Inquiry of the English department at Harvard failed to elicit any information. The title is "The Obliviad—A Satire—With Notes—together with—Additional Notes, Preface—and—Supplement—by—The American Editor—and—The Perpetual Commentary—of the Athenæum," followed by a Greek quotation: "Λήθη κατενεμήθησαν—Diom. Schol. apud. Bent, and Iliad XVI, v. 406," and one in Latin, "Plin. Hist., Lib. XIV Proem. New York: James Miller, 779 Broadway; London: B. Quaritch, 15 Piccadilly; MDCCCLXXIX." On reverse: "Entered according to Act of Congress in the year 1879, by Dr. William Leech, in the Office of the Librarian of Congress at Washington, D. C."

A brief dedication to Dion Boucicault is followed by a list of names of persons celebrated in the poem. Among these names (occupying five pages) I may note Barnum, Accius Labeo, Guido Colonna, Mark Twain, Lais the Courtezan, Swinburne, et al. Then follows a list of works quoted (in seventeen pages). May be mentioned: Aluredi Beverlacensis Annal. sive Historiae de Gestis Regum Britanniae. Plays of Mrs. Aphra Behn. Blue Laws of Connecticut. Bosio, Roma Sotterranea—Roma, 1632. Chanoine Bossu, Traité du Poëme Epique—Paris, 1718. Trial of Rev. Ward Beecher, D. Crantz. History of Greenland, two volumes, London, 1767, etc., etc. Then follows a Catalogus Vitandorum, which is so rich that I must quote it in full:

Dixon, W. Hepworth. Spiritual Wives.
Dove of St. Mark, by Joaquin Miller.
Fanny Hill or Memoirs of a Woman of Pleasure. John Cleveland. London, 1750.
Harlot, History of, with the names of the principal Pimps and Puffers in her pay. London, 1868.
Laus Veneris and Other Poems and Ballads. By Algernon Charles Swinburne. London, 1866.
Petronius. Lusus Diversorum Poetarum in Priapum. Leipsiae, 1711.

The poem itself and the commentary show a really enormous amount of perverse learning. CHARLES ST. CLAIR WADE.

Tufts College, Mass., June 30.

A CORRECTION.

To the Editor of The Nation:

SIR: Apropos of your very interesting article on the Hon. John W. Foster, in the *Nation* for June 17, in which you say he attended Wabash College, allow me to say that Indiana University gladly yields to Wabash College her vice-presidents, but must lay claim to John W. Foster, who graduated there in the class of 1855, and has proved yearly, by word and gift, his great loyalty as an alumnus. KATE MILNER ROBB.

Indianapolis, Ind., June 24.

GEORGE MUNRO.

To the Editor of The Nation:

SIR: I do not write to congratulate you on the fulness and beauty of your semi-centennial number, nor to tell you that ever since my college days in the sixties the *Nation* has been to me and many fellow-students our guide, philosopher, and friend, for whose opinion we always looked before making up our minds. My purpose is the humbler one of making a slight correction in one of your many historical articles. The Munro publishing house was established by George (not John) Munro. I cannot refute the statement that he vigorously opposed the attempt to secure international copyright. It would be natural that he should do so. But it should be put to his credit that he used a large slice of his earnings in the endowment of quite a number of professorships in Dalhousie College, one of which was the George Munro professorship of international law. This chair was held until last year by Dr. R. C. Weldon, a Ph.D. of Yale and alumnus of Heidelberg, who sat in the Dominion House of Commons from 1887 to 1896 and was the father of the so-called Weldon act to provide for the deportation and thus facilitate the proper punishment of the wealthy rascals who took refuge in Canada, their delinquencies not being within the extradition treaties.

B. RUSSELL.

Halifax, N. S., July 22.

THE "NATION."

To the Editor of The Nation:

SIR: I wish to contribute my little note of congratulation among many others that you will undoubtedly receive at the completion of the fiftieth year of the *Nation*. In the spring of 1865 I returned from a service of over three years in the Union army. My school education ceased when I was thirteen years old, but I was blessed with a taste for reading, and somehow I took to good periodical literature. So I began reading the *Nation* with the first number, and have been a constant reader of it during all these fifty years, and for nearly all that time a regular subscriber. As a young man who needed instruction and direction, it was of invaluable assistance to me, and through all the intervening time I have received from it great help, and it has given me much-needed light on matters political, economical, and literary.

Now, at seventy-five, I value it as a tried and faithful friend, and look for its weekly visits with pleasurable anticipation. I expect to continue to receive good from it as long as my mind retains its power of action, and hope that its influence will continue for the benefit of future generations.

EDWARD G. SHERLEY.

Albany, N. Y., July 2.

To the Editor of The Nation:

SIR: It gives me pleasure to express my high appreciation of the jubilee number of the *Nation*. The admirable articles by Lord Bryce and others have made me realize more clearly than ever the high aims of the weekly and the good it has done in forming a body of intelligent public opinion. Please be assured of my best wishes for and belief in your future. WINSTON CHURCHILL.

Windsor, Vt., July 13.

To the Editor of The Nation:

SIR: For a reader of the *Nation* during forty-eight years, who rejoices at its long life, it is praise enough to say that the semi-centennial number is worthy of its subject. The look behind the scenes, the intimate knowledge of the relations between Godkin and Garrison, are of vital interest to those of us who never failed to wonder each week how such work could be done. How glad we are to have sat at their feet in company with so many men whose influence has been for righteousness! Godkin was a leader of public opinion—of the opinion of the best, and it is a tragedy that, on account of the pessimism of his later years, he could not appreciate the wholesome influence that he had exercised. How he would have rejoiced at this semi-centennial number! Quoting Emerson, with a change in the application, it may be said, "And I think this is a good country that can bear such" an editor as he was.

Literature

THREE BOOKS ON BELGIUM.

The Spell of Flanders. By Edward Neville Vose. Boston: The Page Co. $2.50 net.

Famous Days and Deeds in Holland and Belgium. By Charles Morris. Philadelphia: J. B. Lippincott Co. $1.25 net.

Belgium. By R. C. K. Ensor. New York: Henry Holt & Co. 50 cents net.

Of these three books on Belgium, the first two are illustrated. Mr. Vose, a recent tourist, whose vacation tour began in May and ended in July, 1914, had been prepared by a rich culture and thorough knowledge of the country's history. Hence, keen perception of what is beautiful in the past and charming in the present is here found. Of books that describe fully the northern part of a country that has so often been devastated by armies, not only of the chronic enemies, Gallic and Teutonic, but also from the north and south, this is the latest and probably the best.

With insight and critical appreciation of Flemish art and social evolution, Mr. Vose has made his pages delightful reading and the copious illustration forms an interpretative commentary upon his text, because his pictures are so admirably selected. He takes us into old towns and villages where history is indeed a resurrection. In the midst of a potato patch may rise a mighty tower, which, to the scholar, tells of vanished orders of knights or guilds of burghers that once were among the complex social forces which shaped the early communes. It is in these local units that the patriotism of the modern Belgian is rooted. To-day one may find the memorial of a vanished town only in architecture which recalls the past. The critical student or local antiquary sees and enjoys, while the hasty tourist passes blindly by.

Among the amazing number of battles, one here vividly described is that of Courtrai, when golden spurs were the trophies and the flower of French knighthood became fertilizer for the swampy soil. Equally accurate and stirring is the story of the struggle at Nieuwpoort, where, in 1600, Maurice, son of the William posthumously called "The Silent," won a decisive battle against Albert the Archduke, and also where in the year of Belgium's greatest desolation, 1914, the army of Albert the King made its last stand, holding the ground until reinforced by the Allies. Especially appreciative, also, is the author of that unique institution of northern Belgium, the carillon. He gives not only an account of the music and the listening crowds, but also of the mechanism by which the charming effects are produced. Other countries have chimes, peals, and varieties of dulcet sound, furnished by massing of the bells, but the Low Countries excel in this music of the sky, which furnishes a perpetual orchestra for the people. Scarcely anything of value relating to Flanders, from the point of view of reader or tourist, is omitted from this work, in which literary craftsmanship and dainty bookmaking unite. A full index and a good map, with the reproduction of photographs and four pages in color, make this a book the charm and accuracy of which are alike praiseworthy.

Mr. Charles Morris, a veteran compiler, has furnished in one volume a popular rather than critical résumé of the history of the Low Countries. It is chiefly a digest of Motley's chapters, with, however, a continuation of the history to the present time. The illustrations are well selected and in harmony with the text. The description of the Netherlands in the twentieth century is apparently at second hand, and not drawn from actual observation. The windmills, for example, in Holland, instead of increasing, are steadily diminishing in number; for steam, which can be depended upon to obey the will of man, being in the long run a much more serviceable power than wind, has reduced what was once a prime motor to the grade of an auxiliary. Even less assuring than the text is the preface, which gives one an impression that the author has not followed the first authorities, for he keeps up the traditional but inaccurate idea that the name Holland is derived from words which mean Hollow Land rather than Holt (wood, or forest) Land. "Van" Tromp, here inaccurately referred to, for Admiral Martin Harpentzoon Tromp, exists with this prefix only in English books and writings. The preface also holds the traditional but unhistorical broom at his masthead. Strange to say, nothing is said in the book about the Walloons, who still inhabit one-half of the land of Belgium and are nearly as numerous as the Flemings. In the seventeenth century, out of the hundreds of thousands of these French-speaking southern Netherlanders, driven out by the Inquisition and Alva's army, at least half became exiles for conscience' sake in the Dutch Republic. One company, in the ship New Netherland, in 1624, made the initial settlements, with women and children, of New York, New Jersey, Pennsylvania, and Delaware. The first white children born in New Belgium (Novo Belgico)—the political name of the geographical expression and the region of New Netherland—were Walloons. In this volume of Belgic and Dutch history (p. 348), nothing is said of these people, whose societies and churches, even in the Holland of to-day, are numbered by the score. Yet the Walloons initiated every revolution in the history of Belgic Netherlands, from Cæsar to the great industrial strike of 1914, which foreshadowed the heroic resistance in August of the same year. The compiler further cheapens his work by omitting an index.

No. 95 in the Home University Library is written by an Englishman who was sometime scholar of Balliol College, Oxford. It shows on every page the mark of one who knows the country from personal observation, as well as from books. His chapter on the general characteristics of the country gives a fresh epitome of the geology, geography, political and racial divisions, and commercial possibilities of the land. He shows how handsomely human skill and wisdom have contributed to make a certain area on the earth's surface, small and richly gifted by nature, a place of happiness and comfort for an unusually large population. He discriminates between the Walloons and the Flemings, contrasting in a scholarly and graphic manner their diverse temperaments, characteristics, and achievements. Taking us into their homes, he shows us the secret of the Belgians' tenacity to their native soil, from which few in modern days have emigrated, explaining why it is that a di-ethnic and bilingual people are so patriotic. In the chapter on The Historic Glories of Belgium the roots of national pride are revealed. Though in historic subjection to many masters, Belgian patriotism is rooted in those municipal rights and local privileges which, after long contests, were confirmed by charter many centuries ago. The dynastic struggles of foreigners on Belgian soil and repeated invasions have failed to eradicate this passion of freedom. As early as 1642, the unfortunate geographical situation of the Belgic Netherlands was noted. The phrase "the very cockpit of Christendom" was coined, probably by James Howell, a clerk in the diplomatic service of England, in his quaint book entitled "Instructions for Forreine Travell." He declared that in Brussels we could "behold a constant military court and provincial government, with a miscellany of all nations; and if there be any leaguers (*i. e.*, sieges) afoot or armies in motion, it should be time well spent to see them." In other words, the seventeenth-century tourist is recommended to "the cockpit of Christendom," because there he may have the chance of seeing, almost as in a regular programme, what the war correspondent of to-day does literally so dearly love to behold.

In describing the Battle of Waterloo, Mr. Ensor effectually disposes of the legend, so long current in England, and elaborated by Thackeray in "Vanity Fair," that at both Quatre Bras and Waterloo the Dutch and Belgian regiments fled in cowardly retreat. On the contrary, they acted as did the Union army at Gettysburg, when the infantry retired before Pickett's charge and re-formed behind the guns. Mr. Ensor's chapter on the establishment of Belgian independence is probably the best account in English literature of the revolution which made of the long oppressed provinces a sovereign nation. His treatment of The Belgian Constitution and Politics and Parties is clear and luminous, while in the chapters on Social Conditions and Art and Literature we enter the penetralia of the subject. One is almost forced, in reading this book on Belgium by a true scholar of our year, to contrast his work and Motley's. Despite the fascination of the American's brilliant rhetoric, this little book of Mr. Ensor's suffers little in comparison. The author in his comments on contemporaneous literature shows both acuteness and

sympathy. Of Verhaeren, he says that this poet is still a Fleming, though he uses a French medium, and that in his verse the personalities "cease to be individuals" and become "those tendencies and processes of society in whose tentacles the individual is held," and that "no poet of our age has kept closer together the spheres of actuality and vision." Outline maps, bibliography, and index make this book, not for the sightseer or tourist, but for the serious student, the best volume on Belgium extant in English.

Perhaps two criticisms may be justly entered. The general appeal of Mr. Ensor's book is to an English audience, though the frequent unfairness of British writers towards Belgium is justly criticised. An American, even in a condensed work like this, would have welcomed a more generous treatment of the period of "The Troubles," when, despite the earlier work of the Dukes of Burgundy, the statesmanship of Charles V, and the wisdom of William of Orange-Nassau, the unity of the seventeen provinces of the Netherlands was forever broken and union of the Dutch and Belgians made impossible. Yet even Motley scarcely mentions the personality or work of the Walloon martyr Guido de Bres, whose Belgic Confession of Faith is one of the outstanding monuments of the Reformation and whose work had so vast an influence on the flight of the Walloons into Holland, and on the development of the seven northern provinces which first made the Dutch Republic, and then began the settlement of New Netherland; in a word, on universal history.

CURRENT FICTION.

L. P. M., the End of the Great War. By Stewart Barney. New York: G. P. Putnam's Sons.

Fortunately, the conscientious reader of Mr. Barney's novel of the war can take refuge in the conviction that it is not worth the expenditure of great intellectual effort, and so absolve himself from the task of placing it in any definite category. Indeed, it is only towards the end that one begins to entertain doubts as to the author's intent. Through many dreary pages one assumes it to be an honest but misguided effort to emulate, if not Jules Verne, at any rate the earlier manner of Mr. H. G. Wells; it is only at about the penultimate chapter that a dawning consciousness comes that the author may be indulging in satire on a variety of fads and movements of the day. In any event we must give Mr. Barney credit for the excellence of his intentions. Obviously he doesn't care who wins so long as Germany is beaten. Good intent, however, does not atone for poorness of execution. Mr. Barney uses an idea which is perhaps none the worse for being old, since in detail it is susceptible of almost any number of variations. He pictures the end of the war being brought about by means of a superdreadnought of the air, the invention of a young American millionaire, Edestone (incidentally we may note that the practice of using slight variants of real names is irritating), who constitutes himself a sort of free lance pacificator and finally imposes terms of universal peace upon the world. This laudable object, however, is achieved only after the author, through Edestone, has hectored and lectured the crowned heads of Europe and their advisers to the top of his bent. In his didactic pages Mr. Barney gives evidence of some shakiness concerning the English Constitution—he is apparently under the impression that King George is rather a powerful person in the government of his country—and it may be doubted whether even the Kaiser is quite the half-crazed bully that Mr. Barney would have us believe.

The Auction Mart. By Sydney Tremayne. New York: John Lane Co.

Jacqueline is the illegitimate daughter of a dilettante reprobate who decides to bring her up as an experiment in cynicism. To develop her own personality untrammelled by consideration of others and to exact from the world a high price for all that she gives to it: this is the creed he teaches her, and hence the title of the book. Concerning the author's optimistic view of human nature, we may be permitted to make mental reservations, for the motive of his story is the triumph of the innate goodness of his heroine over the unpromising influences of her environment. The point of view being granted, however, Jacqueline's is an interesting character, and its development is well traced through a series of incidents that are conceived with not a little fertility of imagination. Just the same, we cannot quite share the author's confidence in Jacqueline's future with the very perfect English gentleman whom he has picked out as her mate. He has perhaps impressed us too much with the brilliance and fascination of his heroine, and the unregenerate, it may be feared, will cherish rather the picture of Jacqueline dancing with her interesting, but alas! drug-addicted partner in a Parisian café than that later one of Jacqueline as the chatelaine of a modest but impeccable British establishment.

The Crayon Clue. By Minnie J. Reynolds. New York: Mitchell Kennerley.

The author of this story was born in New York State; became a schoolma'am in a Colorado mining camp; by way of mining gossip worked into journalism, and served on the staff of a Denver daily; became one of the pioneer suffragists in Colorado, and has since been chiefly busy with the advancement of that cause—or effect. This is a spirited and a decidedly breezy and Western tale of a young schoolma'am who deliberately pitted herself against a corrupt municipal school system and came out winner. The schools of the big city of Bartown are under the control of the "Columbian Book Company," which works with the city politicians, and maintains its power by means of graft of all kinds. It has virtually appointed the superintendent of schools and owns the School Board. The superintendent, Dreiser, is an utterly shameless, though plausible and well-mannered, grafter. Not content with a large salary, he exacts commissions from teachers to whom he gives appointments, and accepts them from the purveyor of schoolbooks and supplies. Only the books of the Columbian Book Company are used in the city schools. Many of them are worthless books, but the teachers are forced to use them. The final stroke is the foisting upon them of a worthless kind of chalk. It is this which really rouses our heroine, "Billy" Pennington, and sets her on the warpath. Documents incriminating the superintendent fall into her hands, but at first she is unable to make use of them. The newspapers, as well as the schools, are involved in the general corruption of the city. "Billy" is destined to triumph in the end; meanwhile, there is a sufficiency of stirring incident, including an abduction.

THE TURK IN YEMEN.

Arabia Infelix. By G. Wyman Bury. New York: The Macmillan Co. $2.50 net.

With western eyes fixed upon the outcome of the Turk's desperate struggle to remain in Europe, this intensive study of a province in his Arabian dependency is of particular significance. Strictly speaking, the Turk's hold on Arabia has never been complete; the vast, unclaimed interior, the north of which is not unproductive, has never acknowledged his suzerainty. Except for an important sector on the Persian Gulf, where England has contested his claims to the port of Koweit, Turkish influence is confined to the Red Sea littoral of Arabia, and includes the large and fruitful province of Yemen, where the only semblance of imperial prestige is maintained. Officially the only province open to Europeans, in contrast to the barren interior, Yemen has won from ancient times the suffix of "Felix" for Arabia, chiefly because of her high, cool plateaux adjacent to the sea. Mr. Bury's challenge of this title is based upon an intimate study of Turkish rule, and the enormous disabilities it has placed upon the happiest province of Arabia.

Turkey's negligible spheres of influence are limited to Hejaz, Asir, and North Yemen, while Yemen proper, until the recent truce with the Imam, has always been the scene of intermittent violence and unrest. This nominal power has obliged the Turk to collect his taxes with the aid of troops, and the unintelligent manner in which the taxes are imposed has embittered the indigenous tribes. His despotic régime is also capable of blunders like the bribing of the Bedouins and of temporizing with fanatical leaders like the Imam in Yemen, a task he is already finding onerous and expensive. In the near future Mr. Bury thinks he will face the need of reconquest in Yemen as well as of contesting the growing strength of the

Emir of independent Nejd in the northern desert.

Mr. Bury toured Yemen in the rôle of an ornithologist, and has an invaluable chapter on its flora and fauna, but his experience of Turko-Asian politics and his keen eye for the ethnic differences among the tribes commend his book to our attention. The impression derived of the stupendous task that Turkey has so indifferently faced is definite: naturally Turkish ineptitude and the policy of exploitation have kept Arabia in the guise of a huge, plundered apiary, with her truculent tribes consistently living up to the reputation of her famous bees of Yemen and Hadramut. The forty-odd years of Turkish administration record the failure of the one race qualified to govern these restless, fanatical tribes. As Mr. Bury remarks, the Turk is the natural ruler of Islamic races by birthright, creed, and temperament. The futile war on the Egyptian hinterland in the present crisis marks the collapse of Pan-Islamism as an effective vehicle merely because Turkey lacked the vision that could avail itself of the Moslem genius for obedience and organization.

Thus in Yemen we are shown her pusillanimous rule. In order to stay the fanatical activities of the Imam, who is regarded as an inspired leader by the fierce, marauding hill tribes, the Porte conceded his authority at the important town of Sanaa, and now pays a personal monthly subsidy of 1,000 Turkish pounds. Since Imamship, like all Oriental leadership, is founded on personality, Mr. Bury prophesies trouble when a new or rival Imam appears, and Turkey's espousal of the losing cause will inflame the entire *vilayet*. A short-sighted policy towards this welter of sharply defined races and creeds is not the only reason for Turkish failure: among these primitive Moslems the demoralization of Turkey, owing to the adoption of Western unbelievers' methods and ideals, is far more harmful to her prestige. Since Turkey has fostered in Asia Minor a strong anti-Christian policy, if her knell sounds in Europe, she may find herself at odds with her fervid coreligionists in Asia Minor and Arabia because of her anomalous position.

In the light of the British reclamation of Egypt, Mr. Bury regards Yemen as a greater potentiality. The persistent exploitation and neglect of Yemen's agricultural and industrial resources, hitherto paramount, certainly makes Arabia's new suffix deserved. Whether or no any change at Constantinople compels the Turk to put his house in order, he will find his work cut out for him. In the north, the young and capable Emir of Nejd is attracting the desert tribes by the prestige he won two years ago in driving the Turk from the adjoining province of al-Hassa. In the south the unconquered Bedouin, though bribed by the Porte, has the important pilgrim route at his mercy, and to keep his Caliphate the Sultan must remain guardian of the pilgrims and the Holy City. In rich Yemen the irreconcilable Asiri of the hills are waiting their chance. With the steady and increasing influx of modern arms and ammunition to these fighting tribes, the future of Arabia is an unknown quantity. Mr. Bury credits the Emir of Nejd with a vision of an Arabia governed along the pre-Ottoman, patriarchal, tribal lines; but the collapse of central authority will reëstablish the historic internecine warfare that has long exhausted the land. What influence a religious revival of Islamism may have in bringing order out of anarchy is uncertain: schisms are frequent, and the possible repetition of a galvanizing movement, like that of the Wahabi sect, is always before Islam.

It is interesting to learn from Mr. Bury's pages that Yemen was once in fief to the Biblical Queen of Sheba (Saba); that the Prophet, until just before his death, suffered Christianity and Judaism to flourish side by side; that the Arab coffee grower still uses the stars for guiding the season's toil; that Mokha is no longer a coffee port, but is now famous for the only adequate lighthouse on the Red Sea littoral. The Brazilian competition, Turkish taxation, and the rise of British Aden doomed Mokha.

REMINISCENCES OF LIBBY AND OTHER PRISONS.

Lights and Shadows in Confederate Prisons. By Homer B. Sprague. New York: G. P. Putnam's Sons.

"In peace," declares King Henry V, "there's nothing so becomes a man as modest stillness and humility; but when the blast of war blows in our ears, then imitate the action of the tiger." No such philosophy colors the work before us. With his ears ringing with the German affirmation that war is useful and highly honorable, and that any means, however frightful, if necessary to insure success or hasten victory, are praiseworthy, Colonel Sprague recalls Wesley's assertion that "The business of war is the business of devils," but hastens to add that at heart few are enemies, none devils.

Every incident in his absorbing narrative heightens this impression, as, for example, that of his capture at the battle sometimes called the "Battle of the Opequon" in the Shenandoah Valley. Though told with an oath that the force of which he was a part had killed their "best general," he was complimented by the Confederate officers and treated with all the consideration of which the situation would admit. The hardships of the march to prison were great, but they appear to have been due rather to unavoidable circumstances than to any intention or desire on the part of the captors. To be sure, robbery was not infrequent, but in this connection it is necessary to recall how sadly in want the Confederates themselves were. As we look back on that march we see much that makes us smile, but nothing that bespeaks the devil. Our author, for example, got into a lively discussion of slavery with an officer of the provost guard. Arguments from the Bible, Moses Stuart, Nehemiah Adams, George B. Cheever, Horace Bushnell, Henry Ward Beecher, Garrison, Phillips, and others flew thick and fast. The debates apparently had an amusing termination:

> I had some reputation as an elocutionist in those days, and Sergeant Reed, who was listening with open mouth, broke in with, "I'll be hanged, Colonel, if you warn't cut out for a preacher! By —— I should like to hear you preach." The best reply I could make was: "You'll undoubtedly be hanged some time; and if I were a minister, nothing would give me more satisfaction than to be present at your execution and preach your funeral sermon." He replied: "Now, Colonel, you don't mean that. You don't think I'll ever be hanged!" "Indeed I do, if you don't stop your profanity and general cussedness." "I'll be hanged if I will," was his last word to me.

More dead than alive, the prisoners finally reached Richmond and were shut up in the Libby prison. There they were searched. Our author had shrewdly compressed two ten-dollar greenbacks into a little wad in one corner of his watch fob, and that corner escaped inspection. Another prisoner, it was whispered, had secretly stuffed $1,300 in greenbacks into his canteen, but all canteens were appropriated as contraband of war, and nobody but Uncle Sam profited by the concealment.

Though Libby has a hard name, Colonel Sprague says it was the most comfortable of the six Confederate prisons of which he saw the interior. With all his alleged brutal severity, "of which I saw no manifestation," and his ravenous appetite for greenbacks, "for which we could not blame him," Dick Turner seemed an excellent disciplinarian. Everything went like clockwork. The daily food supply consisted of one gill of boiled beans, one-quarter gill of bean broth, one half loaf of soft bread, four ounces of meat, and a little salt. Of pure water there was happily a copious supply. After a few days our author and his companions in misery were transferred to Salisbury, North Carolina. Here were incarcerated about 320 officers and some 8,000 non-commissioned officers and privates.

Eighty officers obtained permission to occupy four empty log cabins which formed part of the prison equipment. Each house contained but two rooms. For the most part these were without glass windows or even sashes; the spaces between the logs were not stopped up; there was a single fireplace in each house, but not half enough wood to keep a blaze; there were no tables, benches, or chairs; no cooking utensils; no knives, forks, spoons, or plates; often no cups or dishes. They were without blankets, or any clothing but the scantiest summer outfit, though it was October when they arrived; without books or paper; without water sufficient for washing, or soap if water could be obtained. Across a "dead line" were the privates, who had no shelter, hardly a scrap of blanket. Every rain made their

beds a pool or mass of mire. The officers could tell how severe the weather had been at night by the number of dead found in the morning.

In less than a month there was another removal, this time to Danville, Va. It would be hard to imagine a condition more nearly approaching absolute destitution than that in which the prisoners now found themselves. Colonel Sprague's diary shows, for example, that in fifty-three days after Christmas, 1864, they received meat only three times. The suffering from cold was excruciating. The suffering of another character can best be divined from a remark of one of Colonel Sprague's companions: "Hard, indeed," he said, "must have been Pharaoh's heart, and tougher yet his epidermis, if the lice of the third Egyptian plague were like those of Danville, and yet he would not 'let Israel go.'" It was reported, "and believed," that in the following April a returned Danville prisoner entered an apothecary shop in Annapolis and called for unguentum. "How much do you want?" he was asked. "Well, I reckon about two pound." "My dear sir, two pounds would kill all the lice in Maryland." "Well, I vow I believe I've got 'em."

Yet we are told that Lieut.-Col. Robert C. Smith, who commanded the Danville prison, appeared to be kindhearted, though woefully destitute of "faculty." He had been a student at Yale in the forties. He had once been a prisoner in the hands of the Federals, and had been fairly treated. He repeatedly expressed his regret at not being able to make the prisoners committed to his charge more comfortable. As a matter of fact, the spectacle of the hopeless mass of misery in the four Danville prisons seemed to render him powerless, if not indifferent.

This is such a capital story that the reviewer is in danger of forestalling the pleasure of Colonel Sprague's readers. Attention should be called, however, to the fact that, though frankly a narrative, this brief work—it hardly exceeds one hundred and fifty pages—is not without touches of philosophy. It begins, indeed, with a mild criticism of Sheridan's Shenandoah campaign, and ends with strictures on the Federal Government's policy with reference to the exchange of prisoners. It is recalled that 22,576 Federal prisoners died in Confederate hands, but that 26,436 Confederates died in Federal hands. The significance of this is enhanced by the fact that the North held 220,000 Confederates, against 270,000 Federals held by the South; so that the percentage of deaths in Southern prisons was under nine, while the percentage of deaths in Northern prisons was over twelve. A prompt exchange of prisoners would, declares Colonel Sprague, have saved almost all these 49,000 lives. The responsibility for this enormous loss he lays upon the Government of the United States, which, rather than draft again—with the riots of July, 1863, in mind—as it would have had to do if it had allowed the South to reinforce its armies with returned prisoners, left "myriads of our soldiers to sink into imbecility and death."

Though he pictures conditions in Southern prisons in such ghastly colors, our author recognizes that much can be said for the South. Its destitution was extreme; its soldiers needed the food, clothing, and medical care for want of which its prisoners were suffering; its people were threatened with subjugation, its government with annihilation.

A STUDY IN HAGIOLOGY.

Dedications and Patron Saints of English Churches. By Francis Bond. New York: Oxford University Press. $3 net.

The present volume is a cogent refutation of those who look upon hagiology as a form of sentimental indulgence for idle ritualists. In the first place, it demonstrates, all the more conclusively because unconsciously, the importance of the subject to the student of mediæval art, life, and history. We discover, for instance (p. 214), that the dedication of churches to Celtic saints decides a moot point about the boundary between Britons and Saxons in the southwest. The fondness of the mediæval mind for romantic narrative is strikingly corroborated by the disproportionate popularity of those saints whose legends are composed of sensational adventures. The significance of hagiology for a proper understanding of religious art requires no demonstration: the composition and, in the case of painting, even the color-scheme depend not only upon the master's invention, but also upon well-defined conventions of iconography.

In the second place, the author has shown that the subject is capable of a thorough and scientific treatment. The extensive bibliography that he has prefixed to the work is in itself an index to the growing scholarly interest in hagiology. His copious material he has acquired by the most painstaking research, and he has arranged it with systematic clarity. After an introductory chapter on the meaning of dedications, he classifies them all under three general headings by distinguishing the churches named after the martyrs over whose bones they were built, those named after the founders, and those named according to personal predilection. He then proceeds to gauge the popularity of the different saints in England by appending to each name in a long list the respective number of dedications. The heavenly throng are next divided into such categories as Biblical personages, holy kings and queens, and evangelizers, and the following chapters take up these categories in detail, revealing the obscure and often curious reasons for commemoration and relating the legends in such brief and convenient form that the volume will prove an excellent book of reference. Part I concludes with chapters on topics suggested by the previous discussion. Mr. Bond draws up statistics as to the comparative vogue of the saints in the several English counties and seeks to explain the variations; he sets side by side the calendars of Bede and Sarum with additions from those of York and Hereford; he examines certain anomalies in dedication, and he even prescribes methods of procedure for the investigator. But the most valuable chapter of this section, based largely on Delehaye's "Introduction to Hagiography," has to do with the historical criteria applicable for determining the credibility of the legends.

Much of the material in Part I bears upon the other countries of Europe as well as upon England, and Parts II and III constitute a manual upon ecclesiastical symbolism, vestments, and iconographic emblems. The double alphabetical tabulation according to attributes and according to names of saints increases the practical usefulness of the book. Certain sins of omission are bound to appear in a compendium of this kind. The reviewer has noticed that for St. Sylvester the emblem of the portraits of Sts. Peter and Paul is not mentioned. The easiest way of recognizing St. Augustine of Hippo—by the black monastic cowl over the cope—is passed over, and in general a short account of the garbs of the various Orders would have assisted the ordinary student for whom the book is designed.

For such absences, however, which are perhaps caused by the fact that the author is thinking always rather of England, there is ample compensation in the presence of unexpected and delightful digressions upon topics like the christening of bells or the symbolic significance of the deviation in the axis of churches. The pages are enlivened, also, by many well-chosen illustrations, often from less familiar monuments. The work as a whole is a creditable addition to the series upon ecclesiastical art in England of which Mr. Bond is editor and to which he himself has contributed several volumes.

AN INTRODUCTION TO SHAKESPEARE.

The Study of Shakespeare. By Henry Thew Stephenson. New York: Henry Holt & Co. $1.25 net.

For the fifteen years that Professor Stephenson has been teaching Shakespeare, he has brought out a book in the field every five years. "Shakespeare's London" was well received and has continued to be useful to many students. "The Elizabethan People" was interesting, but was disfigured in places by careless statements. The present volume on the study of the playwright himself comes in natural sequence, and is the work for which the others are the logical preparation. It leads up to the critical consideration of eleven plays by attempting to initiate the reader into the social and dramatic conditions of the time, so that he may assume the Elizabethan point of view, and to familiarize him with the stage arrangements under which the plays were originally produced. The manual, though similar to others in the market, is some-

what more comprehensive because of the detailed comment on the eleven plays.

Every one will recognize this undertaking as very important, not only because of the subject itself, but because of the advances of scholarship in this field in recent years. The volume does give a clear and forceful account of London and its playhouses in the sixteenth century, of the publishing and structure of Shakespeare's dramas, as well as vigorous criticism of the characters and the staging of the most popular plays. The exposition is admirably lucid. The only doubt one harbors is whether the notions instilled conform to present scholarly opinion. It is naturally somewhat disappointing to find easily accessible investigations overlooked or ignored.

The Swan Theatre is worthy of careful notice. It has the unique distinction of appearing in the earliest contemporary drawing of the interior of an Elizabethan playhouse. Professor Stephenson, indeed, reproduces the sketch of that Dutchman, John DeWitt, who probably visited London in 1596. Of the house he says: "Though one of the largest theatres, it was not long, and never exclusively used for plays" (p. 28). Now, the researches of Prof. C. W. Wallace have shown that it was unquestionably used for plays for a few years at the time of DeWitt's visit, for the period 1611-1615, and again in 1621. His further statement that "it possessed a movable stage which could be taken down when the interior was to be used for bear-baiting" is also now somewhat discredited. And this for a very simple reason. Any one who accepts the drawing at all and looks at it steadily can hardly be brought to believe that those sturdy pillars and heavy bases do not rest on a solid platform. With regard to those columns, the author says of the Elizabethan theatres in general: "There must have been secondary curtains, . . . probably merely draperies temporarily placed for the occasion of need. Possibly there were side curtains used" (p. 38). Now, Reynolds, Archer, and Child have all shown that the notion of curtains between the pillars is untenable. Since there is no evidence for the use of such curtains before 1640, there is no ground for adhering to the conjecture maintained by Brodmeier. With the greatest assurance, Professor Stephenson declares that "the play before the king and the court in 'Hamlet' was acted on the upper stage" (p. 31), where Juliet stood in the famous balcony scene. Professor Baker, to be sure, in his production of "Hamlet" at Harvard used such an arrangement, but students of Elizabethan staging to-day would not generally fall in with this view, preferring to have the play within the play acted on the inner stage, where it would not divert attention from the conduct of King Claudius. Other examples are unnecessary to illustrate how consistently Professor Stephenson states absolutely views which no longer justly represent scholarly opinion.

His statement of doctrine is similarly direct. The theory of dramatic structure which he expounds through a chapter harks back to Freytag, with his exciting force and pyramidal structure and all that. He nowhere takes occasion to emphasize sufficiently what goes to the heart of many features of Elizabethan tragedy—the necessarily declamatory nature of drama in such a theatre. In the interpretation of separate plays he is likewise individual in his dogmatism: "It is my belief that Macbeth, at the opening of the play, is an honest, high-minded man outwardly, who has as yet entertained no ideas of guilt" (p. 265). Of course, Professor Stephenson is not so much alone in that belief as one might infer, but others have not so impatiently brushed aside the evidence against this conception. The emphasis of the lecture-room appears at times also in a redundancy of expression, as in "Such a play need not necessarily be a tragedy, though hardly an out-and-out farce" (p. 64). We should hope not. These shortcomings are the more regrettable as the volume is, on the whole, an interesting and even illuminating introduction to Shakespeare.

Notes

"The Lost Prince," by Frances Hodgson Burnett, will be published shortly by the Century Co.

T. Fisher Unwin, of London, announces the publication of Gregor Alexinsky's "Russia and the Great War," and a book of "War Cartoons," by D. H. Souter.

Prof. Basil L. Gildersleeve's "The Creed of the Old South," with another essay on "A Southerner in the Peloponnesian War," has been republished by the Johns Hopkins Press.

Houghton Mifflin Co. announces that it will publish early in the autumn a biography by Beckles Willson of the late Lord Strathcona and Mount Royal. This, it is stated, is the only biography authorized by the Strathcona family.

We are requested to announce that the next meeting of the Association of Colleges and Secondary Schools of the Southern States will be held at Nashville on Thursday and Friday, October 28 and 29.

In a notice of "The Gods of Northern Buddhism," by Alice Getty, which appeared in the *Nation* of June 17, the reviewer assumed that the author was the wife of Herbert H. Getty. The collector's name is Henry H. Getty, and the author is Miss Alice Getty, his daughter.

If American tourists in Europe are conceivable in the unhappy year 1915, let it be recorded that there is a new Baedeker for Southern Germany, comprising the kingdoms of Bavaria and Württemberg, brought up to 1914. (Scribner.)

The following volumes are included in the autumn list of the Yale University Press: "A Census of Shakespeare Quartos," prepared by Henrietta Bartlett and Alfred Pollard; "Journeys to Bagdad," by Charles S. Brooks; "The Port of Boston," by Edwin J. Clapp; "Miscellaneous Babylonian Inscriptions," by Albert T. Clay; "Some Christian Convictions," by Henry Sloane Coffin; "A Bibliography of Medieval French Literature for College Libraries," by Lucien Foulet, edited by Albert Schinz and George H. Underwood; "Writings on American History, 1913," compiled by Grace Gardner Griffin; "Civilization and Climate," by Ellsworth Huntington; "The Covent-Garden Journal by Henry Fielding," edited by Gerard E. Jensen; "The New Infinite and the Old Theology," by Cassius J. Keyser; "The Life and Times of Tennyson," by the late Thomas R. Lounsbury; "A Series of Eight Etchings of Yale University," by Huc-Mazelet Luquiens; "Municipal Citizenship," by George McAneny; "The Liberty of Citizenship," by Samuel W. McCall; "The Dated Alexander Coinage of Sidon and Ake," by Edward T. Newell; "A Voice from the Crowd," by George Wharton Pepper; "Sappho in Levkas and Other Poems," by William Alexander Percy; "Selections from the Symbolic Poems of William Blake," edited by Frederick E. Pierce; "Economic Development of the British West Indies, 1700-1760," by Frank W. Pitman; "Lombard Architecture," Vol. I (Atlas), by Arthur Kingsley Porter; "The Social Legislation of the Primitive Semites," by Henry Schaeffer; "Electoral Reform in England and Wales; the Development and Operation of the Parliamentary Franchise, 1832-1865," by Charles Seymour; "Leonardo da Vinci; The Artist and the Man," by Oswald Sirén; "Ethics in Service," by Howard Taft; "A Manual to the Writings in Middle English, 1050-1400," by John Edwin Wells.

In his three lectures on "German Philosophy and Politics" (Holt; $1.25), Prof. John Dewey puts aside the idea that the philosophy of Nietzsche is responsible for the German attitude in the war, and directs our attention, very naturally, to Kant, Fichte, and Hegel. According to him, the underlying motive of German militarism—and of militarism everywhere—is to be found in the system of absolute idealism, which has its source in Kant's idea of an absolute moral law. Following the course of German thought and German institutions, Professor Dewey traces in a very interesting fashion, with plenty of historical illustration, the development in Germany of the idea of manifest destiny and of the mission of Germany to establish the Kingdom of the Absolute on earth. The treatment is impersonal, but the collocation of facts forms a telling piece of sarcasm. And the conclusion is simple and clear: either militarism or pragmatism; there is no middle ground—we use the convenient "catch word"; Professor Dewey prefers "experimentalism." And where the philosophy of the absolute lands us, German egotism has shown.

Professor Dewey is clearly on solid ground. No one who studies the German conception of the organized state—whether militaristic or socialistic—can fail to see that it is built at least upon Hegel. Compared with Hegel, Nietzsche seems recent and accidental. And yet from a simple belief in absolute truth to militarism and an armed propaganda for German *Kultur* is rather a far cry. Probably every deep conviction of duty rests upon some conception of absolute truth. It seems harder to connect moral seriousness with an "experimental" attitude. At any rate, it is quite

as easy to derive moral skepticism from experimentalism as to derive fanaticism from a belief in absolute truth. A belief in absolute truth may be conjoined with a critical attitude and a sense of humor. It is one thing to believe in the absoluteness of truth, another to believe that one enjoys the exclusive possession of truth, and still another to believe that truth is found in the exuberance of animal impulse. To account for the present pitch of Teutonic extravagance, we need something more than Hegelian intellectualism; we need just that romantic confusion of might and right, of animal impulse with the moral self, which we find in Nietzsche. If Hegel sustains the sober German, Nietzsche is his favorite intoxicant.

"Meditations on Votes for Women" (Houghton Mifflin; $1) is the title of a refreshing little book by Samuel M. Crothers, in which he amuses himself by poking fun at feminists and anti-feminists alike, while offering some views that are both original and instructive. In Mr. Crothers's opinion, too much fuss has been made about the whole matter. When the feminists boast and the anti-feminists fear that the social organism will be turned inside-out by votes for women, he reminds them that women have existed since the beginning of the race and have had their part in human development. As for feminine competition in business, he thinks it more likely that women will eventually develop new fields of their own. That there is a magical property in the franchise he regards as a huge joke, kept alive by men for their own purposes. The vote is simply an instrument for registering the popular will. "It is an invention like the cash-register—only simpler." Evidently agitators bore him. But the agitator has his legitimate field, and it is too much to ask that he should not make himself disagreeable. And in the end it is gravely suggested that votes for women would permit the man of the house to control his own. "The husband of a woman with a conscience elicits my sympathy."

The war has drawn countries together as well as separated them, and one sign of this relationship is the comically sudden appreciation of one another's civilization which some of them are expressing. In England's hailing of Russian culture as the two nations draw the sword side by side, the cynical might find matter for comment. Their sneers, however, could not touch the unpretentious pamphlet of J. W. Mackail, "Russia's Gift to the World" (Doran; 25 cents), because, for one thing, it is a calm presentation of Russian achievements in literature and science, and, for another, it speaks of German attainments as dispassionately as if we were still on the other side of August, 1914. As if to prove his detachment, the author, who was formerly professor of poetry at Oxford, expressly recognizes Russian shortcomings. His brief and popular, but authoritative, survey will be of value to a large audience which will rejoice that, if it was prompted by martial events, it reveals one man at least who can praise an ally without either flattering him or slandering the common foe.

The 20,000 women employed in trade, transportation, and clerical occupations in 1870, and constituting 1 per cent. of the total number working for wages, increased by 1910 to more than a million, constituting over 14 per cent. of the whole number employed. Of this million, nearly 600,000 were in offices, and it is this large group that is the subject of "The Public Schools and Women in Office Service," which is volume viii of the Studies in Economic Relations of Women issued by the Women's Educational and Industrial Union of Boston. The book is a study of one aspect of the question of vocational education. Among its specific conclusions are: "The direct relation between education and opportunity for advancement shows the obvious advantage of a four-year high-school course for all who can avail themselves of it"; "a fifth year intensive course of technical training might well be developed in all high schools where the attendance would justify"; "shortened undergraduate courses in the day high school for the skilled occupations in office service seem to be a very questionable experiment"; "part-time schooling for office service seems to promise real advantages."

When, just two hundred years ago, death came to Dr. John Radcliffe, the great physician whose name is connected with the Camera and Observatory of Oxford and with other benefactions, the gold-headed cane, which, as was the wont in those days, he had carried as a sign of his profession, passed into the possession of the Dr. Mead, of whom Johnson said that he lived more in the sunshine of life than any other man he knew. From Dr. Mead it passed to Dr. Askew, then to Dr. Pitcairn and Dr. Baillie, and last to Sir Henry Halford. By this time a cane ceased to be the regular equipment of a physician, and on June 24, 1825, the day before the opening of the New College of Physicians in London, the cane, now wearing the arms of its previous possessors engraved on its gold head, was deposited in a corner closet of the college Library. In 1827 Dr. William Macmichael, a friend of Halford's, had the happy idea of writing what purported to be the autobiography of "The Gold-Headed Cane," and now, in lieu of the centenary celebrations for Dr. Radcliffe at Oxford, which have been given up under the stress of circumstances, a reprint of the second edition of this work has been brought out by Paul B. Hoeber (3), with an Introduction by Sir William Osler and a Preface by Dr. Francis R. Packard. It is altogether a delightful book. In the course of its rather loquacious memoirs, the Cane contrives to draw life-like portraits of its great possessors and to give some account of the history of medical practice from the early seventeenth century to the early nineteenth. The interest of the sketches is primarily for physicians, but by no means exclusively so. There is nothing technical in the language, and always the human side of the profession is uppermost. The book belongs to one of the pleasant byways of literature, and does something to fill one of the great gaps in English biography—the gap which will be closed when some eminent physician, who is also a philosopher and man of letters, shall give us the true and unreserved story of his own life, with the reflections on human nature and on life in general as these would come to him in the course of his peculiar experiences.

Though virtually unknown to readers of the present day, Philip Skelton was one of the noteworthy men of the eighteenth century, and his "Life," by Samuel Burdy, among the most entertaining biographies in the English language, was worthy of the charming form it has received in the reprint from the Oxford University Press. Skelton was born near Lisburn, Ireland, in 1707, and died in Dublin at the age of eighty. He was a priest of the Anglican Church and held several cures, the last being at Fintona, in the county of Tyrone. In character he was so scrupulous that he would not even sell a horse without warning the buyer of the animal's defects, and was so charitable that twice, in times of dearth, he parted with his books in order to raise money for the starving population. He was an original, in the old sense of the word. Though a man of extraordinary strength, he suffered most of his life from what was then known as the "hips." This was the more remarkable because he had himself some skill in medical science, and "by this means," as his biographer states, "was of great use to his parishioners, for he cured many, and killed none, which but few of our doctors can boast of." He might be called one of the earliest practitioners of "muscular Christianity," and never hesitated to resort to physical means of persuasion when arguments failed. On an occasion when at an inn an insolent young officer refused to stop cursing when appealed to by the parson, and even turned his blasphemies against the parson himself, that gentleman "fell to him with his fists, and cuffed him through the hall of the inn, and soon cooled the captain's courage, and made him quiet and submissive." And thus, adds the biographer, he exerted "his valor in the service of God and religion." So many are the good stories in the moderate compass of this book that the reviewer is quite at a loss to select from them, and can only assure any lover of anecdotal literature that here is God's plenty for him, with matters for serious consideration besides. As a scholar, Skelton made some name in his day. One of his pamphlets was attributed to Swift, who, according to his strict determination never to acknowledge or disavow any anonymous performance, merely observed, when the piece was brought to him, that "the author of this has not continued the irony to the end." Perhaps the most important of Skelton's works (at least it is the only one the present reviewer has read) was his "Deism Revealed," one of the best of the treatises brought out by the great religious and philosophical controversy of the day. This is in dialogue form, and is not without permanent literary value. As the argument of the book is directed in part against Hume's skepticism, there is some piquancy in this account of its publication:

> Upon Mr. Skelton's arrival in London, he brought his manuscript to Andrew Millar the Bookseller, to know if he would purchase it, and have it printed at his own expense. The Bookseller desired him, as is usual, to leave it with him for a day or two, until he could get a certain gentleman of great abilities to examine it, who could judge if the sale would quit the cost of printing. The gentlemen who examine manuscripts, in the Bookseller's cant, are called *triers*. "Can you guess (he said to me) who this gentleman was, that tried my 'Deism Revealed.'" "No, I cannot." "Hume, the infidel." He came it seems to Andrew Millar's, took the manuscript to a room adjoining the shop, and then said to Andrew, *print*.

An English translation of Robert Koldewey's "Excavations at Babylon" has been prepared by Agnes S. Johns and published by the Macmillan Company ($5.25 net). It is sufficient to say that the translation has been carefully done and reads very smoothly. The book makes a very handsome appearance, though it is somewhat heavier than English

publications as a rule are. Many English readers will no doubt welcome the translation, which gives a most interesting survey of the important work done on the site of the ancient city of Babylon through the excavations conducted under the auspices of the German Orient Society for a period of over ten years. As a result of these excavations many architectural and archæological problems have been solved and also some historical material added to our knowledge of the later period of Babylonian history. The 255 illustrations and the several plans of the ancient city greatly enhance the value of this important contribution to Oriental archæology.

From the Imperial Japanese Government Railways, at Tokio, we have received the first three volumes of a very ambitious publication, to be known as An Official Guide to Eastern Asia, and intended to deal with Manchuria, China proper, Chosen or Korea, Japan, Farther India, and the "South Sea Islands" (Yokohama, Japan: Kelly & Walsh). Of the three volumes at hand the first deals with Manchuria and Chosen, the two others with Japan. A great deal of original investigation has gone into the making of the books. Where Baedeker can be reproduced in the East he is followed faithfully, down to the characterization of hotel bedrooms and the price of breakfast. The special value of the books is in their mass of gazetteer and statistical material, displayed with systematic thoroughness. There is a wealth of illustrations, both text cuts and full-page inserts, the latter of unusual merit.

In a recent study entitled "Paul's Doctrine of Redemption" (Macmillan; $1.25 net), Prof. H. B. Carré, a Methodist divine, presents the thesis that salvation to Paul is that future peaceful state of the universe in which God, having emerged successful in the cosmic conflict with his demonic adversaries such as Death, Sin, and Law, becomes all in all. The agent of redemption is Christ who dies not to expiate sins, but, by resurrection, to enter into a life of power in which, on the one hand, he wages warfare against the evil beings, and, on the other hand, enables frail humanity, hitherto powerless to cope with the supramundane demons, to sever relations with them, join forces with God, and finally, after the Advent of Christ, to be assimilated to the nature of God. The book is lucid and worth reading; but it is too brief to be convincing. We venture to hope that the author, who is obviously equipped for the task, will revise and enlarge the volume, amplifying the exegetical grounds for his main contention, and above all making good the present failure to discuss either Paul's contrast of Flesh and Spirit or the significant tradition, accepted by the Apostle, to the effect that "Christ died for our sins according to the Scriptures."

Into a volume of most agreeable reading, entitled "Vanishing Roads and Other Essays" (Putnam; $1.50 net), Mr. Richard Le Gallienne has collected some of his writings published from time to time in various magazines. The first essay names the book, presumably because "the vanishing road of a song in the air, the vanishing road of the spring flowers and the winter snows, the vanishing road of the winds and the streams, the vanishing road of beloved faces" pervades most of what follows. Whether it is a meditation on Christmas, or a visit to a long-ago frequented restaurant, or a tramp along an old American canal, or reflections on the snows of last year, or even the last call for the dining-car "suggestive of momentous opportunity fast slipping away," there is an ever-present consciousness of the unstable, transitory nature of all things earthly; not of necessity, however, tinged with sadness. "The Passing of Mrs. Grundy," for instance, prophesies with joyful belief the approaching demise of that (Mr. Le Gallienne to the contrary notwithstanding) not wholly unprofitable lady. Not so much because they are better than their companions, as because their subjects make a special appeal to readers, we may notice the essays, "The English Country Side," "On Rereading Walter Pater," "Fiona Macleod," and "Frédéric Mistral," and in quite different strain, but not the less to be valued, a sympathetic little story of a fox terrier.

Some articles by Reuben E. Bakenhus, of the Navy Corps of Civil Engineers; Capt. Harry S. Knapp, of the Navy, and Prof. Emory R. Johnson, originally published in the Proceedings of the United States Naval Institute, have been collected into a volume entitled "The Panama Canal" (John Wiley & Sons; $2.50 net). The book deals in a matter-of-fact way with the history of the project, the construction of the waterway, the problem of sanitation, the effect of the canal upon the navy, its international status, and its commercial importance. Capt. Knapp scouts the idea that the canal will double the effectiveness of the navy, and holds that its effect in that direction "cannot be mathematically demonstrated." Another book in this field is W. Leon Pepperman's "Who Built the Panama Canal?" (Dutton; $2 net). The purpose of this volume is to remind the country that Theodore P. Shonts laid the foundation upon which Col. Goethals has builded so successfully, and to prevent the credit due the former from being swallowed up in that received by the latter. The book is full of pertinent and interesting detail, but its most valuable feature is the score of drawings by Joseph Pennell. Superior to either of these volumes as a comprehensive survey of the subject is Joseph Bucklin Bishop's "The Panama Gateway" (Scribner; $1.50 net), of which a new edition, the sixth, has been issued. As secretary of the Canal Commission, Mr. Bishop had unique opportunities for knowing about various matters, but his skill is shown also in his treatment of parts of the subject concerning which he had no such advantage, as in the story of the French effort and failure, which he tells most entertainingly. Yet his account is incomplete in places. A reader will search his pages in vain for an explanation of why we made the Clayton-Bulwer treaty. Mr. Bishop is content to recite one after another the list of treaties pertaining to a possible canal without stating, even briefly, the circumstances that led to them. Nor does he see anything wrong in our "taking" of the canal. Nevertheless, his book remains the leading one on the subject.

"The Notebook of an Attaché," by Eric Fisher Wood (Century; $1.60 net), gives many vivid sidelights on the war, and provides, in addition, the most understandable account of the battle of the Marne which has yet been printed. At the outbreak of the war Mr. Wood was a student at the Ecole des Beaux-Arts, in architecture. Casually noting the confusion that the care of the Germans and Austrians brought to the American Embassy, he offered his services. First he devoted himself to aiding our temporary wards, the harried Teutons in France. He carried dispatches to Germany and Austria. Immediately after the battle of the Marne he motored over the battlefields, and with the aid of the American military attaché read the vicissitudes of the fray from the wounded and dead, who still lay where they fell. These were great experiences, which Mr. Wood fortunately set down in letters and diaries, at the time. From these the book is woven together. It has the actuality of the best newspaper writing, more simplicity, and naturally more comprehensiveness. The tone is singularly just, though the frankness of some of the paragraphs might make a resumption of the author's diplomatic adventure a bit difficult. Not the least interesting pages are those devoted to Germany and Austria-Hungary in war time. The contrast between the rather ugly tension in Germany, where the author suffered something like persecution from police surveillance, and the generous hospitality which he everywhere received in Hungary, is very striking. In Hungary he was the guest of Count Apponyi, whose views on an ineluctable conflict between Slav and Teuton make reading more interesting than convincing. We can touch on only a few of the more attractive features of a book that is always vivid and at times thrilling. The author has risen well to exceptional opportunities. Few of the professional chroniclers have done as well. Fifteen photographs, mostly from the battlefield, and facsimiles of military passes, etc., give a documentary character to the fresh and ingenuous narratives.

As richly illustrated as its predecessors, the sixth volume of Professor Firth's edition of Macaulay's "History of England" (Macmillan; $3.25) comes to hand to complete the great undertaking. The total of illustrations reaches 900, of which forty-four are full-page plates in color. The latter include, in the final volume, pictures of Sir Isaac Newton, the Earl of Halifax, the Princess Anne, with her son, and three others, all from paintings in the National Portrait Gallery. In addition, there is the usual wealth of reproductions of plans, medals, portraits, scenes, broadsides, and cartoons, among them being St. Paul's Cathedral as it stood, half-completed, in 1695; Whitehall and its surroundings in 1724; the congratulatory poem "To the High and Mighty Czar of Muscovy," now known as Peter the Great, on the occasion of his arrival for a visit in England in January, 1697-8; a "List of the Seven Thousand Men" constituting "The Standing Forces of this Kingdom" in 1699, and a proclamation against pirates by the Lords Justices in 1696. The index is new, the old one being incomplete and in many items in error. The finished set constitutes a notable achievement, being not only a tribute to his popularity, of which Macaulay could not fail to be proud, but also a worthy memorial of British scholarship and bookmaking.

The first of the Harvard Studies in Education, "The Oberlehrer," by William Setchel Learned (Harvard University Press; $1.75), is an informing essay, attractively written, in spite of the remote suggestion of the doctor's thesis. Mr. Learned's review of the gradual rise of schoolmastership in Germany to the status of a dignified profession, and his account of the democratic conditions that pre-

vail in the *Kollegium*, seem to show that American schools "need the benefit of German example." We may believe also that they are in some respects in advance of the schools in Germany. One wonders, however, whether the "standardization of curriculum" and "minute regulation of method," which, according to the author, hang like a leaden weight about the neck of the German schoolmaster to-day, are not, for the American schools, impending evils rather than evils from which they have been delivered.

The small volume of "African Adventure Stories" (Scribner; $1.50), by J. Alden Loring, one of the collectors who accompanied Roosevelt on his African expedition, is a rather heterogeneous collection of incidents and stories. Some of the former occurred on the expedition itself, and others rest on narratives told by various hunters or travellers. The reader is warned that the facts in the concluding seven chapters are at least "not improbable." The author's style is a free and easy one, unconnected, and amateurish as to vocabulary, but several of the chapters stand out in interest far above the general text. The account of the grass-fires is one of these, a less detailed but more personal sketch of the same incident which Roosevelt describes in his "African Game Trails." The method of shooting and observing animals with the jacklight at night is described in an interesting way, as is the "driving" of creatures which have taken shelter from the sun in dongas or clumps of brush. The most original chapter is entitled Wild Animals That I Have "Et."

A noteworthy bibliography of material bearing upon the antecedents of the war has been compiled under the direction of Hermann H. B. Meyer, chief bibliographer of the Library of Congress. The pamphlet is entitled "List of References on Europe and International Politics in Relation to Present Issues." It excludes the merely controversial literature that has appeared since the war began, but includes the official documents issued by the various governments. Consultation of the list is facilitated by grouping the titles under several headings in addition to divisions by countries, as "Growth of Nationalities," "Balance of Power," "Neutrality," "Marine Insurance," "Triple Alliance and Triple Entente," "Aerial Warfare and Law of the Air." The references are given without comment.

The "Tabular Views of Universal History" (Putnam; $2.50 net), which were originally compiled by George P. Putnam in 1832, under the title "The World's Progress," have been continued to the outbreak of the present war under the editorial supervision of George Haven Putnam. Their character is well indicated by the sub-title: "A series of chronological tables, presenting, in parallel columns, a record of the more noteworthy events in the history of the world from the earliest times down to the present day, together with an alphabetical index of subjects." There are also some mediocre maps, a few genealogical tables, and an ingenious chart picturing racial and national development since about 2500 B. C. More than a third of the text, however, with its parallel columns of events, relates to the last fifty years. So far as we have tested it, the book is fairly accurate in statement and judicial in selection, and therefore convenient for purposes of reference or of cramming.

Science

VOLCANISM.

The Problem of Volcanism. By Joseph P. Iddings. New Haven: Yale University Press. $5 net.

This book, embodying the substance of the Silliman Lectures at Yale University in 1914, attempts to present a theory of volcanism expressing current opinions on problems in petrology, geology, and astronomy. The author, trained in the Rocky Mountains in the service of the Geological Survey, has been for years professor of petrology in Chicago University and is the author of a well-known text on Igneous Rocks. After he has reviewed in the first chapter the phenomena of volcanism, including Mont Pelée, Krakatau, Kilauea, Taal, Perry Peak on Bogosloff Island (misnamed "Parry Island"), active volcanoes are dismissed, and ancient volcanic fields of Wyoming and Montana, of Massachusetts and Connecticut, come in for mention under the "phenomena" of volcanism. Thereafter, throughout the book, the author deals with cosmogonic and lithologic theory, until the last chapter, on the "extrusion of lavas," compels some further mention of the active vents. The author at the outset declares his intention of presenting the problem "rather than a theory or a supposed explanation of it."

In view of this statement, therefore, it is regrettable that the author deals so little with the empirical data now available concerning eruption, its mechanism, its progress, and its recurrence. The idea of evolution at a normal volcanic vent, following a definite sequence in accordance with comparatively uniform laws, has not presented itself to Dr. Iddings. In fact, the evolution and classification of volcanoes is not treated in this book, and the question, above quoted, of recurrence in the same region is not discussed as a prevalent characteristic of volcanicity on any other page.

Instead of being an unprejudiced expression of current opinion, this book is an expression of the biassed opinion of the inner circle of American petrologists and geologists who have produced the quantitative classification of rocks and the planetesimal theory. The principal references in the book are to Chamberlin, Gilbert, and Suess. There is no mention in the text of Mercalli, Omori, Brun, Brigham, Hitchcock, or Perret, and the new textbooks of von Wolff and Schneider are mentioned only in the bibliography. Dr. Iddings's conception of a volcano as a steam engine shows little advance beyond Scrope, Judd, Dana, Hull, and Bonney. The problems of gas-fluxing elaborated by Daly and Perret, two-phase convection, juvenile water, and differential ascensional force, are neglected, the rise of lava being considered a question of relief of pressure, and fracture induced by warping and flexure. There is no sufficient treatment of experimental volcanology in the field and laboratory, nc summary of problems to be solved in the study of active volcanoes, and the reader finishes the book with the antiquated notion that volcanoes are essentially dangerous and that the main sources of our information are the ancient rocks and the physico-chemical laboratory.

We learn that volcanic activity has not occurred at any one time in all parts of the earth, and that it breaks out in new localities at widely remote periods; "*in some instances*" (the italics are the reviewer's) "not to reappear in the same locality so far as our powers of observation go." Geikie is cited on recurrence of lavas in successive geologic ages in the British Isles, but this is apparently an exceptional case (p. 26), for as in the case of assimilation of sedimentary wall rock by magma, cited by Lacroix in the Pyrenees, it would not fit the theory of a heterogeneous earth to grant that volcanic recurrence and assimilation were general and widespread.

Nebular hypotheses are reviewed from Descartes to Chamberlin, and a severe indictment is brought of the shiftlessness of the average geologist. We are told that "a nebular hypothesis as to the origin of the solar system, and therefore of the earth, has come to be a widely accepted theory among geologists, who have restated it in various terms, in some instances with elemental simplicity and misleading terminology, not infrequently dignifying their invention by calling it the Laplacean hypothesis." We are further informed that the formulæ of geologists in this matter are some of them "as crudely simple as the cog wheels of a mechanical toy." One would suppose that Dr. Iddings believed himself to be the first geologist who ever took the trouble to look up the history of nebular theory and the work of modern astrophysicists. The chapter on nebulæ has in view the determination of how hot the interior of the earth is. Our author thinks there can never be direct means of observation of this. He speaks of the so-called "green" nebulæ as characterized by the bright spectral lines of *incandescent* gases (p. 40). On another page (44) he tells us that the luminosity "is probably not due to heat. Hydrogen and helium gases only exhibit spectra when excited electrically . . . and the temperature of such nebulæ may be near absolute zero." We know nothing of the cause of the light of the white or spiral nebulæ; we know "by observation that the sun possesses such explosive energy that it projects jets of its substance thousands of miles from its surface at velocities greater than three hundred miles a second," and that it is analogous to some parts of these nebulæ; but after discussing various forms of the hypothesis of accretion for the origin of the earth, Dr. Iddings concludes that a nebular hypothesis "does not at this time furnish any basis for a determination of the temperature of the inner portion of the earth." Elsewhere we learn that "it appears to be quite possible that the temperature of the interior of the earth is not greater than that of the

hottest volcanic lavas at the surface, from 1,000 degrees C. to 1,500 degrees C."

The thesis of Professor Iddings to account for the origin of the igneous rocks is that we must begin with a heterogeneous globe. This gives us opportunity for petrographical provinces of diversified rock composition. The earth is an elastic solid subject to accumulating stresses that periodically exceed the limit of elasticity and cohesion. An accretionary hypothesis permits the innermost part of the earth to have aggregated the heavier meteoric particles with lighter matter on the outer portions of the planet, but not uniformiy, iarge nebuiar nuclei having failen in to make the denser ocean basins. The central portion contracted through crystallization and chemical readjustment at varying rates, owing to heterogeneity, and warping or fracture took place for the same reason, permitting irregular release of pressure over a "pseudo-rigid" zone where fluidity is dependent upon pressure. Gases are acquired partly by dissociation, but more especially from wall rocks. The temperature of the magma is never very high, certainly never high enough to melt the wall rocks, except in rare instances. The diagrammatic sections of the lithosphere drawn by Dr. Iddings do not permit any batholithic bodies, such as granites, etc., to enlarge indefinitely downward into the substratum, but all are drawn as dikes or flat sheets bounded on both sides by wall rock.

A very singular inconsistency is exhibited in the discussion of the acquisition of new gas, especially water vapor, from the wall rocks. The author strenuously objects to intrusion by solution, because this would involve excessive localization of storage of heat, and he objects to the hypothesis of overhead stoping for the same reason; and without localization such heat in the zone of primitive magma would undermine the outer rock crust, or lithosphere. No such difficulty confronts him, however, when it comes to dissolving gases in magma. In spite of the relatively low temperature of magma, by his hypothesis, and the acknowledged poor conductors that rocks make, "the contact of molten magma with rocks containing water necessarily involves the conversion of water into gas at high pressure, and the absorption of a large part of the gas by magma. Nothing can prevent its entering the magma but impermeable wall rocks and a higher vapor pressure within the magma." Johnston has completely disposed of Daubrée's percolation theory, but nevertheless "at considerable depths, where water-charged rocks are under great pressures, the heating to magma temperatures should produce water-gas at a very high vapor pressure, and there should be a flow of gas into the magma, which may completely dissolve it."

In view of the conclusion above stated, that the earth's interior is not possibly hotter than 1,500 degrees C., the following comment in the discussion of liquid lavas seems somewhat inconsistent: "Some have been seen to issue from orifices at white heat, about 1,500 degrees C. How much hotter they may be at considerable distances below the surface of the earth, before entering the cooling zone, there is no direct means of knowing." This appears to be an acknowledgment that there is a cooling zone far below the scene of volcanic outflow, which would imply that the lavas emerging at 1,500 degrees C. are already considerably cooled. Why, then, lay stress on so improbable an hypothesis as that the whole earth's interior is no hotter than these lavas merely because extrapolation on discordant curves of thermal gradient is inaccurate? There are many reasons based on our knowledge of the sun, of volcanoes, of geology, and of the well-considered opinions of conservative astronomers and physicists, for agreeing with Arrhenius that the interior of the globe probably possesses a temperature of many thousand degrees centigrade. The argument of Dr. Iddings is merely the death-struggle of a school of thought which combats the doctrine of assimilation.

Chapter IV, on the petrology of the earth, is a useful summary of up-to-date work concerning the physical character of rocks and rock minerals, their melting points, and the arrangement of rocks in comagmatic series. The statement (p. 90) that hardness and rigidity are identical is questionable, as hardness is a composite quality. The repetition of the oft-quoted "white heat" of Mauna Loa lava is probably a repetition of error. The discussion (pp. 109-112) of the hypothesis of assimilation-differentiation and its brief dismissal show ignorance of the hypothesis and great unfairness towards Professor Daly, of Harvard, who is not even cited.

The work of Day and Shepherd in collecting gases at Kilauea is extraordinarily misapplied in direct opposition to the conclusions of these authors. On page 7 it is stated that "the clouds of vapor that rise from craters and lava streams are mostly water-vapor. . . . Other gases are abundant in some instances, but from the nature of eruptions little has been learned or will ever be discovered, from observation and investigation" of craters. "From the lava pool of Kilauea, whose surface temperature is about 1,000 degrees C., water-gas should issue much above its critical point and pass into the tropical air, however moist, without producing clouds." Does this mean that when the relative humidity of the atmosphere on Kilauea is 100 per cent., as it frequently is, more water-vapor may be added to it without showing as a cloud of condensed moisture? Day and Shepherd are cited as having collected water-gas in abundance along with other gases, but these authors clearly acknowledge that the relative proportion of water-gas is still in doubt. They also consider the assemblage of gases collected as deep-seated in origin, yet Dr. Iddings cites them (p. 173) on heating effects in combinations of gases "acquired from wall rocks," and "from near the earth's surface and sedimentary strata." Dr. Iddings takes very little account of juvenile gases as agents in the heating and ascension of lava, though he does acknowledge in one place (p. 244) "that most of the characteristics of extrusion, apart from the eruption of great volumes of lava, are attributable to the action of gases." But it is exactly what he here excepts, eruption of lava, that modern thought is coming to discern as due to a convectional foaming under gas pressure. He even explicitly denies this on page 245.

He states that there is a striking analogy between the behavior of lavas and that of geysers; but in the discussion this resemblance proves to be purely a superficial one. "In the eruption of lava from volcanic craters the explosive agent is the gas within the lava, which is in fact the vapor of the lava, *just as steam is the vapor of water.*" (The italics are the reviewer's.) This would seem to mean that the boiling point of magma were reached somewhere in the depths, but then the author goes on to explain that silicate compounds are only slightly vaporizable, that the chief gases are other things, and virtually that the explosive agent is not the vapor of lava, and is in no wise comparable to the vapor of water. The long-overworked comparison with the geyser could not be more effectually refuted than in this "striking analogy," which his own discussion destroys when it turns out that a temperature is needed far in excess of what the author will allow.

This discussion ends with the statement that the explosions of Krakatau and of Taal and Pelée were the result of the influx of water to contact with molten lava, and that the birth of a new volcano is probably occasioned by the access of molten magma to underground reservoirs of water. There is not the slightest proof of these things, and abundant evidence in the quiet activity of submarine lavas that the forces of volcanism are actuated otherwise.

The hopelessness of the author's point of view concerning the science of volcanoes is expressed in the statement (p. 236) that while something of the life history of a volcano may be made out from new outbreaks, active cones, and eroded sections, still "there may be infinite variety in the experience of volcanoes in different localities." Ours would certainly be a heterogeneous earth if this were true. Fortunately, modern volcanology is finding order in this seeming chaos by realizing that the variety of volcanoes is far from infinite, that the volcanic process is remarkably uniform, and that the differences are evolutionary stages of growth.

The failure to conceive succession of volcanic cycles for the same region, along with misinformation about certain regions, has led our author to the conviction that early volcanic activity in a given region is explosive, while the later stages produce fluent lava. This is singularly at variance with the probabilities of terrestrial history and with the evidence of geological history treated by volcanic cycles for the same region.

It is unfortunate that the author of this

book was not more familiar with the Hawaiian volcanoes. On page 239 he writes: "At Kilauea explosive eruptions from the crater are almost unknown, certainly none of considerable magnitude, but lateral eruptions of non-explosive lava frequently break out upon its slopes, and also on those of Mauna Loa; however, parasitic cones are rarely formed." Again, "the play of fountains of lava within crater pools (p. 245), which occasionally occurs at Kilauea." In fact, Kilauca is a tremendously explosive volcano at long intervals. Great ash-beds lie within the lava flows of the crater walls, and the explosion of 1790 was comparable with that of Mount Pelée in 1902 and similarly destroyed human life. Lateral eruptions of lava are rare at Kilauea, but common on Mauna Loa. Parasitic cones are common on both volcanoes, and are nearly always formed at the sources of the lava flows. Lava fountains have been continuous features of the activity of Kilauea in the nineteenth century throughout the time that it has maintained lava pools in the crater; they are invariably present on Mauna Loa when that volcano is active. In both volcanoes the emission of vast quantities of gas is a constant feature of lava activity.

Even within his own field of petrology, in dealing with the texture and composition of rocks, the author of this book seems to be pessimistic about finding orderly relations. "No distinctions can be discovered between rocks solidified under different pressures or at different depths; consequently, distinctions that were formerly supposed to characterize rocks as 'plutonic' or 'volcanic' have been found to be inappropriate and without actual significance." This wonderful assertion marks the climax of hopelessness, left in the mind of the young student who may read this book. It is an assertion which either aims at sensationalism, or is designed to enforce the conclusions of the four petrographers, Professor Iddings among their number, who tried to secure general acceptance of their so-called "quantitative classification of the igneous rocks."

The writer of this review regrets the polemical attitude which he has taken in this notice of a book which is bound to excite discussion because of the distinction of its author and the excellence of his achievements in petrology. But any other attitude on the part of a reviewer would be hypocrisy in one trained to an eclectic point of view, and in view of the author's professed intention of expressing *current opinions* on volcanism. This book, von Wolff's "Vulkanismus," and Daly's "Origin of the Igneous Rocks," are the three works of the year that bring up to date the growth of science on this topic of geology, and von Wolff's book is the only one of the three which is unbiassed and more or less encyclopædic. The books of Daly and Iddings are diametrically opposed; both show scholarship of high order, both claim eclecticism, and both represent extreme schools. Dr. Iddings in *Science* has seen fit to criticise Dr. Daly's book as dangerous in its departure from accepted ideals of geology and likely to lead students astray. Just the same danger lies in his own production, which he modestly recommends in that review as a model of conservatism, when in reality it is radical in the extreme in its doctrine of a cool, heterogeneous, planetesimal earth and non-volcanic moon, and it is narrow in its insistence on steam absorption from wall rock and steam explosion; it is out of date in its neglect of modern volcanology, and of a rational evolutionism in volcanicity, and it is unduly pessimistic in seeing no hope of ever making experimental conquest of the facts concerning the temperatures, pressures, and gases of the inner earth.

Dr. L. Doncaster's book on "The Determination of Sex" (Putnam) is meant for the "untrained reader." It starts out, indeed, in a very elementary way, with simple definitions of protoplasm and other biological terms, but the reader is soon confronted with a variety of generic names and special cases of sexual and asexual reproduction, with rather complicated schemata attached, that requires some concentration to follow intelligently. The book gives a good account of all the recent important work upon the determination of sex, but the author is apparently less enthusiastic than most recent writers in the acceptance of some of these results. He still finds it worth while to discuss seriously such theories as the alternate discharge of male-determining and female-determining ova from the ovaries, and the influence of external conditions in modifying or determining the sex of the fertilized ovum. The glossary at the end of the book is not so helpful as it should be. Some of the definitions might be greatly improved, both in clearness and accuracy, those of hormone and interstitial tissues, for example.

By the first term of Percy E. Davidson's title, "The Recapitulation Theory and Human Infancy" (Teachers Coll., Columbia University; $1 net), is meant, in Haeckel's terminology, that the outgoing or development of the individual is a short and rapid recapitulation of the evolution of the race. As applied to the psychical or psycho-physical side it implies that as the individual develops he will rehearse in chronological order the chief stages of the psycho-physical evolution of the animal phylum to which he belongs. This theory in its bearing upon human infancy is discussed carefully by the author, but not in a luminous or interesting way. He rejects the theory so far as the interpretation of human infancy is concerned, but his own conclusion that infancy is "the ancient structure of maturity . . . shorn of and supplemented by those things which plasticity presupposes" is difficult to comprehend clearly, except possibly by the professional psychologist.

Volume III of Prof. L. H. Bailey's "Standard Cyclopedia of Horticulture" (Macmillan; $6) covers the subjects from F through K. There are more than 500 large pages and about that number of figures. These statements will indicate the widened scope of this valuable treatise, which bears at every point the marks of great editorial skill. This work, in its earlier edition, has been reviewed with commendation in previous numbers of the *Nation*, and we can now merely add that, in its new form, it has not lost any of its good features. Like all cyclopædias, it is bulky and somewhat inconvenient, but this cannot be helped. It is trustworthy and exhaustive, and meets every need of the commercial and the professional cultivator of garden plants. More than this, it is admirably adapted to the more exacting requirements of the amateur.

The Missouri Botanical Garden, at St. Louis, has published for more than twenty years an annual report which gave a full account of the activities of the institution. Hereafter, the annual report will appear under an entirely new form. The reports of the officers of the board of trustees, and of the director, will be given in monthly bulletins, while the results of the scientific work at the Garden, by its staff, by advanced students in the contiguous Washington University, and by visiting botanists, will appear in a quarterly publication, to be known as the *Annals of the Missouri Botanical Garden*. Four of these quarterly numbers, bound together in a substantial volume of 432 pages, now appear as Volume I, and cover the scientific contributions for the year 1914. The range is wide, the volume is well printed, well indexed, and well illustrated.

Until the appearance of Carlton Ellis's "The Hydrogenation of Oils" (Van Nostrand; $4 net) the literature on hydrogenation had been scattered through many periodicals, and the author has performed a valuable service in collecting, arranging, and editing the considerable mass of material. The first two chapters give in chronological order the methods which have been proposed for hydrogenation. Catalyzers and the part they play in the process are then discussed, and, after a chapter on the analytical constants of hydrogenated oils, their general characters and uses are described. There follows a very full description of the practical methods for producing hydrogen for the hardening of oil—from water gas, hydrocarbons, by steam or acids on metals, by electrolysis, etc. Full reference to the original articles and to the many patents is made, and the work closes with an Appendix on the litigation over patents of hydrogenated oil. The author is well known, and among the many patents which he has taken out seventeen relating to the hydrogenation of oils are cited in this volume. He has included in his text virtually all that has been advanced on the subject, but has avoided critical comment as inadvisable at this stage of a young and rapidly growing process. As he remarks: "A few years hence, when oil hydrogenation will have found its measure and the more important points have reached definite settlement," much of the material here presented "may be considered superfluous." The publishers have produced a well-made and handsomely printed book, which, like their "Industrial Chemistry," is made unnecessarily heavy by their choice of paper.

A fifth edition of the second volume of Professor Minchin's "Treatise on Statics" has been issued by the Oxford Press under the editorship of H. T. Gerrans. The work has been recognized as a standard treatise for so long a time that it is necessary merely to note the changes in this new edition. For the most part, they consist in omitting certain sections which were somewhat irrelevant and in adding more than five hundred problems as an appendix.

Drama

"HANDS UP."

In presenting this piece at the Forty-fourth Street Theatre the Shuberts have done a signal service in defining a summer review. On the programme "Hands Up" is announced as a "musico-comico-filmo-melo-drama," and this is so complete that the present reviewer feels much of his task has been done for him. Mention should, at least, be made of the fact that the cast is an attractive one, including Maurice and Florence Walton, Ralph Herz, Irene Franklin, Burton Green, and Bobby North. The management, however, has evidently found difficulty in meting out due measure to each of these important people, and the result is that "Hands Up" runs well into the fourth hour, which is too long. There is a great deal of wholesome fun in the piece, and particular mention may be made of an excellent bit of burlesque by Mr. Herz, Miss Franklin, and George Hassel. A novelty of the entertainment is a scene called "The Animated Screen," in which the effect of the cinema is acted out. The costumes and the settings are remarkably good, and the chorus is all that the chorus of a summer review should be. L.

In the thin and unpretentious little volume entitled "Homeric Scenes," by John Jay Chapman (Lawrence J. Gomme; 60 cents), is contained choice literary and scholarly work. Mr. Chapman has taken episodes from the Homeric story and recast them in dramatic dialogue, in which the tone and spirit of the original text are preserved with singular felicity, notwithstanding the flavoring of modern thought with which they are occasionally spiced. He divides them in two parts, "Hector's Farewell" and "The Wrath of Achilles." In the first, which is very brief, Hector, prescient of fate, but gallant and undismayed, bids a cheery, tender adieu to Andromache and his infant son, and proceeds to the fatal field. The second contains six short scenes in which the closing incidents of Achilles's career are compactly but effectively set forth. Thus, at the instance of Ulysses, who represents the peril of the Greeks in a vigorous speech, Agamemnon is induced to make reparation to Achilles, who is sulking in his tent, and to restore Briseis. Achilles, however, is not to be appeased, either by the crafty, flattering argument of Ulysses or by the intercession of his old nurse, Phœnix. He resents the proffered bribe and vows that he will sail with his ships on the morrow. Then Antilochus brings news of the death of Patroclus, through the direct intervention of Apollo, and Achilles, bent on instant vengeance, proclaims his reconciliation with the hated Atreidæ, and hurries to gird on the new armor provided by his mother Thetis. The scene of reconciliation, as described by Thersites, is one of the most notable passages in the book. In the following episode the terrible strife of gods and men, about Scamander, and the death of Hector, are described in vivid and sonorous lines by Antilochus and another messenger, to Briseis and others, until Achilles returns, bloody and war-worn, to sacrifice his captives and give the body of Hector to the dogs. From this purpose he is dissuaded, first by the ghost of Patroclus, who prays for instant burial, and secondly by a visit from old Priam, whose pathetic appeal moves him to mercy and generous treatment of his fallen foe, as he meditates upon his own imminent death. The final scene shows him stark upon his bier, with Thetis mourning over him. Literary and descriptive as the little piece is, in the main, it is not devoid of dramatic possibilities, and it might even be effective in the theatre if actors capable of speaking it and interpreting it in the proper heroic mood could be found. It is most notable, however, for the purity and vigor of its English. The blank verse is robust and rhythmical, and a word of special recognition is due to the prose of Thersites, which is of Elizabethan quality and charged with vitriolic humor. Mr. Chapman, of course, had a rich well of inspiration to draw from, but his success in preserving the spirit of his original, in condensed and original paraphrase, is a praiseworthy achievement.

An interesting study of the varying fortunes of the monologue or dramatic soliloquy is given in Dr. Erwin W. Roessler's "The Soliloquy in German Drama" (Columbia University Press; $1 net). This dramatic convention, after a glorious career, suffered an ignominious ending in the final decades of the nineteenth century, owing to the influence of Ibsen and other naturalistic forces. The author distinguishes, on the one hand, the expositional soliloquy, a crude makeshift which has been a device too much favored in the German drama, and on the other hand the reflective, deliberative, emotional soliloquy, whose disappearance he thinks is much to be regretted. The soliloquy, of course, flourished amid the naïve crudities of the old Shrovetide plays, and the Renaissance tradition did not dislodge it. The first reaction came from the pseudo classicism of the eighteenth century. Gottsched, influenced by arguments of common-sense and by the sparing use of the monologue in the later plays of Corneille, was resolutely hostile to it. It was probably in conscious opposition to Gottsched's precepts that Lessing reinstated the soliloquy, attempting at the same time to make it more realistic. Goethe and Schiller accepted the convention unquestioningly without worrying over its naturalness. Dr. Roessler points out, however, that Schiller, in particular, vitalized the soliloquy by such elements of dialogue as apostrophe, questions and answers, exclamations, etc. In the nineteenth century most of the leading German dramatists employed the monologue unhesitatingly. We find it, for instance, abundantly in Grillparzer and excessively in Hebbel, where the frequency of soliloquies and asides is in keeping with the author's proneness to morbid introspection and self-analysis. Kleist is the only notable exception to this ready acquiescence until our own generation is reached, when the technique of Ibsen becomes dominant. The author observes that the characters in Ibsen do not seem to suspect that they are characters in a drama performed for an audience. Hence they do not proclaim themselves except through the natural channel of dialogue. This achievement is all the more noteworthy since the construction of Ibsen's plays, which generally begin with the catastrophe, inevitably tempts the playwright to the use of the clumsy expositional soliloquy. The influence of Ibsen in these matters is apparent upon Sudermann and Hauptmann. But, as the writer points out, Hauptmann in his desire to avoid the artificial device of the soliloquy has usurped the prerogatives of the novel by employing the epic method. His stage directions frequently make impossible demands on the actors, are, in fact, intended for his readers. What actor, for example, is chameleon enough to interpret the direction "Seine Farbe wechselt oft," which occurs in "Das Friedensfest"? Facial expression or pantomime is substituted for the old emotional soliloquy, and the result is a loss of clearness and no gain in naturalness. Dr. Roessler's conclusion is that, since the performance of a play rests upon conventions, it is absurd for the stage to attempt to be a faithful copy of life. Granted that the old expositional soliloquy was a slovenliness the departure of which none will regret, it is nevertheless a pity that the soliloquy of thought and feeling has been eliminated so completely from the contemporary drama. This well-arranged little monograph is valuable for the miscellaneous information which it furnishes, and for the reflection which it stimulates.

Two years ago Mr. Alfred Noyes wrote a little one-act play called "Rada," an imaginary episode of the war in the Balkans. That was little better than a pot-boiler, a lurid, sentimental, but not ineffective bit of melodrama of no particular distinction. "A Belgian Christmas Eve" (Stokes) is the same story, rewritten and greatly expanded, with the scene laid in Belgium during the present European upheaval, and is a much more ambitious and thoughtful piece of work, with poetic qualities to which the earlier version could lay no claim. As drama it is somewhat tricky and conventional, but the literary execution is vigorous, and, in places, carries a note of genuine inspiration. The victorious German hosts are running wild in a Belgian village. Two privates, university men, having killed the local physician, have billeted themselves in his home on Christmas Eve. With cynical jocularity, quoting Schopenhauer and Nietzsche, they strive to rally the despairing widow, Rada, who, they are convinced, is trying to conceal something from them. Finally, an old half-witted schoolmaster, Nanko, a pensioner of the doctor, innocently betrays the fact that Rada's little twelve-year-old daughter, Bettine, is asleep in the bedroom. Then Rada throws herself on their mercy, and, while she is speaking, the child enters in her nightgown. The soldiers, melted by her innocence—this is a true and gracious touch—play Santa Claus and affect to join her in a Christmas Tree festival. But the party is disturbed by the irruption of a band of other drunken soldiers, who have seen the female figures through the window and are bent on outrage. The two students try to defend Rada, who has concealed herself in her bedroom, but the intruders proceed to batter down the door, and the woman shoots herself and her child, while the thunder of advancing guns tells of the approach of the British forces. The dramatic incidents are virtually identical with those in the earlier piece, and, as has been intimated, have too strong a savor of the purely theatrical in their calculated contrasts and somewhat trite sentiment to carry the impress of reality. The dialogue is of a much superior order. The prose spoken by the soldiers is vital, rugged stuff, and much of the blank verse in which Rada's protests and appeals are couched has a fine swing and is charged with pathos, scorn, and passion. It is to the half-crazed Nanko, however, that

some of the most poetic lines are allotted. He has a fine description of the great Belgian cities, and his long soliloquy with which the play closes—outside the chamber from which the blood of Rada is trickling—is strikingly imaginative in thought and expression. But, after all, the noblest English in the play is the Biblical story of the Nativity which the child Bettine, with a curious disregard of the probable, is made to recite before her Christmas Tree. Mr. Noyes is at his best, perhaps, in his "Dedication," in which a solemn thought is expressed with dignified simplicity, and in his epilogue, which, breathing a prayer that the war may bring about an era of human liberty, is inspired by a noble spirit of comprehension and tolerance.

Finance

"MUNITIONS CONTRACTS."

In a very extraordinary way, all the speculative interest on the Stock Exchange of last week converged on stocks of manufacturing companies, who have taken "war munitions contracts." One day last week, at the height of the week's speculation, 75 per cent. of the day's transactions on the Stock Exchange was in shares of industrial companies subject to such influences. Stocks in which the average daily trading, four or five months ago, was only a few hundred shares, on several days were dealt in to an amount twenty times as large as such stocks as Union Pacific or Reading. In one of these stocks, which had not changed hands at all on the New York Stock Exchange until three months ago, 90,000 shares were sold on a single day.

The spectacle is not new to Wall Street, though unfamiliar during recent years. It is one of those well-known phenomena which occur when the public and the stock exchanges are in a gambling mood, when money is easy and the outsiders' surplus funds abundant, when something has happened to set on fire the popular imagination regarding the prospects of a given group of stocks, and when—this is not the least important condition—surrounding circumstances are such that the buyer cannot ascertain the exact facts of earnings possibilities, and therefore may picture what his own enthusiasm suggests. It is the case of the railway shares in 1901 and 1902, when nobody knew the limit of the "buying for control."

Is there, then, no way of throwing any light on prospective profits from the "munitions contracts"? One fact in the matter, not without significance, is that no responsible manager of any company now engaging in the munitions business, has in a single instance made any statement bearing out the extravagant Wall Street expectations. Only two official statements have been made. At the annual meeting of Bethlehem Steel shareholders, on April 6, President Schwab remarked:

> The matter of paying dividends on the common stock has not even been considered by the management. There were years when we paid no dividends on the preferred stock. I shall maintain the same policy regarding the common stock while funds of the company are needed for its development.

The other statement, published last week, came from a member of the executive committee of the Crucible Steel:

> I can see no reason why the common stock of the company should be able to pay dividends for a good many years.

Wall Street laid more stress on a remark in the second of these statements, that, on the company's $15,000,000 munition contracts the profit might be $5,000,000 to $6,000,000 "providing everything goes according to calculation." Supposing Wall Street's favorite estimate of $1,500,000,000 for such contracts in the aggregate to be correct, that rate would mean a profit of more than $500,000,000 for the American manufacturers. But the experienced part of Wall Street hesitated to jump at that conclusion.

Why? In the first place, because the estimate of orders placed is itself doubtful. A good part of the orders has certainly duplicated itself in the calculation. Orders have been sub-let by original contractors, and the process has frequently been repeated by the sub-contractors. In the market's estimates, which do not always distinguish between the processes, the total of the sub-let orders has been constantly added to the original contract of which it was a part. Nor have original contracts been free from exaggerations. Stock Exchange estimators had named for the Crucible Steel, for instance, an aggregate of more than $60,000,000 war contracts, some going as high in their estimates even as $150,000,000. Last week those orders were officially stated as $15,000,000.

But even supposing the estimate of $1,500,000,000 to be correct; what then? One offset to calculated profits is the possibility of strikes for increased wages. Another is the chance of rejections, on the part of foreign buyers, of shells, cartridges, guns, or rifles, which are turned out, but do not meet specifications. One company which lately entered the munition business had a large consignment of rifles (possibly 100,000) thus rejected this very week.

But the most impressive factor of uncertainty lies in the unfamiliarity of the American manufacturers with the business to which they have unexpectedly diverted their machinery. The *Iron Age*, commenting editorially on the caution required in booking contracts of the sort, cites this case in point:

> A business man whose contract for shells looked like 100 per cent. profit when it was taken, now says that so many unexpected hindrances to rapid and efficient production have turned up that he may not make a dollar.

Further:

> A machine-tool manufacturer, who sublet parts of his machine to increase production, scrapped the first batch of parts he received in its entirety, and cancelled the contract.

The chairman of an English company whose machinery had been thus diverted from its ordinary purposes reported to his shareholders that this "sudden influx of work with which we were unfamiliar has resulted in a falling off in the money value of the output"—that is to say, the profit was less than that of the company's ordinary business. On the whole, a safe conclusion is that Wall Street will know a good deal more about "munitions contracts" twelve months hence than it knows to-day.

NOTABLE NEW MACMILLAN BOOKS

Winston Churchill's New Novel

"Many people read 'The Inside of the Cup,' but 'A Far Country' should reach a wider audience."—New York Times

A FAR COUNTRY

By the author of "The Inside of the Cup," etc.

Illustrated, $1.50

New York Times

"No one can afford to miss reading 'A Far Country,' or, reading it, can fail to be interested. The themes Mr. Churchill handles are the big themes confronting all America, and in the fortunes and misfortunes of his characters he indicates energies and developments that are nation-wide. It touches on what is vital . . . and it will help in no small degree to broaden our thought and clarify our vision. Many people read 'The Inside of the Cup,' but 'A Far Country' should reach a wider audience."

Boston Globe

"A powerfully written story, displaying wonderful scope and clarity of vision. Presents a wonderful study of American emotions."

New York World

"A story worthily complete . . . vastly encouraging. The kind of a book that points to a hope and a right road."

Chicago Post

"Mr. Churchill has done a difficult thing well . . . we congratulate him on an achievement well worth while."

Chicago Herald

"A great piece of art, comprising admirable humanization, plot, and sympathy, diverse as intrinsic . . . and many interesting side issues. Any author might well be proud of such achievement."

Chicago Tribune

"'A Far Country' is an American novel in all that that term implies."

Philadelphia Ledger

"'A Far Country' is a strong story that is vital and compelling. . . . Adds one more leaf to Mr. Churchill's literary laurels."

Owen Wister's New Book

"Owen Wister has depicted the tragedy of Germany, and has hinted at the possible tragedy of the United States. . . . We wish it could be read in full by every American."—The Outlook.

THE PENTECOST OF CALAMITY

By the author of "The Virginian," etc.

The first really lucid account of the changes which took place in the hearts and minds of the German people on August 1, 1914.

Written with the ease and charm of style of the author of "The Virginian," it is prose that holds the reader for its very beauty, even as it impresses him with its force. It is doubtful whether there will come out of the entire mass of war literature a more understanding or suggestive survey.

Price 50 cents. Ready August 18th.

Ernest Poole's New Novel

"'The Harbor' is the first really notable novel produced by the New Democracy."—New York Tribune

THE HARBOR

By ERNEST POOLE

THE 13TH EDITION NOW READY

To build a harbor is to build a city. To improve a harbor is to develop a city and a nation behind it. Read the story of the growth and future of one of the greatest harbors in the world in Ernest Poole's significant new novel, "The Harbor."

"By all odds the best American novel that has appeared in many a long day. Earnest, sincere, broad in scope and purpose, well balanced, combining intellect and emotion. . . . The characters are ably drawn, strikingly contrasted, essentially American."—*N. Y. Times.*

"A book of the past, present and future, not only of New York, but of all the world."—*N. Y. Tribune.*

$1.40

ORDEAL BY BATTLE

By FREDERICK SCOTT OLIVER

"To those who desire a brilliant survey of recent domestic history and character studies, done with the clear precision of Swift, we recommend these chapters."—*London Times.*

"The best book by far that has yet appeared on the causes and conditions of the war."—*London Post.*

"The most notable book concerning the war that has yet appeared."—*London Standard.* ***$2.40***

Imperial Germany and the Industrial Revolution

By T. B. VEBLEN

"It accounts for Germany's economic advance and high efficiency by natural causes, without drawing on the logic of manifest destiny, Providential nepotism, or national genius, and the like; and it is believed to be the first attempt yet made at an explanation, as distinct from description or eulogy, of this episode in modern history." ***$1.50***

THE LIBERTY OF CITIZENSHIP
By HON. SAMUEL W. McCALL

"No one can be a citizen all by himself. Robinson Crusoe may have been a sovereign, but a citizen he could not be. . . . Since we cannot each one of us have his island, let us try to preserve for ourselves some measure of freedom upon the continent to which we have been consigned and let us regard it as one of the first duties of citizenship to aid in checking the rapidity and greed with which the laws are coming to devour liberty."

From the Author's Introduction.

Price $1.15 net, postpaid.

YALE UNIVERSITY PRESS
209 Elm Street, New Haven, Conn. 225 Fifth Avenue, New York City.

This week's issue of THE NATION comprises 10,771 copies: of this 7,877 go to paid subscribers and 827 go to exchanges or are sent out as free copies. The average weekly newsstand sales during the first six months of the year 1915 were 876; June average, 794 copies.

In view of the large library and college and family circulation of THE NATION, it is safe to assume that not less than 30,000 people read it each week.

WRITING OF TODAY

Models of Journalistic Prose

Selected and Discussed by J. W. CUNLIFFE, D.Litt., and GERHARD R. LOMER, Ph.D., of Columbia University.

Specimens of contemporary writing, dealing with matters of living interest, by well-known writers of today, for use in English composition. Without disregarding the element of literary charm they are designed to appeal to students—and their name is legion—who find the usual classic models outside their interests and altogether beyond their reach. They include examples of description, narration, the interview, exposition, controversy, humor, literary and dramatic criticism, etc., chosen from the better dailies, weeklies and monthlies of the United States and England. Among the authors represented are Lord Bryce, Huneker, Chesterton, Burroughs, H. G. Wells, Woodrow Wilson, Roosevelt, Lincoln Steffens, Robert Herrick, and Richard Harding Davis.

The Nation

NEW YORK, THURSDAY, AUGUST 5, 1915.

Summary of the News

What may be termed "secondary" notes have passed to and fro in abundance between this country and other Powers during the past week. Concerning the main issue between the United States and Germany there is, however, nothing definite to report. Indeed, it is freely suggested that Germany will solve the difficulty, so far as she is concerned, by not replying to the last American note on the subject of the sacrifice of the lives of American citizens through the submarine warfare.

So far as other notes and queries addressed to Germany are concerned, there is little to record, beyond the bare facts of their dispatch. A note of inquiry in regard to the attack by a German submarine on the British steamer Orduna was presented by the American Ambassador to the Foreign Office in Berlin on July 27. On Monday the reply of the German Government to the last American note on the sinking of the sailing ship William P. Frye by the Prinz Eitel Friedrich was received by the State Department. Dispatches from Washington state that the note reiterates the former contention of Germany that the destruction of the vessel was justified under the treaty of 1828, provided that Germany is willing to pay compensation. Representations in regard to the sinking of the American steamship Leelanaw, which, as we noted last week, would appear to have been a similar case to that of the Frye, were, it is understood, made to the German Government at the end of last week.

The receipt of two supplementary notes from Great Britain was announced by the State Department on Monday. Of these, the one amplifying that which was received on July 26, but was not published by request of Sir Edward Grey until the arrival of the present communication, covers the *caveat* of the United States, in which the rights of this Government and of its citizens in connection with all prize-court matters in Great Britain were expressly reserved; the other explains the action of the British Government in detaining the Neches, a vessel carrying goods from Rotterdam to the United States, some of which are alleged by the British Government to have been of German origin. As the full text of these notes was not published until yesterday, we shall withhold comment on them until next week.

German submarines have had an exceptionally successful time during the past few days, having sunk twenty fishing vessels and thirteen other ships. The fishing vessels were all British. In attacking the others submarine commanders displayed a fine impartiality towards flags, belligerent or neutral. Four Danish ships were sunk, two Norwegian, two Swedish, one Belgian, and four British. The only vessel destroyed that has a direct interest for this country was the Leyland liner Iberian, on which three American citizens were killed. The case, however, is likely to present no international difficulties, since, on the evidence before us, it would seem probable that the Iberian was summoned to stop and was only shelled by the submarine when the captain disregarded the order. It was in the course of this shelling that the Americans were killed. On the captain stopping his vessel, the crew was ordered off, and the ship was then torpedoed. The affair is interesting as affording another illustration of the contention made in the last American note that it is perfectly possible for commanders of submarines to observe the rules of warfare, the only difference between a cruiser and a submarine as commerce destroyers being, apparently, that the task of the submarine is slightly more difficult, since the pursued vessel has a better chance of escape.

Undeterred by the unfavorable reception in neutral countries hitherto accorded to "facts" concerning Belgium's misdeeds, the *Norddeutsche Allgemeine Zeitung* began, on July 29, according to dispatches from Berlin of that date, the threatened publication of the series of documents purporting to be secret Belgian diplomatic reports found in Brussels by the Germans and describing international political events from the time of the Moroccan crisis until the beginning of the present war.

The reported agreement between Turkey and Bulgaria, which we recorded last week, has not been confirmed; indeed, it is explicitly denied by the Cologne *Gazette* that any agreement has yet been reached, while the Bulgarian Premier, M. Radoslavoff, as reported in a dispatch from Budapest to the London *Morning Post*, dated August 2, frankly admits that Bulgaria is negotiating simultaneously with two groups of Powers, and declares that these negotiations are "proceeding quite satisfactorily." Greek newspapers, according to dispatches from Athens, in commenting on the reported Turko-Bulgarian *entente* are unanimous in declaring that, if Bulgaria should attack Servia, Greece would consider herself in honor bound, in accordance with the Greco-Servian treaty, to go to the assistance of the latter country.

An important announcement in regard to Mexico was given out by the State Department on Monday night. An "informal conference" is to take place at the State Department to-day, at which will be present the Ambassadors from Brazil, Argentina, and Chili, as well as the three ranking Ministers of the American republics, namely, those of Bolivia, Uruguay, and Guatemala. No details as to the nature of the proposals to be put forward are given, but dispatches from Washington last week professed to be informed that the main feature of the contemplated plan would be the recognition by the United States as Provisional President of that member of the Madero Cabinet who is entitled to the office under the law of Presidential succession. From Mexico itself there comes little that is new, except that on Saturday of last week the capital again fell into the hands of the Carranzista forces under Gen. Gonzales.

The Coroner's jury that inquired into the disaster to the excursion steamer Eastland at Chicago on July 28 returned a verdict placing the blame for the loss of life on six persons: the general manager of the company that owned the vessel, the captain, the engineer, two Federal inspectors of steamships, and the general manager of the Indiana Transportation Company, the lessee of the Eastland. An inquiry, which has aroused a good deal of acrimony, is also being conducted by Secretary of Commerce Redfield.

Charles Becker, the ex-police lieutenant of New York, who was twice convicted of having instigated the murder of the gambler Rosenthal, was finally executed in Sing Sing prison on July 30. The incident was attended by the usual debauch of lurid sensationalism on the part of a section of the daily press.

An interesting item of news was obscurely recorded in the papers of July 28. On the preceding day the first direct wireless communication was established between the United States and Japan, when messages were exchanged between the vice-president of the Marconi Wireless Telegraph Company of America and the Director-General of the Ministry of Communications at Tokio.

The French Chamber of Deputies, on July 29, raised the limit of the issue of defence bonds to 7,000,000,000 francs. Dispatches of the same date stated that the reports of the Budget Committee on Supplementary Military and Naval Credits showed that the cost of the first five months of the war to France was 6,403,000,000 francs.

Something like a Cabinet crisis was caused in Japan by the resignation, on July 29, of Viscount Kanetake Oura, Minister of the Interior, following an investigation by the Ministry of Justice into charges of bribery resulting from the Parliamentary elections last March. Viscount Oura's resignation was sanctioned by the Emperor, and Viscount Okuma, believing that he should hold himself responsible for the acts of members of his Cabinet, also offered his resignation, which was followed by those of the whole Cabinet. As we write, it is believed that the resignations are not likely to be accepted, as a change in the Cabinet would be unpopular at the present moment.

The revolution in Hayti resulted, on July 28, in the assassination by a mob of the President, Vilbrun Guillaume, who was dragged from the French Embassy, where he had taken refuge, and shot in front of the building. Admiral Caperton, on the same night, landed a force at Port-au-Prince to protect property and lives and prevent the further spread of rioting. Some resistance was opposed to the landing, and after it was effected two American bluejackets were killed by snipers. There have, too, been some casualties among the Haytians. French marines have also been landed, with the approval of the American Government, for the protection of the French Legation. Order has been restored, but the Haytian Congress, though guaranteed protection for its deliberations, has not so far taken any steps to elect a successor to the murdered President.

The Week

Secretary Lansing made a quiet announcement on Monday which is yet of the highest significance. The Mexican nettle is to be grasped firmly, but not by the hand of the United States alone. South and Central America are to help. The Ambassadors from Brazil, Argentina, and Chili—undoubtedly with the consent and authorization of their Governments—are to confer with our Department of State, and in addition the Ministers from Uruguay, Bolivia, and Guatemala will be present. And the express object is to "consider the Mexican situation." This can mean only one thing. It is a revival, with a difference, of the scheme of last year to utilize the friendly coöperation of South American diplomacy in solving the immensely difficult Mexican problem. Then it was a question of preventing war between Mexico and the United States. Now it is a question of bringing about peace and order, with some approximation to a settled government, in a sister-republic which has been torn and ravaged by internal strife for four years.

This renewed and extended effort to make the solidarity of the American nations useful is one proof more of the resourcefulness of President Wilson. His calling in the A B C Powers again is not a confession of weakness, much less an act of cowardice. Of course, the United States is strong enough to go about the business alone. It is not physical support that the President is seeking, but moral. With large foresight, he is directing his policy to the end not merely of meeting the immediate need in Mexico, but of doing it in a way to make the path of statesmanship in the future plainer and easier. Working for the restoration of security in Mexico, he is also endeavoring to provide against the suspicions and jealousies which a rough intervention in Mexico by this country, acting independently, would be sure to arouse throughout all South America. The aid previously accepted by the United States from republics to the South, in our critical relations with Mexico, made a deep and excellent impression all the way from Panama to Patagonia. Old fears and prejudices were swept away in a day, and a feeling of new confidence and friendship created. It was seen that President Wilson had transformed Pan-Americanism from a word, a flourish, into a real thing. This great advantage it is evident that he now desires to retain and to enlarge. If there is to be any intervention in Mexico at all, it will be joint. In case it falls to the United States to take the leading part, and possibly to apply the strongest pressure, we shall all the time be acting under the mandate and with the cordial approval of the other American republics.

When Wall Street and the speculating public get into the frame of mind which has lately been exhibited on the Stock Exchange, warnings are apt to be thrown away. As every one familiar with past speculative manias is aware, the fact that one stock has risen from 46 to 275 in the space of a few months (advancing 100 points since July began) and that another has risen from 18 to 83 in eleven weeks, does not operate as an argument for increased caution at the higher prices, but rather as a stimulus for an even greater rise. The problem ceases to be one of intrinsic values, and becomes one largely of psychology. We fear it is equally futile to attempt, as has been suggested, to solve the whole question by the happy thought of "maximum prices," to be arbitrarily imposed by the authorities of the Stock Exchange. The Stock Exchange can certainly take restrictive measures if it discovers fictitious trading, where one party is at once both buyer and seller, and it can arbitrarily stop a "corner," in which one group of operators has accumulated all of a given stock, and is itself bidding up the price when no one else can sell. But when an infatuated public chooses to bid against itself at an extravagant advance, using its own money or credit for the purpose, it is a little difficult to see how even the imagined "State control" could fix the limit.

There is no mystery as to the origin of this excited speculation, and there is not much doubt as to how it will end. The imagination of the speculative public has been inflamed by the highly sensational estimates of the value of the "war orders" placed with the various manufacturing concerns by European Governments. The figures named are so large as to serve for the wildest sort of estimates on probable net profits—always supposing the ordinary qualifications of business common-sense are to be ignored. In the public's present mood, they are inevitably ignored. Such considerations as the duplication of figures through "subletting" contracts which one contractor cannot execute; as the proved exaggeration in figures already published; as the offsetting influence of strikes, or rejection of output not up to specification; as the certainty that two or three years will be required to complete the larger orders, and that the European war may in the meantime suddenly end—these considerations will have a large place in after-thoughts. But as the speculator sees the facts at present, the stocks are to go on advancing, merely because they have advanced so far already. Every one of the least experience knows what happens in the aftermath of a market built up on such a basis. Perhaps the present speculation is peculiar in this regard—that it has reached its climax of enthusiasm at the very moment when a sudden turn in events of the most disturbing character, in the field of international politics, is at least a constant possibility.

Scruples about espionage, when you have once gone in for it, seem almost like fastidiousness in burglary. The German spy-system has been elaborately organized for years past—it is called, as in all armies, the "information" department—and has naturally been especially employed since the war began. Several German spies have been caught in England, and some of them executed. The latter have gone to their death courageously, regarding themselves as good soldiers and patriots. They knew that they took their lives in their hands when they volunteered to do the work of spies. And if in war all's fair, it certainly might be held to be in spying. Yet our State Department is inclined to draw the line at the forging of American passports for German spies, and has addressed inquiries to Berlin on that subject. The point is that responsible German officials are accused of supplying such fraudulent passports as a regular thing. This makes the affair different from what it would be if it were all a matter of initiative on the part of the individual spy. Liable as he is to be hanged if detected, he is at liberty to resort to any disguise or artifice. But it is another thing for his Government to furnish him with documents purporting to be officially issued by another country. That appears to be the basis of our protest in the matter of the forged passports.

The memory of 1812 was invoked by the Russian Minister of War in the opening session of the Duma at Petrograd. He was referring to the sacrifice of Moscow and the ultimate victory of Russia over Napoleon. But there is another parallel to 1812. In the face of invasion and disaster, Alexander I made his appeal to the loyalty and self-sacrifice of the people. Tolstoy has described how Moscow rallied around its sovereign in 1812. To-day, the Russian Government is

compelled to turn once more to the representatives of the people, and to renew those pledges of good behavior which adversity usually forces from an autocracy. Thus the present session of the Duma may be more important to the future than the military operations of the moment. To the Polish people the promise made by Grand Duke Nicholas at the beginning of the war is now embodied in a specific and formal pledge by the Premier, speaking for the Czar, of national, social, and economic autonomy for Poland. And for the other nationalities, without regard to difference of race, creed, or tongue, there is the promise of "impartiality and benevolence," as a reward for their "fidelity." The session of the Duma is only another illustration of how the truth is being forced upon the ruling minds of Russia that repression and efficiency cannot go together.

We do not for a moment suppose that the great body of German-Americans approve the railing accusations against President Wilson made by Henry Weismann, president of the New York German-American Alliance, at its meeting in Utica last week. He spoke of Mr. Wilson as the "dupe of Wall Street pirates." He also called him a "political bankrupt," distinctly implying that the President's course throughout the war had been dictated by a desire for reëlection. That he can be elected again next year, Mr. Weismann emphatically denied. This is the ordinary politician's rhetoric: "Anyhow, right or wrong, you can't get the votes." But the other assaults on the President go far beyond this, and must be condemned by all sensible Americans of German descent. They will consider Mr. Weismann's language in shocking bad taste, and a great political blunder, whatever else they may think of it. All such people ought to feel, or to be made to understand, if they do not feel it instinctively, that this is a time for them to display great restraint and moderation. The champions of Germany in this country have received every liberty. They must not abuse it. It would be a huge mistake for them to fancy that our American tolerance and habit of allowing everybody to have his say, provided he does not incite to violence or sedition, give them a charter to go to any lengths. They have their preferences and their prejudices, their hopes and their fears. To these let them freely give utterance. But let them do it decently. They will not only give deep offence to the mass of American citizens, but will do the greatest possible harm to the German cause, if they permit themselves to fall into abusive attacks upon the President of the United States. Level-headed German-Americans understand this perfectly. They have been heard to say that the antics of the *Fatherland*, the paper started especially to speak for Germany in this country, have been worth a great deal to the Allies.

To call Eugene N. Foss a candidate for the Republican nomination for Governor of Massachusetts is to do him scant honor. He is the fated interpreter of the popular will. Any doubt of this is removed by his own words to Charles S. Bird, who waved away the nomination which Foss offered him in his first attempt "to interpret the popular will" and thus compelled the ex-Governor "to lead the popular movement myself." The superficial and the prejudiced will dwell upon the fact that Foss has thrice led the popular movement to victory under Democratic banners, unmindful of Foss's own explanation that, as the exponent of the McKinley policy of tariff regulation, he has all this time been "the real leader of the true Republican idea in Massachusetts." But surely a man who has been the actual leader of the Democratic idea, the real leader of the true Republican idea, and is now the embodiment of the Prohibition idea, has fulfilled all the requirements of leader of a popular movement. The Progressives are wise in announcing that their candidate for the Governorship has been selected but cannot be disclosed because of "certain contingencies." It can only be a matter of time before all other candidates see a light, and for strategic reasons announce their retirement.

The international situation resulting from the Haytian violation of the French Legation is spoken of as serious, but it is not immediately complex. The natural step will be for the United States to act for the French Government in calling for full apology and reparation. Yet the incident will increase the feeling of France that the positive side of the Monroe Doctrine, involving the responsibility of the United States for the conduct of the more untrustworthy nations within its scope, demands a new expression. The outbreak at Port-au-Prince cannot but give an impetus to the movement already on foot to ask the United States to take over the control of customs, as in the Dominican Republic. The problem of oversight over civil affairs is more difficult, in that the Haytians may resent it in a way that the Dominicans have not; the country must trust to President Wilson's special knowledge. But since we stopped the long, criminal war between Hayti and Santo Domingo in 1850, it has been abundantly proved that a firm hand was to the benefit of both countries. Those responsible for the new murderous outbreak in Hayti must expect positive action.

That the excess of exports of merchandise over imports during the fiscal year ended June 30, 1915, was very nearly 1,100 million dollars is all the more striking because the total of imports shows no tremendous falling off. The imports aggregated 1,674 million dollars, which is only 220 million less than in the preceding year, 139 million less than in the fiscal year 1913, and actually greater than the total of imports for any year preceding 1913. In view of the fact that in the fiscal year immediately preceding the war our imports from Germany were $190,000,000, from Belgium $41,000,000, and from Austria-Hungary $20,000,000, this is particularly interesting. As for the excess of exports, besides its being more than half a billion dollars greater than the average of the preceding four years, and more than four hundred million dollars greater than the largest excess previously recorded, it is to be remembered that the usual expenditures of American travellers abroad, which are an important offset in ordinary times, have during the past year been reduced to an insignificant item. On the other hand, relief supplies sent from this country to the war-stricken lands of Europe count in the volume of recorded exports, but do not enter into the accounts of commerce; these, however, would not approach in magnitude the total usually spent by Americans abroad. The effective "favorable" trade balance, therefore, calculated so as to compare with that set down in former years, is probably fully $600,000,000 greater than the average of the past four years. The question of exceptional transportation and insurance rates, however, somewhat complicates the comparison.

But the law which proposes to make it a crime for a white teacher to help make a better citizen of the negro would put Georgia in the absurd attitude of sending her preachers and her teachers, her sons and her daughters, to foreign lands to do missionary work among barbarous and semi-barbarous people, when the descendants of a race of these very people constitute a large part of Georgia's population—that part which brands her with a disgraceful quota of illiteracy.

It is thus that the Atlanta *Constitution* speaks out against what it terms, mildly enough, "an unjust measure." It is aimed

directly at Atlanta University and other institutions for the higher education of the negro, which have been founded and supported by Northern money. In them have taught some of the noblest missionaries that have ever gone forth from peaceful homes to encounter ostracism and unbridled prejudice for their crime of laboring to create leaders for a race, in order that it shall not prove the undoing of the South by its ignorance and its degradation. In the matter of laws like these, in the South as in the North, there seem to come periods when one State hastens to follow suit to another without asking about the wisdom of the proposed statute. Florida passed a law of this kind, and, therefore, Georgia must do likewise. In its essence it is a deliberate attempt to cripple the educational facilities of the negroes, although veiled under the usual guise of preventing social equality, as if the example of the high-minded and exceptionally devoted teachers at Atlanta could be aught but a blessing to all who come into contact with it, black or white! One thing is certain: If the question were left to a vote of the Southern leaders of education in the South, this bill would perish without more ado.

Without alteration of policy, the Canadian Government will, by 1916, own and operate nearly 5,000 miles of railway; and the time is at hand when it must determine its final attitude towards the various hard-pressed lines it has assisted by subsidies, or constructed in partnership with private interests. The hope is apparently strong that further steps in nationalization may be avoided. Yet the acquisition of the two new transcontinentals, the Grand Trunk Pacific and the Canadian Northern, is being discussed on every hand, and its consideration is playing a part in Sir Robert Borden's conferences on financial affairs in London. These roads, now practically completed, are financially embarrassed, and the Western provinces guaranteed such large bond issues that failure to meet the charges would involve them deeply. Canadian newspapers insist that the fat must go with the lean, and that if the Government takes over the Transcontinental it must also take over the Grand Trunk and Canadian Northern as its western feeders. These lines, states the Toronto *Globe*, "need not expect to unload upon the people the unprofitable links while they grow sleek and prosperous on the prairie sections." Complete governmental ownership would cut a Gordian knot; but the risks in taking over a two-billion-dollar investment must certainly give Canada pause. A preliminary survey by British and American experts is contemplated.

"Under the shelter of the university, and almost in its name," says the San Francisco *Argonaut*, speaking of Dr. Scott Nearing, "he was conducting an impassioned political campaign, and the board of trustees was practically in the position of paying him to do this." There is much virtue in an "almost." Dr. Nearing did not profess to speak in the name of the university; no man of sense—and, we are sure, very few people with or without sense—had the least idea that he was speaking in the name of any person but himself, or of any institution whatsoever. The thing that has got to be rubbed into the heads of people like the trustees of the University of Pennsylvania, or Chancellor Day, or the editor of the *Argonaut* is that nobody can speak "in the name" of a university on any controversial matter, for the simple reason that the university, as an institution, has no opinion on the matter. It may be that every one of the hundred professors of a university holds a given opinion upon it; and, if so, that is an interesting fact and may be a fact of importance in the formation of public sentiment. But still the opinion would be the opinion of the hundred individual professors, and not of the university. And if ninety-nine think one way and one thinks the opposite way, that, too, is a matter of interest and may be a matter of importance. But if every professor who holds opinions that the trustees consider pernicious has got to keep his mouth shut, on peril of losing his livelihood, what reason is there for attaching any special interest or value to the opinions that any of them stand for?

If the issue at stake in Poland is not the holding of Warsaw, but the safe withdrawal of the Russian armies, recent reports from all capitals, Berlin and Vienna as well as Petrograd, show clearly that the danger of encirclement is not immediate. If the southward swing of the northern German armies and the northward swing of the southern Austro-German armies be compared to the closing of a pair of pincers, then the pincer ends at the beginning of the week were still about 110 miles apart, which should be a sufficiently large hole for the retirement of an army. It is true that the southern pincer end has broken the Lublin-Cholm railway to Ivangorod, and that the northern pincer end is close to the Warsaw-Wilna-Petrograd railway. Were the Russians on the offensive, the cutting of the two main lines of supply would be fatal. But for the purposes of a retirement there lies midway between these two lines the railway running east from Warsaw through Siedlce to the line of the Bug and Brest-Litovsk. Against this line the Austro-Germans are developing an attack after crossing the Vistula between Ivangorod and Warsaw. If we dismiss the matter of railways, and imagine the Russians being compelled to make their retreat on foot, it is a problem of falling back perhaps eighty or ninety miles across country, while the wings of the enemy, as we have said, are still more than a hundred miles apart.

Assuming that the Russian army escapes from its present predicament without the disastrous loss which it is undoubtedly the main purpose of the German drive to effect, and assuming that in that case the immediate object of the German offensive in Poland will have been accomplished with the occupation of Warsaw and the temporary paralysis of the military effectiveness of Russia, what will be the next move in the German plan of campaign? The deadlock in France and Flanders continues, and the prospects of success for another drive on the coast towns of northern France, with whatever determination undertaken, can hardly appear bright. It would not be surprising, then, if, after their effort in Poland, the Teutonic allies should turn their attention once more to Servia. Their purpose would be nothing less than the occupation of the country. With Servia in Austro-German possession, it is not to be thought that Bulgaria would resist the passage of troops and munitions to Turkey. That some development of this kind has been foreseen by the Allies, is indicated by the presence of French and British troops in Servia reinforcing the reorganized Servian army. Meanwhile the answer to the oft-repeated question, "Where is Lord Kitchener's new army?" is probably, "In Gallipoli and on its way there." In other words, for the Allies the Dardanelles have become for the present the principal theatre of war, and it is not, we think, a far-fetched supposition that in the near future the struggle may resolve itself into a race for Constantinople, on the part of the Allies through the Dardanelles, on the part of the Austro-German forces through Servia and Bulgaria, the latter either terrified into non-resistance or cajoled into the complaisant neutrality of another Luxemburg.

ANNUS TERRIBILIS.

The year of war was passed in review by two British Ministers, on the eve of the adjournment of the House of Commons last week. As in duty bound, they sought to put the best face possible on the situation. Mr. Asquith declared that the struggle had settled down to a question of endurance, and that the final triumph of the Allies, with their superior resources, was certain to come. Mr. Lloyd George was equally confident of the ultimate result, though he had some very blunt and unpalatable things to say of English mismanagement in the matter of equipping and supplying the army. Neither statesman was able to draw a rosy picture. Into the souls of both, as into those of all public men and private citizens in the countries engaged in the war, the grim and terrible tragedy of the past twelve months has entered. Boastfulness hides its head in the presence of the fearful sacrifices made. Even recrimination falters. It is with a sense of aghast helplessness that the whole world contemplates the misery into which civilization, all unawares, was plunged last August.

It has been a year of frustrated predictions and expectations gone wrong. In several of the warning notes which passed between the various diplomats last July, the expression was used that war, if it came, would have "incalculable consequences." It was a true word. Nobody foresaw what has come to pass. Military experts have been left looking like children. Even the German General Staff, with its wonderful organization of knowledge, has been overtaken by surprise after surprise. Financial prophecies have fallen to the earth. The forecasts of Bloch and others of his school have been beggared by the event. And not into the imagination of anybody did there enter a conception of the enormous losses which one year of fighting would bring. It has been truly an *annus terribilis*. And its gloom is projected upon the future.

The strictly military aspects of the war it is not necessary to bring to mind again. But this is to be said: the frightful mien of war has been so exhibited that never again will it be possible to clothe it with glamour. If the world had to have this lesson, it has now got it in a way not to be forgotten. When men hereafter speak of the pomp and circumstance of war, we shall know that they are referring to scenes such as can be witnessed in a slaughter-house. This war has been of a sort to revive the story of a writer in the Middle Ages, to the effect that when soldiers set up the claim of being the most useful citizens, the honor was contested by butchers with reeking knives. And he added that, whatever the motives, or whatever the services, of men going to battle, war was in its nature so cruel that it was impossible to "honest it with civil terms." It will certainly be difficult for the impartial historian to honest the war which broke out a year ago.

It has not, however, been nothing but a shambles. Even amid its horrors, the humane spirit has shone out, and moral principles have asserted themselves. Discussions about the responsibility for beginning the war have been dying out of late. But one thing we can never too much insist upon, because it goes to the roots of national morality and of civilization itself. We mean the crushing moral handicap which Germany took upon herself by her conduct towards Belgium. This she has never been able to overcome. Germans themselves admit this. They now perceive that the immense moral revulsion which shook the whole world when Belgium was trampled by German armies had an effect very like that of making the Allies a present of a million armed men. Thus we have at least one great sentiment, having to do with law and right, which has persisted steadfast all through the war. It has been a manifestation of the soul of goodness in things evil. We need not despair of the future so long as the heart of man continues to thrill over Belgium's wrongs, and so long as the consensus of civilized nations, outside the belligerents, is that no ending of the war ought to be thought of which shall not make the Belgians again independent and free.

That attainment is not yet in sight. It may have to be won by force of arms; or it is possible that it may come through mediation and diplomatic negotiations, supported as these would be by the demand of the German Social-Democrats that no annexations be made as a result of the war. All these things are still in the shadow. And what the next few months of the war may bring forth, the wisest cannot say. Facing such stupendous events, the mind feels itself reduced to imbecility. But unless we are to believe that this world is the sport of chance, and that the long history of mankind has been nothing but a blind clash of atoms, we are bound to look forward to some great good coming out of this mighty evil. If we do finally get a peace which means the discrediting and disappearance of militarism, with the exaltation of righteousness and justice between nations, it may come to seem worth the awful price that had to be paid.

INDICTING A WHOLE PEOPLE.

A letter from an American woman in the *Evening Post* last week was typical of many. The writer protested vehemently, and in part pathetically, against what she looked upon as the intolerant severity of American judgment of Germany during this war. The sentiment that she expressed has naturally been manifested often by persons of German origin and German sympathies in this country. Nor is there wanting, on the part even of those who believe that the German cause is wrong and that a German triumph would be a disaster to the world, a sense of sympathetic pain when that feeling is brought to their notice. "Read the attacks," said the writer referred to, "made upon the German soldier, then picture the feelings of a German-American, man or woman, who perhaps has just been called upon to mourn a beloved soldier-brother!" Nor is this the only aspect of the matter that awakens thoughts full of poignancy. We have recently read a letter from a German-American of culture, and of deep attachment to this country, who cannot bring himself to believe that the American people, especially those of the educated classes, having so many and such long-standing bonds of sympathy, admiration, and gratitude with Germany, can suddenly have flung away all recollection of these feelings and have given themselves over to unsparing condemnation of the German Fatherland. To no one who has known what is high and noble and lovable in Germany can such a cry of grief and disappointment be indifferent.

The truth is that Americans cherish no ill-will towards individual Germans, and do not ascribe to them as separate human beings those qualities of ruthlessness and unscrupulousness which have brought upon Germany, as a nation, the condemnation and resentment of just-minded people—condemnation and resentment so absorbing as to cast into the background, for the time being, those gentler thoughts which, when the terrible agony is over, will once more assert themselves. For the fact is that, so far from its being impossible, in this sense, to draw up an indictment against a whole people, it is precisely against a whole people that in times like these an indictment can and ought to be drawn. Indeed, when Edmund Burke made his well-remembered declara-

tion, it was not a moral indictment but a legal indictment that he had in mind. "I do not know," he said in his great speech on Conciliation with America, "I do not know the method of drawing up an indictment against an whole people." But the preceding part of the speech shows precisely what he meant. "There are but three ways," he had said, "of proceeding relative to this stubborn spirit which prevails in your colonies, and disturbs your government. These are: To change that spirit, as inconvenient, by removing the causes. To prosecute it as criminal. Or to comply with it as necessary." And it was the utter impracticability of criminal proceedings as a method of dealing with the American spirit, seeing that that spirit pervaded the whole body of the people and their assemblies, that Burke condensed into his famous epigram.

When it came to moral or intellectual indictment, surely no man more than Burke himself showed that that was not impossible. Right or wrong, his denunciation of the spirit which pervaded France during the Terror was as sweeping and as scathing as the power of eloquence could make it. To pass judgment upon individual Germans—to assume that we in their place would individually be better—might truly be presumptuous; but it is not presumptuous to declare that somehow or other a spirit evil and intolerable has gained such possession of those who control the destinies of Germany as to make her national conduct—in the large, and terribly often in detail—an abomination in the sight of all the nations. If the inflexible backing up of Austria in a demand so arrogant and an attitude so unyielding as to make the desolation of this war a certainty be a crime; if the violation of Belgium in cynical disregard of treaty obligations be a crime; if the punishment of the Belgian people for resisting this aggression, executed with calculated ruthlessness of the most appalling kind, be a crime; if the slaughter of non-combatants on the Lusitania, in defiance of the clearest mandates of international law, be a crime—what attitude is it possible for us to take towards the country guilty of these offences except that of indignant condemnation?

On this whole subject no better word has been spoken than that of the Bryce Committee at the conclusion of the first part of its report on the atrocities in Belgium. "It was with amazement and almost with incredulity," we are told, "that the Committee first read the depositions relating to such acts." And it finds the only plausible explanation of the acts not in some ingrained wickedness or barbarity on the part of the German people or the German soldier, but in the hold that the militarist creed has obtained upon the German nation. "The Spirit of War is deified. Obedience to the state and its War Lord leaves no room for any other duty or feeling." That the militarist doctrine is not one inherently attaching to the German people, but the outcome of a theory held by a ruling caste with whom it has become an obsession, the Committee asserts with emphasis; and the recent courageous declarations of leaders of the Social-Democratic party strongly bear out the assertion. But in the inception, and in the conduct, of this war, that doctrine has been the decisive factor; and, as the Bryce Committee says, "this is not the only case that history records in which a false theory, disguising itself as loyalty to a State or to a Church, has perverted the conception of Duty, and become a source of danger to the world."

ARE THE PROGRESSIVES HITTITES OR GITTITES?

Those who deplore the lamentable ignorance of the Bible in our day will find fresh cause for dejection in the fate that has befallen a Biblical allusion by the Chairman of the Progressive National Committee, Mr. Victor Murdock, of Kansas. In a statement positively guaranteeing that his party will be in the field next year, he said that the Progressive platform had become "the Ark of the Covenant" to hundreds of thousands of "aggressive Americans," and added that "there is not a township anywhere without its group of —— devoted wholly and solely to its preservation." The word we have left blank is variously printed in the newspapers. One of them timidly gives it as "gittites." Others boldly take the plunge and make it "Hittites." This last must seem to Kansas Progressives, who know their Bible so well, not only ludicrous but insulting. For the Hittites were, along with the Amorites and Canaanites, "driven out" by pious Israel. Andrew Lang said of the defunct London *Academy* that it was too much occupied with "obscure controversies about the Hittites." Such controversies are unknown in Kansas. There a people bred on the Old Testament understand perfectly that the Hittites are a name of reproach, and the idea that Victor Murdock could apply it to his beloved Progressives must seem deliciously absurd.

But the "gittites" that got by the proof-room of one newspaper—who are they? The word was perhaps passed as good Kansas slang—something like "git-thar." Alas for the lack of a Bible or, at least, a Concordance! Every Sunday-school child in Kansas could at once turn to II Samuel, vi, 11, where we read: "And the Ark of the Lord continued in the house of Obed-edom the Gittite three months; and the Lord blessed Obed-edom and all his household." It is that kind of Gittites who are now to be found in every American township, according to Victor Murdock. The only wonder is that, while discoursing about the Progressive ark, he did not point out the danger of laying an unauthorized hand upon it. In Kansas, at least, they would have understood him if he had referred to the fate of Uzzah, who sought to steady the ark, but was smitten for his presumption, and "there he died by the ark."

A good many Progressives are apparently in fear of similar punishment if they stay too close to the ark of their party. At all events, they are quitting it with suspicious haste and in an emphatic manner. In New Jersey, on Saturday of last week, there was a meeting of the Progressive State Committee. The first order of business was the reading of letters of resignation from four members of the Committee. One of them was from the redoubtable George L. Record, who wrote that he had rejoined the Republican party as now the best means of securing the triumph of Progressive ideas. However this may be, the New Jersey opinion of Mr. Record's astuteness is such that his defection is taken as sure proof that he sees no chance for the triumph of ideas, or of anything else, in the keeping alive of the Progressive party. Ex-Senator Colby, it is true, affirmed that it would not disband in New Jersey, but it is plain that it is already largely dispersed, and that the faithful remnant is only waiting the signal to go to one or the other of the old parties. Another Progressive Colby, the recent candidate for United States Senator from New York, is giving his former associates some amazed thinking to do. He speaks in high praise of Senator Root, whose programme for the Constitutional Convention, as Mr. Bainbridge Colby understands it, smacks of the purest Progressivism. On top of this come reports from Michigan that the Progressives of that State are strongly in favor of nominating Mr. Root for the Presidency! Do we sleep, do we dream?

Over the spirit of the Progressive dream a great change is evidently coming. It is shown by the various indications we have noted from time to time; it is also shown by both the tone and the substance of the National Chairman's manifesto. He as-

sumes, to be sure, a fighting posture. If Victor Murdock assumed any other, we should think he ought to be consulting his physician. He is nothing if not belligerent. "I am ready to say flat-footedly that we Progressives are going into the 1916 fight as a party and to win." But his explanations follow, and they are fatal. For Mr. Murdock tells us that the great "battles" of next year will be, not over candidacies, but over platforms. If that is so, the heart will at once be taken out of the Progressive party as it existed in 1912. There was then, of course, a lot of talk about the platform, but the real thing, the only thing that counted, was the leader. Never was there clearer evidence of the dominance of personality. The Colonel could have written any platform he pleased; his obsessed followers would have declared it perfect. But if next year he undertakes to frame the platform, while refusing himself to run as Progressive candidate, then there will truly be a battle over the platform. When in full command, Mr. Roosevelt could suppress incipient Progressive mutinies with an iron hand; he could cram Perkins down their throats. But as one in 1916 who refuses to hit the line hard himself, or who even declares his willingness to support "any decent Republican," in order to compass that great end at once of militarism and of social justice—the defeat of President Wilson—his autocracy will be much broken. And yet if Victor Murdock expects Theodore Roosevelt to be a humble Gittite, guarding in solitude the Progressive ark, he was never more mistaken even as a Congressman.

BECKER AND THE LAW.

The sentence of the law was finally executed upon Becker last week. Two juries, each of them of exceptionally high quality, had found him guilty of the murder with which he was charged. In the first trial, though there was naturally intense public interest, and perhaps public prejudice against the accused, there was no such state of public excitement as could be supposed to exert an overmastering influence on the jury; the second trial took place at so great a distance of time from the crime that all trace of excitement had disappeared, and the proceedings could not be supposed to be influenced in the slightest degree by any pressure of sentiment from the outside. Moreover, the judge who sat in the second trial had had no connection with the first. And finally, every resource of judicial appeal had been exhausted in the endeavor to have the second verdict set aside, and the endeavor had failed.

In these circumstances, it might be supposed that any attempt at the eleventh hour to obtain a new trial, unless based on the discovery of really new and weighty evidence, would at once be dismissed—by the public judgment at least—as utterly fantastic and intolerable. That this has not been the case is due to a circumstance to which it is worth while to give some attention. Stripped of comparatively unimportant matter, the final effort of Becker and his attorneys was based on the bad character of the principal witnesses against him, and the strong motive they had for bearing false witness in case Becker was innocent. No one can deny the force of this consideration. But the trouble with many persons is that they forget that this consideration was as fully present to the juries while the case was on trial as it can be to anybody to-day. No man of the twenty-four had any illusions as to the kind of person that Jack Rose, or Bridgie Webber, or Vallon, or any of that loathsome crew, was. In full view of the facts and with an opportunity, entirely inaccessible to the outside public, for judging the weight of all the evidence, every one of the first set of twelve good men and true, and every one of the second set, solemnly declared that he was convinced of Becker's guilt beyond the possibility of reasonable doubt. And it is to the removal of all reasonable doubt from the minds of the jury, and not the removal of all doubt from the minds of the rest of us who have no real opportunity to judge, that the prosecution must address itself. Neither absolute scientific certainty, nor the procurement of a unanimous judgment on the part of the public, is demanded of it; and obviously to make such a demand would be utterly to paralyze the arm of the law. For the sake of preventing the possibility of the conviction of one innocent man in a million cases, we should be inviting the certainty of thousands of failures of justice—thus promoting the commission of countless crimes, in which the innocent would pay the penalty for the immunity that, through a fantastic scruple, we had been foolishly granting to the guilty.

While these are the broad considerations bearing on the matter, the specific reasons set forth, with such clearness, conciseness, and force, by Justice Ford for declining to grant the motion for a new trial are not less interesting. His position rests upon the explicit and unmistakable requirements of the statute law. It is owing to the statute alone, and not by virtue of any inherent power deriving from the common law, that he could have authority to order a new trial; and the prescriptions of the statute are plain. His analysis of the claims put forward for the evidence proposed is as convincing as it is simple and direct. Of new evidence in the sense required by the statute, there was not enough proffered, says the judge, to have changed the result had it been received upon the trial. One point may be singled out as of special interest:

> Mr. McIntyre and Mr. Manton [of counsel for Becker] make affidavits to their not knowing at the time of the last trial about the matters detailed in the defendant's statement. The fatal fact is that the defendant himself did know about them at and before both of his trials.

In anticipation of this view, Mr. Cockran had said, in his plea for a new trial, that if it were to be denied on the ground that Becker had failed to bring forward his allegations at the right time, he would be executed not because he was guilty, but because he had made a mistake in the management of his case. But the requirement of law that shuts out this plea is no mere legal accident or technicality. It is the clear requirement of common-sense and effective justice; for if it did not exist, what could prevent an accused man from holding back evidence for the express purpose of presenting it as a basis for a new trial when every other device had failed, thus reducing to a nullity all the long labor that had been gone through by prosecutors and courts and juries?

The Becker case has been dragged out through three whole years. It is a horrible example of the law's delay. How shockingly the effectiveness of such a punishment as Becker's falls short of what it might do towards the prevention of crime, when it comes at the end of this long and dreary period of pulling and hauling, is self-evident. The consequence of it is that if the process ends in the carrying out of the sentence it has lost nine-tenths of its impressiveness and moral effect, while if it ends in the rescue of the condemned man it stands out as a monumental example of the difficulty with which the law has to contend, an unforgettable encouragement to evil-doers of every kind, however hard beset by justice. Against all this there might be a possibility of setting up the plea that the time, however long, is well spent which is spent upon an endeavor to establish the truth—were it not for the patent fact that mere dragging out of the time rarely tends to increase the chances of discovering the truth, and very often has quite the contrary effect. In this

very instance, there is not a thing brought out in the frantic efforts at the eleventh hour which could not have been brought out just the same if that eleventh hour had fallen two years ago, or two and a half years ago. With ten times the strain and expense, we get one-tenth the public benefit that the vigorous and rational methods in use in England bring about; and we certainly come no nearer to the requirements of truth or of justice. That in this instance the public has been spared an even longer protraction of the spectacle, we owe mainly to the action of Justice Ford in strictly following the dictates of the law.

Unhappily, the scandal did not cease with Becker's death, but followed him to the edge of the grave. The attempt to stigmatize Gov. Whitman as his "murderer" could be thwarted only by an invasion of what are usually regarded as sacred precincts, and even the failure of this attempt did not prevent over-zealous friends of the family from a last effort to dignify the man who had paid the penalty of his crimes as a martyr. Worse than these manifestations, because so easily preventable, were the scenes during the removal of the body to the church and to the cemetery. Adequate police protection in such a matter should be one of the simplest duties which the authorities are called upon to perform, and yet the public was permitted to crowd upon the procession at every turn in its journey. The disorder at the end was the final distressing detail in a disgraceful episode, which the people of New York and of the country at large will be glad to forget.

CHAUTAUQUA AND WATER.

In the Middle West, the climax of the heated season, once anticipated with dread, is now awaited with impatience, since it brings with it the recurrence of that strange medley of emotional and intellectual titillation known from coast to coast as Chautauqua. Like the year of jubilee that wiped out all debts, the week or so of the local Chautauqua buries all the disappointments of the preceding twelvemonth and starts the community off at a fresh canter. Once more the great world has brushed the small circle that feels its isolation none the less keenly for the pride that prevents the avowal. Art, Knowledge, the Sense of Something Doing—this ineffable blessing has again descended, and the whole neighborhood is in a pleasant flutter for days at a stretch. Naturally one looks to Kansas for the frankest expression of feeling. Nor does one look in vain. No false modesty obscures the revelation of the Kansian psychology, the plain man's reaction to the Santa Claus that, coming in midsummer, goes under the name of Chautauqua—with whatever individual idiosyncrasies of pronunciation.

Perhaps Emporia is more fortunate than some of her sister towns in respect of the richness of Chautauqua, but the spirit is the same in self-conscious Emporia as in more naïve Upper Dow Creek. It was in Emporia recently that Signor Castellucci, head of Castellucci's Italians, "seemed to know the tastes of the average Chautauqua audience, for instead of a long programme of high-brow music, he gave a mixture which included a little of everything and played many of the old favorites, which always are acceptable." To be more specific, the programme began with something from "Il Trovatore" and wound up with a noisy rendition of "Tipperary." But the utmost efforts of the shrewdly obliging Castellucci were thrown into the shade in the evening, we gather, when a lecturer mounted the platform for a more strictly intellectual entertainment. "Grapes of Gold" was his theme, the phrase being taken "from a Japanese legend by that name." In plain English, he meant to talk about the power of suggestion, "the value of thinking good thoughts and the evil of thinking bad thoughts." But he was no conventional lecturer. Was this not Chautauqua, and Chautauqua in Emporia? So—

> Touching upon the power of suggestion, Mr. Adams stopped for a moment, pulled out a phial, and emptied a fluid from it, saying it was peppermint and he desired to test the ventilation in the auditorium. He asked his hearers to nod their heads as soon as they smelled the peppermint. In a few seconds half a dozen heads began to nod and in less than two minutes at least thirty people in the auditorium signified that they had smelled peppermint. A few minutes later, in bringing out the power of suggestion, Mr. Adams confessed to the audience that the phial contained nothing but water. The confession brought a storm of applause and many sheepish grins from those who thought they had smelled the peppermint.

From peppermint and the power of suggestion, the lecturer gracefully proceeded to the value of a cheerful word in a sickroom, the medicinal virtues of laughter, and the desirability of young people thinking big thoughts and thus some day doing big things.

It is easy to see why those interested in the original Chautauqua should protest against the use of the name for the hodgepodge of amusement and instruction that passes so widely under the name. The institution that is centred on the lake in this State which gives it its title is not a three-ring circus, but a serious educational enterprise for the benefit of the hosts of men and women who, never having had the advantages of advanced education, long to do what they can to lessen the handicap thus placed upon them. Many a busy woman in an obscure village has followed the "required readings" of the "American year," the "Greek year," and so on, finding her half-hours for reading as she could, and finally crowned her work with a two weeks' visit at the mystic spot that has been the centre of her intellectual life for four years or longer, there to receive her tangible reward in the form of the prized diploma, meantime infusing into her home a quality of culture that in her children had full bloom. More than one rich university now provides a multitude of correspondence courses which, pursued steadily, soon bring one within sight of the same recognition as that vouchsafed to the more fortunate resident of the Quadrangle. If the popularization of education is an evil, the Chautauqua Institution no longer stands alone in it.

But is the original Chautauqua altogether blameless in the matter of the pseudo-Chautauquas, with their Neopolitan Troubadours and Sears the Taffy Man? A look at the "official programme" for any week of the summer season makes it difficult to acquit the institution on this score. No single person would find it physically possible to attend every number on this programme. From two to six events are in progres simultaneously from eight o'clock in the morning until ten in the evening. A list so heavily loaded in mere number of offerings must be relieved in places by lighter exercises. The early morning lecture on "The History of Israel in the Light of Recent Archæology" makes necessary the fixing of a meeting of the Bird and Tree Club in the middle of the forenoon, to which further variety is added by an address by Commissioner Davis early in the afternoon on "Prison Labor," and, a little later, motion pictures, a Shakespearean recital, and an oratorio. Here are three kinds of "attractions." The primarily instructive lecture glides easily into the "address" by some notability, whence the step to out-and-out entertainment is not a long one. In this mingling on the same bill-of-fare of solid food, hors d'œuvres, and dessert, all offered without distinction of value except as the purchaser may choose to distinguish for himself, is the germ of the false Chautauqua that is so much more conspicuous than the true.

Foreign Correspondence

THE WELSH COLLIERS—A SERVIAN ARTIST — "TOMMY" AT SUBURBAN FETES.

By JAMES F. MUIRHEAD.

LONDON, July 20.

The strike of the colliers in South Wales is not a thing of which we are proud, but it would be as great a mistake to exaggerate its meaning as to minimize it. The miners believe that the coal-masters are making such abnormal profits now that, at the end of the war, it would leave them in a position to close down with equanimity and dictate their own terms to the men. No doubt the belief is not wholly justified, as the returns of the various mines show; but the owners cannot be altogether acquitted of blame in the matter of threshing out the disputed points openly and amicably. The strike has been declared against the will of the official leaders of the men, and without the taking of any general ballot; the assertion is that it is really engineered by a comparatively small group of syndicalist miners, mostly young men, who have cleverly contrived to secure control of the machinery of the "lodges." The miners have contributed their full quota to England's volunteer army; and it is not believed that, if the whole body could be canvassed, the result would be otherwise than patriotic. The object of the syndicalists is undoubtedly to force the state to nationalize the coal pits; but the situation, though serious, is not yet considered so desperate as to necessitate this measure or the equally revolutionary introduction of conscription. In all probability, a way out will have been found before this letter reaches America; Mr. Lloyd George is again to the front as the *deus ex machina*, though it is realized that it must have required some resolution on his part to risk his popularity in his native Wales. Even those who most sympathize with the strikers; even those who blame the Government for a certain tactlessness, precipitancy, and lack of foresight, are inclined to feel that the situation would not be permanently eased by a complete surrender to the men. It must be fully understood that the Munitions Act is not a dead letter.

It may be doubted whether the exhibition of the Serbian sculptor Mestrovic, now in progress at the South Kensington Museum, would have excited so much attention in time of peace as it has in time of war. It is not wholly clear how much of our interest is in the new artist, how much in the new ally. In justice to Mestrovic, however, it must at once be said that most of those who came to show their friendly feeling for Servia remained to study a compelling artistic phenomenon for its own sake. The very fact that his work has excited an animated controversy in the newspapers is a proof that Mestrovic is no negligible personality. The man who forces the Slade professor of fine arts to tilt at him with lance in rest is surely no lay figure; and this opinion is confirmed on the positive side by the number of defenders who have also rushed into the lists. Some of these seem to regard Mestrovic as predominantly, if not solely, an exponent of Servo-Croatian nationality. Others refuse to see anything except an individual talent, in full sympathy with the most modern development of art. Probably the truth lies, as usual, in the middle way. While it may be true that Mestrovic's work could never have been produced if M. Rodin had not lived and worked before him, it is at least equally true that none but a Slavonic pupil of that great French artist could have produced these particular works. It is easy to trace Egyptian, Assyrian, Greek, Byzantine, Italian Primitive, and modern influences in the creations of Mestrovic; but there is always a substratum that we are forced to believe has vital and organic connection with the nationality of the artist. His works are no mere imitations; there are features that we are driven to ascribe to a blend of individual genius and racial inheritance. This belief is strengthened and, perhaps, justified by the fact that these terrible and tragic creations, with their controlled ferocity, indomitable endurance, and illimitable sadness, so completely reflect the tale of Servian history, with its five centuries of Turkish tyranny. Surely even such minor details as the sheer-cut, almost unmodelled nose must be somehow typical of the Southern Slav. If Americans have the chance, they should certainly see Mestrovic's works.

Suburban "gayety" has recently taken on a new lease of life, as every one with a garden the size of a counterpane is entertaining convalescing Tommies to tea and strawberries. Acquaintances who can sing a comic song or recite "The Wreck of the Puffin" are in great request, and the automobiles of the district are almost monopolized for conveying the guests from and to the hospitals—by as circuitous a route as possible. The appreciation shown by the men for these little attentions is very touching, and it is obvious that the break in their monotonous convalescence has a decidedly therapeutic effect. The courage and cheerfulness, even of those who have lost a limb, are beyond all praise. A charming Polish lady, who "assisted" lately at one of these functions, came home exclaiming: "Now I know what the English are really like! The English bourgeoisie—pah! the bourgeoisie are everywhere *horrible*, but the English 'peasant' is *magnifique*, and I adore him!"

If the volunteering spirit is not quite so extensive as its votaries might wish, it has certainly a marvellous intensive power in certain quarters, as is shown by the case of a man I recently came across who succeeded in entering the British army after twenty-one previous refusals of his services. If we could believe that the strength of such a recruit as this would be as the strength of twenty-two, we might confidently rely on our voluntary system; but I fear that not even the most vehement belittler of the pressed man would venture to assert this.

One very singular vein of volunteering was recently opened by an advertisement in the *Times*, reading as follows: "Skin—Officer requires 4 in. by 3 in. of skin to cover wound and expedite his return to duty; opportunity for unselfish patriot." Upwards of fifty people, most of them women and all apparently genuine, replied to this request and offered the skin required, generally without conditions. Unfortunately, my information ends here, as I have not heard whether the Army Airman concerned succeeded in patching himself up in this way.

The Central Committee for National Patriotic Organizations has arranged for the holding of meetings throughout the British Empire on August 4, the anniversary of England's declaration of war. The resolution to be moved at all of these meetings records an "inflexible determination to continue to a victorious end the struggle in maintenance of those ideals of liberty and justice which are the common and sacred cause of the Allies." The Committee wishes it to be understood that this resolution is not meant to express a spirit of glorification or triumph, but simply to renew the vows with which we dedicated ourselves a year ago to a task that has turned out to be even more vast than we believed it to be.

H. W. MESDAG—THE PAINTER OF THE SEA.

By A. J. BARNOUW.

THE HAGUE, July 15.

On July 10, 1915, Hendrik Willem Mesdag died at the age of eighty-four years. His fame, like the ships on his countless canvases, has sailed the world, and at the news of his death many an American collector will proudly have raised his eyes to the Mesdags on his walls, remembering where and when he bought them. For half a century Mesdag has enriched the world with an endless variety of seascapes, painting the same sea never the same. From the Scheveningen dunes he studied it in all its aspects and moods, rough and calm, dull and blazing, at daybreak and at sunset, in all seasons, at all hours.

Mesdag took up painting at an age at which most artists have attained the height of their power. He was bred for business, and not until his thirty-fifth year could he free himself from books and figures and follow whither his talent beckoned him. The landscape-painter, Willem Roelofs, became his master; but it was not pasture and cattle and woods, such as Roelofs taught him to paint, which attracted him most. From the very beginning he found his own domain at the seacoast, first on the beach at Norderney, afterwards at Scheveningen, near The Hague, where he settled in 1870. Little growth is noticeable in Mesdag's art. He seems, at the outset, with one bold stroke to have struck the true vein of his power. His earlier pictures have, indeed, more of the dramatic in them than his later work; a stirring scene on the beach, at the return of the lifeboat from the wreck in the dark distance, is among his most popular paintings of that earlier period. But, unlike Josef Israels, who saw the sea as the tragic background of the fisherfolk's sad, awestricken home life, Mesdag grew more and more regardless of man's share in the life of the sea, and many canvases among his later work appeal to the spectator's sense of beauty by no other means than the sole expanse of sky and sea, a grand desert of water.

There is nothing theatrical or sentimental in the bold realism of this art, and in that the painter was true to the man. Mesdag was a strong, straightforward character, in outward appearance not unlike the type of fisherman whose watery element he loved with a sailor's love.

To his own country Mesdag has been a benefactor in a double sense. He has left it not only his work and his name for a lasting glory, he also gave it the precious col-

lection of nineteenth-century art, which, during his long life, he brought together with a true connoisseur's love and knowledge. At a time when few people in Holland were yet aware of the greatness of the Barbizon school, Mesdag purchased the Corots and Daubignys, which now form the pride of his small but exquisite collection in the "Mesdag Museum" at The Hague.

ROUGET DE L'ISLE—HONORS TO THE AUTHOR OF "THE MARSEILLAISE."

By STODDARD DEWEY.

PARIS, July 17.

Peace, his triumph will be sung
By some yet unmoulded tongue
Far on in summers that we shall not see!

Rouget de l'Isle, if he still remembers the obscurity of his latter days and knows the national fame which has accrued to him on this Fourteenth of July, might think in such verse. Only lately there was an old woman living who told her childish remembrances of him. He died as late as 1836 in the village of Choisy-le-Roi, just above Paris, on the Seine, eking out his old age by subsisting on two friends of the Revolution, lunching with one, dining with the other, perhaps not always to his hunger, as the French say. But "The Marseillaise" which he had written as the song of Liberty ceased never.

—The ages plead,
Present and Past in under-song.

It was so much the case that Alexandre Dumas heard it sung freely only after he was a grown man, for the restored Bourbons had done their best to silence its strains. It came back with Revolution in 1830, and, after another foolish prohibition by the Second Empire, it remains ever the spontaneous musical utterance of France through the centuries:

. . . a people's voice
In full acclaim,
A people's voice,
The proof and echo of all human fame—
A people's voice! we are a people yet.

This was the burden of all that was sung and said in honor of the author of "The Marseillaise" on Wednesday when the tardy honor of the French nation brought Rouget de l'Isle's ashes from Choisy to the Invalides, where Napoleon is entombed. They are to go further, to the Pantheon of "a grateful country," when war leaves time for Parliament to place them there. This honoring of the poet who, in life, depended on the charity of his brother song-writer for the people, Béranger, was led by the President of the Republic and all its constituted bodies.

In the clear, cool morning, the stone coffin in which his remains were gathered years after his death was carried triumphantly up the Champs Elysées, hedged with troops, to Napoleon's Triumphal Arch. There it was set down before the great sculptured group in which Rude has depicted the departure of the volunteers of 1792, inspired by the notes of "The Marseillaise." This is at the right-hand corner as you come up the broad avenue from the Place de la Concorde—another name of Revolutionary remembrance matched by the present *Union sacrée* of the French people against ruthless invaders. And there the noble voices of Mademoiselle Deina and Henri Albers sang alternate strophes of the nation's song, the great crowd far down the line taking up the refrain.

Battalions of dragoons and cuirassiers kept guard roundabout, with the sun gilding their casques and their horses' caparison. Overhead aeroplanes soared and wheeled and dived. Veterans of the last war, in which France suffered mutilation, and eighteen-year-old youths who are now making ready to fight in her new struggle for life, came and laid their flags reverently on the coffin. Then, the long funereal pomp wound its slow way, with soldiers of every arm and uniform of France, to the great court of the Invalides. The catafalque was left there so that, all the day long, the people of Paris might defile before the remains of Rouget de l'Isle. The President of the Republic, flanked by all the authorities of France and the representatives of other nations, made the only speech. He is the spokesman of his people and he had something to say worth hearing in these troublous times:

"By decreeing that the ashes of Rouget de l'Isle should be solemnly brought to Paris on the national holiday, the Government of the Republic not only intended celebrating the memory of a French officer who expressed, in a tragic hour, the eternal soul of our country. It also wished to bring together, under the country's eyes, two great pages of our history and recall to every one of us strong lessons of the past, and—while once again, France struggles heroically for Liberty—to glorify the incomparable hymn whose accents have awakened so many superhuman virtues in the nation's heart.

"The sublime and improvised hymn of Rouget de l'Isle was, in 1792, the cry of vengeance and indignation of the noble people which had just proclaimed the Rights of Man and refused proudly to bend the knee before the stranger. . . . Wherever it resounds, 'The Marseillaise' calls forth the idea of a sovereign nation which has the passion of independence and all of whose sons deliberately prefer death to slavery. It is no longer for us Frenchmen alone that 'The Marseillaise' has this grand meaning. Its stirring notes speak a universal language and to-day they are understood by the whole world.

"Once more the spirit of domination has come to threaten the liberty of the peoples. For long years our toiling democracy had taken its pleasure in the labors of peace; it sought but to keep up courteous relations with all the Powers; it would have thought that man a criminal or a fool who would have dared to nurse projects of war. . . . And, on the morrow of the day when an agreement had been made between France and Germany, regulating between the two countries their Oriental interests, at a moment when Europe reassured began taking breath again—it was then a thunderstroke set the pillars of the world trembling.

"History shall tell what has followed. . . . Each of us, in all serenity, may revive his memories and examine his conscience. At no moment have we neglected to utter the word or make the gesture that might have dispelled the threat of war. If a mad attack on the peace of Europe had not long been willed and prepared by implacable enemies. We have been the innocent victims of aggression most brutal and most scientifically prepared.

"But, since they have forced us to draw the sword, we have no right to sheathe it before that day when we shall have avenged our dead and the common victory of the Allies shall enable us to repair our ruin and make France whole again and guard us efficaciously against the periodical return of provocation.

"Of what would to-morrow be made if it were possible that a lame and breathless peace should come to perch on the ruins of our destroyed cities? A new Draconian treaty would at once be imposed on our lassitude and we should fall for ever into vassalage, political and moral and economic, under our enemies. French manufacturers, French farmers, French workmen, would be at the mercy of triumphant rivals, and France, humbled, would sink down in discouragement and self-contempt.

"Who, for one moment, could linger over such a vision? And who would dare so to insult the common sense of our people and our national clear-sightedness? Not a single one of our soldiers, not a single citizen, not a single woman of France, that does not understand clearly how all the future of our race and, not only its honor, but its very existence, hang on the weary minutes of this inexorable war. We have the will to conquer, we have the certainty of conquering. We have confidence in our strength and that of our allies as we have confidence in our good right.

"No, no, let our enemies make no mistake! It is not to sign a precarious peace—an unquiet and fugitive truce between a war cut short and a war more terrible—to be exposed to-morrow to new attacks and mortal risks, that France has risen, whole and entire, thrilling to the manly notes of 'The Marseillaise.'"

Notes from the Capital

THE ANCHOR OF THE STATE DEPARTMENT.

To most men filling positions of importance in the Government at Washington, our present vexed relations with Germany are a momentous event; to one they are merely a notable incident. He has witnessed so many such encounters that his nerves are not easily stirred by them, for he has been in active diplomatic service for forty-five years. Boy and man, he has seen the United States embroiled in three wars—the one with Mexico, the Civil War, and that for the liberation of Cuba—and in the last named he was a direct partaker on its diplomatic side. We might add to the list, perhaps, the Philippine insurrection, and, as a near-war, the Boxer rebellion in China, during part of which he was our acting Secretary of State. Then, there were the clashes with Chili over the maltreatment of our sailors in Valparaiso; with England over the Venezuela boundary; with Italy over lynchings of Italians in Louisiana and Mississippi; with Spain over the Virginius affair, and a dozen others less worthy of mention.

Alvey A. Adee, Second Assistant Secretary of State, might well be called the anchor of the State Department, for he is the one man in it whose permanency was never in doubt, even in an administration so kaleidoscopic as Blaine's or so spoils-ridden as Bryan's. His partisan affiliations have nothing to do with

his security, for probably not one of the ten Presidents under whom he has served has known whether he had any. Grant sent him to Madrid as Secretary of Legation; Hayes brought him home to take charge of our Diplomatic Bureau; Arthur made him Third Assistant Secretary; Cleveland promoted him to Second Assistant; McKinley made him full Secretary *ad interim*, when Day had gone abroad and Hay had not yet taken hold; and Roosevelt, Taft, and Wilson have given him abundant proofs of their esteem.

What astonishes everybody on first making his acquaintance is that he could have achieved a career of this kind, handicapped by an infirmity which would have driven many a man of less strength of purpose into exile from public affairs; for he is as deaf as an adder, and has been so since as long ago as any one can recollect. He would explain this himself on the ground that persons with perfect hearing often hear too much; they suffer distractions which he is spared. When there is something he wishes to learn from the lips of another, he always can contrive a way of doing it; the rest he treats as negligible. A second marvel is how a man of so uncertain a temper as his can have gone so far in an art like diplomacy, which is supposed to require unfailing self-control. Here again, it appears, Adee exercises a wise discrimination, which has become a habit and works automatically, like a mechanism in which the cumulative pressure of steam or water, on reaching a certain point, forces open a safety-valve, lets its surplus escape, and resumes its normal operation immediately thereafter. Adee knows when to lift the valve and blow himself off. The human objects in the foreground may be startled, even disconcerted, by the phenomenon, as the new servitor was at whom tradition says that Adee once hurled an unsatisfactory luncheon; but the next foreign envoy who entered the office found the Secretary's surface as unruffled as a summer sea.

In the old times, Adee was scarcely ever seen, outside of the Department, except on a bicycle. The congestion of the streets and roads, however, now that the world has gone mad about automobiles, has made this a dangerous indulgence for one who cannot hear a horn or a gong or a cry of warning. It must have cost him no slight pang to curtail his riding, for the difficulties of continuous conversation in the streets make his walks rather lonesome affairs, and he is cut off largely from his former pastime of rural photography, which had made him an oral Baedeker with illustrations.

Adee is nothing less than an encyclopædia of international relations and usages. He is an authority on all questions of State etiquette and precedent, and can tell you who should sit where at a formal dinner, recite the seventeen sub-titles of the Sultan of Jimjamboree without a miss, or quote you the very words of President Jackson's rebuke to the Minister of the Netherlands. How so much information can be crowded into one memory is your constant wonder as you talk to him. With his short stature, his ruddy Scotch face, his auburn-gray hair and beard, and his brownish tweed suit, he looks more like a wiry, persistent little broker than like an editor of Presidential proclamations or a director of our national negotiations in Far Cathay. But, somehow, in the language of the streets, he "gets there just the same."

VIEILLARD.

Dean Swift

REFLECTIONS ON AN ENIGMA THAT DEFIES SOLUTION.

By P. E. M.

In more ways than one, Swift holds a peculiar place. He is, I suppose, not much read to-day, by adults at least, yet his name is certainly among the most significant for us in literature. When we think of him, it is likely to be with a shudder for the cruelty of his satire, perhaps the most relentless satire the world has ever known; yet "Gulliver's Travels," the book into which he distilled his bitterest venom, is now printed chiefly for the entertainment of children. He is personally one of the best-known figures of literary history, still dominating the imagination by that terrible force which awed his contemporaries; yet the mystery that clings about his motives and actions has never been, and is likely never to be, solved. The very groundwork of the man's character is still disputed. To one sentimental lady of our day he appears as the great and clean and typical humanitarian; whereas Thackeray drew back from contemplating "the caverns of his gloomy heart" with shuddering admiration. The man, he cries, "was always alone—alone and gnashing in the darkness, except when Stella's sweet smile came and shone upon him. When that went, silence and utter night closed over him. An immense genius: an awful downfall and ruin." For my part, if I had to choose between these two extremes, I should say that Thackeray, though he slandered Swift in the matter of friendship, had drawn the truer portrait—as indeed all the character studies in those marvellous lectures are quite the best thing of their kind in our language.

But I would not say that Thackeray dispels the mystery that hovers about Swift's name. On the contrary, the vivid art of the novelist serves to throw into darker relief the problem of that savage indignation and self-devouring rage; and it is with this problem in our minds that we are likely to approach the six volumes of Swift's Correspondence recently brought to conclusion.* Manifestly, it is impossible in a brief essay to give any notion of the variety and importance of the material contained in this great collection of letters. Statesmen, like Harley, Bolingbroke, and Ormond, write of their varying fortunes; churchmen, like King, of Dublin, and Atterbury, bring the functions of religion into the profane councils of the politicians; the high wits of the day, Addison, Pope, Prior, Gay, make a jest of philosophy and a philosophy of jest; Arbuthnot is here, whom we still love despite his one recorded fault—"really, Brother, you have a sort of shuffle in your gait"; and here are women, high and low, including Vanessa, who gave all for love of the Dean, and lost, and left an ugly stain, I fear, on the Dean's character—only no single word from loyal, ill-spelling Stella, who lost and gained nobody knows how much. To each and all of these the Dean himself writes with a flexibility of mind and a faculty of adaptation which no one would expect from so domineering a soul. The very variety of his tones, ranging from the manner of the dignified churchman to the not-too-squeamish boon companion, adds to the difficulty of coming to terms with the writer. I confess that to me at least the man himself, after all these words to and from him, still hides in darkness; I thought to explore the man's soul, but my little lamp of criticism was extinguished in the heavy air of that cavern.

But one or two things I have, or seem to have, seen. No one, I think, can read this correspondence without being impressed by the dramatic interest of the closing period of Queen Anne's reign, and by its immense significance, not only for the actors involved in the events, but for the whole of England. Even with the omission of the confidential letters, which for obvious reasons were destroyed by the recipients, one feels the passionate tension of the struggle between the Whigs and Tories, and shares something of the confused dismay caused by the rivalry of Oxford and Bolingbroke. But it is only after the victory of Bolingbroke, and the quick-following death of the Queen, with the frightful *débâcle* of the Party, that the full bitterness of the players in that desperate game finds an outlet in words.

The first vivid account of the weakening of the Dragon, as they called Oxford, in Bolingbroke's strangling grasp, comes from Arbuthnot. "I will plague you a little," the Doctor writes to Swift, then in the country, "by telling you that the Dragon dies hard. He is now kicking and cuffing about him like the devil; and you know parliamentary management is the *forte*, but no hopes of any settlement between the two champions." The next stage is noted in Erasmus Lewis's pretty story of the defection of Oxford's main help in the palace, Lady Masham: "Our female friend told the Dragon in her own house, last Thursday evening, these words: 'You never did the Queen any service, nor are you capable of doing her any.' He made no reply [that is Harley to the life], but supped with her and Mercurialis [Bolingbroke] that night, at her own house. His revenge is not the less meditated for that. He tells the words clearly and distinctly to all mankind. Those who range under his banner call her ten-thousand

The Correspondence of Jonathan Swift, D.D. Edited by F. Elrington Ball, with an Introduction by the Right Rev. J. H. Bernard, D.D. 6 Volumes. New York: The Macmillan Co. 1910-1914. All the known letters to Swift are included, as well as those written by him. Dr. Ball's editing is admirable from every point of view. The notes are full, accurate, and apt, offering to the scholar an almost inexhaustible mine of information. Nor, as is too often the case in such editing, is the gentleman-reader ignored. Learning is here a-plenty, but pedantry is conspicuous by its absence. The text is spelled and punctuated in modern style, and everything is done to give the impression that one has to do with literature and life, rather than with documents for school exercises.

bitches and kitchen-wenches." The sequel follows soon from the same hand:

It is not the going out, but the manner, that enrages me. The Queen has told all the Lords the reasons of her parting with him, viz., that he neglected all business; that he was seldom to be understood; that when he did explain himself, she could not depend upon the truth of what he said; that he never came to her at the time she appointed; that he often came drunk; that lastly, to crown all, he behaved himself toward her with ill manner, indecency, and disrespect.

An extraordinary indictment, and, apparently, true in every word! How that age of ceremony and decorum had learned to "rail to the pit of hell"!

Then, almost on the heels of Lewis's letter, there comes from another political friend the tale of the famous session of the Privy Council through the long day and night while the Queen lay dying, and of the discomfiture of Bolingbroke when she "gave the Treasurer's staff to the Duke of Shrewsbury, my Lord Chancellor holding her hand to direct it to the Duke." The tragic farce is ended—"the Queen is dead." Bolingbroke, the principal victim, showed a brave heart—in words. "The Earl of Oxford was removed on Tuesday," he writes to Swift; "the Queen died on Sunday. What a world is this, and how does Fortune banter us. . . . I have lost all by the death of the Queen, but my spirit; and I protest to you, I feel that increase upon me." But there is nothing of this pretended serenity in the letters of the rest of the little band of politicians and wits who had been striving to hold back the onsweeping tide of change; for them it was the end of all things. Swift expressed the sentiment of the group when he wrote: "These public misfortunes have altered all my measures, and broke my spirits"; and Arbuthnot summed up the situation in a Virgilian phrase: *Fuimus Troes* (or *Tores*, as it is sometimes quoted).

The peculiarity of this whole event for us to-day lies in the mingling, intricate beyond the common measure, of national and personal interests. Swift, reflecting later on this period of time and naïvely suggesting to Bolingbroke that he should draw up its story "fully and exactly told," was not deceived in declaring that "there never was a more important one in England than that which made up the four last years of the late Queen." In that momentous session of the Privy Council the old and the new England sat facing each other, and the passing of the staff from the groping hands of the sovereign to Shrewsbury instead of to Bolingbroke was the symbol of a great revolution closed. It marked the end of that high zeal of the imagination which for longer than a century had given to England something more than material empire; it foreboded the quick decline of that intellectual originality which had already caused her to be regarded as the *pays philosophe*, and which, if unchecked, might have kept her as the leader of European thought when the world sadly needed such leadership. With the coming of the Hanoverians loyalty of the imagination to the institutions of church and government left the land, or lurked in secret places, and the prose of opportunism spread over all; England was to gain in practical efficiency, but for a time she was to sink in the scale by which nations are measured against one another in things of the mind and spirit. The pity of it is that the visible object of loyalty had been so unworthy, descending at the last to that lonely, dull, well-meaning, but helpless woman who united the blood of the Hydes and the Stuarts: the irony of it is the character of the two men, Harley and St. John, who, by their folly and egotism, made it impossible, in the day of final trial, to distinguish loyalty from faction and literature from pamphleteering.

That is the piquant contradiction of Queen Anne politics; on the minds of those who partook of the movement without being practical politicians, the result was such as might be guessed. For reasons which it is not necessary here to discuss* the literature of England had been for some time tending more and more to forms of satire; so much so that "wit" had become almost synonymous with malice, and Grub Street was thought of as the haunt of men banded together against the dignity of mankind and the stability of society. Early in the seventeenth century Sir Henry Savile, the editor of Chrysostom and Provost of Eton, had avowed, if we may believe Aubrey, that "he could not abide *witts:* when a young scholar was recommended to him for a good witt, *'Out upon him, I'le have nothing to doe with him; give me the ploding student. If I would look for witts I would goe to Newgate, there be the witts.'*" By the time of Anne this spirit of opposition had grown to be internecine, to such a degree that the mark of the true wit was his success in excoriating the vermin who had debased the name. "Fools, in my opinion," said Swift to Pope, "are as necessary for a good writer as pen, ink, and paper." Now, this little group of authors of whom Swift and Pope were the acknowledged chiefs, had, for very tangled motives, let us admit, undertaken to organize the malice of wit in the service of statesmen who, in their opinion, were upholding the great tradition of England as the home of enlightenment; and they had been deceived in their political leader and defeated in their policy. If they had hated fools and Whigs before, they now extended their animosity to most of mankind. Even Arbuthnot, for a moment, caught the infection of rage: "I have an opportunity calmly and philosophically to consider that treasure of vileness and baseness, that I always believed to be in the heart of man." All this, he declares, "really diverts me, and in a manner improves my theory." Yet it is an odd sort of diversion: "God knows," he adds, "I write this with tears in my eyes."

It would be interesting to follow this improvement of their theory through the works of the various men affected. Arbuthnot, for example, though he expressed himself at the moment in what are perhaps the bitterest words of any of the group, soon regained the fine equanimity of his spirit. But in the case of the two great writers of the group, Pope and Swift, if it did not change their attitude towards life, it at least deepened their views, adding a something which raises, or lowers, their conviction into a kind of philosophy. With Pope this conviction came with the enlarged opportunity of associating with Bolingbroke, one of the leaders of the deistic optimism which was running parallel with the satirical movement and was in the end to supplant it.

Thereafter, in the same years, almost in the same breath, we shall find him composing the "Dunciad" and other satires, and in his "Essay" giving epigrammatic form to Bolingbroke's creed of universal goodness. The thought of the little poet thus calling his enemies (that is, all the world save a half-dozen exempts) every scandalous name in his rich vocabulary, while at the same time he was concocting his deistic salve for the conscience of mankind, is not nice. It troubles me in my admiration of Pope—for I am bound to admire his genius, and somehow I cannot help loving the man, too—this troubles me, I say, more than all the atrocious intrigues of his vanity.

Now, Swift, too, has dealt heavy blows to his enemies on occasion, notably to such wicked Whigs as Wharton, but in what may be called his literary pose he consciously and consistently reserves his satire for human nature itself, rarely even alluding to particular men. So, in a letter after the completion of his "Gulliver's Travels" and of Pope's "Odyssey," he draws by inference a comparison between his own method and Pope's, and summons his friend to battle with the same sort of weapons:

But since you will now be so much better employed, when you think of the world, give it one lash the more at my request. I have ever hated all nations, professions, and communities, and all my love is toward individuals; for instance, I hate the tribe of lawyers, but I love Counsellor Such-a-one, and Judge Such-a-one; so with physicians—I will not speak of my own trade—soldiers, English, Scotch, French, and the rest. But principally I hate and detest that animal called man, although I heartily love John, Peter, Thomas, and so forth. This is the system upon which I have governed myself many years, but do not tell, and so I shall go on till I have done with them. I have got materials toward a treatise, proving the falsity of that definition *animal rationale* (the definition much mouthed by Bolingbroke and the deists generally), and to show it would be only *rationis capax*. Upon this great foundation of misanthropy, though not in Timon's manner, the whole building of my Travels is erected; and I never will have peace of mind till all honest men are of my opinion.

On this ground the "Verses on the Death of Dr. Swift," to me the greatest of his poems and very great in its way, rises into a kind of pathetic sublimity. The whole

*See the essay on the Duke of Wharton in the *Nation* of August 13 and 20, 1914.

thing is a sermon on a favorite text of the cynics, "Dans l'adversité de nos meilleurs amis, nous trouvons toujours quelque chose, qui nous ne déplait pas":

> As Rochefoucault his maxims drew
> From nature, I believe them true;
> They argue no corrupted mind
> In him; the fault is in mankind.

So the text is accepted, but with what exquisite art is it turned to the service of flattery:

> In Pope I cannot read a line,
> But with a sigh I wish it mine;
> When he can in one couplet fix
> More sense than I can do in six;
> It gives me such a jealous fit,
> I cry, "Pox take him and his wit!"
> I grieve to be outdone by Gay
> In my own humorous biting way.
> Arbuthnot is no more my friend,
> Who dares to irony pretend. . . .

And then the other side of the picture. The Dean is dead, and the wits and politicians and courtiers take their cynical advantage of the occasion, each in his own way. But—

> Here shift the scene, to represent
> How those I love my death lament.
> Poor Pope would grieve a month, and Gay
> A week, and Arbuthnot a day.
> St. John himself will scarce forbear
> To bite his pen, and drop a tear.
> The rest will give a shrug, and cry,
> "I'm sorry—but we all must die!"

This heartiness of feeling for his friends is not peculiar to Swift. It was, indeed, characteristic of the group, giving a rare charm and beauty to their correspondence among themselves and to their poetical references to one another; and in the case of Pope as much as of Swift, this feeling is marvellously enhanced by its very isolation in a desert of jealousies and enmities—so excellent is hatred as one of the backgrounds of life. But Swift's ironical association of this genuine sentiment of friendship with Rochefoucauld's doctrine of universal egotism is quite different from, let us say, Pope's shameless juxtaposition of the two motives in his "Epistle to Dr. Arbuthnot." From this theme Swift passes easily to a statement of his theory of satire corresponding to that which he had expressed in his letter to Pope:

> Yet malice never was his aim;
> He lash'd the vice, but spared the name.

Such, then, I take it, is the note of Swift's satire (though we must not construe the absence of personal malice too literally). His method, at least, is logical, even terrible in its logic. If you say that such personal tenderness as he showed for his friends ought to have been precluded by his theory of the universal baseness of mankind, the reply is that all generalizations are subject to exceptions. Yet let us grant a certain inconsistency between the man's mind and heart—and be grateful for it. And let us admit frankly that the cause of this broken harmony is a part of the mystery of his being which it is presumptuous to say we understand. We can go no further than to guess at its origin. He was born, one thinks, with a sensitive heart, quickly moved to sympathy by the joys and sorrows of those near him, and at the same time tortured by the pride of a Lucifer; he had a mind easily duped by appearances, yet strong and tenacious in logical deduction. With such a nature he might under other conditions have developed into the humanitarian which one of his recent biographers, with more zeal than knowledge, has actually made him out to be. But events—it is unnecessary to relate them—carried him in a different direction. He never lost his tenderness for his friends, and his sympathy for specific cases of distress, whether personal or national, remained with him so long as he kept his faculties. When the rest of Oxford's adherents were turning against him and complaining to one another of his weakness and treachery, Swift alone of his group refrained from crimination. He was kept faithful in part, one thinks, by sympathy for the man in his fallen estate, and in part also, it may be, by his notable inability to judge individuals. His own failure to rise was due in no small degree to this weakness of judgment, as was shown in the beginning of his career by the instrument he chose as his advocate with King William; and his extraordinary and manifestly sincere laudations of Oxford may be attributed to the same blindness. But if his feelings suffered little change—at least until the final silence and darkness settled over him—his early experience of humiliation and his many disillusions tended to confine his sympathy to personal relations and to preclude from coloring his general criticism of life.

We should, then, not be surprised to find the boasted malice of the wits used by such a man with devastating logic. We might almost expect, given the genius, such a work as the "Tale of a Tub," in which the author's satire, though aimed ostensibly at the absurdities of religious faction, ranges with terrible destruction over the various enthusiasms of mankind, shrivelling with its touch the aspirations of fame, the pretensions of learning, the pride of elevation, the spiritual mysteries of faith, the very hope of escape from degraded misery into calm of soul—"This is the sublime and refined point of felicity, called the possession of being well deceived; the serene peaceful state, of being a fool among knaves." It is not strange that the reputation of this book should have overshadowed Swift through life, deterring those in power from placing him in a position of authority over the higher illusions of society.

For such a satirist there remained but one step, and that was taken, I think, when the calamity of 1714 opened the door into the darker cavern, where rage at the delusions of men was to be converted into hatred of humanity itself. From this cavern he wrote to Pope that "the common saying of life being a farce is true in every sense but the most important one, for it is a ridiculous tragedy, which is the worst kind of composition." From there also he sent to the same person his literary profession: "The chief end I propose to myself in all my labors is to vex the world rather than divert it. . . . I hate and detest that animal called man." He changed the name of the animal to Yahoo in his great book.

So the event that carried Pope into the shallows of deistic shirking lifted Swift's cynicism to a perfect philosophy of hatred, and made of him the true logician and master spirit of wit. Yet withal the author of "Gulliver" still kept his human inconsistencies of love. There is nothing, perhaps, in the book quite so sublime, shall we say, or so blasphemous, quite so cynical and so pathetic, as his parody, in the same letter to Pope, of the words spoken over Sodom and Gomorrah: "Oh! if the world had but a dozen Arbuthnots in it, I would burn my Travels."

I would leave the matter there, were it not that to write an essay, however brief and tentative, on Swift without touching on his attitude towards women would have the appearance of shirking the main problem of his character. Into the secret of his relation with Stella I shall not attempt to pry beyond the limits of safe conjecture. The story that they were both the natural children of Sir William Temple I reject as too wild for credence. Of the hypothesis of impotence it seems to me that a candid reading of Swift's works and correspondence, with a slight knowledge of the world, ought to make short shrift. Whether the marriage ever took place is still problematical; the external evidence for it is pretty strong, the internal evidence appears to me to weigh against it, and I am rather inclined to form my opinion in this case upon the latter. Further than this, if there be any clue to the abnormal course of his love, it is to be found, I suspect, in the fact that, whereas his cynicism and tenderness for men were kept separate by experience and understanding, with women they were combined into one feeling of strange and fateful power. Here his very cynicism is tender, and his tenderness cynical. He could have written of no man those inscrutable words, "Only a woman's hair"; and the critic is audacious or ignorant who would attempt to analyze the complexity of their meaning. But one can see dimly that such a feeling, while saving him from common debauchery, would strike true love with a palsy of hesitation. It brought awful repentance to him after the woman's death; how it affected her in life we shall never know.

Another woman, who rebelled against this mystery, and broke her heart in doing so, made this confession in one of her letters to him: "Could I know your thoughts, which no human creature is capable of guessing at, because never any one living thought like you. . . . Sometimes you strike me with that prodigious awe, I tremble with fear; at other times a charming compassion shines through your countenance, which revives my soul." That is about all one can say of the great Dean of Dublin after reading the six volumes of his correspondence.

Recent German Poetry

REVOLUTIONARY BARDS IN PORTLY MIDDLE AGE—SOME NEW NAMES AND SOME ANNIVERSARIES.

The average quality of Germany's lyrical productions is not in proportion to its enormous output. It suggests either lack of self-criticism in the poets, or lack of judgment in the publishers. To begin with the generation which in the 'eighties heralded a renascence of German life and art, it cannot be denied that since it has matured into middle-aged portliness the revolutionary spirit has yielded to a somewhat bourgeois acceptance of the material blessings of life and a supreme unconcern about spiritual values. The notes struck by the one-time bards of progress sadly recall the very ideals which some twenty-odd years ago, in the vernacular of the time, they set out to "revalue."

Among the poets whose half-century mark was celebrated last year, Karl Henckell was a conspicuous representative of the young generation that shocked the good German philistine of the century's end. The "Hundert Gedichte," which Hesse & Becker, of Leipzig, published on this occasion, are not chronologically arranged; if they were, they would give a poetical synopsis of the development of his generation. But the book is typical of the range of subject-matter treated by the young men; it contains poems on nature, love, life; reflects the awakening of the individual and the social conscience, strikes the militant notes of a rebellious youth, and in its more recent products conveys the impression of self-satisfied maturity. A slim volume of Henckell's addresses and lectures was published at the same time under the title "Lyrik und Kultur" (München: Hans Sachs Verlag). The first paper contains some valuable hints how to judge and appreciate poetry. "Von lyrischen Werten" attempts to trace the relations between life and lyric verse. The appreciative study of Ada Negri, with the sub-title, "Eine lyrische Kulturträgerin," reminds the reader that Henckell introduced the Italian poet in Germany. The autobiographical sketch, "Aus Werkstatt und Leben," also contains interesting bits of historical information.

Max Dauthendey has not yet reached his fiftieth year, but he has already to his credit two volumes of reminiscences and a slim volume of verse which represents a selection from seven previously published books. Among these "Ausgewählte Gedichte" (München: Albert Langen) are some little gems of lyric song calling for musical setting; there are love songs with something of the quality of the Biblical classic, nature moods of rare color, and delicate symbolism, and very few commonplace passages and conventional images.

A new book of verse by Adolf Frey, "Neue Gedichte" (Stuttgart: J. G. Cotta), reflects delightfully the strong personality of the Swiss writer. No imitator of Gottfried Keller and of Conrad Ferdinand Meyer, but one in whom their spirit seems at times to revive and find new expression, Frey peoples the Swiss landscape with a world of mythical beings; his lyrics have always an element of narrative, allusions to the lore and history of the country giving life and animation and a deeper meaning to the scenes which he describes in a language admirably adapted to visualize his imaginings.

The latest volume of verse by Stefan George, "Der Stern des Bundes," breathes the abstract beauty and impersonal dignity which seem part of his personality. Gustav Falke has written a new book of verse, called "Anna," which shows no evidence of development beyond his earlier poems. A pathetic reminder of a figure sadly missed in the literary world of the country is a posthumous book of verse by Gerhard Ouckama Knoop. Else Asenijeff, who belongs to the same generation, has struck out into a new path by writing a novel in lyrics, entitled "Hohelied an den Ungenannten."

Among the comparatively new names that of Otto Krille stands for an unusually interesting personality. Krille was a factory-worker and made his début as a writer of plays when he was thirty-six years of age. Some books of verse followed, founded more or less upon his experiences as workingman and reflecting a certain class-consciousness. That he is outgrowing that point of view is evident from his new poems: "Die stille Stunde" (Berlin: Egon Fleischel), for the volume contains only two references to that period of his life. One is the touching episode in a factory, "Die Rose"; the other is the poem called "Poète allemand," which strikes one as a bit out of date. The poem must have been written when Krille was still an outsider to the literary world; otherwise he would have known that German poets to-day are no longer of the idealist type that used to starve in garrets in order to remain true to their muse. This type of poet is more likely to exist in the garrets of Paris, Moscow, Stockholm, or any other city but Berlin. German poets to-day know the value of advertising; their fiftieth birthdays are celebrated by special articles and editions; their friends write and their publishers circulate appreciative studies of their poetical individuality. They go about the country reading their own works, and have even come to the United States under more or less official auspices to lecture for and to write about us. Otherwise, Krille seems to have a correct estimate of the world and a sound reading of life. He has risen above material wants, looked about, and sought eternal values in the depth of his soul. "Der Wanderer" reflects the philosophy which he acquired in his quest for truth in a series of admirably worded symbols.

Paul Zech, too, is a poet whose early work was rooted in the proletaire world of Germany's coal regions. His imagination was stimulated by the picturesque features of mining life which he visualizes with remarkable power. His form is the conventional sonnet, but the spirit of his verse suggests the influence of Verhaeren. As a contribution to the poetry of labor, "Das schwarze Revier" (Berlin-Wilmersdorf: A. R. Meyer) is more direct and convincing than the verse of Krille. For Zech is the younger man, and his point of view is that of a generation that looks upon labor in a new way. His pictures of daily life on the canals and in the alleys of mining towns have light and color and vibrate with reality. There are no rare and exquisite moods translated into rare and exquisite language; but there are scenes that a painter's brush could not convey more directly to the reader's eye.

An individuality reminiscent of Dehmel and Whitman has appeared upon the horizon in Franz Werfel. With the volume entitled "Wir sind" (Leipzig: Kurt Wolff) he seems to have thrown down his gauntlet and announced himself with the naïve self-assertion characteristic of the new generation. A curiously rugged individuality, he appears to be involved in the same conflicts through which the Young Germany of the 'eighties passed at the time of its meteoric début in literature.

The volume modestly entitled "Erste Gedichte," by Wilhelm Südel (Berlin: Egon Fleischel), is of a quite different character. Its charm lies in the purity and delicacy of its sentiment and in the arresting music of its lines. The personal note is strong, but it rings true. Südel's nature-moods suggest the visions of an artist; but they are always related to life, and this relation lends itself to a subtle symbolism which finds expression in images of rare beauty. The freedom with which he handles his rhymes is admirable; his three- and five-line stanzas are particularly effective. The more ambitious cycle, "Der Dichter," with the parenthetical note, "Thema zu einer Symphonie," is of a quality to inspire a composer.

The slender volumes of prose and verse which Kurt Wolff, of Leipzig, has launched under the collective title, "Der jüngste Tag," seems to be devoted to the youngest and least-known writers of modern Germany. There is an unmistakable note of juvenile defiance of the traditional canons of good taste in some of the stories, plays, and poems. While the French writers have long outgrown naturalism, the Germans seem to revel in it with a voluptuous delight in its crass and coarse manifestations. Though a title like "Junge Pferde! Junge Pferde!" is apt to prepare the reader for some Pegasus prancings of unusual daring, the author of the book so called, Paul Boldt, succeeds in administering to his readers a series of shocks. That he should with preference use the sonnet form seems more than incongruous, for his language is of savage directness and his imagery reeks with blood, if it does not offend the nostrils. The frequency with which the poet refers to the Friedrichstrasse indicates the source of his inspiration.

Gottfried Kölwel's "Gesänge gegen den Tod" has reached a second edition. The grotesque title of the first poem, "Maus, Hund, und Mond oder die dreieinige Liebe," does not encourage its perusal. But on turn-

ing the leaves one comes across some striking sentiments, which, though often awkwardly expressed, have an original charm. There is a remarkable unity in the spirit of the book. The motto, "Es giebt keine Toten," precedes the first group, "O Welt, wie bist du wundervoll!" the second, and "Ach, alles ist Liebe!" the third, and the leitmotiv throughout is an eloquent though crudely formulated eulogy of life.

Three books of verse by women claim attention as being so many reflections of the woman soul. "Das Schicksal einer Frau" (Egon Fleischel) is an anonymous volume, evidently born of experience. It suggests the conflict in which a high-spirited woman finds herself on realizing her marriage a failure and being prompted to bear it for the sake of the child. What would have made one of many problem novels is here converted into a volume of verse in which the author frankly analyzes her feelings and sings the tragedy of her life in lines which show a facile gift of verse, though no originality of form. Moods and memories are translated directly into poems which collectively make the impression of a singularly honest human document. Erika Rheinsch strikes in her book, "Die Laute" (Egon Fleischel), a variety of notes with an admirable formal certainty. She is more self-contained in her love poetry than the anonymous author of the previous volume, more the poet than the woman. The book reflects a tendency towards metaphysical speculation and ends in a group of poems written upon the old theme of regeneration through sorrow, of which "Wie Sankt Christophorus das Christkindlein trug" is a distinctly original variation. The third book by a woman poet is Marie Sorge's "Frauenlieder" (Jena: Eugen Diederichs). The gem of the volume is the first poem, "Via Vecchia," with its powerful suggestion of the somnolent solitude of an old Roman highway. The "Hirtengedichte" are hardly simple enough in sentiment and language, and impress one as a rococo imitation of a shepherd dialogue. With the exception of the theme of motherhood, which in plain German is called "Der Schrei nach dem Kinde," the love poems of none of these writers strike notes that have not been struck some forty-odd years ago by Ada Christen, perhaps the only woman poet whose work has been compared with that of Heine. Only the last poem in "Frauenlieder" is new in sentiment, singing the dawn of a new era and the advent of the new woman.

Since the outbreak of the war much militant and patriotic verse has been written by German poets, and some of it has been published in handy little paper-covered booklets for distribution among the men at the front. "Der heilige Krieg" is the title of one of these collections (Jena: Eugen Diederichs). There is not a line in it reminiscent of the ideals for which Carl Schurz and other men held high in the esteem of the world chose exile some sixty-odd years ago; there is no appeal to humanity; not even a faint trace of the spirit of the 'eighties, when a young generation rose above the fatuous self-content of the elders and reached out into the larger world beyond the national borderlines, and seemed to strive for an international brotherhood. Richard Dehmel, the leader in this chorus of war-cries, follows an august example in his prayer, his sermon, and his eulogy of the nation's unanimous trust in God. Gerhart Hauptmann, Julius Hart, Cäsar Flaischlen, and others once suspected of political and other heresies, ably second him. Even Isolde Kurz, to whom the atmosphere of Imperial Germany was never congenial, exclaims, "Schwert aus der Scheide!" and Ernst Rosmer closes her harvest song with the lines:

Dem letzten Mann am letzten Herd
Schmied in die Faust das heilige Schwert—
Gott grüss dich, letzter Friede.

Alfons Petzold, the Austrian proletaire poet, is the only one who feels the universal tragedy and addresses the people, not his nation.

It is meet to notice in this connection a slender booklet by a German poet living in New York, Otto Sattler's "Krieg. Gedichte der Zeit" (New York: Rudolf Rochow), which bears the dedication:

Der Krieg hat mir liebe Menschen entfremdet. Sie kennen vorläufig keine Toleranz mehr.

Einige meiner Freunde sind aber doch frei geblieben von Rassenhass und nationalem Hochmut. Sie blicken weiter, über die Weltkatastrophe hinaus.

Und diesen Freunden widme ich meine Gedichte.

In this booklet there is dignity, and there is true pathos; not of that commonplace quality which rings through the sonorous effusions of facile rhymesters, but that genuine pathos which is too strong to heed conventional forms. Sattler's patriotism respects the patriotism of other nations as it does that of his own; it is not narrowly national, but generously human, as is indicated in the following lines:

Fest in unserem Volke stehn
Und dann hinaus
Weit über die Landesgrenzen sehn,
Dann sind wir auch in der Welt zuhaus.

Formally, the poem entitled "Es war . . ." with its personification of war as a hoary monster, half-man, half-beast, crushing the crops ripening in the sun, and laughing scornfully at the peace on earth, is the best in the book. The author's attitude towards the country of his adoption is apparent from the lines:

Amerika—
Sei du des Friedens treuer Hort,
Lass nicht der Hetzer giftig Wort
Auch dir die Fackel in die Hände legen,
Die nun Europa flammen lässt im Kriegesbrand—

Behalt, Amerika, des Friedens Segen,
Und schütze ihn mit fester Hand—
Du sollst den Weg zur Welt ihm weisen—
Und Jahrhunderte werden dich noch preisen,
Amerika.

A. von Ende.

Correspondence.

GERMANY VERSUS THE CIVILIZED WORLD.

To the Editor of The Nation:

Sir: There is no other great Government in the world to-day which insists so strongly as that of Germany that the individual will must bend to the collective interest of the State. Kept within proper limits, the underlying principle of this demand is sound. There must be a great deal of the bending of individual wills if there is to be a state at all, and the time is not yet at hand, or rather the time is long past, when an endurable life can be lived without states.

But for centuries past there has been coming into ever stronger life a state more comprehensive than any that ever before existed—the civilized world itself. Feeling its way slowly, it has built up a code of law based in principle on the fundamental postulates of justice and humanity and in practice on the general consent of individual nations to submit to a few restrictions on arbitrary power in return for a more orderly progress of civilization, which experience has shown to be well worth the sacrifice.

And now comes a nation which arbitrarily demands the privilege of setting aside any part of this code of law which, in its own unaided judgment, clashes with what it chooses to regard as "military necessity." How its demand will work in practice, it proceeds to illustrate by forcing its way with cannon through territory whose neutrality it was bound by specific treaty to protect and by sending to the bottom of the ocean without warning hundreds of men, women, and children, neutrals and non-combatants, whose presence where they were slain was absolutely under cover of international law.

Let Germany herself teach us what to say of all this. As there can be no Imperial German Government without a tremendous bending of the wills of individual citizens (or subjects), so there can be no such entity as "the civilized world" without a bending of the wills of individual states. The majority of individuals in Germany doubtless are convinced that it is best for all that there should be an Imperial German Government, and they insist accordingly upon bending or breaking the wills of recalcitrants sufficiently to keep it in existence and in running order. Some of these days they may change the form of it considerably and even give the will of the individual citizens much more play than it has so far enjoyed, but they will still insist that the individual must bend to the whole so far as the safety of the whole may require. Likewise the great majority of the individual nations which make up the entity spoken of as "the civilized world" are thoroughly convinced that it is best for all that there should continue to be a civilized world with its code of laws, meagre but slowly growing, which each individual member of this entity must respect as it stands until it is duly changed by consent of the nations interested. For Germany to conquer now in a struggle of nature would be merely to throw a temporary dam across the current of civilization, herself below. And with all her boasted efficiency she can mix no concrete for a dam of that kind which will not crush disastrously over her head in the near future. It is in the very nature of mod-

ern civilization that in such a contest the arbitrary will of the recalcitrant nation *must* give way to the permanent good of all nations, which demands the sacredness of international law against any individually determined "military necessity" whatever. And for planting himself irrevocably on the right side of that *must*, President Wilson will one day have the respect of millions of Germans themselves.

W. H. JOHNSON.

Granville, O., July 27.

ITALY AND THE WAR.

TO THE EDITOR OF THE NATION:

SIR: In your issue of May 27, in two successive editorial articles, you make some observations on the moral aspects of Italy's declaration of war against Austria, and on the diplomatic negotiations that led up to it. You admit that Italy "had a technical case for 'compensation.'" "Accordingly, the Italian Government at once began to press the Austrian for the 'compensations' due. At first, the Austrian Foreign Minister denied that Italy had a case; but finally—it may be under German tutelage—he admitted the force of the Italian contention, and began the long and rather sordid negotiation over terms." And further on you say: "This, of course, is a purely legalistic justification. It does not go to the moral bearings of the case. In impartial eyes, it will not make Italy's position glorious or even handsome. She has to-day too much the appearance of having invited bids for her support in the war, and of having finally gone where the highest price was offered."

That these negotiations were in outward seeming "rather sordid" may readily be admitted. The point I should like to insist upon is that whatever there was of sordidness derived from the Triple Alliance itself. After Austria's declaration of war against Servia, Italy began negotiations on the basis of compensations because the Triple Alliance admitted no other basis. The Triple Alliance, forced upon Italy in the first place, and false to the national conscience, had habituated the country and its leaders to an abandonment of the national ideals, and as Italy was always treated as the inferior partner, she became accustomed, as regarded her two allies, to remissness and acquiescence. You say that she has to-day too much the appearance of having invited bids for her support in the war. Yes, but it is only the appearance. Even from the first it was recognized that Italy could only fight on the side of the Allies. The best that Germany and Austria could hope for was neutrality. "The friends of Italy in neutral countries," you say again, "cannot help regretting that, in all this business, she has not stood more erect before the world. . . ." You are quite right. Italy could not stand erect before the world until the Triple Alliance had been denounced and war declared.

But you seem to forget that the "compensation" about which Italy negotiated so sordidly was, in other terms, the realization of national unity. You speak as if any territorial compensation, even one that could be commuted in money, would have satisfied her aspirations. Though your words imply such an interpretation, you yourselves, I suppose, would be the first to object to it. Apart from the strategic necessity to Italy of the Trentino and the eastern Adriatic shore, all that Germany and Austria could have offered her, of all the lands they hold by right, force, or fraud, would not have been accepted in exchange for those regions where Italians dwell and long for union with the mother country.

Another assertion you make, which is of prime importance to the whole argument, is that Italian statesmen "gained the delay necessary to arm, at the same time that they took up the work of shaping Italian opinion, and kept the Powers in doubt." Herein you have been grossly misinformed. It is not true that they took up the work of shaping public opinion. This work was done by the press, by books and public meetings, and finally by pamphleteering, carefully organized, accurately timed, and of extraordinary ability. The newspapers that had the strongest influence in determining the country to armed intervention were the *Corriere della Sera* and *Secolo* of Milan, and the *Messagero* and *Idea Nazionale* of Rome, not one of which had any relations with the Government. On the contrary, they were a number of times in open opposition to what were, or seemed to be, its tendencies. The *Idea Nazionale* did not conceal its discontent when Sonnino was made Foreign Minister, though it afterwards loyally admitted his courage, patriotism, and honesty. The *Giornale d'Italia* of Rome, which was founded by Sonnino and of which he is still part owner, before he assumed this office was, if not on the side of neutrality, at least very lukewarm for intervention. After Sonnino was called to the Consulta, it did indeed become more pronounced in this sense, but never to the extent of the other papers I have mentioned. Not only did it profess itself to be entirely unofficial, but the Ministry itself a number of times took occasion to declare that it had only one official mouthpiece, and that was the Stefani Agency.

Again you say: "Finally, in the most dramatic fashion, they [the Ministers] forced the hand of the King and spiked the guns of the once dominant Giolitti." I do not know whether this was a part of the abundant misinformation that is continually purveyed from Europe to the American press, or whether it was only your inference. At any rate, the fact is that the best-informed publicists in Italy were very much in doubt as to what would be the effect of the resignation of the Salandra Ministry. Giolitti's majority in the Chamber of Deputies had shown no signs of rebellion, and it seemed distinctly possible that he or one of his followers would return to power. I yield to none in my admiration for the statesmanship of Salandra and Sonnino; but their resignation, so far from being a stroke of policy, was forced upon them. With Giolitti, the leader of a strong parliamentary majority, treating over their heads and behind their backs with von Bülow, they needed a new mandate from the King and country.

In your leading article, entitled "A People's War," you begin by saying: "It is clear that nothing but the tremendous demonstrations in the chief Italian cities solved the Government crisis of last week. As it was bitterly put by the Rome corrospondent of a Berlin newspaper, 'the street has won.'" Further on you say, "And the fact is plain that the real decision was made by the Italian Government. The nation was committed without being formally consulted." Without inquiring how you reconcile these two contradictory statements, I will merely observe that it is not true that "the street won." It was the whole people that won. The great demonstrations that took place everywhere throughout the kingdom, not only in the big urban centres, as you seem to think, were the unforced and spontaneous expression of a people's will. It was such an outburst of moral and patriotic enthusiasm as falls to the lot of few to experience. It came from those depths of sentiment and reflection which are the final justification of democracy and its hope for the future.

It may be that the Ministers of the Crown felt reasonably sure of popular support in the negotiations that led up to the denunciation of the Triple Alliance, although some acute and well-informed observers two weeks before war was declared were very doubtful if even a numerical majority of Italians were in favor of armed intervention. Anyhow, it was Giolitti's unutterable infamy that caused the scales to fall from the eyes of many. Then the Ministry, sure as they could not be before that the nation's heart and conscience were with them, committed it to action. And this, I suppose, is responsible statesmanship under free institutions.

HOMER EDMISTON.

Milan, July 2.

THE REVIEWER REPLIES TO PROFESSOR USHER.

TO THE EDITOR OF THE NATION:

SIR: *Difficile est satiram non scribere,* in commenting on Professor Usher's vindication of his "Pan-Americanism," in the *Nation* of July 22; perhaps the three editorial lines appended to the letter deal with it more suitably than could any serious rejoinder. Reasoning would seem ill-bestowed upon a writer who is capable of explaining that, "in order to disown any intention of predicting or foretelling, and in the hope of avoiding the inference . . . that one probability discussed was more likely than another," he has chosen to designate his book by a term which —as his previous sentence reminds us—means "discernment beforehand, foresight of consequences, estimate of future happenings." Yet, since the letter charges the reviewer with seriously misrepresenting the book, and the author's position, through a misunderstanding of the "usage of words"—and since reviews in the *Nation* should be beyond reproach of this kind—it seems needful to examine Professor Usher's complaint with as much gravity as may be attainable.

(1.) Did Mr. Usher mean in his book to "forecast" anything at all? The review complained that the book wavered between a pretension to do so and a Gamaliel-like avoidance of choice between alternative possibilities. Mr. Usher's extraordinary talent for self-contradiction, which the review noted, did not desert him when he wrote his letter to the editor; he has contrived to assume, within less than a column, the same two irreconcilable positions. In one paragraph he declares, as has been noted, that in composing "Pan-Americanism" he had no "intention of predicting or foretelling," and hoped to avoid "the inference that any certainty was claimed for any future happenings or that one probability discussed was more likely than another." Three paragraphs later he informs us that "the book was intended to lead the reader to the conclusion that the use

of force by us, or against us, seemed to me improbable, though possible, but that an opposition of interests and views with the victor seemed inevitable."

A reviewer ought, no doubt, to be grateful to an author who, in replying to a criticism, so precisely exemplifies the truth of the criticism to which he takes exception.

(2.) Mr. Usher's researches in the dictionary seem to have left him with the final impression that the noun "forecast" is synonymous with "suspension of judgment" or "avoidance of predicting and foretelling." If his conception of "the accepted usage of words" in other cases is analogous to this, one can only express the hope that his future publications will, out of consideration for both readers and reviewers, be accompanied by a glossary.

(3.) It would appear, indeed, that Mr. Usher employs other words in highly unfamiliar senses. For his letter seems clearly to assert that when his book "forecast" an "inevitable clash" between "Europe's victor" and these United States, it had no reference to any "armed conflict or the use of force," that, in fact, it showed "the use of force by us or against us" to be improbable. Yet Mr. Usher's "inevitable clash" is expressly defined at the beginning of the volume (p. 6) as a clash over the Monroe Doctrine; and the reader is later not less explicitly assured that the maintenance of the Monroe Doctrine "means only one thing: war with Europe's victor in the first place, and with South America in the second place" (p. 402), and that "the probabilities indicate that the United States is about to be assailed by Europe" (p. 316). But it now seems, from Professor Usher's letter, that when he spoke of "war" he meant only an "opposition of interests and views," without "armed conflict or the use of force." I regret to observe that Mr. Norman Angell, in a review of "Pan-Americanism," which has appeared since that in the *Nation* (the *New Republic*, July 17), has also been misled by this oddity of Professor Usher's diction.

Has Professor Usher, in the course of his lexicographical studies, ever examined some of the more technical senses of the verb "to hedge"?

THE REVIEWER.

MR. GODKIN AND IRELAND.

TO THE EDITOR OF THE NATION:

SIR: In the well-earned jubilation of the semi-centennial of the *Nation*, I hope I am not sounding a discordant note when I lament the fact that none of the writers give to the late Mr. Godkin the credit that the "mere Irish" recognize was his due, viz., that he was, as Goldwin Smith called him, the "champion of his race."

During all the years that he moulded American opinion, there was continually in his breast, as in that of his countryman, Edmund Burke, as quoted by John Morley, an ardent desire of showing his love for Ireland, and that this desire, noted by Mr. Ogden in his biography, has been passed over in silence to-day is some disappointment to those of us who have either paternal or sacred literary traditions of the influence of a band of workers who founded the first journal to receive the name of the *Nation*.

This side of Mr. Godkin's work was worthy of some reference, and no wreath to his memory is complete without it.

JAS. KINSELLA.

Winnipeg, July 22.

SCHUETTELLANZ?

TO THE EDITOR OF THE NATION:

SIR: In glancing over the Correspondence department of the *Nation* of July 22, I notice that Agnes Repplier makes the brief statement that the Germans are trying to dupe the Americans.

There is perhaps not a student of English or of English literature, worthy of that name, who does not reverence the great Agnes Repplier, and who will not defend her assertions as the gospel truth. But when such dogmatic and radical words flow from her remarkable pen she takes one overwhelmingly by surprise. The Germans are not guilty of her epithetical charge of duping and hoodwinking. Germany is the most truthful and efficient nation under the sun, and hence it must necessarily follow, as some one has said, "To thine own self be true and thou canst not be false to any man."

Literature

TWO CENTURIES OF STUDENT LIFE.

Memorials of Eminent Yale Men. By Anson Phelps Stokes. Two vols. New Haven: Yale University Press. $10 net.

The Yale brotherhood, to whom Mr. Stokes offers these volumes as a tribute of loyalty, will find in them ample ground for pride in the academic ancestry of a Yale alumnus. Since the day, more than half a century ago, when Sprague wrote his paper on "The Influence of Yale College on American Civilization," no one has attempted to measure Yale's influence, or, indeed, that of any other great collegiate institution, on our national life, or to discover, with any such wealth of illustration as is here given, the meaning of the title "mother of men," so often applied to the college at New Haven. Of course, the biographies of only one hundred and fifty-eight men, selected from the entire list of ten thousand deceased graduates, furnish but an imperfect record of actual achievement in the life of the country, a record the more imperfect in that the author takes no account of the seventeen thousand living graduates, who also are sons of the honored mother; but they do show that Yale has a hall of fame filled with men of rare distinction. Could similar selections be made from the alumni lists of other colleges and universities of the elder line, we should have a roll of worthies who in every walk of life have contributed something to their country's advancement. The roll would not be complete, for distinction does not depend on college training, but it would include a surprisingly large number of the men who have made the nation.

These volumes are redolent with the atmosphere of Yale undergraduate life during a century and three-quarters of changing practices and ideas. Mr. Stokes is quite as anxious to know what Yale has done for his worthies as he is to show what they have done for the world outside. He, therefore, intersperses with the biographical data quotations, often lengthy, regarding contemporary life, education, and discipline, drawn from college records, society minutes, library manuscripts, and private letters, that add both interest and local color. Many of these citations disclose the prominence of religious and classical requirements, some are satirical in their references to "four years at college dozed away," while others illustrate the cramped and artificial conditions under which students lived and worked in the days before the era of the first Dwight, when the whole system underwent renovation and the foundations were laid for the future university. Student energy, barred from most of the outside activities, found relief in drinking-bouts and rebellions. Punishments were freely inflicted, "according to the merits of the crime," and fagging was a college practice till 1804. High spirits found vent in "bullyism," as contests between Town and Gown were designated, which reached its height about 1820, and was not abolished till 1840. The "bully," the college champion in the encounters, was a unique Yale figure, and it is curious that of the thirty-seven known bullies but one attained distinction, and he not for physical prowess or the power of leadership, but as an authority on *mosses*.

These biographies are, therefore, no mere formal outlines of men's lives, such as would be found in an encyclopædia or a biographical dictionary. They are very intimate and human descriptions, in large part taken up with the college careers of the men selected, disclosing their hopes and fears, successes and failures, during the years before they became famous. Few of Yale's great men displayed evidences of greatness as undergraduates, and it was the exception rather than the rule that their classmates hit the mark in prophecy. Inevitably many left behind them records of excellence. Some were presidents of Linonia, were good at debate, and could write well; others, as, for example, Barnard, later president of Columbia, were remarkable scholars and stood among the first in their classes; but few displayed genius, as did Bushnell, when as an undergraduate he contrived a submarine, or E. P. Mason, who wrote in college his observation on nebulæ, or the mathematical genius, A. M. Fisher, who was advanced to a full professorship at twenty-five, a record surpassed only by the elder Silliman, who attained the same distinction at twenty-three. Precocious boys, such as John Trumbull, James Hadley, and William Rainey Harper, were certain to reach distinction, but their precocity manifested itself before they entered college. Harper fulfilled the promise of his early years by obtaining his doctoral degree at the unusual age of nineteen.

Conspicuous as Yale has been in the fields of religion, modern science, invention, and public service, it is as the mother of educational pioneers that she deserves greatest recognition. Leaving out those who

have been the leaders in Yale's own advancement, such as Timothy Dwight and Theodore Dwight Woolsey, the most distinguished graduate of the eighteenth century and the most beloved graduate of the nineteenth, and also those who founded colleges elsewhere, such as Wheelock and Baldwin, we have the following remarkable list: Gallaudet, the American pioneer in the instruction of the deaf and dumb; Henry Barnard, one of the men who revitalized the American common-school system; Webster and Worcester, the pioneers in shaping our mother tongue; Gilman, the founder of the true American university; Sumner, the pioneer in the teaching of political economy; Harper, who revived interest in America in Semitic studies; Harris, who improved the methods and standards of public-school teaching throughout the United States in the last quarter of the nineteenth century; and Johnson, the founder of the movement for the improvement of agriculture and the use of chemistry in modern scientific farming. When we add to this list the names of Willard Gibbs, the founder of the modern branch of mathematical physics, whose work at Yale shows "how inconclusive the size of a teacher's courses may be as a final test of service," and Othniel Charles Marsh, the pioneer in palæontology, known to college boys chiefly through the "bones" in Peabody Museum, we but enlarge a list that might be further extended were we to turn to the names of lesser rank. Mr. Stokes has not often strained a point in order to include a worthy, but in the case of Tilden, with a scant two years' residence, and in that of J. E. Brown, with but a year in the Law School, he has made perhaps overmuch of the slight Yale connection. He would have added to the value of his biographies and increased considerably the interest of the reader if he had worked out the racial origin of his eminent men.

Yale has in the past furnished but few names of first rank in philosophy and literature, and none in art and history. She has distinguished herself for service rather than scholarship, and except for those who have been members of her own faculty, she has not until very recent times deemed the training of scholars and the publication of scholarly efforts among her obligations to society. Yet Yale was the first college in America to establish the degree of doctor of philosophy (1860), and is to-day among the very few that have raised to the highest level the requirements for the master of arts degree. These volumes show Yale's traditions of scholarship as well as those of service and good citizenship, and they show that these traditions are alive and demanding recognition. When a future secretary of Yale shall publish a supplement to these volumes, covering a third century of Yale life, we believe that the distribution of honors will be less unequal than is now the case, and that service and scholarship, inseparably bound up with the idea of a university, will each have its long roll of distinguished men.

A CHAPTER OF CANADIAN HISTORY.

Sir George Etienne Cartier, Bart.: His Life and Times. A Political History of Canada from 1814 until 1873. By John Boyd. New York: The Macmillan Co.

There have been several attempts to write the life of Cartier, by De Celles, Turcotte, David, Suite, and others, but it may fairly be said that this substantial volume of some 425 pages supersedes all previous biographies of the great leader of the French Canadians, and will probably remain the authoritative work on the subject. Cartier's place in the political history of Canada, and the extent of his services in bringing about the confederation of the scattered colonies of British North America, particularly in overcoming the widespread feeling of distrust among French Canadians as to their status in the new Dominion, have never been rightly understood, and not the least of the merits of Mr. Boyd's work is the conclusive evidence it affords as to the magnitude of the debt owed by all Canadians to the memory of George Etienne Cartier. During his lifetime and after, the personality of Cartier was overshadowed by that of his political chief, Sir John Macdonald. No careful student of Canadian history is likely to underestimate the magnitude of Macdonald's services to the Dominion. He was first and always captain of the ship of state, but no political captain ever had a more loyal and invaluable mate than Cartier. Macdonald himself bore tribute more than once to the statesmanlike qualities of his colleague.

It would, of course, be impossible to write an adequate life of Cartier without giving a good deal of attention to the stirring and momentous events in which he was so prominent an actor. As has been said, "to write the life of Sir George Cartier the future biographer must write the history of Canada during an eventful and progressive period"; and this is to a very large extent what Mr. Boyd has done. While availing himself of all the material in print, and using these secondary sources with judgment and good sense, he has apparently spared no pains to base his narrative primarily on the original documents. Papers, letters, and documents in the Cartier family and elsewhere have been placed at his disposal, and it is evident that many of these were not accessible to, or at any rate not used by, earlier writers on the period. These documents, however, formed but a small portion of the material which Cartier himself collected during his lifetime, illustrating his relations with other public men of his time, his part in various political movements, and his attitude towards burning questions of his day, the heat of some of which has even now not quite evaporated. It had been his intention that this material, in the form of memoirs, should be published ten years or so after his death, and it is evident, from what he himself said of them, that these papers would have shed an exceedingly interesting light on many obscure points in the political history of Canada between, say, the Rebellion of 1837 and Confederation, thirty years of upheaval during which the fight for political freedom and responsible government was fought and won.

In some way, however, these documents, or the bulk of them, disappeared, and Mr. Boyd has had the benefit only of those that escaped or were in other hands. It is all the more creditable that he has made such excellent use of more or less fragmentary material. Cartier's life is traced from his early years in the Richelieu country and as a law student in Montreal, through the political turmoil preceding the Rebellion of 1837, the Rebellion itself, the union of Upper and Lower Canada, the struggle for responsible government, the annexation movement, the reciprocity treaty with the United States, development of party government, the fight for confederation, and the final birth of the new Dominion. Cartier died in May, 1873, having lived to see the mournful predictions of the opponents of confederation disproved in every particular, and his own virile faith in the capacity for government and coöperation of the two branches of the Canadian people thoroughly justified.

AN ISLE OF UNREST.

Ceylon: The Portuguese Era. By P. E. Pieris. Two volumes. Colombo: The Apothecaries Co. 15 rupees.

As the sub-title informs us, this is a history of the island from 1505 to 1658. Its especial value consists in the author's utilization of hitherto unpublished material found in the copy (owned by the Government of Ceylon) of the history of De Queiroz ("Conquista Temporal e Espiritual de Ceylão"), who died in 1688, after a long term of residence in the East. Besides this fount of fresh information, the author draws from nearly two hundred authorities, native and European. The story of Ceylon begins, as is inevitable, with the more or less mythical account received from Hindu tradition, but it passes rapidly to historical ground. No event of especial importance occurred in this happy land ("o melhor pedaço de terra que o creador poz neste mundo," as Ribeiro describes it), till, in the second century A. D., Gaja Bahu invaded India and, returning as a conqueror, brought back with him the jewels of the "goddess of smallpox and purity," who still remains a popular divinity. Although this conquest affected only the lower extremity of India, it is noteworthy as being the first authenticated invasion from the South and as following the lines of the Rāvana myth.

The early history of Ceylon abounds in romantic situations. In the third century the pious king of the land was so strict a Buddhist that he would have no malefactors killed, and when rebellion broke out he abdicated rather than cause bloodshed. As a price had been set on his life, he gave his head to a peasant who had befriended

him and sent him (with the head) to earn his reward. In the fifth century, after a parricide prince had seized the throne and been in turn defeated, the victor cut off countless ears and noses of the parricide's adherents, slew thousands besides, and established his own power by "importing relics of Buddha and organizing a naval force for coast defence"—for the first time. It was the son of this king who committed suttee (if the word may pass) for love of his friend, the poet Kālidāsa, by no means the first instance of a man's committing suicide from love of a friend in India, but the first case known in Ceylon. After this period war-like intercourse becomes common between Ceylon and the mainland, till at the date when William the Conqueror landed in England the whole land, after fifty years of oppression, drove out the invaders in one of the bloodiest wars the island ever suffered. Incidentally, it may be remarked that there was considerable friction with the Chinese, to whom the Sinhalese had sent missionary ladies (nuns) as early as 434 A. D. In the fourteenth century a princess of Ceylon led to the funeral pyre the royal ladies of Chittore rather than fall into the hands of the Mohammedans.

The Portuguese first landed in India in 1498, under Vasco de Gama, soon reached Ceylon, and by unheard-of cruelties and barbarous violation of the rights of neutrals made themselves the best-hated nation in the East. They were, in short, no better than pirates till, having established their power through dread, they adopted the practices of civilization, exchanging ambassadors with the King of Ceylon, a puppet in their hands, and carrying on a trade even more lucrative than piracy. Of the later history, unrolled in full in these pages, the content, it must be confessed, is not of universal interest. Naval battles, intrigues, the evil government of the native, and the worst rule of the Portuguese, all on rather a small scale measured by the world's history, repeat themselves untiringly, if not monotonously, being varied by occasional notes of interest, such as the observation of Queiroz that Anurajapur was abandoned because of war followed by smallpox, famine, and *a plague of poisonous rats*. So ends the first volume of this chronicle.

The second volume also has illustrations enough of the lawlessness, rapacity, and incredible cruelty of the Portuguese, and some romantic stories still linger in the later period; but here the interest centres rather on the exposition of the village community, the economic conditions, and the sociological data (marriage, ceremonies, names), amply recorded by the author. In so far as Mr. Pieris relies on unpublished material, he cannot, of course, be controlled; in the use of other material he appears to be judicious, and, though naturally inclined to stress the picture of Portuguese atrocities, does not fail to be fair. His acceptance of the view that the Hindus used firearms in remote antiquity is due to lack of acquaintance with literature remote from his field. We doubt also whether the Hindus were adepts at lithotomy and rhinoplasty quite so early as some scholars imagine; but Mr. Pieris is surely safe in asserting that these arts were known before the word *rhinoplasty* "was coined in the West"! The author, who is a barrister-at-law and has a Cambridge degree, is in the Ceylon civil service. His native name is Deraniyagala Samarasinha Sriwardhana. His work is inscribed to his countrymen in the hope that fuller knowledge of what their native land has suffered will lead to a better appreciation of the Pax Britannica.

THE NEAR EAST.

The Development of Modern Turkey as Measured by Its Press. By Ahmed Emin. New York: Longmans, Green & Co.

Albania, the Foundling State of Europe. By Wadham Peacock. New York: D. Appleton & Co. $2.50.

The Life of King George of Greece. By Capt. Walter Christmas. Translated from the Danish by A. G. Chater. New York: McBride, Nast & Co. $4.

The cross-currents of nationalism in Southeastern Europe, ever struggling latently or openly to displace or overwhelm each other, toss to the surface from time to time such works as these three, which, very different in plan, substance, and racial sympathy, nevertheless aid each in its own way towards a comprehension of that age-long disturber of the world, the question of the Near East.

Mr. Emin's book possesses special interest from the fact that the writer is the first native Turk to be trained for historical work in an American university. His material has been an abundance of Turkish newspapers and periodicals, and his method of examination has been both quantitative and qualitative. Mingled with statistics as to the number of publications in various languages at successive periods, and calculations of the proportional space given in each publication to different sorts of material and different subjects, is to be found a valuable exposition of the development of Turkish life and thought during the past two centuries, and especially in the swift-moving days since the Revolution of 1908. The author considers his work "an attempt . . . to give a view of Turkey in her struggle for survival and betterment."

Owing to Moslem conservatism, the printing-press was not introduced into Turkey before 1728, and the small and slow beginnings of publication were state-fostered. Very interesting is the description of the dissemination of news in "pre-journalistic" days, through such agencies as criers, wandering dervishes, and itinerant theological students, and in such places as mosques and market-squares, coffee-houses and caravanserais. The first genuine progress in Turkish journalism was made after the Crimean War. Most journalists were reformers, and their papers, usually short-lived, bore such expressive names as *Liberty*, *Admonition*, and *Watchfulness*. After 1876, Abdul Hamid II gradually brought the Turkish press, like all other controllable agencies in his Empire, under rigid supervision. One-fifth of the material set up is said to have been cancelled by his censors.

The revolution of 1908 led to an outburst of journalistic activity, much of it futile and evanescent. The political struggle between the Committee of Union and Progress and its opponents became, however, reflected in journalism, and only for brief intervals was there real "freedom of the press." After the sharp humiliation and the partial recovery of the Balkan Wars, the temper of the nation was improved, and publication became more natural, supporting "earnest and constructive effort, a sign of the coming of a more fortunate balance between waste and repair." The study does not extend into the time of the Great War.

The press of a university of high rank should be more careful of its proof-reading, and of the conforming of a foreign-born writer's style to the idioms of the English language, than is the case in this publication.

With Mr. Peacock's book the reader passes from the ancient and strategically situated city, much desired by great Powers of the world, to the rough mountains fought for by peoples never yet lifted out of barbarism. A foreigner on official duty, Mr. Peacock observed externals primarily, and in the first two-thirds of his book his style is pictorial rather than reflective. Roads (or what serve as such), bridges, travel scenes, buildings, furniture, costumes, ceremonies, and visits of state fill very interesting pages. But, like an enjoyable type of after-dinner speaker, Mr. Peacock comes down finally to serious matters. His sketch of Albanian history, his narrative of the recent creation of autonomous Albania, his discussion of its possible future (alas, much water has run under the bridges since March of 1914!), and his misplaced final chapter on the Roman Catholic Church in Albania, are all remarkably accurate, temperate, and sound. He makes perfectly clear the separateness of the Albanian nationality, its persistence and capacity, and the essential justice of keeping its territory from further division between its bitter and mortal enemies. The book is well illustrated, but lacks an index.

Capt. Christmas, though usually fair in his judgments of the Balkan peoples, adopts the narrow Greek view as regards the Albanians, denying them the capacity for independent unity, and even counting them out of existence—they are not to be found in the table of inhabitants of the Balkan peninsula given on page 327. In what sense he can call them a "wandering race" (p. 311) is not clear, since they are probably the oldest inhabitants of the peninsula, and have certainly been in their present situation as long as it has had any history.

His knowledge, however, of the capable king who reigned in Greece for no less than fifty years, cannot be gainsaid. Four

visits, the first paid as a midshipman forty years ago, and the last bringing him to talk with the King only three hours before the assassin fired the fatal bullet, together with meetings in their native Denmark and frequent correspondence, provided him not only with warm interest in and enthusiasm for King George, but also with much first-hand information. A scientific biography will no doubt be prepared laboriously at some future date, defining, with the use of countless personal and state papers, King George's position and work in Greece and Europe. But the King is not likely to live as actively and humanly in such a work of erudition as in the somewhat unformed and disproportioned account of Capt. Christmas.

George of Greece is naturally not criticised adversely by his compatriot and friend. Due allowance being made for this, he is revealed as a King of very modern type. He did not occupy his time with ceremonies involving barbaric splendor, nor did he love to exhibit uniforms and clank the sword of feudal overlordship. Of respectable private life, he will no doubt join the company of notable European ancestors through his numerous and healthy progeny. A shrewd business man, he did not disdain to encourage the consumption of Greek currants, or to invest in promising commercial enterprises. Like a small Napoleon I or Bismarck, he watched the press of Europe, and at times used appropriate means to counteract opinions hostile to Greece. A travelling King, he endeavored to win and retain by personal diplomacy friends for his restless, ambitious, long discredited little state. At home he maintained the peace between kaleidoscopic factions, and by exactly the right combination of dignity and democracy, of wealth and simplicity, he retained a marvellous popularity to the day of his death. And this was in a country where, at the beginning of his reign, scenes much like those in About's "Le Roi des Montagnes" were actually enacted (see pp. 86 ff.), where he had to coöperate with forty-two Ministries in twenty years, where war was rushed into (in 1897) with insubordinate officers and insufficient preparation, where the mismanagement of finances compelled the nation to go into a virtual receivership, and where for forty-seven years he had to work without a single statesman who could rise above petty interests and partisan politics. Only after Venizelos came to power in 1910, did the Greek people work together for the larger common interests of all.

Capt. Christmas usually introduces only material which has some direct relation to King George, but he makes exceptions in discussing the war of 1897 and the first war of 1912-13. Since he begins a brief history of the latter war, and carries it to within two months of the end, the reader is surprised to find no completion of it after the description of the death and burial of King George. In fact, the failure to show the King as a real force in Greek life during his later years is a serious defect in a readable book. There is a good index.

Notes

"The Rainbow Trail," by Zane Grey, will be published on August 12 by Harper & Bros.

The Century Company announces for early publication "A History of American Literature Since 1870," by Fred Lewis Pattee.

Henry Holt & Co. announce the forthcoming publication of "The Cinder Pond," by Carroll Watson Rankin.

Longmans, Green & Co. announce that they will publish this month "An Appreciation of Dr. Henry A. Coit," written by James Carter Knox.

Dr. J. William White's "A Textbook of the War for Americans" (Philadelphia: The John C. Winston Co.; $1 net) is an able abstract of the controversies about the war, so far as they affect America. Naturally, most of the citations are of quite ephemeral matter, but the author's comment provides a bond of philosophy. He is adroit in revealing the tortuous disingenuousness of the Teuton polemic by the use of the parallel column and similar devices. The compilation is clear, and turns over the case from every conceivable point of view. Of the many books of this type it is one of the fullest and best. It has the indispensable but rarely provided convenience of an adequate index.

The general impression of "Shots and Snapshots in British East Africa," by E. Bennet (Longmans; $4 net), is of a Bradshaw or Baedeker, written in the first person singular. There are ten "I's" in the first paragraph. The narrative of a six months' shooting trip is unvarnished by any abstract comment and wholly devoid of imagination or of pleasing diction. Taking it as such, we may follow the author's every move, every stolid inspection and appraisal of his surroundings; we may peruse the minutest details of his safari, and may view the rather good snapshots of natives and the less commendable ones of wounded and dead animals. The second half of the volume is occupied with a descriptive list of the game animals of the country. The book impresses one as being the result of some mechanical combination of camera, dictograph, and typewriter, so devoid is it of enthusiasm, virility, and abstract interest.

The poet and romancer Emil Lucka's recent sociological study is presented to English readers as "Eros: The Development of the Sex Relation through the Ages" (Putnam). The translator, Ellie Schleussner, provides an introduction which prepares the reader for the vividness, charm, poetry, brilliance, and fascination of the ensuing chapters. Calmly stated, Lucka's thesis is based on Haeckel's biogenetic law, but is transformed by a sea-change into a psychogenetic law which reads: "Every essential quality which the human race has evolved in the course of history must be present in every normally developed individual of our time." In his particular application it means that "every well-developed male individual of the present day successively passes through the three stages of love through which the European races have passed." These three stages, the unfettered sexual instinct of primitive life, the metaphysical eroticism of the middle ages, and the blending of sexuality and spiritual love in modern times among Germanic races, especially the second and third, which are "founded almost entirely on original research," are developed in great detail through three hundred and fifty pages. The theory, however, is not complete without the corollary that "the evolution as well as the aberrations of love have affected man alone, and, roughly speaking, to this day affect only him. He is the Odysseus, wandering through heaven and hell, ultimately to return home, perhaps, to where woman, the unchangeable, is awaiting him. That which has been woman's natural endowment from all beginning, the blending of spiritual and sensual love, man looks upon and desires to-day as his highest erotic ideal." The mass of evidence, collected from a wide variety of sources, largely mediæval, is carefully selected to support the main thesis, and will doubtless be eagerly accepted by those who are of Teutonic culture or descent. But just why woman has been free from the operation of an evolutionary law working ineluctably from prehistoric times, is not made so clear at any rate to the Anglo-Saxon intelligence.

The note of the Wayfarer's Library, a collection of some forty volumes published at forty cents each (Dutton), is lightness. Some ten may be dismissed as merely popular attempts in present-day fiction—negligible if readable books like L. Cope Cornford's "The Master Beggars of Belgium" and works by Pett Ridge and Hugh Walpole. Another dozen are novels and romances of substantial merit and perennial popularity, some of which have long deserved an inexpensive reprint. We may be grateful for a better cheap edition of Hardy's idyllic "Under the Greenwood Tree" than this country has hitherto had, and for the opportunity of securing not only Shaw's well-known "Cashel Byron's Profession" and "An Unsocial Socialist," but his "Love Among the Artists." For the inclusion of two translations, Daudet's "Kings In Exile" and Sienkiewicz's "Quo Vadis," the latter taxing unduly the capacity of the slender format, there was less occasion. The same may be said of Dickens's "Christmas Carol" and "The Cricket on the Hearth," of which there are a thousand editions. But it is in its collections of essays that the Wayfarer's Library constitutes a deserving innovation. In this country no cheap edition of George Gissing's "The Private Papers of Henry Ryecroft" has been heretofore available, and in consequence this masterpiece of autumnal autobiography is known to relatively few. The Library contains also Gissing's last book, "The House of Cobwebs ,and Other Stories." It could not do better than include in future issues at least two of his most robust and admirably subtle novels, "Thyrza" and "New Grub Street," both of which are now obtainable only with the greatest difficulty, if at all. The Right Hon. G. W. E. Russell has consented to the collection of some of his "Essays on Literary Subjects," in which space is unfortunately given to treatment of the more prominent names — Shakespeare, Dickens, Kingsley—rather than to writers whom Russell has known personally, or to the minor figures, as John Newton, on whom he has collected peculiar facts. Austin Dobson has chosen from a half-dozen of his books a series of "Eighteenth Century Studies," nearly

all literary, with which may be mentioned Edward Parry's edition of "Letters from Dorothy Osborne to Sir William Temple" and Herbert Paul's "Queen Anne." Hilaire Belloc's "The Historic Thames" and George S. Street's "The Ghosts of Piccadilly" were naturally designed for English rather than American readers, but are in the pleasant essay vein opened by Leigh Hunt's "The Town," and have a fairly catholic appeal. Of more modern tone are Holbrook Jackson's "Southward Ho!"—a volume, indeed, too journalistic in manner—and A. G. Gardiner's "Prophets, Priests, and Kings," with its long gallery of informing vignettes of contemporary British notables. Some mention should also be made of two typical volumes of British humor, F. Anstey's "Baboo Jabberjee," a breezy analogue to Goldsmith's "Citizen of the World," reprinted from *Punch*, and Barry Pain's "De Omnibus," with its picture of London streets as seen by the Cockney eye. It is to be hoped that the Library will grow, particularly in the field of the modern informal essay, in which it might well reach out to include France.

A recent number in that series of well-printed, handy little volumes published by Doubleday, Page & Co., under the title of "The American Books," is "The American Navy," by Rear-Admiral F. E. Chadwick, being a condensed summary of our naval history and an excellent guide, through its "short bibliography," for those who desire to study at length any particular phase or period. Within a narrow compass, the leading facts are given, with sample references to the authorities quoted. Less stress is laid upon the services the navy has rendered to the country and the world at large during times of peace in surveying, oceanography, the suppression of the slave trade, protecting American interests in remote lands, etc., than their importance warrants. These services have justified the existence of the navy, even when no clouds of war hung about the political horizon. "Aft of" instead of "abaft" (p. 7) is open to question as not in accordance with the best nautical usage. In the toast, "To the downfall of the barbarous Moor" (p. 99), the adjective generally employed was "barbarious," thus including jest and anathema in the same breath. The author's attitude towards the navy is expressed in these sentences: "We can only remain a world Power through a navy which can command safety and peace. Linked to such power there must be political good sense and just dealing." The absence of an index or even a table of contents makes the work less useful than could be wished.

It is not possible to define exactly the limits of Christian doctrinal liberalism—its boundaries are constantly shifting, and at any moment may appear in various shapes; but suggestions for a partial solution of the question are offered by H. W. Clark in "Liberal Orthodoxy" (Scribner; $2 net) and by J. M. Campbell in "The Place of Prayer in the Christian Religion" (Methodist Book Concern; $1). Dr. Clark gives an historical sketch of the freer Christian thought in Europe and America from the Cambridge Platonists of the seventeenth century to the present time, pointing out the literary and scientific influences (philosophical, astronomical, biological, critical, and other) that have induced modifications of the Church creeds. His volume, learned and clear, comes near to being a history of Christian thought in the period treated; with details too numerous to be considered here. It appears from his statements that the term "orthodox" needs constant redefining—opinions are now freely expressed in circles called orthodox that some centuries ago would have entailed on those who professed them excommunication or death. Naturally liberal orthodoxy (like the physical sciences) has never announced a well-defined creed or attained a definite organization. Dr. Clark's own determinant characteristic *stantis aut cadentis ecclesiæ* is the belief that Jesus Christ brought to the world not new religious information or modifications of existing systems, but a new divine dynamic creative force, the continuation of the original creation of the universe, implanting a new life in human society—a formula that obviously admits of different interpretations, and might, if adopted, lead to a fresh division into various types and sections of orthodoxy.

Mr. Campbell, while not denying God's power to modify the physical laws of the universe, lays stress on the spiritual side of prayer, and on its subjective value. Man should not pray, he urges, for merely temporal good, but only for the temporal when it is looked on as a means for obtaining the spiritual. The temper of the suppliant must be ethically pure, devoid of hate and merely selfish ends, humble also, in view of man's ignorance as to the outcome of his schemes and desires. True prayer, he adds, is calming and purifying—it brings the mind into contact with the ideal, banishes what is unworthy, and lifts life into a higher plane. The volume says nothing that has not been often said before, but its tone is restful, and its general influence will, doubtless, be to further an intelligent apprehension of the function of prayer as a communion of soul with all that is highest in life.

Henry Rutgers Marshall's "War and the Ideal of Peace" (Duffield; $1.25 net) is a book on war by a philosopher. The treatment is essentially philosophic in that the subject is considered in all its important bearings, remote as well as immediate. The unwary reader who is not familiar with philosophical writing will be astonished to learn how far-reaching are the relations of war and peace, and may become a trifle dizzy as the author whirls him off to various remote parts of the universe on his way to a seemingly near-by goal. But the goal is only seemingly near by, and before he can be allowed to reach the practical matter of preventives of war, he must first be initiated into panpsychism, learn the real meaning of "spontaneity" and of "nature" and "law," and be converted to a new metaphysical theory of creation—namely, the hypothesis of the constant production of new forms in nature, based on the analogy of human spontaneity. He must also be instructed in the nature of ideals, must be able to refute pessimism, and understand the true meaning of morality, of conscience and its origin, of religion and its function, and of human responsibility.

The argument which requires all these rather surprising excursions is in outline as follows: We are told by the militarists that lasting peace is a fantastic dream, since the impulse to war is a part of human nature, and human nature, being a part of the larger nature, cannot be changed. To refute this it is necessary to show that spontaneity is an essential characteristic of man's being, and that, since he is a part of "Nature," this, too, may be regarded as possessing spontaneity—a view which panpsychism has made not improbable. Now it is by ideals that our spontaneity expresses itself; by their aid man has been able, to a considerable extent, to remake nature. One of the forces of nature which man finds working within him is the fighting instinct; and one of the ideals which he has created is the ideal of peace. And both history and psychology show that the fighting instinct, like other instincts, may be in part repressed, in part directed into new channels. Hence, though many pacifists have been guilty of a shallow optimism in that they have failed to understand the power of pugnacity, there still is good ground for the pacifists' hope, and the assertion that war must always be because it always has been is based upon a psychology and a philosophy quite as shallow as any assertions of the pacifist party.

After disposing of the philosophy and psychology of the question, Mr. Marshall devotes one chapter to the moral and religious issues; and in a final chapter on "Our Responsibility and Duty" he considers the extent of our responsibility, and points out various practical means by which we may hasten the victory of the ideal of peace. Although the lengthy philosophic discussions of the earlier part of the book into seemingly irrelevant fields may at times puzzle the reader, the work is not only sound, but very readable, and ought to have a helpful influence at a time when a fatalistic belief in the inevitability of war threatens to saddle the race in perpetuity with the very thing which it most dreads.

"The Dawn of Christianity" (Appleton; $1.25 net), by Alfred W. Martin, contains a course of lectures on the origin of Christianity, delivered in the Meeting House of the Society for Ethical Culture, of which the author is one of the leaders. It is an intelligent and sympathetic sketch of the Christian movement as reflected in pre-Pauline Jewish Christianity, Paul, and the Fourth Gospel. In the treatment of Paul, the starting-point seems to be, not the Apostle's idea of salvation, but his conception of Christ. Hence, little is said of the mystical union of the believer with the indwelling Lord who is Spirit, a conception which, to many scholars, is distinctive of Paul, and absent from that Christianity which is untouched by Paul. In the discussion of the ideas of the Fourth Gospel, due weight is given to Paul's Christology; but, we venture to think, more should have been said of the influence of his soteriology. We miss, furthermore, a reference to the survival in the Fourth Gospel of that legal type of Christianity which is reflected in the Synoptic tradition and primitive Jewish Christianity. The chapter on Hermas is interesting and instructive; but, if the Shepherd is included, the great catholic Irenæus should not have been excluded. But, be that as it may, the important remark is that Dr. Martin has written not only with understanding, but with sympathy, on one of the most perplexing problems in the history of religions, namely, the dawn of Christianity.

In "The World in a Crucible" (Dodd, Mead; $1.50 net) Sir Gilbert Parker goes over the

thoroughly familiar ground of the origins and conduct of the great war. His advantage is in literary adroitness and a certain vividness. The case is conceived from the point of view of a British Imperialist; the moral is, "Wake up, England." Though the international implications of the war are mostly ignored, the survey is made with clearness and generally with entire fairness. Especially good is the brief sketch of recent history in the Balkans and its relation to the present cataclysm. Besides the political and diplomatic discussions, there is offered a brief view of the fighting, again from the British standpoint. It is not quite contemporary history, the scale forbidding, but it preserves that part of the controversies and events that will most interest British sympathizers. The fervor of the style often attains eloquence, and the book is one of the most enthralling of its numerous kind.

In "The Life of Catherine the Great of Russia" (Brentano's; $4) E. A. Brayley Hodgetts seeks to present "a really dispassionate picture of that great ruler's character and reign." In fact, he is evidently more interested in her personal life and character, which he tries to clear of many of its darker spots, than in her reign, to which he gives only the last half of his volume, and which he does not adequately appreciate. The first half of his book is devoted to a gossipy account of the unedifying reigns and court scandals which intervened between the death of Peter the Great and Catherine's own accession. With a subject as fascinating as Catherine II, his book is bound to be interesting and lively, and he does not fail to make the most of the bizarre conditions in eighteenth-century Russia. He quotes a good deal from the published dispatches of foreign diplomats resident in Russia, but his chief reliance is on the standard biographies in German by Brückner and Bilbassoff. His lack of historical method and inaccuracies of statement will be evident to scholars acquainted with the subject, if not to the more popular audience to whom his book is addressed.

The aim of "Roma: Ancient, Subterranean, and Modern Rome in Word and Picture," by the Rev. Albert Kuhn (Parts VI-VIII), is to give to the general public a readable account of the manifold monuments of Rome in ancient, early Christian, and modern times. It is written by a member of the Roman Catholic Church, and part of its purpose is to set forth the glorious past of Rome as the centre of that Church. The book is to be issued in eighteen parts. The parts, six to eight, now to hand, complete the story of classical Rome and begin that of the city in early Christian times. Descriptions are given of the Collections in the Vatican, the Capitoline Museum, the Lateran, and the National Museum; while the early Christian sections deal with the history and art of the Catacombs. The book has no archæological pretensions, but it is brightly written and amply illustrated. Moreover, the most noteworthy works are generally selected with discrimination. A rather flagrant exception is the omission of any mention of the famous "Ludovisi Throne" in the National Museum, perhaps the most important classical work in Rome.

Offered to "the youth of the British Empire," "The British Navy," by Ernest Protheroe (Dutton; $2.50 net), will interest as well as inform a much wider audience. Mr. Protheroe begins his story at a time far antedating that suggested by his title, for in his opening chapter he traces the use of ships from prehistoric man, "who floated down a stream on a log or a branch," to the establishment of the Classis Britannica and its abolition during the latter part of the Roman occupation. But this scientific comprehensiveness must not be taken to imply dulness, either of matter or of style. On the contrary, the author has evidently aimed at producing a narrative that should reflect the fascinating romance of the sea. His pages are, therefore, full of dramatic events, in which the actors appear in all their glory. We are told just how many guns were carried by important vessels, and just how the wooden walls were sheathed below the waterline, but these details are never allowed to become burdensome, and are always part and parcel of the story that is the chief thing to be told. The effect is that of a brilliant panorama, in which the triumphs of the Mistress of the Seas are depicted in their original colors, while, incidentally, is recorded the history of naval progress from the Ark to the submarine. Very suitably, the narrative is accompanied by a profusion of pictures, some of them from old manuscripts and engravings. The last twenty pages of the volume tell the story of the British fleet from the declaration of war in August to the sinking of the Emden. An appendix contains a list of ships in the British navy by classes.

There are portions of Dr. Eugene Coleman Savidge's "The Philosophy of Radio-Activity" (The Jenkins Co.; $1.50 net), in which the ideas are sufficiently digested and the language is simple enough to be understood, but they are rare. On the whole, it seems to be a mess of almost everything, expressed generally in passages of this extraordinary nature:

DURATION, INDWELLING FRACTIONS OF SPACE, IS THEREFORE THE DETERMINING REALITY, the syntonic key which non-materiality compresses into the color patch, attuned to ignore all other chatter, and draw from about it, its precise necessity of reinforcement.

The reviewer might as well confess at once that he can make no sense of this or of the many passages similar to it.

Fortunately, the publisher, foreseeing such a possibility, enclosed a slip in the book giving a résumé of Dr. Savidge's Philosophy. Even in this simplified form it was too erudite, but as there are many who apparently enjoy such excursions into the philosophy of the "conglomerate," one or two excerpts will permit them to judge whether they will find enlightenment from the book:

Radio-activity is the "ebb of the force which vitalizes the universe." Duration and space, annealed together by the forces of the cosmos, slowly disengage according to mathematics which never vary. Though the subject is associated in the public mind principally with cancer,—and, indeed, its very close relation has opened up a true philosophy of malignancy—this is a small fraction of the whole. . . . Dr. Savidge's thesis is, that matter is involuted with selective purpose, and that there is an *"ATTRACTION OF DURATION FOR MATTER"* as mathematical as the attraction of gravitation. Whether or not he be sustained therein, there will be no question that identities in living beings are as surely selected as that an acid seeks its base.

Such is Dr. Savidge's philosophy, and whether he can be sustained or not his readers must judge. But he must be first understood.

Almost simultaneously with Mr. Roy's volume on "Rabindranath Tagore" (reviewed in the *Nation* of June 17) came another life issued by Macmillan ($1 net), the regular publisher of Tagore's works, and written by a Celt, Mr. Ernest Rhys. This, as might be expected, is a better-written book than Mr. Roy's. One good service Mr. Rhys performs, in giving us a pretty full summary, with extracts, of two or three of Tagore's prose tales, which lead the present reviewer to suspect that those are right who value these pieces of fiction above Tagore's poetry. But Mr. Rhys, like Mr. Roy and most other writers on the subject, falls into the error of thinking that the "Gitanjali" and "Sādhanā" are in the spirit of the Vedânta. He is probably excusable on the ground that he has only a distant acquaintance with the ancient books. To name old Cankara on the same page with Tagore is awful to any one who has wrestled with that brain-wracking metaphysician of the Vedânta. But the true relation is also indicated by Mr. Rhys when he shows us how easily and naturally Tagore's plays were accepted and acted by the Dublin Players, and when he intimates the similarity of Tagore's educational ideas, as practiced at his model school, with those that run through the work of Froebel and Henry George, jr., and Mme. Montessori. This relationship is, of course, not to the discredit of Mr. Tagore, and we only allude to it for the sake of intellectual clarity. But it is not quite so when Mr. Rhys holds up the spirit of this modern Hindu mysticism and romanticism as a corrective for the competitive straining after power among us, which has brought on the present war. Europe, as any one familiar with the works of Maeterlinck and a host of kindred writers ought to know, has for many years been full of the same obscurantism of the emotions; and any one familiar with human nature ought also to know that kind of sentimentalism, when it comes to a test with any of the strong materialistic forces of life, simply crumples into nothing. Europe needs more a philosophy of duty and discipline than of pantheistic relaxation.

The Rev. R. M. Lithgow, in "The Parabolic Gospel" (imported by Scribner) discovers in the parables of Jesus not only an orderly and logical development of Christ's doctrine, but a development which is in keeping with the normal spiritual growth in man. This discovery, which the author rightly asserts to be original, is due primarily to his ability to see meanings in the parables which a reader who is furnished only with a knowledge of the hopes and aspirations of Judaism and primitive Christianity is unable to see, as, for example, the idea, more than once affirmed, that the parables of the Lost Sheep, the Lost Coin, and the Lost Son, the "three-one" parable, as it is called, set before us pictorially "the saving work of Father, Son, and Holy Ghost." The author's discovery is due, in the next place, to his contention that it is self-evident that the Gospel of Matthew, the work of an eye-witness, gives the historical and logical order of the parables which it records. The student who shares the premises of the author may, without further comment, be referred for details to the book itself.

Science

PREHISTORIC MAN.

The Antiquity of Man in Europe. By James Geikie. New York: D. Van Nostrand Co. $3.

Owing partly to recent discoveries of the first importance, and partly to the fact that older ones are now better understood, the ancient problem of the antiquity of mankind is being attacked with renewed interest from many sides. The three great lines of converging evidence, which may be called the anatomical, dealing with the skeletal remains of man himself, the archæological, that considers mainly his handiwork, and the geological, upon which we depend for a knowledge of his environment as well as of his probable age, all agree in placing the date of his arrival in Europe at an almost inconceivably remote epoch.

Geology is, after all, the court to which observers of whatever class must make their final appeal, and no saner and surer interpreter of the geological evidence could be found than the author of the present work. James Geikie's "Great Ice Age," the first issue of which appeared in 1874 and the last in 1894, in one respect, at least, furnished a new basis for the history of the earth and man; Geikie showed that what is now known as the Pleistocene or Quaternary Period in Europe really consisted of a great series of alternating cold and genial epochs, with corresponding oscillations in the flora and fauna, a view which is now generally accepted and which the author has elaborated in the present work.

Four major glacial and three major interglacial epochs, each of vast duration, are now generally attributed to the Pleistocene in Europe, and in the course of ten lectures the author here deals concisely with each, from a purely geological point of view; at the same time he correlates with them, so far as possible, the archæological stages of man at present recognized; these are seven in number, beginning with the Chellean of the older Palæolithic to the Azilian or transition stage that preceded Neolithic man in Europe. Evidence from successive faunas and floras, from caves, river drifts, glacial and interglacial deposits are briefly reviewed in the light of the most recent observations. The work ends with a succinct history of Pleistocene time, and of man's relation to it in his successive stages of culture, as they have been worked out by De Mortillet and other archæologists. Numerous illustrations and maps accompany the text, which the reader will find perfectly clear, if somewhat barren in style.

Though freely recognizing the possibility of the existence of man during the Pliocene Period in Europe, the author considers that the earliest human remains pertaining to the continent, the authenticity of which is beyond dispute, belong to the Pleistocene. The animals and plants of this entire period are divided into three classes, a southern and temperate group, indicating a genial climate, a tundra or snow-loving group, corresponding to the present inhabitants of the treeless zone bordering the Arctic Ocean, or "barren grounds," as this area is called in North America, and a steppe group, which occupied low grassy plains and high plateaus.

During the milder interglacial times vast herds of deer and wild cattle, as well as elephants, rhinoceroses, and hippopotami, ranged at will over central Europe from the Mediterranean to as far north as Yorkshire in England, and from the borders of Asia to the western ocean. Whenever the climate of middle and western Europe began to approach Arctic conditions, vast annual migrations of mammals and birds took place, and, as sometimes happens to this day on existing tundras and steppes, many were overwhelmed, *en masse*, by the raging blizzards and storms of dust. The mammoth discovered in Siberia, that had been held in cold storage for thousands of years, and was so well preserved that dogs and wolves ate eagerly of its flesh, was probably buried in snowdrifts while on a summer visit to the tundra, and subsequently covered with successive layers of sand and snow. Similarly the vast heaps of buffalo skulls and bones which were found in northern Colorado and Wyoming were probably the remains of great herds that the blizzard and drifting snow overwhelmed.

There appear to have been no sharp transitions in climate throughout the long series of epochs which constitute the Pleistocene era, but only slow changes that led up gradually to profound successive revolutions. Since man has lived in Europe throughout the entire period, and possibly longer, and since no marked change in the physical characteristics of the Old World has taken place in historical times, it is clear that the human race has existed for a vast period. As yet, however, geology can give no exact dates, but, before this subject is scrutinized more closely, the author reminds us that prehistoric time is divided into three periods, the ages of stone, bronze, and iron; the elder Palæolithic age lasted down through the Third Interglacial epoch, marked first by the Chellean, then by the Acheulian, and still later by the Mousterian stages of culture; the Fourth Glacial epoch began with the Aurignacian and ended with Magdalenian man, of artistic temperament; thereafter the Azilian race formed a transition that linked the earlier races to Neolithic man. The suppositional gap between the Palæolithic men, who retired with the final retreat of the ice, and the Neolithic inhabitants of Europe, who came in with the forests, probably does not exist.

Deposits in caves and the erosion of river valleys below them show that Palæolithic man was contented with the rudest of shelters for thousands of years; nevertheless, during the Pleistocene, he advanced from a stage when he used only the simplest and crudest flint implements to one in which he had become an artist in the manufacture of tools and weapons, in stone, bone, and ivory, as well as an adept in the art of drawing.

The second or Tyrolian Interglacial epoch was one of the longest and mildest of the entire Pleistocene series; when this genial time had reached its climax the Alpine glaciers were even less extensive than at the present day; Britain was a part of the continent, and was joined to Iceland and Greenland; the Mediterranean consisted of two enclosed seas, with land-bridges to Africa at both Gibraltar and Sicily; the Baltic was also completely enclosed, and the present North Sea was a great river-plain, the Elbe, the Rhine, and the Thames all forming affluents to one mighty stream. Chellean man hunted the elephant and the rhinoceros where to-day the elusive submarine seeks its prey beneath the waves, and the fleeter aeroplane drops bombs from the sky.

The close of the Pleistocene in Europe did not wholly end climatic disturbances; for a long period lesser oscillations continued to occur, like the feebler movements of a pendulum when coming to rest; and there were the same corresponding changes in the fauna and flora, though on a smaller scale. It was during this time that peat-beds were formed in northern Europe; the sea's level was lowered at least one hundred feet, and the rivers cut down their beds through this depth to the new margin of the ocean; while the land area was thus greatly increased, the climate was considerably ameliorated; but again followed a fresh invasion of the sea, though this time the water rose to only forty or fifty feet; then followed its final return to the present level, and the pendulum had come nearly, if not quite, to rest. In short, Geikie describes for northern Europe a Fifth and a Sixth Glacial epoch, alternating with a Fourth and Fifth Interglacial, and considers that they were correlated with changes similar to those recorded by Professors Penck and Brückner for the Alps. Even these milder revolutions in climate could not have taken place in the twinkling of an eye, but must have occupied thousands of years; the peat, a product of this time, now finds a drier atmosphere, and the old beds are suffering from denudation, and are rapidly wasting away.

In conclusion, the author remarks that he has labored to little purpose if it has not been made clear that man's antiquity is very great: "When we consider that he has lived through a succession of stupendous climatic revolutions; that he has seen widely contrasted floras and faunas alternately occupying our Continent—tundras, steppes, and great forests succeeding each other again and again—we must feel convinced that the few thousand years that have elapsed since the downfall of Babylonian, Assyrian, and Egyptian empires are as nothing compared with the long eons that separate the earliest times of history from the apparition of Palæolithic man in Europe."

Those who must have definite dates, where none can be truly given, he would

refer to the estimates of Dr. Penck, for the reason that they are "based upon a profound knowledge of the geological data, which are best displayed in a mountainous region like the Alps, where all the evidence of glacial and fluviatile erosion and accumulation can be studied more satisfactorily than elsewhere." Penck's figures for the duration of Pleistocene time give a minimum of 620,000 years. Inasmuch as the Chellean stage dates back to at least as far as the middle of this period, it would give us "somewhere between 250,000 and 500,000 years for the antiquity of man in Europe. But if, as recent discoveries would seem to indicate, man was an occupant of our continent during the First Interglacial epoch, if not in still earlier times, we may be compelled greatly to increase our estimate of his antiquity." To continue: "It is not without emotion that we look at the beautiful art-work of the Magdalenian reindeer hunter. And when we remember the conditions under which he lived—exposed to a severe climate and the attacks of many formidable wild beasts, his home a dark cave or rude rock-shelter—we may well be astonished at his attainments as an engraver, a sculptor, and animal painter. With the simplest of tools and appliances, his best efforts rival, if they do not sometimes excel, those of our modern art-schools, and must ever be a marvel to critics who may have nourished the belief that such attainments are only possible in a civilized community.

"When we think of the countless multitudes of unknown nameless folk—of the innumerable generations of primitive peoples passed into oblivion ages before the dawn of the earliest civilizations known to history—we recall the words of the grand old physician of Norwich: 'The number of the dead long exceedeth all that shall live. The night of time far surpasseth the day, and who knoweth when was the equinox?'"

An honorarium was recently offered for the preparation and delivery of a lecture on eugenics by a suitable member of the faculty in each of thirty-two American colleges and universities. The donor of the fund hoped in this way to disseminate trustworthy information regarding eugenics among many thousands of young adults. The plan seems to have worked out well, for in the group of scholars procured as lecturers we find the names of professors who rank high in their respective branches and whose opinions on the subject of eugenics could scarcely fail to be interesting and valuable. Twelve of the lectures are reported in full in the volume before us, "Eugenics: Twelve University Lectures" (Dodd, Mead; $2 net). In the series, the subject is presented from several different points of view corresponding to the special fields in which the main work of each lecturer has been done. The first lecture is of a general character and is provided by Professor Davenport, of the Carnegie Institution. Professor Vaughan, of Ann Arbor, discusses "Eugenics from the Point of View of the Physician." The view of the physiologist is described by Professor Howell, of Johns Hopkins. Others deal with the genetic, the ethical, the economic, and the general social view. The last lecture of the series, that by Professor Thorndike, of Columbia University, treats of "Eugenics with Special Reference to Intellect and Character." The volume will be welcomed by readers who wish to know the opinions of this much-discussed subject held by thoughtful men occupying university chairs, especially as newspapers and magazines during the last year or two have given space to many ill-considered and irresponsible pronouncements.

Art

TAPESTRY.

Tapestry Weaving in England, from the Earliest Times to the End of the XVIIIth Century. By W. G. Thompson. New York: Charles Scribner's Sons.

This book, with much citation of documents, sums up present knowledge of the history of tapestry weaving in the British Isles. The title, it may be noted, in limiting the subject-matter to England, is technically misleading. There is an instructive chapter, with information drawn from the State papers of Scotland, on the tapestry decorations that figured at Holyrood House when James IV was married. Ireland also comes into the record, for in 1677 Charles II, who had neglected the tapicer's art in England, gave support to a short-lived "Royal Manufactory of Ireland."

The comprehensive story of the Mortlake tapestry enterprise is by far the most interesting and valuable part of Mr. Thompson's work. From the fourteenth century to the beginning of the seventeenth, tapestry weaving, though practiced in England, was carried on for the most part in obscure and isolated shops. The output, although often of good quality, did not compare favorably in quantity or magnificence with the product of Flemish and French looms. Except, indeed, for Mortlake, the history of British tapestry must have been of insular and antiquarian concern. Only under Jacobean and Cromwellian patronage did England for some years witness the making of tapestries that were quite the best of their period. Their excellence, in fact, down to now, so Mr. Thompson believes, has hardly been appreciated by reason of a tendency among critics to depreciate all the arts of the seventeenth century. Because the Mortlake works are more pictorial, less naïve, and decoratively "amusing" than earlier pieces, it has until recently, especially in Great Britain, been "almost impossible to obtain a single word of praise for the masterpieces of our national manufactory. On the Continent these were always regarded with admiration; and now, in England, with the development of a more catholic taste in matters artistic, Mortlake tapestries are beginning to receive the studious and sympathetic appreciation they deserve, were it only for their splendid decorative quality and unrivalled technical achievements."

The narrative of Mortlake starts from a report made to James I that certain horizontal looms—*basse lisse* as opposed to *haute lisse*, and capable of enlarged output at decreased cost—were successful in France. A detailed description of their methods was obtained, and this was submitted to an advisory committee. By these the project was entrusted to Sir Francis Crane, an energetic man, and, by reputation, keen for favorable balances. Two workshops were fitted out at Mortlake, Surrey, and here in 1620 were settled fifty Flemish weavers and their families. An initial set of nine tapestries, for which the King had allowed an appropriation of £2,000, yielded a book profit of more than £1,000, which, however, was reduced by much trouble in collecting the money. Thereafter, with Sir Francis frequently complaining of slowness of payments, the manufactory entered upon a career of great technical success. Crane died in 1636, the royal treasury then owing him about three thousand pounds.

Strife between King and Parliament naturally disturbed Mortlake. Orders from abroad, however, and from the Dutch Congregation of London helped out, and presently, under the Commonwealth, "contrary to the popular impressions of the character of the Roundheads (especially as expressed by the bygone generation), the greatest sympathy was extended to the industry, and attempts were made to revive its prosperity in every way the Council could devise." Ten panels now at Hampton Court, representing The Triumph of Julius Cæsar, after Mantegna, were woven under personal supervision of Sir Gilbert Pickering, a Commonwealth appointee. In technical soundness and pictorial brilliancy they were the best tapestries made at Mortlake.

Charles II took no interest in the manufactory, though prominent statesmen sought to give it commissions. In 1667 important governmental work was placed, and soon after that the weavers did the series depicting incidents of the Dutch War, now at Hampton. The zenith of prosperity had been passed, nevertheless, and the decline could not be stayed. Under succeeding reigns the buildings became ruinous, and the best workmen sought other callings. In 1703 the royal manufacture of tapestry ceased.

Private initiative, nevertheless, kept the art alive under Anne and the first Georges. The celebrated John Vanderbank, tapicer, of Great Queen Street, is commemorated in a Tatler poem urging him to depict "in silk and gold and scenes of Action" the glorious successes of Marlborough's army. Stephen Demay produced excellent tapestries, and the last of the great tapicers before the revival in the nineteenth century, Paul Saunders, of Soho, whose name has lately been rescued from obscurity, was, in handling of soft, low-toned yarns, an indubitable master. The history of William Morris's restoration of the art at Merton Abbey is outside the limits set by Mr. Thompson for his admirable book.

Drama

"THE LAST LAUGH."

The best thing about Paul Dickey and Charles W. Goddard's "The Last Laugh," at the Thirty-ninth Street Theatre, is its length. It does not start—or did not—until after 8:30 o'clock, and it is over at a little before 10:30. There are amusing moments in it, and these are relied upon by its authors and its producers to carry it over the barren spaces. Towards the end, it is saved from running down prematurely by being taken bodily in hand by a resourceful character, who gives it a new turn and so postpones the already evident outcome. Its theme is that of the man-monster, Frankenstein, whom it takes a rather long time to pull through his last stage of manufacture, but the audience was patient and was rewarded by several surprises. The laboratory scene, with electrical contrivances going at full speed, doctors in hospital garb, and kindred effects, had a certain impressiveness, and Edward Abeles, as one of the pair of fake Frankensteins, was occasionally diverting, but the scaffolding most of the time was altogether too conspicuous.

D.

Three plays by Maurice Donnay, "Amants," "L'Affranchie," and "Eux," translated by Barrett H. Clark, occupy the latest volume of "The Modern Drama Series" (Mitchell Kennerley), edited by Edwin Björkman. Of the brilliant, if somewhat superficial, cleverness of the first two there can be no question, but the third, a juvenile essay, is in no way remarkable, even as a bit of humorous extravagance. In a prefatory note Mr. Clark cites "Lovers" and "The Free Woman" as conspicuous examples of Donnay's "penetrating insight into human nature." The phrase is not fortunate. That they are exceedingly clever satirical sketches of an almost exclusively French phase of modern society may be readily granted, but as veritable studies of human nature, especially of feminine nature, they are often wholly incredible. The personages act in accordance with theatrical needs, rather than human impulses. Most of them are types which have long been familiar on the French stage, while the atmosphere in which they exist and the adventures in which they figure are entirely artificial, as is the superior dialogue with which most of them are provided. It is difficult to understand how M. Donnay can be included among the realists, except upon the ground that, in dealing with delicate subjects, he leaves very little to the imagination. Notwithstanding the essential veracity of many of his details, and the emotional trials which his heroines undergo or impose upon others, he paints his demi-monde in roseate colors. Over the tragic and baser side of it he throws a veil, or rather he drops the curtain before he reaches it. It is the *facilis descensus* only that he shows. But his artistry is great and his knowledge of one section of the Parisian world, thoroughly expert. Neither his women nor his men are vital, except as special instances of extreme types assembled for a special purpose. The virtues of the plays are literary and technical, and these are sufficient, perhaps, to justify their inclusion among the notable examples of modern drama, but the literary values are scarcely expressed in the present translation, which, however literally exact, does not always reproduce the smoothness, point, and sparkle of the original.

"Plays of the Pioneers" (Harper) contains half a dozen pageant plays by Constance D'Arcy Mackay on American legendary or historical subjects. Their nature may be sufficiently indicated by their titles, "The Pioneers," "The Fountain of Youth," "May-Day," "The Vanishing Race," "The Passing of Hiawatha," and "Dame Greet of Portland Town." They are designed for easy production in more or less rural communities, and may be commended as well suited to their purpose, being intelligently and simply written and offering abundant opportunities for the musical, the processional, and the picturesque, without requiring the costly. The author of these pageant plays has a good notion of the aims and limitations of the type.

Finance

A YEAR AGO.

One year ago, within a few days, the world's financial markets, suddenly realizing what was about to happen, made what hasty preparations they could to bear the brunt of the economic storm. What the financial result would be, the most experienced European financier did not venture to predict. The Stock Exchanges knew what would happen first, and on Friday, July 31, the London institution, quickly followed by that of New York and the rest of the world, abruptly closed its doors. The London bank rate rose to 8 per cent.; it went to 10 next day, and the run on the Bank of England, which was to be averted only by declaration of a series of extra holidays in which no maturing financial obligations could be enforced, followed two days later.

Now that the full twelvemonth has elapsed since the war really began, from the financial markets' point of view, it is in order to ask whether the expectations and apprehensions of those first days have or have not been fulfilled. The question might be answered either yes or no, according to what are assumed to have been the expectations of that time. But it would not be easy to say what actually was expected.

We had, however, very soon after the first brief period of chaotic panic had elapsed, a few very definite predictions. Perhaps they may be thus summed up: Germany would be crippled economically, by the destruction of her foreign commerce; she would soon feel the strain of raising the necessary war loans. England would call in all her capital from abroad. At the first opportunity, all Europe would be throwing its billions of dollars of American securities upon the New York market. Prices on our Stock Exchange would break by twenty, thirty, or fifty points; all of our gold would be drawn away, to London or the Continent. We should suffer the consequences of banking failures in European cities. The prodigious issues of European war loans would drain away the capital of the world, including ours. Our foreign trade would shrink to small dimensions; our commercial and financial prestige would sustain a heavy blow.

Not one of these predictions has in the long run been fulfilled. Whatever the German Admiralty and the German Foreign Office may have inserted in their public statements, with a view to defending the drowning of non-combatants on the seas, Germany has not yet been crippled economically. As yet, it is not easy to prove that the burden of floating three to four billion dollars' worth of war loans has strained her home resources.

England has raised, with still less difficulty, loans running to even more unprecedented totals. She has not called home her foreign-invested capital, except for a few hundred millions in securities gradually sold on the New York market. Instead of a break on the New York Stock Exchange, there is in progress now a second excited "bull movement" in stocks. Instead of losing all our store of gold, the stock of the precious metal in the United States to-day exceeds by more than $100,000,000 that of a year ago, and has this month crossed the $2,000,000,000 mark for the first time in history.

Instead of our having lost financial prestige among nations, London has openly resigned to us, for the period of war, the post of central money market of the world; we are lending to neutrals and belligerents, and exchange on every European market has swung unprecedentedly in our favor. There have been no great banking failures, even in Europe. Our foreign trade, since 1915 began, has risen to the largest recorded volume; but not because of neutral markets.

Such is the curious outcome of a chapter in history and political economy which, considering all the forces involved in it, is new to the world's experience.

A question which now unavoidably arises is whether this wrecking of the predictions of the experts, in the first twelve months of war, may be accepted as a forecast of the trend of events hereafter, while the war continues, or whether what has happened thus far was something due to peculiar and more or less temporary influences, which will not outlast another year. If the war goes on, it still perhaps remains to be fully tested whether Germany can endure a very much longer continuance of the economic strain; whether England can keep up its present scale of expenditure, without a real strain on the money market, and how far the abnormal credit expedients, in use on all the European money markets, will continue to work smoothly.

It is a matter of doubt whether the United States can continue to import gold, on anything like the scale of the past six months. Our grain exports may easily fail to play the extraordinary part performed by them in the past season's export trade. But the office of the world's money centre seems, at least from the present indications, to be ours more surely than it was six months ago. Behind all this stand the even larger problems, what the fortunes of the war itself will be in the coming year, what will be our own

relations to it, and just what situation would be created here by indefinite prolongation of the conflict, or by the sudden ending of it.

Standard Measure for News

¶ The New York Evening Post has no hard-and-fast definition of news, by which to guide or limit its staff in gathering and presenting the current news of the world. In general, its standard remains what it was when it was stated in the first issue of the paper, more than a century ago, on November 16, 1801:

> The design of this paper is to diffuse among the people correct information on all interesting subjects, to inculcate just principles in religion, morals, and politics; and to cultivate a taste for sound literature.

¶ "Correct information on all interesting subjects," is still the standard. It aims to present to intelligent, forward looking readers a true, discriminating, well-proportioned account of the daily happenings of the civilized world, together with such further general information and comment thereon by its editors or others as may seem timely and useful. There is constant and vigilant effort to keep the columns of the paper clean, responsive to the best taste of the people in matters both of style and of subject-matter; yet without an undue strictness of censorship which might arbitrarily exclude matters of interest and importance about which intelligent folk should be informed.

¶ In a word, it is the effort of The New York Evening Post to keep up with the best and most virile intelligence of the day; to represent and have part in the discussion of all the subjects which clean, upright, and well-informed men and women find it to their interest to discuss, in the home, in social life, and in business activities of all kinds.

Plain Facts
for Both Sexes

This is the most complete book ever written upon the subject of relations between the sexes. It treats fully of the vital matters upon which every man or woman, young or old, should be informed. The author, Dr. J. H. Kellogg, speaks from the standpoint of over forty years' practice. During most of this time, he has been Superintendent of the great Sanitarium at Battle Creek, where he has had opportunity to treat and prescribe for thousands of cases of weakness due only to ignorance of vital matters. Dr. Kellogg deals with facts. He sets forth plainly the truths of—

Social Hygiene

Dr. Kellogg's style of writing is so clear and concise that it can be understood by anyone. He tells you how to care for yourself so the health and future of your family may be fully protected—yet Dr. Kellogg handles the subject with such delicacy that not even the most sensitive need be offended. The book contains nearly 800 pages, with many illustrations and colored charts of the human body and its parts. Price in library cloth binding $3—in half leather $4. Order to-day. You take no risk. If you are not entirely satisfied with the book, it may be returned for prompt refund. Address your order and remittance to—

GERMANY EMBATTLED
An American Interpretation
By OSWALD GARRISON VILLARD

"The most sympathetic book on the war from America's viewpoint."—*William Allen White in the Emporia Gazette.*

"It is a wise, calm, and all-embracing review of the attitude of those Germans in America who have made the Kaiser's war their war, and it leaves them not a leg to stand upon."—*Henry Watterson in the Louisville Courier-Journal.*

"A remarkable book."—*Philadelphia Public Ledger.*

"The book is high-minded; it is truthful; it is worthy of America. So justly, and in the main so tactfully, has the author expressed his message, that his treatise may well stand before the world as perhaps the clearest and most succinct expression of the American attitude."—*North American Review.*

"No war library will be complete without this volume, which is written with convincing force."—*Pittsburgh Dispatch.*

"The strangling of Democracy, the blow to Germany's prestige as a seat of learning, the wreck of her reputation for faith and honor . . . these, and other subjects, Mr. Villard discusses with frankness, with courage, with conspicuous ability."—*Harvard Graduates' Magazine.*

"Exceptionally interesting in its sympathetic viewpoints and its frank treatment of the subject matter."—*Duluth Herald.*

"In a day when it is almost necessary to be a partisan, the very fairness of this little book has the fearlessness of a real triumph of intellect."—*Columbia State.*

VALUABLE BOOKS CONCERNED WITH THE PRESENT WAR

EVERY LIBRARY AND INTELLIGENT MAN SHOULD PURCHASE AND READ THEM

Nationality and the War
By ARNOLD J. TOYNBEE. *Net, $2.50*
A study of the problem of nationality as the underlying cause of the present war, and the chief obstacle to the establishment of permanent peace.

War: Its Conduct and Its Legal Results
By THOMAS BATY, LL.D., D.C.L., and Professor J. H. MORGAN. *Net, $3.50*
A critical study of emergency legislation; neutrality; the laws of war; and a complete study of the effect of war on commercial relations.

The Interpretation of History
By LIONEL C. JANE. *Net, $1.75*
A record of progress from the conflict of individuals through that of nations toward ultimate universality.

Peace and War in Europe
By GILBERT SLATER. *Net, $1.00*
A singularly capable, sincere and impartial consideration of the forces which make for war and for peace.

War Cartoons
By BOARDMAN ROBINSON. *Net, $1.50*
A permanent record of the war, grim, sardonic, impressive.

Evolution and the War
By P. CHALMERS MITCHELL. *Net, $1.00*
Showing in what way the laws of nature apply to and are illustrated by the war.

One American's Opinion
By F. W. WHITRIDGE. *Net, $0.50*
A frank, forcible, and absolutely sincere reply to the German appeals for American sympathy.

The Nations at War
By LIONEL C. JANE. *Net, $1.00*
A forecast of the political and moral results of the Great European War.

The War Week by Week
By EDWARD S. MARTIN. *Net, $1.00*
Observations from "Life."
It is just what you would expect a Life book on the war to be like: alive, bright, original, prophetic.

The Human German
By EDWARD EDGEWORTH. *Net, $3.00*
A penetrating, comprehensive and entertaining picture of German civilization.

Modern Germany
By J. ELLIS BARKER *Net, $3.00*
Fifth edition revised to date of the best summary in print of Germany's problems and policies, the causes of her successes and failures.

The Irish Nuns of Ypres
By DAME M. COLUMBAN. *Net, $1.25*
A simple and effective narrative giving the bombardment of Ypres by the Germans, the suffering of the nuns and their quiet heroism.

Builder and Blunderer
By GEORGE SAUNDERS. *Net, $1.00*
An appraisement of the personality and policy of the German Emperor since he ascended the throne.

The German Enigma
By GEORGE BOURDON. *Net, $1.25*
A frank exposition of German policy and German feeling.

On War 3 Vols. *Net, $7.50*
By Gen. CARL VON CLAUSEWITZ.
"No other work has surveyed the whole field of strife in a more impartial or comprehensive manner."—*The London Times.*

MILITARY HANDBOOKS
For Officers and Non-commissioned Officers

Military Law: Its Procedure and Practice
By S. C. PRATT. *Net, $1.50*

The Principles of Strategy
By CAPT. EDWARD NASH. *Net, $1.25*

Letters on Strategy
By PRINCE KRAFT zu HOHENLOHE-INGELFINGEN. *2 Vols., Net, $10.00*
With five maps and plans.

France in Danger
By PAUL VERGNET. *Net, $1.00*
An important exposure of the methods and purposes of the notorious Pan-German League.

The War and Lombard Street
By HARTLEY WITHERS. *Net, $1.25*
A forceful, lucid explanation of the widespread shock of the war in public finance.

The Origins and Destiny of Imperial Britain
By Prof. J. A. CRAMB. *Net, $1.50*
The most thrilling, inspiring analysis in print of those high national ideals for which Britain is justified in making war.

Germany and England
By Prof. J. A. CRAMB. *Net, $1.00*
Accepted everywhere as the most valuable book on the deeper causes of the war. Over 130,000 copies have been sold.

The Tollhouse
By EVELYN ST. LEGER. *Net, $1.00*
Portraying the life of an English village during war times with tenderness and charm.

Italy's Foreign and Colonial Policy
By TOMMASO TITTONI. *Net, $2.50*
"A volume which should constitute another link in the chain of Anglo-Italian friendship."—*Richard Bagot.*

Pro Patria
Compiled by W. J. HALLIDAY. *Net, $1.00*
A Book of Patriotic Verse.

The British Navy
By ERNEST PROTHEROE. *Net, $2.50*
A masterly hisory of a thousand years' seapower and Empire.

The Inner History of the Balkan War
By Lt.-Col. R. RANKIN. *Net, $5.00*
A comprehensive first-hand account by the correspondent of the London Times.

THE UNDYING STORY By W. DOUGLAS NEWTON *Net, $1.25*
The famous retreat of the British from Mons to Ypres. Possibly the most vivid and remarkable piece of descriptive work the war has produced.

Price subject to revision on publication.

LITTLE, BROWN & COMPANY
Publishers Boston, Mass.

I'm the only man who can sell these 10¢ Cigars for 5¢

When I first began to buy rare Havanas for my own personal use they cost more. But soon all my friends wanted to order with me.

Before I knew it, my hobby as a fancier of fine cigars grew into a business. One man told another. Today 12,000 men in every state rely on me to divide up with them. So I'm using 2,000,000 cigars a year. Such volume means a great saving to all of us.

Not Sold at Stores

If you bought my cigars at a store—paid the dealer's profit, salesman's salary and expenses—you would pay $10 per hundred. But by joining me in this co-operative plan you can get them for only $5.00 per hundred—$2.60 for 50. You not only save 50 per cent, but you get a cigar of unmatchable quality—mild and sweet, not heavy and strong.

For forty years I've smoked cigars made solely from the choicest tobaccos grown in the Vuelta district in Cuba. I've never been able to find any flavor or aroma so delightful. Certainly not in ready-made cigars.

First Five Free

Just to convince you that you cannot duplicate these cigars for twice the cost—smoke five at **my** expense. Merely send 10c for packing, postage and revenue, with your letterhead, business card or reference. I'll then send you a box; pick out five and smoke them; then, if you are delighted, send me a check, and I'll replace, free, the five you smoked.

A TEXT BOOK OF THE WAR FOR AMERICANS

By J. Wm. White, M.D., Ph.D., LL.D.

"It is undoubtedly the most effective compilation of facts, quotations, and citations yet contributed to the vast literature on this subject. As an effective argument, it is a cross between the 42-centimeter cannon and the French 75—tremendously destructive like the former, and smooth in action like the latter." —*Ex-Attorney-General James M. Beck.*

CANADIAN FINANCE

An Independent Journal

Investment, Banking, Insurance, Trade, Public Affairs

S. R. TARR, M.A., Managing Editor. WINNIPEG, CANADA Annual Subscription In United States, $2.50

¶ Since the outbreak of the war, the United States has been Canada's banker to the extent of some $135,000,000—over and above one-half billion dollars previously invested in the Dominion.

¶ American investors are finding more and more to interest them in the columns of CANADIAN FINANCE, a publication that has come to be recognized as at once reliable, well-balanced, fearless—and readable.

¶ Published "where East meets West," it is notably the one journal that surveys Canadian investments without sectional bias.

¶ Knowing that the readers of The Nation do not include the idly curious, the publishers of CANADIAN FINANCE will be glad to send the journal with their compliments for one month to anyone making request upon blank printed below.

The Nation

NEW YORK, THURSDAY, AUGUST 12, 1915.

Summary of the News

The three British notes, the text of which, as we announced last week, was published on August 4, dealt, respectively, with the American protest of March 30 against the British Orders in Council, with a protest on the procedure of British prize courts, sent from Washington on July 14, and with the seizure of the cargo of the Neches, which was the subject of a protest by the United States in a telegram under date of July 15. The first of the British notes was dated July 24 and the other two July 31. Comment on the substance of the notes will be found in our editorial columns.

The general tone of the notes is noticeably friendly and businesslike. By the press of this country they have been received in a similar spirit. With a few exceptions, on the one hand approving, on the other condemning, with little qualification, the general opinion of the press is that, though Sir Edward Grey has made a plausible argument, he has failed to meet squarely or to dispose of the contentions of the United States Government. The question is, however, generally conceded to be justiciable, and emphasis is laid on the distinction that should be drawn between the issue with Great Britain and that with Germany, the one involving property, the other lives of American citizens. The part of Sir Edward Grey's communications which has provoked most unfavorable comment is that which refers to German violations of international law, implying that in these violations may be found justification for extra-legal steps which Britain may have found it expedient to take. The note on the subject of the Neches was supplemented orally by the British Embassy in Washington on August 7, when it was explained to the State Department that the ship was not, as had erroneously been understood from the brief wording of the note, taken in reprisal for violations by Germany of the rules of naval warfare, but in accordance with the Orders in Council, the legality of which was defended in the note of July 23.

The latest German note on the case of the William P. Frye was given out for publication by the State Department on August 4. The note maintains the German contention that the destruction of the vessel did not constitute a violation of the Prussian-American treaty of 1799, and proposes that the amount of the indemnity to be paid be determined either by two experts designated respectively by the Governments of Germany and of the United States, or that the differences between the two Governments be submitted to arbitration at The Hague.

Eight British trawlers and eight other vessels have been sunk by German submarines since we wrote last week. Of the latter, four were British, one Belgian, one Danish, and two Swedish. The sinking of a British transport in or near the Dardanelles was reported by the Sayville wireless early last week, but the report has received no confirmation. Dispatches from Constantinople on Monday recorded the official announcement that the Turkish battleship Barbarossa had been sunk by a submarine of the Allies. The British cruiser India, according to the Sayville wireless on Tuesday, has been sunk by a submarine off the coast of Sweden, and from Constantinople on the same day came the report that a submarine of the Allies had been sunk by an aeroplane. The report of the British Board of Trade for July shows that sixty-two British steamers and sailing craft were sunk by German submarines during the month, with the loss of sixty-three lives.

The seizure of the American cotton ship Dacia was confirmed by a French prize court on August 4.

The French Chamber of Deputies on August 6 passed a bill carrying an appropriation of 120,000,000 francs to be used in the purchase of wheat and flour to feed the civilian population.

The Russian Duma on August 3 unanimously adopted a resolution declaring it to be the Empire's determination not to conclude peace before victory should be complete and pledging the willing assistance of the entire population for the creation of fresh means for continuing the struggle.

We allude elsewhere to the revelations in the second Belgian Gray Book, published on August 3, according to which Herr von Jagow, the German Foreign Secretary, in April, 1914, had made proposals to the French Ambassador in Berlin for the partition of the Belgian Congo. The text of this note was published in the New York *Times* of August 7.

With the fall of Warsaw, which took place on August 6, and the elimination for a considerable time to come of the armies of Russia as an aggressive force, the attitude which may be taken by the Balkan states becomes of increasing importance. Representations regarding the political situation were made to M. Gounaris, the Greek Premier, last week, when the British, French, Russian, and Italian Ministers at Athens made a collective visit to him, presumably with a view to inducing Greece to cede to Bulgaria that portion of Macedonia which came under Greek rule after the second Balkan war. Strong pressure has also been brought to bear on Servia by a similar Ministerial visitation to the Premier, to induce her to give up the Macedonian territory under her rule which Bulgaria demands. Dispatches from London on Monday asserted that Servia had yielded to the pressure of the Allies, but that Greece was still recalcitrant, opposing the suggestion that she should surrender Kavala to Bulgaria. Hope, however, is expressed that the Greek policy may be changed after the reassembling of Parliament, when M. Venizelos will presumably have been restored to power. The attitude of Rumania, apparently, remains anti-German, but not definitely pro-Ally. Count Reventlow, in a recent article, warned his compatriots that they must abandon any hope of attaching Rumania to their cause, stigmatizing her neutrality as "malevolent" on account of her refusal to permit exports of grain or the passage through her territory of munitions for the Turks.

Seventy-five lives were lost and damage to property to the extent of some $6,000,000 was caused by a cloudburst in Erie, Pa., on August 3.

The domestication of the Moose seems to continue. Two more prominent members of the Progressive party, Frederick M. Davenport and Chauncey J. Hamlin, last week followed the example of Theodore Douglas Robinson in announcing their reëntry into the Republican fold.

That the Administration is determined not to abandon its fight for the Ship Purchase bill was made evident by a letter from Secretary McAdoo last week to the president of a Southern chamber of commerce, in which he pleaded for the support of the South for the measure on the ground that an adequate number of American ships would have maintained both the price and the foreign markets for cotton.

The result of conferences last week in regard to the Mexican situation of representatives of the United States and of Brazil, Argentina, Chili, Bolivia, Uruguay, and Guatemala, was the decision that individual appeals from each state should be addressed to the warring factions of Mexico. Secretary Lansing on Monday stated that "we have reached a stage where a very definite policy has been decided on." Gen. Carranza apparently is unappreciative of the Pan-American efforts that are being made on behalf of his country. The Guatemalan Minister was expelled from Mexico on August 7 and the Brazilian Minister was withdrawn by his Government on Monday because, it was stated, Carranza was prepared to accord him similar treatment.

The situation in Hayti is apparently under control. Rear-Admiral Caperton has reported that business conditions throughout the island are improving on account of renewed confidence on the part of the native officials as to the intentions of the United States towards the country. The Presidential election, which was to have been held on Sunday, was postponed. Gen. Bobo, the revolutionist leader, according to dispatches to the Navy and State Departments, has resigned as chief executive, dismissed his Cabinet, and ordered his generals in the north to deposit their arms with the American authorities at Cape Haytien. The entire Administration of the island has been taken over, temporarily, by the United States Government.

Bernardino Machado was elected by Congress President of the Republic of Portugal on August 6.

The Cabinet crisis in Japan has been settled. The Premier, Count Okuma, it was announced on August 8, at the request of the Emperor, has decided to withdraw his resignation and has re-formed his Cabinet. Following the example of Mr. Asquith at the time of the now almost forgotten Ulster crisis, when he tided over a difficult period by himself assuming the Secretaryship of War, Count Okuma becomes for the time being his own Foreign Minister, Baron Kato having declined to retain the portfolio.

The Week

Several, not joint, is to be the form of the Pan-American appeal to the warring Mexicans. The effect will be much the same. If Brazil and Argentina and Chili, Uruguay and Bolivia and Guatemala, make their representations to Carranza and the others separately, the result will be very like dispatching an identic note. At the same time, the South American Governments could avoid the appearance of making themselves a mere tail to the United States kite. They could allege their own initiative and their entire independence. Either way, the strength of the movement, both in its immediate purpose and as exhibiting a harmonious understanding among the American republics, would be very marked. President Wilson is reported to be greatly encouraged by the ready coöperation which he has secured from the South Americans. It is really a fine stroke of policy, and will have a lasting influence. From the field of civil strife in Mexico come conflicting stories. The weakened and fading factions in the north under Villa are naturally willing to confer to bring about peace. In behalf of Carranza, who seems to be winning everywhere, it is stated that he is ready to come to terms, in a military sense, with any or all of the chiefs opposing him. If they stop fighting, he will! But he makes the point that he should not be asked to step aside until, by military "decree," he has enacted the reforms for which the revolution has contended. Directly after that, he would summon Congress and arrange for a Presidential election. Bearing in mind Mexican historic precedents, as embodied in Comonfort and Juarez, there is some force in this plea. To deal with it wisely will task Pan-American diplomacy.

The details of the alleged offers of the Kaiser to the Czar were scarcely credible, and, even if tentatively put forward, were easy to repudiate, if necessary. No direct approach of the German Government to the Russian seems probable at this time. Yet the thing is in the air. The Russian armies have been driven back as were the French last autumn. By so much, Germany is in the position of a conqueror, entitled to propose terms of what the Emperor William calls "an honorable peace." It is not in the least likely that anything which may yet have been advanced, in a roundabout way, would be acceptable to Russia. But it is undeniable that the German public has been prepared for the idea of making offers to the Russians which they could at least consider. The various hints and suggestions which have appeared in German newspapers within the past two months look that way. And the general tone of the talk has been that, after all, there is no reason why Germany and Russia should not agree to live and let live. There are no fundamental causes of lasting enmity between the two peoples, it is said. Minor grounds of estrangement and quarrel could be disposed of, if only there were good will on both sides, etc. Why not go back to Bismarck's policy of maintaining a firm friendship with Russia?

Regarding such approaches to Russia, two things are to be said. They are a singular retreat from the anti-Russian fury of the German press at the beginning of the war. Then we heard of nothing but the barbarian hordes bent on spreading an Asiatic *Kultur* over all Europe. The spectre of Slav domination was used to affright the world, while justifying Germany. There could be no security for the civilization of Western Europe till the Muscovite power was forever broken. Pages could be filled with the outcries of this kind then so common and so shrill in Germany. Now all this is to be forgotten, and Germans are again to be accustomed to the thought of living in good understanding with their neighbor to the east. Such changes in national passions in war time are not unexampled, but the Russians show no signs of being greatly impressed by them. The second point to be made against expecting the recent rumors of peace between Germany and Russia to come to anything definite is the plain fact that the Russians are not yet reduced to such desperation that they feel compelled to undergo a national humiliation. And as such would be felt the acceptance of any offers coming from Germany that have yet been hinted at. Besides tearing up her treaty agreement with France and England not to make a separate peace, Russia would have to put a bitter cup to her own lips. That she will do either, so long as she has the power to resist, is not to be believed.

In one thing at least English professors surpass the German: they say what they think about their Government's position in any given international controversy. We have before had occasion to point out the fact that several English authorities on international law have dissented from the views of blockade held by Mr. Asquith and Sir Edward Grey. In the last number of the *Quarterly Review* there is an article by Dr. John P. Bate, in which he upholds at several points the protest of the United States Government against the British Order in Council. Thus he writes, apropos of the claim of right to seize goods consigned to a neutral port, on the ground that their ulterior destination may be Germany: "This is not permissible in the case of non-contraband goods." Likewise of the asserted right of British ships to "seizure of innocent, neutral-owned goods in a neutral ship trading between neutral ports, if the goods be of enemy origin," Dr. Bate declares: "This is an almost unheard-of claim." We merely add that he has been recognized for years as an expert in international law, both at Oxford and in the University of London. His courage in speaking out against the contentions of his own Government in time of war is noteworthy: the freedom to do so which he enjoys in England is still more so. This is an English possession which we can imagine even German professors coveting.

"A ridiculous invention" was the first characterization in Berlin of a disclosure made in the new Belgian Gray Book. This was to the effect that the German Minister for Foreign Affairs had proposed to the French Ambassador, early last year, a division of the Belgian Congo. Herr von Jagow was also reported to have said to M. Cambon that the day of small nationalities had passed. Only the big Powers could be considered in the matter, especially, of colonization and seizure of land in Africa or elsewhere. All this was vehemently denied in the earliest dispatches from Germany, but, on second thoughts, the *Norddeutscher Zeitung* admits that there may have been something in it. It concedes that there were negotiations of the general tenor alleged, and that the German Foreign Office held the view that "perhaps the Congo would be an appropriate subject for general agreements." But there was no intention of violating Belgian rights. Herr von Jagow merely believed that Belgium would be "unable financially to meet the requirements," and that it "generally was doubtful whether the small countries were financially strong enough to administer large colonies." For a denial, this is about as strong a confirmation as could be asked. In connection with it, the rumor comes that Herr von Jagow is to be dismissed from office. This need not be credited in order to make one believe that he has fallen out of favor. Both in this proposal relating to Belgian Congo and in the negotiations preceding the war he committed the unpardonable diplomatic sin of telling the truth.

From recent official dispatches, supplemented by the story of the last few hours of Russian rule in Warsaw sent by the correspondent of the London *Times*, it appears that the evacuation of the Polish capital was due less to the immediate danger of envelopment for the Russian army than to a desire to avoid a bombardment of Warsaw. On August 4 the suburbs of Warsaw were in flames, the explosions of shells were visible from the Vistula, and the city itself was bombarded from the air. An army might have maintained itself in the Polish capital for some days, but the havoc wrought would have been out of all proportion to the advantages gained. That the fall of the city might have been delayed is arguable from the very stubborn resistance made by the Russian lines to the northeast of the capital in the Lomza and Ostrow region guarding the Warsaw-Petrograd railway. This fact is admitted in the Berlin dispatches. Accordingly, it would seem that where there is an important military object to be gained, the Russians are still in condition to offer fairly serious resistance, though it is not a question of checking the enemy but only of delay measured in days. The situation as a whole is clearly developing towards a linking up of the Germans around Warsaw with the forces of Gen. Woyrsch on the middle Vistula and of Gen. Mackensen coming from the south, to be followed by an attempted advance east of the Vistula.

It is now almost exactly six months since the German Admiralty proclaimed its submarine "blockade" of Great Britain, and announced that "every hostile merchantman . . . will be destroyed." What are the net results of military value? One great aim of the campaign was to cut off supplies from England—especially foodstuffs. Without imported food, England would starve. Thus the English threat of starving out Germany was to be retorted. Yet during the first five months of submarine activity in British waters, the official figures of imports show that 100,000 tons *more* of foodstuffs were received in England than during the corresponding five months of 1914. This does not look as if the German plan of reducing England by starvation were succeeding any better than the British scheme to leave Germany with only half enough food to live on. As for the actual destruction of British shipping—virtually all of it insured, by the way, so that the owners lose nothing—it is variously estimated, but is surely less than one per cent. of the vessels actually coming and going through the war zone. Lloyd's Register has recently issued the quarterly returns of new ships—leaving out men-of-war—under construction in British yards at the end of June. The total is 1,500,000 tons. The tonnage of the ships sunk by the Germans is a little over 200,000. Thus the British mercantile marine is not exactly disappearing. In fact, despite the submarines, the year has been one of large profits for shipowners.

Count Reventlow points out that the alliance against Germany now comprises Russia, England, France, Belgium, Servia, Italy, Japan, and Geography; and that only to the last named ally can be attributed such successes as have been scored against Germany on the sea:

> How must it be with British reliance [says Count Reventlow] when the First Lord of the Admiralty boasts of having driven German trade off the seas? That is less due to the accomplishments of the British fleets than to the geographical configuration of the North Sea. The British Isles dominate the exits, making barriers for trade remarkably easy.

It is plain that if the North Sea were as big as the Pacific, or Germany were situated off the coast of Tasmania, things would be different. For the nation of *Realpolitik*, for a people that scorns sentimentalities when it comes to the business of war, and insists on hard facts, it is rather odd to complain against the North Sea being where it is. It is the German way of using science to make a special case. We have been told that the war was a biological necessity for Germany, because she has seventy million people, and a geographical necessity because Germany lies where it does. The invasion of Belgium was also justified by geography. Germany's ultimate triumph is a physiological necessity, because of her superior nervous organization, and a psychological necessity because of the will to conquer. But England must be denied the consolations of science. However, the laws of logic must not be too strictly enforced amidst the clash of arms. So *Gott strafe* the Glacial Period, or whatever it was that made the North Sea.

The decline in immigration as a result of the war in Europe naturally suggested itself as the readiest explanation for the showing of the recent census in New York State. From Federal sources now comes specific confirmation. In the fiscal year 1913-14, the excess of immigration over emigration was 584,575. For the year ending last July, the surplus of immigration over emigration is a bare fifty thousand. Thus the addition of more than a half million to our permanent population was prevented by the war. Since so large a part of the alien stream is diverted to the ports of entry, and principally to New York city, the loss was immediately noticed there. Abroad they are discussing the social consequences of the losses of the battlefield. In England they are speculating on the results of a death-list of half a million adult workers, though the actual death-list for Great Britain as yet falls far short of 100,000. Here, on the contrary, the decline in adult labor is already a fact. There is little prospect of an end to the war before 1916, and it will be some time after peace before the stream of immigration sets in again. In other words, by the summer of 1916 this country will have at least a million less workers than it would have had if there had been no war. The subtraction of such a fraction of our supply of labor will be felt, though the war, in all its consequences, has brought such confusion that the effects will probably not be so clearly marked as if the same phenomenon had occurred in times of peace.

A study of the fall in immigration by countries throws light on various phases of the great conflict in Europe. Thus we have heard much of the failure of Ireland to rally to the Allied cause, and there have been stories of the emigration of great numbers of young Irishmen for the purpose of avoiding enlistment and possibly conscription. Yet there has been a falling off in Irish immigration of 10,000 from the figures of some 25,000 for last year, or a decline of 40 per cent., whereas immigration from England has declined only 37 per cent. The most extraordinary decline has been in Italian immigration, a fall of 238,000 from last year's total of 284,000, or more than 80 per cent. Undoubtedly, the Italian Government checked emigration by calling men to the colors, though Italy's participation came only within the last two months of the year in question. Yet it is hard to escape the impression that many thousands of Italians remained at home in anticipation of war, presumably out of a sense of patriotic duty. If we wish, we can read into this fact a proof of the popularity of the war against Austria. On the other hand, it would appear that from the Russian and Hapsburg Empires, participants in the war from the beginning, the emigration fell off only 50 per cent.

The story of the feeding of Belgium has been told only in fragments and impres-

sions. For the first time the spirit and machinery of what is probably the greatest charitable enterprise in history have been systematically described in a special supplement of *The New Republic* by Mabel Hyde Kittredge, whose narrative, for all its avoidance of rhetoric, lays a strong hold on the emotions. The problem has been one of bringing food to a people of seven millions beleaguered with armies. Be it said to the credit of human nature that there is one task to which the spirit of self-sacrifice and the talents of efficiency will rally as quickly as to the call of war, and that is when the calamity of a city or a nation calls upon the pity of the world. Several generations have gone into the fashioning of that German "preparedness" which has awed the world. Only a few months of preparedness created the machinery of the Commission for Relief in Belgium, which functions with a precision and effectiveness that the German General Staff cannot but admire. And it is a legitimate source of pride for us that American enterprise has taken the lead in this vast undertaking, in mapping out the routes and channels of charity, from the departure of the grain ships from our ports through the Dutch harbors and the Belgian canals, into the mills, the bakeshops, and the eager hands of the Belgian people.

The belief is probably current that the Belgians themselves are doing little for their own salvation. Miss Kittredge's report shows this to be quite untrue. The only way in which Belgians have been remiss is in the flight of a large section of the well-to-do population during the early days of panic. Were these refugees to return, the benefit would be marked, materially and spiritually. But the prosperous citizens who have remained have given generously of their time and means. Ten million dollars have been contributed to the funds of the Commission by Belgians. The rich pay for their food, including a profit on it; the working classes of small means pay the actual cost—$1.80 a month will keep one human being alive; the destitute receive food free. The actual task of distributing food and clothing is entirely in the hands of the Comité National de Secours—the Belgians themselves—which operates in 32,000 communal centres. This much should also be said for the conquerors of the country: that they have given every facility for the distribution of relief. The only special passes issued by the Germans for free movement throughout Belgium are those given to members and agents of the Commission. Automobiles, says Miss Kittredge, are now used in Belgium only by German officers, the American Minister, and the Relief Commission.

A billion bushels of wheat, another billion of oats, and three billion bushels of corn, and on top of this prospect a decision of the Interstate Commerce Commission that is expected to grant an increase in freight rates to the grain-carrying roads of the Northwest: such is the picture of prosperity that is unveiled by recent dispatches. If the present forecast proves correct, we shall produce more oats and corn than last year, and more wheat than ever before. Yet it was last year's crops—and prices—that are primarily responsible for this year's excellent outlook, for the farmers have planted 10,000,000 acres more for this year than last in the three crops named. The decision of the Interstate Commerce Commission will come in good time to insure to some extent that "passing of prosperity around" that was demanded so vehemently at the last election, although those who raised the cry were not thinking particularly of the railways. Now, as a year ago, however, it is Europe that is most vitally interested in our agricultural good-fortune.

"Yesterday was the Progressive party's third birthday."—[New York Sun, August 7.

At three years the bull moose (*Alces machlis americanus*) usually reaches his full natural growth. His antlers have attained their characteristic form; that is, they project on each side at right angles to the middle line of the skull, and after a short distance divide in a fork-like manner (Encyclopædia Britannica), some pointing in a Republican direction, and some in a Democratic direction (not the Encyclopædia Britannica). The antlers, which constitute the main offensive weapon of the bull moose, flatten out very markedly by the end of the third year (Britannica), from which it would appear that the survival of the animal after that period depends less on its native powers than on diplomacy (not the Britannica). The usual pace is a shambling trot, but when pressed, the elk, or moose, break into a gallop (Britannica), with a tendency to take shelter in their native Republican "moose-yard" (not the Britannica). In America the elk is known as the moose, and the former name is transferred to the wapiti deer (Britannica), but in American politics the name moose is assumed or disregarded according to the fluctuations of the direct primary. (*Loud cries* of "Nature-faker!")

Details of the purely American drama recently produced in the public square at Temple, Texas, show a very unusual consideration for the dramatic unities. It was given under the open sky and staged in the public square. The audience, on foot and in automobiles, packed every square inch, but called for no interference on the part of the police, who apparently were greatly gratified by the entertainment. Boys of all ages climbed the trees of the square and cheered and applauded, and, so the Houston *Post* assures us, "many girls of tender age" were "scattered through the throng." The title of the play was "Spurning the Law," and the chief actor was a young negro, twenty-six years old, who played the unusual rôle of being burned alive. The large supporting company "yelled and cheered," just as if they had rehearsed their parts many times, "as they shoved the negro into the flames." So realistically was this all done that "the onlookers were fascinated," particularly when the chief actor was again and again thrust back upon the pyre, and the great throng did not disperse until the remnants of the charred body were hung to a telegraph pole. We miss in the account any details as to the moving-picture artists, but we are sure that they were present, and that we shall all have the opportunity to have the same treat in the movies ere long. And every spectator, we are sure, went back to his home rejoicing at the triumph of righteousness, and at this fresh demonstration of the superiority of our own civilization to that of Hayti and Santo Domingo.

Japan's latest Cabinet crisis repeated the previous one, and it is this fact that must give her people special concern. Bribery is an ugly word, and would be thought of as the last infirmity of Samurai or of those still within the shadow of that noble tradition. Opposers of Western ideas, if there are any left, must be finding in these untoward Ministerial developments confirmation of their worst forebodings. To such persons as these, it would seem a grim joke to suggest that Japan can be truly Western only by having occasional scandals in high places, but there is more than pleasantry in the observation. Japan would be favored of Heaven indeed if she could adopt a form of government and escape new perils while obtaining new advantages. She need not fear for the future either of herself, or of Cabinet Government, so long as scandal brings disaster to the Ministry guilty of it.

THE BRITISH REJOINDER.

In order to get a full understanding of why the note of the British Government, made public last week, is unsatisfactory, it is necessary to go back to the previous correspondence between Washington and London. In especial must one carefully read over again the protest sent by our State Department to Ambassador Page on March 30. This gave the considered objections of our Government to the Order in Council establishing a novel form of blockade, and undertaking to prevent the transportation of all goods, whether contraband or not, to and from Germany. The grounds of objection were, in substance, these: (1) An Order in Council was simply municipal law, as distinguished from international, and England could not expect foreign nations to be bound by it. (2) The blockade was, on its face, but partial. "The Scandinavian and Danish ports . . . are free . . . to carry on trade with German Baltic ports." Yet it is of the essence of a valid blockade that it must "bear with equal severity upon all neutrals." (3) The refusal to allow innocent shipments to neutral countries, on the plea that they might reach belligerent territory, was, in effect, a blockade of neutral ports.

Now, in answer to these complaints and protests Sir Edward Grey admits that an Order in Council cannot rank with or supersede public law, but states his belief that British prize courts will be governed by international precedents, and points out that, if they are not, aggrieved Americans can appeal to the Privy Council or push their claims before a tribunal of arbitration. This is virtually confession with a weak show of avoidance. Nor does Sir Edward deny that the Baltic ports are open to neutral traders so situated that they have access to them. Yet in his original notification of a blockade he spoke of *all* German ports. If the British Order in Council had limited itself to notifying a blockade of Hamburg and Bremen, it might now be justly asserted that the blockade is effective. But with the Baltic ports open, it cannot. Finally, Sir Edward Grey frankly concedes that British ships are virtually blockading neutral ports. He even uses the words. So doing, he warrants and confirms the protest of our Department of State, that the British Government was proceeding in violation of "a rule sanctioned by general practice."

In its attempt to break the force of this charge, the British rejoinder alleges certain precedents set up in the blockade during our Civil War. The cases cited are familiar. They do, indeed, prove, as Sir Edward Grey asserts, that the law of blockade was greatly contributed to by the decisions of American courts. And in some of these there is an apparent conflict in the principles laid down. Our Government points to the Peterhof case; Sir Edward adduces, as was expected, the Springbok. Into both of them very nice questions enter. The former seems to safeguard the rights of neutral trade; the other to override them. The law of contraband is somewhat uncertain, and it was involved in both cases. International lawyers may or may not be able to reconcile the two decisions; but we venture to say that in neither of them can any legal justification be found for the methods of interfering with neutral commerce which the British Admiralty has pursued.

Sir Edward Grey comes very near to conceding this. He points out, correctly enough, that British naval commanders have been solicitous of human life. He also recalls the pains taken by the Order in Council to provide due compensation for any neutral goods unlawfully detained. But the real question is, of course, what does international law say to all this? In his answer, Sir Edward Grey reasons like a German. The law of nations is all very well, but it is a fluid thing, and has to be "adapted to new conditions" as they arise in warfare, each belligerent being the sole judge of his own conduct. This is exactly the way in which the German Foreign Office argued, at first, about submarines. The similarity goes further, for Sir Edward Grey reminds our Government that the measures to which it objects were adopted by England only as a form of "reprisals" against Germany. To this the response is obvious. Reprisals against the enemy are no excuse for wrongs to neutrals. And any Government that pleads the justification of reprisals, in the very act confesses that its course, so far as it involves neutrals, cannot be defended legally. We said that to Germany; why should we not now say it to England?

The British note is as friendly as one could wish, but it does not clear up the issue with our Government. What we have contended for goes to the heart of the rights of neutrals in time of war, and our State Department cannot do other than press its views upon the British Government again with all earnestness. As in our controversy with Germany, we are bound to protest against the sweeping away of lawful restraints upon belligerents, and to do all in our power to maintain the privileges and immunities of neutrals. Happily, the matters in dispute with Great Britain are by no means of so grave a nature as those which have disturbed our relations with Germany. How strong will be the representations which our Government may feel under obligation to proceed to make to Great Britain, we do not know. It may not be necessary to do more than renew its solemn notification of March 30. This was that it expected the British Government to be "prepared to make full reparation for every act which, under the rules of international law, constitutes a violation of neutral rights."

THE FALL OF WARSAW.

Within a year, almost to an hour, since the Kaiser's troops began the attack on Liège, the German army has brought to a successful conclusion the longest sustained campaign of the war and the greatest, if measured in terms of men engaged and the visible results of victory. Two other campaigns outrange it in ultimate importance. Had the Allies been beaten on the Marne last September, the war would possibly have been over by this time, very much on Germany's own terms. Had the Kaiser's armies broken the Allied line around Ypres in October and November, the same conclusion might have been reached by this time, or at least peace on terms favorable to Germany would have been much nearer than it is to-day. And yet it would be idle to deny the importance of the latest German achievement, both in a material and in a moral sense. Russian Poland is to-day lost to the Czar, with the exception of portions of the provinces of Siedlce, Suwalki, and Kovno. If we add Courland, the Austro-Germans are in possession of more than 60,000 square miles of territory, with a population of 15,000,000, together with Warsaw, the third city of the empire, and, as may happen at any time, Riga, the sixth city of the empire, and its principal Baltic port. If the conquest of nearly all of Belgium and several thousand square miles of French territory be counted, it is plain how in actual figures the balance shows enormously on the credit side of the German ledger.

The moral effects of the German achievement are equally unmistakable, whether we consider public opinion at home, among the enemy nations, or among neutrals. The effect on popular opinion of specific and tangible victory or defeat must count. The Allies to-day are visibly under the depressing

influence of the unbroken tide of Teuton success of the last three months. Bulgaria, which holds the key to the Balkan situation, seems determined to remain neutral, unless the Allies, under the stimulus of defeat, concede much more than they have so far been willing to do. From Greece comes news of a subsidence of pro-Ally sentiment. Rumania, to be sure, is being severely scolded by the German press, and, if the Italian parallel holds, this would argue Rumania's inclination to side with the Allies; but here, too, Warsaw may engender second thoughts.

Within Germany the stimulating effects of victory are bound to be intensified by the reflection that success has been won on the nation's second wind. At the outbreak of the war it was conceded by Allied sympathizers that in a short war Germany might win. But they also asserted the opposite, that the failure of a swift German offensive meant the certainty of German defeat. It was argued that the German military machine was built for swift and crushing victory; with hope deferred it would disintegrate. At the Marne and around Ypres the second alternative seemed to have been established. But in the test of endurance which set in, Germany has shown that she can not merely hold out in an obstinate deadlock, but that after one check she can gather herself for a renewed attack. After the Marne, Germany was supposed to face the problem of starvation. She has lived through the year and wins her most notable victories of the war on the eve of a new harvest. It is to be shown, of course, whether the crop of 1915, raised and gathered under adverse conditions, will equal the harvest of 1914; but, at any rate, the problem is deferred for many months.

Of the ultimate military results of the Galician and Polish campaign it is impossible to speak with such confidence for Germany. It has been assumed that Germany will now turn her attention to the western front, but it is by no means certain that the campaign against Russia will not be continued in the hope of beating the Czar to his knees and forcing a separate peace. If the Kaiser moves elsewhere, it is still a question where he will strike first—at Servia, at Italy, or in Belgium and France. For here is the difficulty which the Teuton cause must face, and here is the basis for the Allies' hope of ultimate victory. Whichever way he turns, the Kaiser gives his enemies a chance for increase of strength or recuperation. If he goes west, Russia obtains a breathing spell of which she will make good use. If he continues in his assault on Russia, he gives time for the development of the new British armies with which in the last resort the hope of Allied victory lies.

More than ever the war resolves itself into a test of nerves, as Gen. Hindenburg put it last winter. If the league of the Allies can be maintained unbroken under defeat, the odds are still greatly against the Kaiser. If Russia, though beaten, chooses to remember that she has contributed to the common cause by making the Teuton allies pay as dearly as possible for victory; if Italy, should the next blow be directed against her, can stand firm in the same expectation of ultimate good, it is hard to see how the German resources can remain unimpaired for the decisive test with the British and French armies.

THE STRAIN OF WAR.

Statements of Finance Ministers in various of the belligerent countries were given out last week. As to them all, there is an unavoidable suspicion of "bluff." The facts are not covered up. There need be no question of the sincerity with which it is affirmed that the nations will cheerfully bear even more back-breaking loads. But in what M. Ribot tells us of French finances, Mr. Asquith of English, the Minister of Finance in Petrograd of Russian, and Herr Helfferich of German, it is impossible not to feel that there is something deeper than the words used. The sums of money dealt with are of such magnitude that they become meaningless to the mind. England has floated a loan of $3,000,000,000, but this will last only till next Christmas—hardly so long, in fact! Germany has soon to go to her people for another two billions or so. This war has long since left off thinking in hundred millions. Treasure, supplies, human life—all are subject to exhaustion at a gigantic rate. *Guerre d'usure*, the French call the trench-fighting. But what is being used up is not only soldiers: it is the ultimate resources of the nations at war.

Attempts to hide this truth are vain. Statesmen may seek to paint color of rose. The press may be drilled to a parrot-like optimism. Even the people who suffer may be moved by patriotic feeling to say that the hurt is nothing. But the ghastly wounds which have been inflicted upon the national life are visible under the bandages. And they are becoming more gangrenous every week. All the shifts, all the recourses, all the saving and the skilled organizing—yes, and all the heroic endurance—cannot prevent the eye of common-sense from perceiving that a perfectly enormous wastage of blood and wealth is draining the vitality of the belligerents.

Some remarkably frank utterances on this subject were recently made by the *Frankfurter Zeitung*. They had a double significance, appearing as they did in a newspaper holding such close relations to German banking and the great commerce. The text for its remarks it found in the debate in the House of Lords, when it was said that the huge war-loans, piled up on each other, pointed straight to the bankruptcy of Europe, and to possible revolution on top of that. The *Frankfurter* echoed this word. To be sure, as in duty bound, it made out a worse case for England than for Germany. Besides, Germany might count upon victory to yield her a great indemnity in money; while in England every hope of that kind had long since been buried. This is an example of the "bluff" of which we spoke above; all the warring nations furnish samples of it. But in the following from the *Frankfurter Zeitung* there is no bluff: there is a true and courageous account of what is actually going on in Germany, despite all that we have been told of the marvellous power of German "organization" in wringing prosperity out of war:

> Our productive labor has in good part shrunk away, while millions of the most skilled men are now diverted into manufacture of war supplies. And what we make is no longer productive goods which till now meant new values and an enlargement of our national wealth. Where we formerly built houses, factories, machines, canals, merchant ships, now we produce only war material of every kind; the work of our hands disappears in the air as powder and lead. We are using up our resources, our capital. . . . We save, but we create no new reserves. . . . Unless reason comes to the countries of Europe, we are steering for European bankruptcy. The saying of the English Lords, as we have explained it, we accept.

A sort of side-light on this article of the Frankfort newspaper is to be found in one printed at about the same time in the *Berliner Tageblatt*. It is entitled, "The World Market after the War," and discusses the good chance that Germany will have to regain and even enlarge her foreign trade. Hope is pinned to the superior organizing and technical ability of Germans. English competition is dismissed on the ground that England's manufacturers are without initiative and far behind the times in their methods. As for the Americans, Germany has no reason to fear them as rivals in foreign markets, since their high-tariff taxes and their imperfect system of banking and

credits leave them outpaced. Now, all this may or may not be true, but what is the underlying and ominous assumption? Why, that the vast and growing foreign commerce of Germany has been cut off by the war. Professor Ashley has shown what a disaster this necessarily is to the economic life and industrial system of Germany. That has happened which Prince von Bülow predicted a couple of years ago would happen, if Germany engaged in a war into which England might be drawn. That is to say, the "future on the sea," to secure which Germany has been straining every nerve, became in one day a source of terrible loss. That German business men are fully aware of this is shown by the way in which they are considering, as the *Tageblatt* represents them, how they may painfully win back, when peace comes, a part of what they had securely in their grasp before the war.

We do not allege that this strain upon Germany is more severe than that upon France. Relatively, it may not be more so than that upon Russia—"inépuisable en hommes et en blé," as Anatole France has lately called her. To date, it is undeniably greater than that felt in England. But all the nations at war are alike in having the sword thrust into their vitals. No prophesying of smooth things by any of them can hide the fact. If peace were to come to-morrow, it would require a generation to repair the devastations of a single year. And if peace is long delayed, who can say to what unbearable miseries the hostile countries may not be brought?

FOREIGN MASTERS OF ENGLISH.

Maarten Maartens reached his highest fame early in his career, in the 'nineties of the last century, though he continued to publish novels until within two or three years ago. We speak of fame here in its gross sense of filling the public eye through the columns of literary "chat" and appreciation. Of his popularity in the sense of being read by the masses we should be inclined to think there has been no great diminution. Such books as "God's Fool" and "The Sin of Joost Avelingh" have the quality of popular life which is independent of contemporary chatter. If one were to judge of Kipling's public to-day by this standard of literary gossip one would say that his readers have decreased enormously, whereas we have the authority of his publishers and the libraries that Kipling is more widely read than ever. For that matter, the test by gossip would work out the same way for Dickens and Walter Scott, who are intensely more alive than one would gather from the *chroniques* of young and advanced critics. Yet because of the habit of thinking in terms of press notices, it is true that Maarten Maartens is most often referred to nowadays less as a writer of eminent merit than as a prestidigitateur, a foreigner who performed the notable feat of writing English literature like an Englishman. The situation, of course, was sufficiently piquant. A native of Holland, he wrote, in English, novels of Dutch life, and had them translated into Dutch. To add to the international flavor, nearly all of his writing was done on the Continent, in France, in Switzerland, and, we believe, in Germany.

A greater English novelist than Maartens (the name comes easier than the formal Van der Poorten-Schwartz) has suffered from something of the same generous but rather unsatisfying admiration for his performances as a feat. This is, of course, Joseph Conrad, whom some enthusiasts would place at the head of living writers in England, and who unquestionably does stand in the first rank. Conrad's achievement in the conquest of the English tongue is a much greater one than that of Maartens. The latter had his education as a boy in England, and, for that matter, mere geographical proximity would make it more natural for a Dutchman to turn to English. In the case of Conrad, a native of Poland, the only advantage seems to have been that his father was an admirer of British institutions. The fact remains that Conrad was nearly forty before he wrote his first English novel, after picking up his first knowledge of the tongue from English newspapers, in the course of an active career as shipmaster in the seven seas. Master though he is of one of the richest styles in contemporary English literature, a style of mingled subtlety and vigor, of dim half-tones and gorgeous phrases, it is yet possible to detect in Conrad the foreign manner. He does not lack ease in the sense of being over-formal, and yet there is a stately march to his prose which reveals foreign cadences; there is an absence of the slipshod liberties which the best of writers will take with his native tongue. This effect would be less noticeable if Conrad's dialogue were not so small a part of his stories. In his brief, ejaculatory, almost parenthetical, sailor talk, he makes one completely forget his foreign origin.

Far less attention than has fallen to the share of Conrad on the technical side has been given to a British poet of international fame whose achievement is none the less remarkable. Rabindranath Tagore does not compose in English, but he is his own translator out of the original Bengali, and the effect is almost as if he had an equal hereditary claim to the English language with those other eminent natives of India, William Makepeace Thackeray and Rudyard Kipling. To be sure, Rabindranath Tagore, as against Conrad, has at least two advantages. In Bengal he must have acquired the language of the English masters of the country. But more important is the fact that as a poet, primarily putting his verse and tales into a poetic prose, he is not subjected to the same comparison as Conrad must be with the established genius of English prose. The rich harmonies of Conrad seem appropriate enough in a professedly poetic style. Whatever may be the cause, the fact remains that one actually finds in Tagore less of the foreign flavor than in Conrad, if one makes allowances for the exotic nature of his themes. Taking Conrad and Tagore, it is interesting to compare them with a native Englishman, Hilaire Belloc, publicist, novelist, politician, and historian. Belloc's father was of French birth, and Belloc himself, between school and Oxford, served in the French army. At any rate, his style shows the foreign manner to a very marked degree, and it would be easy to point out actual Gallicisms in a style that is among the best now to be seen in England.

Other languages and literatures, no doubt, can show instances of mastery won by writers of foreign birth. In France we presume the most notable example is that of the poet, José Maria de Heredia, a native of Cuba, though half his parentage was French, whose "Trophées" have been acclaimed as the most perfect sonnets in the French language, and who by this single work won a place in the Academy. On general considerations, the French tongue should be the easiest literature to show the largest number of alien practitioners, since it is the language most cultivated in foreign countries, and is so closely bound to the other Romance languages. Probably among writers of ordinary rank the French language can make this showing, but not among writers of eminence, Maeterlinck, of course, not entering into the problem.

In this country pure literature can cite no such instances as Joseph Conrad, Maartens, or Tagore. But among publicists we have the notable example of Carl Schurz, who came to America at the age of twenty-three, his education completed. Schurz's mastery of English has been described by

one competent to judge as an extraordinary intellectual achievement. In journalism there is the case of Joseph Pulitzer, who came to this country at the age of seventeen and whose trenchant editorial style has left its mark on popular journalism. Of college professors from abroad who are writing in workmanlike English there are a good many, but we cannot think of one who writes with that mastery which the English examples show.

OUR GERMAN-AMERICANS AGAIN.

It was a terrible threat made to the country by the National German-American Alliance at its annual convention in San Francisco. We refer, of course, to the statement that if our immigration laws are not modified—that is, if we do not behave better—the tide of immigration will soon change, and we shall then see streams of Germans going back to the Fatherland. There will be many places of the dead to fill there, endless opportunities opened by shot and shell, and the lure will be irresistible. What this would mean to our beloved country we cannot even portray. The mere thought of seeing George Sylvester Viereck and Hugo Münsterberg and Dr. Hexamer and Henry Weismann going up a gang-plank, and forever shaking the dust of America from their shoes, is enough to make strong men weep. It would rock our nation to its very foundations. Our best culture would disappear over the ship's side, our truest guardians of the national conscience be borne away from us. And with them would go the unnaturalized army corps of reservists, of which *Kanonenfutter* the British fleet deprived the Kaiser. But why dwell longer on this dreadful future? At any cost, let us save our country from this frightful possibility.

Thoroughly humbled, therefore, we have examined the rest of the German-American Alliance's programme, adopted last week for its future activities and the future political and social developments of our country. Primarily, it has decreed a new national holiday—American Day—the 19th of October, the anniversary of the surrender of Cornwallis, in order that we should never forget that on that day we freed ourselves from British control. Next, leagues are to be formed in every State for the promotion of laws establishing the right to education in German, and safeguarding such instruction. Thereafter, every form of German-American activity is to be pushed. The German press is congratulated for its brilliant (!) work since the war began, and is urged to do still better. The formation of classes of children outside the schools for instruction in German songs and poetry and in the language is to be undertaken at once. The collecting of material about the deeds of the German pioneers and the part they have played in our history is to be systematically organized and encouraged; and German libraries are to be enlarged or founded. The Turner movement is to be revived and furthered. Our German public-school teachers are to be shown how to teach history from the German point of view, and, of course, the teaching of German is to be a part of *all* public-school courses hereafter, as well as instruction in German history and *deutsche Kultur*.

Summed up, therefore, the whole German-American programme is that citizens of this country of Teutonic origin shall remain a separate group, retaining their traditions, customs, and language, and preserving their own culture, not acquiring ours. They are to be Americans and yet not Americans. As Prof. Julius Goebel, of the University of Illinois, put it in a book published before the outbreak of the European war, in January, 1914, the German-American, the "scion of a noble race," declines to permit himself to be cast into the melting-pot of American life, to emerge re-formed into a factory-like type, "by the common mould" by which ordinary Americans are stamped. To make German-born Americans, or those with German blood in their veins, just like ordinary American citizens is to decree, the Professor says, the destruction of everything that is holy "*in our* [that is, the German] *national character.*" Not unnaturally, his view of our American future is of an "American people filled with German ideals"; for not only is the German-American to be allowed to keep all his customs and his language, but, so Professor Goebel asserts, the sole hope for our American institutions, sunk so low as to make all "thinking persons ask how much longer can this country rule itself," is the "infusion of our American life with German *Kultur* and ideals, German sense of honor and of duty."

Now, men like Professor Goebel and the members of the German-American League are so convinced that everything German is superior to everything else on earth that it is hardly worth while to reason with them. For instance, it would be idle to remind them that other groups in our country believe in their ideals and customs and languages. What is to become of us if each of our numerous groups, the Scandinavian, the Jewish, the French, the Hungarians, and Czechs, were to insist on their language and their history in our schools, and refuse likewise to be moulded into good Americans by the common melting-pot of our life and politics? Are we to be not a nation, but a collection of groups of citizens of different thoughts and ideals? Already in Chicago the Bohemians are paying out of their own pockets for schools using the Bohemian language. In Minnesota the Scandinavian tongues are taught in more and more schools; in its largest city there is to be a "house of life" from which Scandinavian *Kultur* and ideals are to be spread throughout the land. What is to become of American ideals and our *Kultur* and our varied contributions to mankind, our social and political additions to human knowledge and human happiness and the science of government? Well, our foreign-born citizens may be certain of one thing: our native American ideals will never be subordinated to any made in Germany or elsewhere, for the word "American" stands for things political, spiritual, moral, and humanitarian that are unsurpassed. But we are grateful to Professor Goebel, the German-American Alliance, and others for their giving us due warning of their intentions for the future.

BOHEMIA AND THE TABLE D'HÔTE.

The Café Boulevard, on Second Avenue, best known perhaps of New York's Bohemian eating-places, has made way for the apartment-builder. Nearly every one of the popular foreign dining-rooms has had an "original," and several more or less legitimate successors. Almost as many places as contended for Homer now claim to be the original "Maria." So with the Café Boulevard, whose first embodiment moved north to Times Square some years ago as part of the general northward immigration from Grand Street, Second Avenue, and the vicinity of Washington Square. This geographical rapprochement between Bohemia and Broadway has been the result in part of racial changes. With the increase in the city's foreign population, both in numbers and in social importance, foreign eating habits have spread over the city. The East Side prospers and moves north to Forty-second Street, and the places of resort follow. But, in part, too the enormous development of the exotic restaurant, Italian, French, or Spanish, with red wine or white, is the sign of a change in the dietary habits of the native population. Especially the city's large bachelor population is drifting from the boarding-house table to the foreign table d'hôte. Spaghetti with grated cheese is by way of becoming naturalized.

But the laws of change do not work all one way. The foreign table d'hôte meets the fate of all conquerors, and is subdued to its medium. The Bohemian bill of fare shows strong

Anglo-Saxon influences, precisely like the Normans in England. The original invaders of Bohemia around Bleecker Street and Second Avenue were an adventurous race, and ate everything on the card. Their imitative and timid successors found it more difficult to cast off old habit. They dallied with the red wine, but felt a longing for mince pie. They took a chance on the heavy vegetable soups, but found the demi-tasse insufficient, and so asked for a large cup of coffee with cream. There were even lost souls who succumbed to the appeal of Bohemia so far as to venture into the mysterious basements which were the original habitat of the table d'hôte, but, once in, balked at the transatlantic mess and made the nearest approach they could to a New England dinner by ordering cautiously. That stage has long been left behind. The assimilatory process has been active. The "Marias" and Roversis are hyphenated. The traditional bottle of "ink" is no longer obligatory, but one may have beer instead, or nothing but ice-water. There is a choice between spaghetti and roast beef, between cheese and pie for dessert.

To the true adventurer in the hinterland of gastronomy, such hybrid establishments are anathema. For that matter, even before the Italian table d'hôte prospered, moved north, and began to advertise, it was the pioneer's fate to see his haunts invaded and desecrated by the mob. He could only pack up and shift before the march of civilization always to the setting sun, in the sad consciousness that there was no permanent rest for him, that the crowd was close at his heels. James Huneker, who has probably risked his life at more out-o'-the-way dining-tables than any man alive, has recently exposed the grief. In "The New Cosmopolis" he tells how necessary it is now for the conquistador of bills-of-fare to plunge into the jungles of the upper East Side, along unknown First Avenue, for such unspoiled flavors and odors as may still be had in New York. Perhaps there are younger and more active men than Mr. Huneker who have been more successful. There must still be spots of virgin soil in the Bulgarian section around Rector Street, among the Greeks of Chambers Street and Madison Street. It may be that in the very heart of Gasolene Alley, amidst the ruck of foreign places that are no longer foreign, an obscure cellar or store-front has kept the true exotic atmosphere. But their survival in unspoiled form is more and more precarious. It is only a question of time before the Mendelian laws of descent get them, and they begin to produce a mixed progeny of ragouts and roast beef rare, of Gorgonzola and mince pie.

Deprived of its sustenance, will the race of Bohemians of pure native origin disappear? Not so long as there is youth and courage and illusion. The lesson of Mr. Huneker's "New Cosmopolis" is that the kingdom of Bohemia is within you. The East Side as a place of adventure is supposedly dead. But were the young generation to go down to Grand Street and East Broadway with the same fine faith that gulded the original discoverers of Jewish café life and intellectualism, they would find greater activity there than ever. The cafés on East Broadway, the Newspaper Row of the East Side, are thronged with the men who produce the vast Yiddish journalism of today; and the explorer will hear the same passionate harangues over coffee-stained tablecloths that fascinated Mr. Lincoln Steffens and Mr. Hutchins Hapgood "already" fifteen years ago.

Foreign Correspondence

A RESTATEMENT OF THE ENGLISH POINT OF VIEW—THE FEAR OF MISAPPREHENSION IN AMERICA.

By JAMES F. MUIRHEAD.

LONDON, July 27.

England has quite recently been visited by a little group of Americans, most of them women, concerning whose highmindedness and good intentions there can be no dispute, and yet concerning whom it seems none the less desirable to sound a note of warning. The persons I have in mind are, I think, dangerous in two ways: first, in creating a wrong impression here as to America's attitude towards the war, and especially towards Great Britain; and secondly, in being likely to disseminate an erroneous conception in America of the predominant British feeling as to both war and peace. Without any intention to do so, these visitants to our shores rather tend to persuade us that America's attitude towards the belligerents is not unlike that of a benevolent elderly gentleman vis-à-vis of two little boys fighting in the street. Conscious that he himself is very remote from any such vulgar "scrapping," his one aim is to make the little pugilists shake hands, without listening to any explanation of the causes of the quarrel. And yet the heart of one of these small combatants may be bursting with a sense of injustice, because he knows that he has been forced unwillingly into the fray, to guard the coppers entrusted to him as his mother's errand-boy, or to save a little sister from blows or a miserable puppy from drowning.

It goes without saying that we recognize the full propriety of the United States remaining neutral, on grounds that have been ably set forth by leading American statesmen and journalists; but we are hardly willing to accept the theoretic assumption that, because all the belligerents claim to have right on their side, they are all likely to be equally wrong. The following passage from a well-written pamphlet by Miss Julia Grace Wales, delegate from the University of Wisconsin to the International Congress of Women, which met in April at The Hague, illustrates the attitude at which we are inclined to take umbrage: "If these protestations [i. e., made by *all* the belligerents as to the justice of their cause] are sincere—and it is by no means clear that we have adequate reason for doubting them—it is not strange that we have felt unable to commit ourselves to any final judgment of the moral attitude of any party to the conflict. We cannot estimate past motives; we cannot distinguish perfectly between the actions of peoples and the actions of governments, between the responsibility of one nation and that of another. And there is a sense in which all are to blame."

I own it is a great grief to me that any American, in the light of all that has happened, can still write in this strain. It would wholly stultify our contention that we are fighting for civil and constitutional liberty against militarism, if we were to attach any great value to the judgment of people who refuse to discriminate between ourselves on the one side and the violators of Belgium's neutrality and the sinkers of the Lusitania on the other. We understand that some, at least, in America refuse to read Lord Bryce's Report on the Belgian Atrocities, in order to preserve their "detachment" of mind; and again we have to deny any serious value to an opinion that ignores facts and evidence. If these people are willing to assert, after due consideration of all the facts and all the evidence now available, that they deliberately think that, in the matter of right or wrong, the state of the case as regards the belligerents is six of the one and half a dozen of the other, we shall know at least where we stand. But the assumption, depending on a calm ignoring of the history of the last twelve months, that the moral delinquency of all the belligerents is approximately equal, is something that we cannot stomach without loss of self-respect. We are content to waive the question of "atrocities," and to base our moral case simply on what Germany avows, justifies, and glories in.

Those who are responsible for direct and immediate action are too busy to listen to à priori views as to the necessary wickedness of all who are engaged in war; and we feel that people who maintain their "detachment" by ignoring facts, are quite likely to misinterpret the British attitude and ascribe to blind national prejudice and ingrained jingoism what really rests on a much wider and higher ideal. If we are sinning, we are not sinning ignobly; and we should like to see a recognition of this fact from any one who wishes to gain our ear. We cherish no bitterness against the German people as such; but we have an undying hatred for the principles for which Germany at present stands. Our dearest hope is for a revolution in German thought, or (as I should prefer to put it) for a domestic triumph of the best elements of the German people. We would much rather see the patient restored to sanity than confined in a strait waistcoat.

The American visitors I refer to probably attach too great importance to the attitude of the Union of Democratic Control, the Independent Labor Party, and other similar bodies. It cannot, however, be too clearly understood in America that these societies form the most insignificant of backwaters in the current of British opinion, and that their most gifted members have seriously impaired their national reputation and usefulness. Names that used to be greeted with respect and admiration now evoke little but regretful sighs. Too much stress may also be laid on the *Morning Post* and *Anti-German Union* agitation, which errs in the other direction. Those of us who agree with neither of these movements (and certainly we represent at least nine-tenths of British opinion) are as keenly aware of the horrors and futilities of war as our American visitors themselves, or as the amiable but somewhat misguided Englishmen they have been consulting; but we realize that war is, on certain rare occasions, more righteous than peace, and we have been forced to crush our natural prejudices in favor of the latter, at the bidding of a higher and more searching ideal. We are not sacrificing our sons and brothers for a whim; and we naturally find it very hard to listen patiently to any discussion of peace or mediation that would place either the object or the method of our warfare on the same plane as those of our opponents. No doubt the Germans would say as much for themselves; but our contention is that the choice between us should not be either avoided or determined on abstract or à priori grounds. We are not concerned to

assert that 10,000 Englishmen, Frenchmen, or Russians are, as individuals, more valuable assets to humanity than as many Germans; but we do assert that the general theory of life for which the Allies stand in their mass capacity is infinitely more vital for the future weal of civilization than that of their foes. That pacifists should be petrified with horror at what is taking place, is more than comprehensible; but that the power of clear thinking of some among them should be equally paralyzed is an immeasurable calamity. There is no place now for those who wish to ride off on a general condemnation of war; some decision must be made on the merits of the case.

It is quite possible that we may now have a rather gloomy period ahead of us, but we do not mean to be dismayed thereby, and we trust that America will not measure deserts merely by the glitter of success. We shall hold on, not for any vainglorious triumph or material advantage, but until (if human strength avail) the priceless principles at stake are vindicated and accepted by our enemies as well as by our friends.

ONE PARIS HOUSE—A "MISUNDERSTANDING."

By STODDARD DEWEY.

PARIS, July 27.

The house is really in a suburb, but the streets are built up flush with the great city and the inhabitants lead continuous lives. It is a fair sample of the Paris apartment house, such as houses are in Paris where only the exceeding rich have separate dwellings. There are twelve apartments served by the masters' stairs, two facing each other on each landing; and at the top of the servants' stairs, under the roof before you come to the servants' rooms, two small apartments more have been arranged for humbler households. That is, the house with its fourteen families represents fairly the average middle class of Paris people. How has the war affected these?

On the ground floor, door to the left as you enter the house, an old lady has nephews at the war. Another old lady to the right has closed her apartment and gone to live with her granddaughter-in-law, while her grandson is fighting. First floor up, there is a young wife with her baby—and her husband is at the front since the mobilization, eleven months ago. They had just set up housekeeping. Opposite, there is a childless elderly couple "with relatives at the war."

Second floor up, to left, there is yet another old lady whose daughter has come to live with her, the daughter's son being at the front. To right, there is an elderly couple of means—before the war. The man is a retired business man of Lille, where his property is. The occupation of that rich manufacturing city by the Germans so touched him that he had a stroke from it and now goes up and down stairs leaning heavily on an attendant's arm. I have seen an officer in worn uniform at the door—some relation passing through Paris on military business.

Third floor up, opposite my own place, there is a young wife waiting since last August to hear if her husband is killed or wounded, for he has been in the thick of the fray all that time. For myself, I have only the cook who has a son with the cavalry and who yesterday came to show a card from an ambulance doctor "in the zone," saying her son-in-law had been shot in the head and they hoped to save one of his eyes. He has a wife and four children. The other cook on the landing has a brother and brother-in-law long ago off to the wars, both with families depending on them at home.

Fourth floor up, above me, a young husband has already had a frightful accident in the army automobile service to which he belongs and was invalided two months; he has just returned to his post in the army. In the apartment opposite, the son is back "on permission" in all the bravery of his dragoon's uniform. He has been wounded once and laid up for a month.

Fifth floor up, to left, there is the empty apartment of a young couple who came there just after their marriage. He was called out from the start in the engineer corps, and she went home to her mother and has had her baby. Opposite, there is another empty apartment rented by a German family which left France at the first alarm. The man was in business—lace-selling—and took the precaution to pay a year's rent in advance. It keeps his property intact, but it will be long before he sees his household goods or France again. Very likely he, too, is fighting in his own army, which was to have taken Paris before the first month of war was over.

This is all for these *bourgeois* dwelling-places; but in one of the two apartments at the top of the servants' staircase, there was a funeral two days ago. It was a concierge of the neighborhood who went to fight in the trenches, came down with galloping consumption, and was brought home to die. His wife has two young children and, living with them, her own two young brothers—"refugees" from a district invaded by the Germans.

I have left out our own concierge, who may yet be called to serve—he is forty-eight and of the "last class." He has a brother who has been a prisoner in Germany since early in the war; and his own and his wife's parents are inside the German lines in the invaded departments. Only in these last days has it been possible to hear from them, by refugees passing through Switzerland. Across the street, where I used to look out in early morning and see an orderly holding the horse of the major going for his daily ride, I can now see the major himself walking painfully on crutches, for he was among the first wounded.

So it goes in the other houses of this street, in the other streets of this suburb and of Paris and of outlying towns, in country villages and farms through all France.

The long waiting, the hope deferred, and the ever-present fear, the return of the wounded, and the shadow of death sitting at the door of every French family have made no outward change in the disposition of the people. As some terrible plague let loose on them, they bear the war as best they may; and they think of no change except to drive the invader from their homes. It was thus last August I saw the men of Savoy leaving their hayfields, saying good-by to their women and marching away to the unexpected peril, without fanfaronade, unwhimpering, *puisqu'il le faut*—since it must be.

Perhaps if the comfortable middle classes of England had realized how cruelly the French have been bearing the brunt of war for them, they would have dragged behind less and would have made it possible for their long-suffering Government to render more efficient aid against the common enemy. Not that the French reproach the English actually equipped and engaged in war—"They die well!" is the universal utterance. But it is the lack of equipment in time, lack of ammunition and arms and artillery, which keeps back armies that might have shortened this war. And it has still to be fought out to the bitter end—*puisqu'il le faut.* I have heard nothing worse than this, said not impatiently, among those who in such a house as I have described were reading news of the strike of the Welsh miners: "Our workmen could not have had the heart to do it!"

This passing in review of the Paris house with which I have closest acquaintance is not by way of any pretentious census-taking. The world has now made up its mind about the French in the present war. The workmen, those who were thought to be ripe for revolution, have proved to be the readiest and most patriotic soldiers. But what the world has, perhaps, not appreciated enough is the clearness of mind of the French people amid all their struggles and sufferings.

A resolution voted unanimously by one hundred students from forty American colleges and universities attending the Conference of International Relations at Cornell University (June 28) has been sent me. It speaks of "a war arising out of misunderstanding among the nations of the world." The French around me have had no misunderstanding. After the whole of Belgium, ten of their own departments have been invaded. All their able-bodied men, young and middle-aged, have had all they could do to prevent the invader's further advance; and they are still fighting after a year under peculiar hardship and danger and death. The populations have suffered cruelties such as had not been told in wars since Grotius, where students may read. And all this is still going on—it is a fact and no misunderstanding. Within one mile of this house, there is the American Ambulance with more than 500 wounded; there is the hospital of the Dames de France; there is the Mussulman hospital—all before reaching Paris. Until France and Belgium are evacuated and free, until the invader stops fighting and asks for terms, there can be no misunderstanding between his and the French nation. The clear-minded inhabitants of this one Paris house leave such misunderstanding to neutrals—they have no time for it!

Notes from the Capital

THE CHIEF OF THE U. S. ARMY.

The last American to welcome war with Germany or any other Power, but also the last to shirk his share of fighting or responsibility if war must come, is the present head of the United States army. In civilians' attire and in a drawing-room, no one looks less like a priest of the sword than Hugh Lenox Scott. Two strangers in Washington, at a social gathering, had singled him out from all the rest of the company, attracted by his modest but distinguished bearing and his scholarly face, and asked me who he was. Before answering, I gave each a guess at his calling. "I should set him down as a scientist," said one, "attached, perhaps, to the Smithsonian or the Carnegie Institute." "I'm not so sure about the science," said the other, "but I'll venture he's a college professor." "By iin-

eage he is both," I replied, "and by his own right also, in a way; for he counts among his ancestors Benjamin Franklin and the famous Dr. Charles Hodge, once president of Princeton College, while, for himself, he not only is the greatest living master of the Indian sign language and an honorary L.H.D., but has filled the chief seat in an institution of learning as Superintendent of the West Point Military Academy."

Three characteristics are printed on Gen. Scott's face: persistence, calmness, and sobriety of thought. You would almost as soon expect to see the Washington Monument walk off its base as to see the General flustered. This is not because he is devoid of emotion; he has an abundance of it, but it is so under his control that it never gets the better of him, even in the most trying moments. None but a long observer would suspect that he has any nerves; and his voice, which is deep-toned and capable of all the sternest inflections of command, is so unobtrusive in conversation that one has to pay pretty strict attention in order to catch all he says. These facts will explain in no small measure his wonderful influence over barbarous peoples wherever he has been brought into contact with them. Like the Indians, he is never noisy, and makes little visible use of his lips in talking; and his countenance does not change its expression whether he is communicating a friendly suggestion or warning an adversary that his latest utterance must be accepted as an ultimatum, except that now and then it is crossed by a smile which for the moment is like a gleam of thin sunshine on an overcast day. The glistening spectacles through which he looks at his vis-à-vis tend to emphasize the generally serious cast of his face.

It was a happy inspiration which prompted President Roosevelt to make Scott Governor of the Sulu Archipelago at the time when the local disaffection towards the United States was at its height and the Sultan was seizing every opportunity to advertise his defiance of the white invaders. Scott had studied our Indians at close range for so many years, as their conqueror in war and their friend and confidant in peace, that he understood very well what problems were confronting him in dealing with another people who had reached about the same stage of social development. The only essential difference lay in the fact that all over our Indian frontier, among the tribes that had never seen him scarcely less than among those that had known him for a generation, his name was a household word, and the news that he was coming was the signal for at least the outward composure of any disturbance that might be in progress; whereas in the Sulu Archipelago such prestige had still to be earned. He earned it—at the cost, to be sure, of losing several fingers which were of constant use to him in exemplifying the sign language—but so conclusively that, when he was called back to the United States, the fiercest of the Moro chiefs mourned like children over his departure; and if another outbreak were to occur in that quarter, no human being could be trusted to quell it by arms more effectively than he could by his mere personal presence.

It was his peculiar mettle, doubtless, which Villa recognized when Scott was ordered to the Mexican border last year. One good look into the General's cool gray eyes and at his masterful jaw seemed to satisfy the guerrilla leader that at last he had met a soldier who would be more than his match should they ever come to a trial of strength. Frills and bluster would have accomplished nothing with this half-civilized fellow; but to the quiet, unostentatious air of determination and self-confidence which he found enveloping Scott he was ready enough to respond with all the pledges demanded of him; and so long as he was the foremost figure on the southern side of the international line the omens of war disappeared behind the horizon. Since then we have begun to harvest a fresh crop of worries on both hemispheres; and it has become a matter of deep regret to many Americans that Scott, their chief apostle of friendly-fronted force, is an indivisible body, which cannot be in four or five places at once. VIEILLARD.

A Tried Administration

ITS VERSATILITY IN HANDLING INTERNATIONAL PROBLEMS—A PRESIDENT WHO TAKES NO THOUGHT OF PARTISAN ADVANTAGE.

By OSWALD GARRISON VILLARD.

WASHINGTON, June 7.

Washington in the third summer of the Wilson Administration affords the extraordinary spectacle of domestic policies and politics completely subordinated to foreign. It would be hard to recall anything just like it, for not only have we the complications growing out of the European war, but there are Hayti and Mexico in addition acutely to vex the Government. If there ever was an overworked department, it is the Department of State, and yet the new Secretary, after more than a month of service in Bryan's place, and weary months of incessant toiling, shows no signs of breaking, despite the intense heat and the extra strain due to the absence from the capital of President Wilson. Indeed, one hears little else here than a discussion of these foreign questions. Sometimes there is a reference to a new Government ship-purchase bill, sometimes some one remembers that we are expending enormous sums in schemes of irrigation, but the talk invariably goes back to our foreign complications.

As to these, we are still too deep in the throes to know just how we are coming out with any of them, or even to gauge approximately how this Administration will be adjudged in the future. But some things already stand out to mark this as a summer that will be memorable in our history, quite aside from the magnitude of the issues involved in the European war. In the first place, Washington is deeply impressed with the pacific attitude of the American public and its self-control which continues in such striking contrast to the hysterical excitement after the blowing up of the Maine and to the demands for revenge which followed that calamity. Said a high authority early in June, sitting at his overburdened desk: "The country is asking of us what seems almost like an impossible task: to punish Germany, but not to go to war with her. How can we accomplish it?" To this the answer was that, somehow or other, the people expected Woodrow Wilson and his advisers to solve the problem, for they have complete confidence not only in the President's soundness of judgment and ability to meet the situation, but in his versatility.

Indeed, the President has had one opportunity after another to deal with grave diplomatic questions along new lines. Thus, if Mr. Wilson's policy towards Germany is successful, it will mean that he will have seized an opportunity to prove to the world that there are other ways of bringing wrongdoing home to a nation than by the slaughter of innocent citizens on both sides. It is a much-needed lesson, for hitherto it has been the custom of the world to resort to war for any reason—because of a real or fancied insult or injury, or because of the dictates of conscienceless ambition. Hence there are extraordinarily few precedents for one who would take measures short of war to send another country to Coventry, or to shame it into right-doing. At this moment, it would seem as if the Germans had decided not to force the President to show to what lengths he will go short of war, by conducting their submarine warfare in accordance with our wishes, although they will not admit that they are doing it. But if the need does come, it is confidently believed in well-informed circles here that President Wilson has several things up his sleeve which would be of a punitive character, yet in themselves would not necessitate war.

Similarly, the English dispute has by no means reached an *impasse*, yet it is safe to say that, if it should do so, this Government will not be content with a reference of the disputed issues to a post-belium tribunal. It would surprise few here, in the event of a further exchange of notes with England failing to effect an agreement, if the United States were to call a conference of at least the South American neutrals to formulate their views as to what the law of the sea during times of war should be, and this might even be followed by a conference of the United States and the European neutrals, although their problems growing out of the war are of so different a character from ours. The point is that this versatile Government does not propose to be guided solely by diplomatic formulas in dealing with the problems that present themselves. Mr. Wilson, more than any other President, is able to look at problems from a social point of view as well as from a purely routine diplomatic or political one. He is not only richer in expedients, but apparently feels freer to resort to them.

Of this his action in the case of Mexico is the most striking illustration. As he accepted mediation from the A B C nations when, according to many persons of diplomatic experience, he had reached a place in his relations with the Government of Huerta whence there was no way out but force,

so he has now voluntarily called in the Central and South American republics to advise him as to his next steps and to obtain their sanction for any action which he may undertake. Here is a precedent of the most far-reaching importance for the Western Hemisphere. Taken in connection with the Pan-American financial congress held here in June, and the coming scientific one in the autumn, and the President's repeated assurances that this country does not want one foot of anybody else's territory, the present action must reassure South America, as it has not been assured since the days of Secretary Root—before the era of the dollar diplomacy of Knox which so alarmed and alienated all of our sister republics to the south of us. It is even possible, if we should be driven at last to interfering by force in order to save the starving Mexicans, that the President will go so far as to invite the South American republics to participate in the action by sending troops to join our forces after the manner of the relief expedition to Pekin. But whether this takes place or not, it is a new Pan-American diplomacy that we are witnessing, and one which accords a recognition and a standing in our councils to the South Americans, which cannot but have a lasting effect among them.

As for Hayti, the opportunity for the new policy is clear there, if this Government chooses to embrace it. First of all, there must be a Government established at once, however unrepresentative of the wishes of the bulk of the people, because there is no Government whatever at this time for our sailors to deal with. Then there should be a thoroughgoing study of the exact situation, preferably by a commission from the United States composed of men able to look at the matter from a social and economic point of view again, rather than from the coldly diplomatic and military. Hayti is by no means all bad, and it is necessary neither to annex it nor to wash our hands of it altogether. Nor is it advisable for this Government to repeat in Hayti or elsewhere in the Caribbean the Nicaraguan blunder which was inherited from the Taft Administration. Few Americans are aware that for years past American bayonets in the hands of a garrison of our marines have supported a Government which we put into power, and that there is pending before the Senate a treaty with Nicaragua, that is, with the Government which we control, giving us dangerously broad powers and rights which the Nicaraguans ought not to grant to anybody. That was Secretary Knox's way of doing things. President Wilson's way, if he is consistent in Hayti with his general policies elsewhere, is to help the people to help themselves and to defend them against their own unjust exploiters. There should be no thought of any benefit to the United States or of obtaining a financial control of a country which might last indefinitely, since the tendency of our own officialdom, particularly of those holding office in Hayti, would be to insist that this control could not be ended and the Haytians once more be given an opportunity to try whether they could manage their own affairs.

But there is one thing about the Wilson Administration which every observer here this summer ought to write down with profound satisfaction and gratitude. I have been in closest touch with the political situation here since the blowing up of the Lusitania, and I have yet to see a sign that in any phase of the situation any member of the Wilson Administration, from the President down, has thought or asked what would be the political effect of any given step upon the fortunes of the Administration. It is easy to say that the magnitude of the crisis and the awful character of the crime upon the Lusitania's innocent passengers would probably have prevented any administration from playing petty politics, though some might easily have been encouraged to do battle for our rights in the spread-eagle manner with which the Harrison Administration in its earlier days was wont to approach international problems. But the fact remains—and as Americans we can say it with profound pride—that no one has sought to gain a single advantage for the Wilson Administration, or for the Democratic party, out of all that has happened. It would have been so easy to wave the flag, for the President to make numerous speeches calling upon the people to rally around "Old Glory," and for the party leaders to make capital in a hundred different ways. There has not been a suggestion of this; the President has not lifted a finger to win by any act or by any word of his a particle of that great popularity which has come to him since May 8. He has simply gone about his business, endeavoring to stand up for the nation's ideals, and to express its views and its wishes without thought of self. Yet the President is admittedly a candidate for reëlection, and the nomination will have been made by this time in 1916.

Sometimes I think the country does not realize how wholly without thought of self the President is. It knows him to be exceptionally hard-working, lonely, as he himself has said, and seeing fewer and fewer visitors as he toils by day and by night at the greatest problems which have come to any President since Abraham Lincoln—in twenty-five days at Cornish he received not a single caller. But he is also modest and unassuming, seeking no praise and caring not at all for the adulation of the mob. He has filled not one single office with a view to his own candidacy for reëlection or the building up of a personal following. Indeed, he has acted throughout as if he did not want any following, or any one to become enthusiastic about him. In that respect he is unique in our later history, and if he is renominated, it will be without his having taken a step or in any way used his great powers to influence the public. It will be because the voters of their own accord ask him to serve again. And so among all the novelties and new departures of this extraordinary summer the greatest is surely this selfless President.

A French Poet of Summer

By STODDARD DEWEY.

Those whom the sudden rise to fame of Paul Claudel has made curious may make ready to be puzzled at his "Two Poems of Summer." Both are dramatic in form—operatic rather, for question and reply are responsive only to some rhythm of the imaginative fallacy. One is declaredly "a three-voice cantata." The other is explained:

At the end of the Orestes sequence, Æschylus placed a satyric drama of which only the title remains "Proteus"; while dreaming of this name, I found I had composed the following piece:

None of the sharp definiteness of thought and feeling which is the strength of this author's legitimate drama is found here. It is rather the poet who clothed Coventry Patmore in French and introduced Walt Whitman to Parisians, that here sings successive impressions of wilful imprecision—something which Matthew Arnold remarked in the cases of Ruskin and Rossetti, should presuppose an independent fortune. Like the hearer of Wagner's music, the reader must, without prejudice,

> —let his feelings run
> In soft, luxuriant flow.

The translation is literal, even to punctuation and rhythm; but it cannot render the half-rhymes and assonances which, against every law of French prosody, make the irregular lines musical. The title of the "cantata" is its first line; and its three personages are Laeta, Fausta, and Beata—a true summer trio:

L. This hour that is between Springtime and Summer—
F. Between this eve and to-morrow sole hour that is left—
B. Slumber unslumbrous before the Sun's born again—
L. Night with no night—
F. Full of mysterious birds without cease and singing you hear when 'tis over—
L. Of leaves and a feeble cry, and words quite low, and the noise—
F. Of far-away water that falls and wind that is fleeting!

L. Springtime already is over.
B. To-morrow great Summer's beginning!
F. Day immense!
L. Earth-fruit immense!
F. Day that endures!
B. Pure sky and Sun's excellence!
L. Now 'tis night still!
F. Now for a while, still—
L. —Late though and threatened—
B. 'Tis the last night before Summer!
F. How the night's beautiful!
L. Continuous sign of you pine on the sky—
F. How sombre and solemn!
L. Sing, tell thy story, call to us, bird, Philomela!

. . . . . .

B. Ah, without giving us bliss, our due,
Shall we let it dree through again, grasping nothing,
This hour which is only once?

F. Moment on which depends all.
L. Supreme word of the year
Of the Earth that yearns still and would speak!
F. And of this sky around us all-present
That beats, that knows all and awaits?
L. When morning's one thing, with evening.
F. And in the dreaming day's bosom
Asleep, little by little memory's freed.
B. Regret is extinct with hope.
L. And what stays?
B. Bliss alone.
L. I hear only wind quite low and water that weeps!
F. —Scarcely the beat of my heart—
L. And the long shooting star sudden that bursts and falls in dust!
B. 'Tis you know not to hear.
L. Heaven an instant unfolding—
F. Shows us only the night.
. . . . . .
B. 'Tis you know not to see.
F. Speak, thou, Beata, we are here, this one and I.
B. All three adorned—
L. Arms and bosom unveiled—
F. Seated—
B. Face heaven-turned—
F. None by the other regarded—
L. —Seated and lying half back
In solemn robes
Which the gilded footpoint outpasses!
F. He whom I love—
L. —Whom to-morrow I espouse
Shall he love me always as now?
F. Whom I love,
Who left me and is far
Shall he come back to-morrow?
B. He whom I love
Is no more, no morrow to me shall bring him ever again.
L. Dead, sayest thou?
F. No morrow to you shall bring him ever again!
B. Nevermore shall he escape me.
L. And 'tis thou speakest to us of bliss?
B. All is over for me of what dies.
F. And what stays when all's over?
B. This hour which is neither the day nor the night.
F. All passes that began.
B. Save only
Even this hour which is between Springtime and Summer.
. . . . . .

Such reading might make Quintilian of a Silver Age like our own gasp and stare; but in Pindar's Golden Age athletes, tired from the fray, had their soul's desultory lifting up from just such a promiscuous haggis of fine poetic feeding—or, better:

An endless fountain of immortal drink,
Pouring unto us from the heaven's brink.

The Philistine, if he has letters, is likely to be still more exasperated by "the satyric drama of Proteus" and will strongly suspect this French poet—for poet he undoubtedly is, but he has also been his country's Consul-General at Munich and Hamburg—of having made himself mad with the too much learning of Jean Paul or, as when his herd of Seals are made by Proteus to do the mathematical tasks of the horses of Elberfeld, of simply laughing at him. For they swim and sing in chorus:

Old Proteus has lost his spectacles, hurrah!
We'll extract square roots no more, hurrah!
Flouc! flouc!
The sea is free! the sea is free!
'Tis free and we are in it!
Do you feel it thrill and shiver?
Do you feel its kick that sends us eight feet up in air?
Hurrah! Hurrah!

Proteus is sorely tried by this, but not as much as by the story—for story, too, there is. It is Menelaus's home-bringing of Helen, and he has no great opinion of either:

So it's for that he took Troy!

Where's the good sense of it all? I ask you.
Where's its justice? Where its good law and order?
And to say 'twill always be so as long as the world shall be governed by poets!
Ah, it's not near over!
How unlucky! How unlucky!

He plunges under is the stage direction and the play's end—and the reader's patience perhaps ends with the rest. But we may still ask—What poets? Has not this polyglot Paul Claudel, besides Æschylus and the others, read Johnny Keats and caught the spirit of him before he went into a decline? For this poetry, too—

'Twas even an awful shine
From the exaltation of Apollo's bow!

Book Notes and Byways

FREDERICK THE GREAT'S "ANTI-MACHIAVELL."

By WILLIAM PETERS REEVES.

A German scholar, alluding to the Moroccan affair in 1911, wrote as follows: "After this African imbroglio no one can afford to neglect the military and political tenets of the great Florentine, Machiavelli, without his sore detriment." Allowing for the enthusiasm of the specialist—the words occur in an announcement of an exhaustive book* on the editions of Machiavelli's works—the invocation of the master craftsman in politics is significant. No less significant is the story of the refutation of Machiavelli made by Frederick the Second as Crown Prince and practically repudiated by him after his accession.

Writing to Napier, editor of the Edinburgh *Review*, on December 1, 1841, Macaulay asked, "What do you say to an article on Frederick the Great?" In January, 1842, he wrote: "I ought to produce something better than the article on Clive or Hastings with so excellent a subject as Frederick. . . ." The essay was published in the April number of the *Review*. Though it betrays shifting judgments, it is one of Macaulay's most persuasive essays, and warrants Grimm's outspoken admiration. One paragraph holds the attention of a reader in these times:

The King of Prussia, the Anti-Machiavell, had already fully determined to commit the great crime of violating his plighted faith, of robbing the ally whom he was bound to defend, and of plunging all Europe into a long, bloody, and desolating war; and all this for no end whatever, except that he might extend his dominions, and see his name in the gazettes. He determined to assemble a great army with speed and secrecy, to invade Silesia before Maria Theresa should be apprised of his design, and to add that rich province to his kingdom.

Earlier in the essay Macaulay had explained the "Anti-Machiavell"; "One of his Highness's performances was a refutation of Machiavelli . . . It was entitled the Anti-Machiavell, and was an edifying homily against rapacity, perfidy, arbitrary government, unjust war, in short, against almost everything for which its author is now remembered among men." Recalling Macaulay's essay on Machiavelli, the first effective apology for the "Prince" in English, one sees that Macaulay had come back to the traditional notion of Machiavelli held by Englishmen for centuries. It was not strange if he had outgrown the brilliant ingenuity of 1827.

By 1849 Frederick's writings began to be published in Berlin, and Carlyle availed himself of this mine of literary curiosities. That Carlyle read the "Anti-Machiavell" one cannot doubt; yet it seems to have suggested little. He seems to begrudge the short chapter given to it: "Truly the world has had a pother with this little Niccolo Machiavelli and his perverse little book." Perhaps Frederick's statement that Machiavelli was narrow-minded and his political ideas petty, had something to do with Carlyle's enforcing the diminutive. At any rate, Frederick's book will live, if for no other reason than that two great masters of English prose wrote about it.

The "Anti-Machiavell" was translated into English in 1740, but it is not available. Before considering extracts from it, the book should be roughly placed in Machiavellian tradition. Machiavellian is an English word for statecraft without morality from the time of Ascham. An industrious student has found some four hundred allusions to Machiavelli in Elizabethan literature. Few of these are derived from the text of the "Prince"; indeed, the Italian text was not translated until 1640. Chief among these allusions is Marlowe's well-known prologue to the "Jew of Malta":

Albeit the world think Machiavel is dead,
Yet was his soul but flown beyond the Alps,
And, now the *Guise* is dead, is come from France
To view this land and frolic with his friends.
To some perhaps my name is odious,
But such as love me guard me from their tongues;
And weigh not men, and therefore not men's words.
Admired I am of those that hate me most.
Though some speak openly against my books,
Yet will they read me, and thereby attain
To Peter's chair; and when they east me off,
Are poisoned by my climbing followers.
I count religion but a childish toy,
And hold there is no sin but ignorance. . . . .

Marlowe's reference to the Duke of Guise connects his lines with the French book "Contre-Machiavell," a popular refutation of Machiavelli in France and Italy in the sixteenth and seventeenth centuries. The book was translated into English in 1577. Four out of five of the ideas attributed to Machiavelli are not, according to E. Meyer, Heidelberg, 1897, to be found in the "Prince" at all. Gentillet, the writer of the French refutation, ascribes to the influence of Machiavelli's works the Massacre of St. Bartholomew, and the French policy from Henry II to Charles IX and Henry III, "who were generally believed to be well read in the 'Queen Mother's Bible,'" for Catherine di Medici was said to have brought Machiavelli's works into France.

The traditions came curiously together among both Catholics and Protestants. Clement VII decreed in 1531 that all of Machia-

*A. Gerber. Machiavelli. 1912.

velli's works be printed. Within twenty years twenty-five editions of the "Prince" were printed in Italian. Denunciation of the work began with its publication. In 1550 the Inquisition proscribed it, and seven years later decreed "the utter destruction of all his works." The Council of Trent confirmed the Index; and from that time on Protestants and Catholics seem to have had but one opinion of the "Prince." Doubtless the opinion was uncritical and unscholarly; doubtless Richard Mohl ("Geschichte und Literatur der Staatswissenschaft") is right in his judgment: "Machiavelli sinned—but he has been more sinned against." Yet one may not brush aside the tradition, nor its effects: there was probably reason for it.

Frederick's book, then, was not the first "Anti-Machiavell." Only less interesting than the book is the story of its publication. Before his accession, Frederick's desire to write found various outlets. His essays, published long afterwards, are less forbidding than their titles imply. As Crown Prince, and anonymously, even if they were printed, he could say pretty much what he liked. His letters to Voltaire show that he frankly spoke of himself as an amateur, and faced the judgment of his amiable critic that he might enforce and sharpen doctrines in which he sincerely believed. To Voltaire, Frederick's ideas seemed to be important, and deserved printing in spite of expressions that were "not French." Reading the essays, one is left with the feeling that here, at any rate, Voltaire spoke as philosopher and man of letters, rather than as courtier. That Voltaire and Frederick had much political doctrine in common in these earlier days, their correspondence shows. That these doctrines were impracticable in the Prussia of his time Frederick soon came to believe. The speculative Crown Prince was lost in the affairs of the King—affairs the like of which would have appalled the debonair writer of the "Anti-Machiavell."

In a letter to Voltaire of January, 1739, Frederick refers to his "Essay on Humanity":

> A ruler, great or petty, should be a man whose business it is to remedy, as far as is in his power, human misery. Tyrants regard the world only as it affects themselves; their very oppression they do not understand, never having felt it themselves. . . . In a word, the economy of human nature is so made as to inspire humanity: a common likeness among men, equality of conditions, the indispensable need for each other, their miseries . . . the natural meeting of those congenial—all nature joins in enforcing upon us the great duty in which we may alone find happiness, and which spreads over each day of our lives new compensations.

On March 31, 1738, Frederick had written to Voltaire about the "Siècle de Louis XIV," "I only wish that you had not ranked Machiavelli, who was a dishonest man, with the great men of his century." Voltaire answers, "*Voilà donc*—Machiavelli is stricken from the list of great men."

Machiavelli's "Prince" does not appear in the correspondence until March 22, 1739. "I'm thinking about a book on Machiavelli's 'Prince.'" On December 4 following Frederick sends Voltaire the first twelve chapters. On April 26, 1740, he writes: "I turn my book over to you, persuaded that it will improve in your hands; it needs your crucible to separate the gold from the dross." Voltaire looked after the printing. The manuscript was sent to van Duren, at The Hague. By the end of September the first edition was printed, under the title "l'Antimachiavell." But Frederick was now King; it would never do to have the book printed as it was. Hurriedly he got word to Voltaire to tone the text down and write an introduction. Voltaire did so, but not to the King's satisfaction. There was talk of another edition. The printer saw to it that his original edition was sold: it went to the libraries of Europe, and must have freshened the gossip of the chancelleries.*

I take extracts from this first text, not as refutations of Machiavelli, but as characteristic of Frederick before his accession. He erected no system of political philosophy; indeed he expresses contempt of such systems.

Since the sixteenth century he finds that a healthy morality has become generally diffused among the people, and he makes morality the basis of his criticism. On Machiavelli's rule that the only way to secure a conquered state is to destroy it, he asks: "Why does a Prince desire to conquer it? To augment his power and make himself more formidable? But if he has weakened the conquered state and made the people miserable he has weakened himself. Mere extent of territory does not make a state great: small, industrious, and contented Holland is as great as Russia, just beginning to cut a figure in Europe."

"I venture the opinion that every King whose policies have but the object of making him feared will reign over rascals and slaves. Nor may he expect large achievements from his subjects, for everything done through fear and timidity bears their stamp." Reaction against his earlier training is apparent: "A prince fulfils only a part of his duty if he applies himself merely to arms; princes should be primarily judges, arms are but accessory."

"One may never succeed in persuading republicans who are really free to impose upon themselves a master, even the best; their one answer will be: 'It's better to depend upon the laws than upon the caprice of a single man.' I should, for more than one reason, love the blood—the ancestry—of heroes; but I love merit much more. One who is raised to empire no longer has ancestors; his capacity is thought of, not his family."

Of a prince's religious professions: "It seems to me that people have great tolerance for errors in opinion, when corruption of the heart does not follow in their train. The people will care more for a free-thinking prince who is an honest man than for an orthodox rascal who works mischief. It is not the thoughts of a prince but what he does that makes his people happy." "That country is happiest when a common charity between sovereign and people spreads over society a gentleness, without which life is a dead weight, and the world a valley of bitterness." "That great truth, that we should do to others as we would have them do to us, becomes the basic principle of laws and of the social compact; from it is born love of country, the one asylum of happiness."

Of diplomacy: "A prince's ministers at foreign courts are privileged spies who watch the conduct of sovereigns to whose courts they are sent. They must see through plans, get to the bottom of apparently trivial matters, foresee action of any kind so as to inform their sovereign in time. The chief object of their mission is presumably to strengthen ties of friendship between the two sovereigns; but instead of being peace-makers they are often the direct agents of war."

Of alliances: "In these critical times of alliances the prudence of rulers should be more than ordinarily vigilant. It is most necessary that they should analyze with minute attention the nature of the things promised, that they may be able to fulfil them." "A prince whose candor is well known will draw to himself infallibly the confidence of Europe; he will be happy without trickery and powerful by his own virtue. Peace and happiness in a state act as a centre where all the ways of politics unite; and this should be the aim of negotiations."

"The peace of Europe rests chiefly on the maintenance of a wise equilibrium by which the superior power of one monarchy is balanced by the united forces of other sovereigns. If this equilibrium is disturbed it is much to be feared that a revolution will result out of which a new monarchy will establish itself on the ruins of smaller, independent states." "Honesty and worldly wisdom alike exact the good faith of princes; that they observe religiously treaty obligations in good faith and scrupulously; for the most effective protection of the people is faithfulness to an alliance. All wars which have had for their object the breaking down of usurpation, preserving legitimate rights, guaranteeing universal liberty, and escaping oppression and violence of the personally ambitious—such wars have been just wars. Blood shed in such wars need be no reproach to sovereigns entering them; for in such circumstances war is a less evil than peace."

"Still it may be said in general that war is so fruitful of evil, the issue is so uncertain, the results are so ruinous for a country, that it is not possible for a prince to reflect too deeply before engaging in war. Acts of violence committed by troops in the enemy's country are nothing in comparison with the miseries which recoil directly upon the states of those princes who have entered the war. A declaration of war is an act of such grave and pervasive importance that one is astonished that so many kings have made it with so little hesitation."

"I believe that if monarchs could see a picture, faithful and true, of the miseries in which people are involved by a single declaration of war, they could never afterward be insensible of these results. Their imagination is not lively enough for them to conceive of these evils as they are, for they have not known such evils personally. Their position has protected them. How can they know anything of overpowering imposts and taxes that crush out the heart of a nation; of the vanishing youth of a nation; of contagious diseases that lay waste whole armies; of the horror of battle and of the more murderous siege; the suffering and penury of those who lose arms, limbs, or organs upon which they must depend for a livelihood; the helplessness of orphans, the loss to the state of men whom war cuts off before their time? Princes, whose only excuse for living is that they should make people happier, would do well to think of all this before exposing their people, for vain or frivolous reasons, to everything that mankind has every reason to fear and hate." "Princes are blinded by their passions and ambitions which paint the most violent acts in attractive colors. War is the last resource in extremity; it should be in-

*In Voltaire's account of this occurs the following sentence: "Je lui représentais qu'il n'était peut-être pas convenable d'imprimer son livre précisément dans le temps même qu'on pourrait lui reprocher d'en violer les préceptes."

voked only in a desperate case, and then only after the reasons for it show no illusion of pride."

"Happy would he be who could destroy the Machiavellianism of the world! Those who govern the world must convince it by example. They must cure the public of its conception of politics: politics, which should be a system of wisdom, but which is popularly thought of as being the breviary of deceit. Those who govern must banish the subtleties and bad faith in treaties, and give life to honesty and candor, rarely found among sovereigns. They must show that they are less jealous of their neighbors' provinces than of the integrity of their own states."

"The world would be well-to-do if it had only negotiations by which to establish peace, maintain justice, and preserve agreement between nations. Reasons would take the place of arms, argument that of murder. Troublesome necessity obliges princes to have recourse to the more cruel way at times; thus arises the paradox that a good war causes and assures a good peace."

"But rulers who regard their subjects as slaves, sacrifice them without pity and see them perish without regret. Only those princes who regard men as their equals—or the body of which they are the soul—are careful of the blood of their subjects."

"In ending this book I beg that other rulers will not take offence at the freedom with which I have spoken to them: my purpose is to tell the truth, to excite virtue and to flatter no one. So high an opinion have I of reigning sovereigns that I deem them worthy of hearing the truth. To the Neros, the Alexander VIs, the Cæsar Borgias, the Louis XIs, one would not dare tell the truth. High praise for the princes of Europe that one may bravely bare before them the vices of royalty, contrary alike to feelings of humanity and justice."

To Frederick, Machiavelli was a small man: he presents only slender ideas; "his narrow soul embraces only such projects as are proper to the politics of petty princes." His most biting satire Frederick saves for such princes as keep up "households," not governments or states; who pretend to have an army, but have merely a lot of servants in uniform. Frederick must have seen much of this in the Germany of his day, and, though his satire was directed to Italy, he must also have hit nearer home.

Professor Münsterberg has warned us against taking literature too seriously as evidence for psychological induction. One might hazard a contrary point of view and assert that literature is cumulative evidence of human nature worth preserving and study for just such induction. Frederick's counterblast to Machiavelli, a royal challenge to royalty, is unique among human documents. Sovereigns, as well as other human beings, have professed one thing and done another; but no prince wrote a book of this sort within a year of his coronation.

Descriptions of German and other translations of "l'Anti-Machiavell" were published in 1756, the first year of the Seven Years' War. Frederick's name does not appear, but by this time the authorship must have been an open secret. Royally audacious one may call the tergiversation of Frederick between "Anti-Machiavell" and Silesia, and the popular notion that Fritz had the devil in him may have been a tribute to his practical mastery of Machiavelli's own game.

Correspondence.

THE UNIVERSITY OF WISCONSIN.

To the Editor of The Nation:

Sir: Recently the *Nation* contained correspondence from "Observer" entitled "Demos and the Professor," which may be recalled because of its unusual facility of expression and its lack of sympathy with the submerged nine-tenths. This theme would not invite comment did not the belaborer of the "proletarian come to college" turn the weaknesses of democracy into a defence of universities in general, and the University of Wisconsin in particular.

One does not need to scurry to the aid of Dr. William H. Allen, of the Wisconsin State Board of Affairs, who investigated the State University. It can be easily believed that most alumni are not interested in whether Dr. Allen is great or only near-great. However, the informed are not unaware of his influence upon the character of municipal government in this country, and of his record, to which anonymous calumny is unimportant. Real friends of the University cannot be so much concerned with the sins of democracy, or the personality of its instruments, as with the suggestions which have been made.

Graduates who have remained in a university atmosphere, or have only recently left it, must perforce believe that in this instance the institution has been attacked without cause. Those who have emerged from the academic influence, and who have occasion to evaluate the services of any considerable number of recent university graduates, know that they do not, without considerable supplementary training, meet the requirements of public and private business. The Survey has indicated in many particulars why these requirements are not being met. As a graduate and well-wisher of the University of Wisconsin, and an employer of university products, I am interested in what steps are being taken to improve that product, rather than how, or why, or by whom, or under what circumstances, the suggestions for improvement came.

L. D. Upson.

Dayton, O., June 24.

To the Editor of The Nation:

Sir: Permit me to reply to the article, "Demos and the Professor," which appeared in the *Nation* of May 27.

The mistake to which I especially call your attention is the sentence: "The Wisconsin Board of Public Affairs and the Citizens' Advisory Committee that sat with it have made a report which, though it naturally contains some criticisms, appears to stand by the University in all the essentials of controversy."

The above sentence is wrong in assuming, first, that the State Board had as a Board made a report; secondly, that the Citizens' Advisory Committee sat with the Board when the report was being made. The majority of the State Board never saw the report and not one member of the Advisory Committee saw the whole report, and only two saw even fragments of the report. There is no possibility of controversy on this point.

As to the content of the report and its "standing by" the University, there is likewise no possibility for honest difference of interpretation. The language is plain. Surely the *Nation* will not carry its personal animosities so far as to assert that with respect to the following the State Board "appears to stand by the University":

(1.) University in Politics—State Board's report said there was no evidence; my report said there was no evidence (p. 9).

(2.) Research—"There is evidence tending to show that some few forget their responsibilities and use the sincere and earnest work done by the many as a cloak of indolence. To prevent this it is necessary that every member engaged in research work be held to the same degree of accountability" (Board's report, p. 13).

(3.) Cost of Research—The Board stands by neither the University nor the survey, but says: "The Board presents no statistics relating to this matter" (p. 13).

(4.) Academic Freedom—The Board says (p. 13) it should be defended; I say it is protected.

(5.) Graduate Work—The Board does not refer to one point raised in my report, namely, points of supervision, offerings in catalogue, distinction between graduate students (some of whom I showed to be taking exclusively freshman and sophomore work) and work of graduate grade, administration of dean's office, etc.

(6.) Social Science Work—My report said, needed to be increased; the Board says the same (p. 14).

(7.) Practical Field Work—The Board says should be extended, not confined to professional and graduate courses, should be provided in all possible courses and given the credit "justified by its quality as determined by supervision and reports" (p. 14). My recommendations were practically the same, but were criticised by the University as "pious opinion" (p. 927).

(8.) Outside Work of Professors—The Board says that some members take unwarranted advantage of present opportunities (pp. 14-15). I do not say that. The Board agrees with my statement that this is a matter to be attended to by administrative authorities without depriving the institution of many benefits. My report lists opinions of faculty members in support of outside work.

(9.) Pensions—My report recommended payment by State instead of by Carnegie Foundation. The Board said (p. 15) that the Carnegie plan and the Wisconsin State pension plan were too new to justify conclusions, and recommended experience and observation of the present arrangement. President Van Hise agrees with me that it would be well for the State to assume responsibility for its own pensions; so does President Pritchett, of the Carnegie Foundation.

(10.) Supervision of Instruction—My report advised more supervision to include classroom visitation. The University said this would hamper personality and drive the best men away from the University. This is one of the most important controversies. Instead of "standing by" the University the Board says that even those members "who have demonstrated definitely the excellency of their scholarship and pedagogical methods" (p. 16) should be adequately supervised and that such supervision should include visitation of classes. In this recommendation President Butler of Columbia agrees as shown by his last annual report so far as concerns younger men. I said that lack of supervision means failure to distinguish efficiency from inefficiency. The State Board said that "ade-

quate supervision is as useful in revealing merit as in discovering inefficiency" (p. 16).

(11.) Cost of Living—There was no issue between the University and my report. The State Board (pp. 16-17) summarizes facts the tabulation of which I organized before leaving the State and the importance of which, when finished, I referred to in my report. My report recommended investigations in this subject, definite information in catalogue, definite warning against extravagance.

(12.) Student Supervision and Student Advisers—My report commended recent advance steps. So does the Board. I showed where further improvement was needed. The Board says: "There is evidence, however, that it is not as effective in all cases as it should be . . . the Board urges those in authority to improve the system wherever and however possible, and to stimulate those acting as supervisors and student advisers to make this branch of service highly effective" (pp. 17-18).

(13.) Non-Resident Students—My report recommended that decision as to non-resident students wait for tabulations which the University promised April, 1914, again in August, again in October, and has not yet completed. The Board, instead of insisting upon the completion of that tabulation, reported facts that had already been published, plus several other facts which are incorrect, but which, when analyzed, disprove the University's contention (pp. 18-20).

(14.) University's Portion of Educational Money—My report says that it is easier for the University to get money than it is for the common schools. The Board admits this. Its records show it is true. The Board says (p. 28) that it "is not a cause for alarm." I did not say it was cause for alarm, but definitely recommended against reducing the University's future appropriations because of previous disproportions, and advised giving the University what it needed to do the work the State expected it to do.
